UNITED STATES FOREIGN POLICY FOR A POST-WAR RECOVERY PROGRAM

WEDNESDAY, DECEMBER 17, 1947

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met at 10 a. m., Hon. Charles A. Eaton (chairman) presiding.

Chairman EATON. The meeting will come to order.

We have as our first witness this morning Mr. Herter, who is the author of H. R. 4579. We will ask Mr. Herter to make a statement. (H. R. 4579 is as follows:)

[H. R. 4579, 80th Cong., 1st sess.]

A BILL To provide means for financing United States programs of foreign aid and to create agencies to carry out such programs

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Emergency Foreign Reconstruction Act, 1948".

PART I—GENERAL PROGRAM

OBJECTIVES

SEC. 10. (a) It is essential to the future security and well-being of the United States that foreign countries which are themselves striving to rehabilitate and reconstruct their war-devastated economies but need assistance to achieve success in their efforts; be extended such assistance. It is the policy of the United States to act effectively in this regard under programs designed to achieve the following objectives without causing undue strain to the economy of the United States:

(1) Continuous application on the part of recipient countries, individually and jointly, of vigorous efforts directed to increasing the production of food and materials needed to meet not only their own essential internal needs but the needs of other countries as well, so that their deficits in essential commodities, articles, and materials will progressively decrease and their requirements from abroad be limited to a minimum consistent with sound economic balance.

(2) Continuous mutual help and cooperation among recipient countries directed to facilitating the economic interchange of goods and services among themselves, providing effective distribution and use of their own resources as well as of the resources received from abroad, and working toward the elimination of exchange controls, quota restrictions, and other obstacles to trade.

(3) The recognition by countries, other than the United States, which are in a position to supplement a program of aid, have the same incentive as the United States to do so, and enjoy access to United States supplies, of the desirability of cooperating in such program, each in relation to its ability to do so.

(4) Encouragement of private initiative to assume, as conditions permit, the emergency activities which have devolved on governments as a result of the economic devastation caused by the war.

(5) The adoption by recipient countries of fiscal, financial, and monetary programs designed to arrest inflation, to correct existing monetary weaknesses, to accomplish stabilization of exchanges, and generally to restore confidence in their currencies.

(6) The dissemination by recipient countries of full and continuous publicity regarding the purpose, source, character, and amounts of aid furnished by the United States, where such aid is not on the basis of commercial loans or normal commercial transactions.

(b) All agencies of the United States participating in the United States program of foreign aid (including United States representatives on international organizations) shall, in the exercise of their respective functions in this regard, be guided by the objectives set forth in this section.

FOREIGN AID COUNCIL

SEC. 11. (a) In order that facilities may exist to promote the maximum coordination possible in formulating, within the limits of available funds and subject to this Act, and in carrying out the foreign-aid programs of the United States by the various agencies of the United States participating in such programs, there is hereby created an interagency council to be known as the Foreign Aid Council (hereinafter called the "Council"), which shall consist of the Secretary of State (who shall be chairman), the Secretary of the Treasury, the Secretary of National Defense, the Secretary of Agriculture, the Secretary of Commerce, the directors of the Emergency Foreign Reconstruction Authority (hereinafter provided for), and the Chairman of the Board of Directors of the Export-Import Bank of Washington.

(b) The Council shall from time to time (1) advise and consult with the President with respect to the establishment by him, within the limits of available funds and subject to this Act, of the programs of United States aid to foreign countries, and policies in connection therewith, and (2) advise and consult with its executive director (hereinafter provided for) regarding the execution of such programs and policies. The Council shall meet at least once in every calendar month.

(c) The chairman of the board of directors of the Emergency Foreign Reconstruction Authority (hereinafter provided for) shall be ex officio the executive director of the Council. As such he shall have the responsibility of (1) examining all of the various needs of foreign countries in connection with the rehabilitation and reconstruction of their war-devastated economies, (2) formulating for the consideration of the Council proposed programs of United States aid to such countries and proposed policies in connection therewith, and (3) providing for the efficient execution of any programs of foreign aid and policies in connection therewith by issuing, with the approval of the President and after advising and consulting with the Council, directives to the various departments and agencies participating in such programs. Every department or agency to which any such directive is issued shall, within the limits of the powers granted it by law, forthwith comply therewith.

(d) The Emergency Foreign Reconstruction Authority shall furnish the Council with a staff to assist the Council in the performance of its functions.

PART II—EMERGENCY BASIC REQUIREMENTS ASSISTANCE

EMERGENCY FOREIGN RECONSTRUCTION AUTHORITY

SEC. 20. (a) There is hereby created, as an independent agency of the United States, a corporation to be known as the Emergency Foreign Reconstruction Authority (hereinafter called the "Authority").

(b) The purposes and objects of the Authority shall be to assist the Foreign Aid Council and its executive director in the performance of their respective functions under selection 10; to meet the emergency needs of foreign countries for food, fuel, and fertilizer required to enable them to achieve success in their efforts to rehabilitate and reconstruct their war-devastated economies; and to make available to such countries limited categories of consumer goods (other than food, fuel, and fertilizer) that will provide incentives to production and distribution therein, and limited quantities of agricultural, mining, and other productive machinery and equipment that is urgently required therein, where, in either case, such countries are unable to finance immediately the purchase of such goods, machinery, or equipment. In connection with and in furtherance of such purposes and objects, the Authority shall have the power—

(1) to determine, prescribe, and conclude the arrangements under which such commodities, articles, machinery, and equipment will be made available to any foreign country;

(2) subject to section 23, to determine in what form payment shall be made by any foreign country on account of such commodities, articles, machinery, or equipment made available by the Authority to such country;

(3) to purchase such commodities, articles, machinery, and equipment without regard to section 3709 of the Revised Statutes or other provisions of law relating to purchases by the United States;

(4) to make contracts and acquire and dispose of property in its own name;

(5) to engage in foreign exchange transactions;

(6) to adopt, alter, and use a corporate seal, which shall be judicially noticed;

(7) to sue and be sued, and to complain and defend, in its own name in any court of competent jurisdiction in the United States or in any Territory or possession thereof;

(8) to employ and fix the compensation of such personnel as it deems necessary to further such purposes and objects and to dismiss any of such personnel at pleasure, without regard to laws relating to the employment and compensation of officers and employees of the United States, except that so far as practicable clerical and stenographic personnel shall be employed from lists of eligibles furnished by the Civil Service Commission and the compensation of such personnel fixed in accordance with the applicable compensation schedules in the Classification Act of 1923, as amended; and to contract for services;

(9) to create subsidiary corporations under the laws of foreign countries, where it is necessary or appropriate for the Authority to exercise its powers in foreign countries through subsidiary corporations created under the laws thereof; and

(10) generally to do all things necessary to the achievement of such purposes and objects, and the specification of particular powers in the foregoing paragraphs shall not in any manner limit the generality of the powers granted in this paragraph.

(c) The Authority shall not have any power to make loans payable in United States currency.

(d) The Authority shall have succession until January 1, 1954, whereupon all of its assets and liabilities shall vest in the Export-Import Bank of Washington, as liquidating agent, whose duty it shall be to wind up the affairs of the Authority as rapidly as possible consistently with orderly liquidation.

(e) The Authority shall be entitled to the free use of the United States mails in the same manner as the executive departments of the Government.

(f) Neither the Authority nor any of its functions, powers, or duties shall be transferred to or consolidated with any other department, agency, or corporation of the Government unless Congress shall hereafter otherwise by law provide.

(g) The Authority shall be subject to the Government Corporation Control Act to the same extent as wholly owned Government corporations listed in section 101 of that Act.

(h) The Authority is authorized to utilize the services, facilities, and personnel of any department or agency of the Government, with the consent of the head of such department or agency, and to reimburse the appropriations of such department or agency therefor.

(i) The Authority shall make a report of all its activities to the President once every three months (which shall include reports of the administration of local reconstruction funds provided for in section 24), and all such reports shall be submitted by the President to Congress.

MANAGEMENT OF AUTHORITY

Sec. 21. (a) The powers of the Authority shall be exercised by the Chairman of the board of directors of the Authority (who shall be a full-time officer of the Authority) under the direction of a board of directors (hereinafter called the "Board") consisting of the Chairman and seven other members, appointed by the President by and with the advice and consent of the Senate. All of the members shall be members of one or the other of the two major political parties, and not more than four shall be members of the same political party. Each member of the Board who is not also an officer of the Authority shall receive from the Authority a per diem of \$100 for each day during which he is in attendance at meetings of the Board. Vacancies in the Board shall be filled according to the manner in which the member causing such vacancy was appointed. Five members of the Board shall constitute a quorum for the transaction of business of the Board.

(b) The Chairman of the Board shall be the executive head of the Authority and executive director of the Foreign Aid Council.

(c) The Board shall have power to prescribe, amend, and repeal bylaws, rules, and regulations (1) governing the manner in which the business of the Authority shall be conducted and its powers exercised, (2) defining the functions and duties and prescribing the compensation of the officers of the Authority, and (3) determining and prescribing the manner in which obligations of the Authority shall be incurred and its expenditures allowed and paid. The Board may require bonds of any officer of the Authority (other than the Chairman) and fix the penalties thereof, and may dismiss any officer or employee of the Authority (other than the Chairman) at pleasure.

(d) The officers of the Authority shall consist of the Chairman of the Board, not more than two vice presidents, a treasurer, a secretary, and such special officers and representatives as the Board may prescribe. The officers (other than the Chairman) shall be appointed by the Board.

CAPITAL OF AUTHORITY

SEC. 22. (a) The Authority shall have a capital stock of \$500,000,000 subscribed by the United States. Payment for such capital stock shall be made by the Secretary of the Treasury at the call of the Board, and for this purpose the Secretary of the Treasury is authorized to use as a public debt transaction the proceeds of any securities hereafter issued under the Second Liberty Bond Act, as amended, and the purposes for which securities may be issued under that Act are extended to include such purposes. Certificates evidencing stock ownership of the United States shall be issued by the Authority to the Secretary of the Treasury.

(b) The Authority is authorized to issue from time to time for purchase by the Secretary of the Treasury non-interest-bearing notes maturing not later than the date on which the Authority ceases to have succession; but the aggregate amount of such notes outstanding at any one time shall not exceed — times the authorized capital stock of the Authority. The Secretary of the Treasury is authorized and directed to purchase any notes of the Authority issued hereunder and for such purpose the Secretary of the Treasury is authorized to use as a public debt transaction the proceeds of any securities hereafter issued under the Second Liberty Bond Act, as amended, and the purposes for which securities may be issued under that Act are extended to include such purpose. There are authorized to be appropriated to the Authority from time to time sums to enable the Authority to retire notes issued by it hereunder.

(c) As of the 31st of December in each year and as soon as possible thereafter, an appraisal of all the assets and liabilities of the Authority shall be made by the Secretary of the Treasury for the purpose of determining its net worth. The value of assets shall, insofar as possible, be determined on the basis of market value at the time of appraisal, except that foreign currencies received in payment for commodities shall be assigned only a nominal value. A report of any such appraisal shall be submitted to the President as soon as possible after it has been made, and by him submitted to Congress.

PAYMENT FOR COMMODITIES FURNISHED TO FOREIGN COUNTRIES

SEC. 23. (a) The arrangements between the Authority and any foreign country for furnishing commodities, articles, machinery, and equipment described in section 20 (b) to such country shall provide for payment of full consideration therefor. The character of the consideration shall be that which the Authority deems to be the best obtainable in the light of the economic situation of the foreign country concerned, the relationship of the goods being furnished to the over-all plan of reconstruction and rehabilitation, and the objectives set forth in section 10 of this Act.

(b) To the extent that the Authority determines that securing consideration in United States currency, or in obligations payable in United States currency, is not feasible in the light of the factors set forth in subsection (a), the Authority may accept (1) local currency of the foreign country, (2) currencies of foreign countries other than the recipient country, (3) other consideration that has or will have a readily determinable market value, or (4) any combination of the foregoing, but consideration in the form of currencies of foreign countries other than the recipient country may not exceed 25 per centum of the value of the total consideration received. The exchange value of any foreign currency received shall be fixed in the arrangements concluded, but if agreement cannot be reached in this

respect then the exchange value shall be that currently fixed by the International Monetary Fund. So far as practicable, the consideration to be received shall include the furnishing to the United States, or agreeing to produce for the United States, for stockpiling purposes, strategic minerals that are produced, or whose production can be developed, in the recipient country (including its colonies and possessions).

USE OF FOREIGN CURRENCIES RECEIVED

SEC. 24. (a) The foreign currencies of the respective countries receiving aid from the Authority shall be used as local reconstruction funds in those countries as hereinafter provided.

(b) Each local reconstruction fund (which shall include the initial principal sum, and any income therefrom and increment therein) shall, subject to the provisions of this section, be administered in such manner as may be prescribed in the arrangements concluded by the Authority with the recipient country in question. The expense of administering the fund may be paid from the fund. In concluding arrangements with the various recipient countries, the Authority shall endeavor to secure the inclusion of provisions to the effect that all disputes in respect of the use or administration of local reconstruction funds shall be submitted forthwith for final determination to a designated international agency or arbitral tribunal.

(c) Each local reconstruction fund shall be administered and utilized for the purpose of contributing to the rapid recovery of economic stability in the foreign country concerned and of developing new sources of wealth therein. To the extent necessary to achieve this purpose each such fund may be used—

(1) to purchase and sell securities, and otherwise to invest in enterprises and projects which will contribute to such recovery or develop new sources of wealth;

(2) to purchase in such country, at the request of the Secretary of National Defense, strategic and critical materials for stockpiling in the United States, and to develop natural resources for future stockpiling;

(3) to promote enterprises of mutual interest to the United States and such foreign country; and

(4) To aid in furnishing technical assistance to such foreign country to further its reconstruction efforts.

(d) The powers in respect of the administration and use of any local reconstruction fund in any foreign country shall be subject to the following limitations:

(1) Such powers shall be exercised so far as practicable to avoid exercising control over the management or operation of any enterprise or project in which sums in such fund may be invested.

(2) Such powers shall not be exercised so as to permit, without the approval of the International Monetary Fund, the exchange, directly or indirectly, of sums in the fund for United States currency or the currency of any other country that can be freely exchanged in world markets.

(3) Such powers shall not be exercised in a manner that will impair the monetary or fiscal policy of the recipient country.

(e) The Authority may authorize the sale for United States currency, at the original value or at a discount, in the discretion of the Authority, of all or any part of any local reconstruction fund either to the government of the foreign country in which it is being administered or to any person approved by the government of such country; and any foreign country in which such a fund is being administered shall at all times have the right to purchase all or any part of such fund in United States currency at such original value.

PART III—AMENDMENTS TO EXISTING LAWS

AMENDMENT OF EXPORT-IMPORT BANK ACT OF 1945

SEC. 30. (a) Section 4 of the Export-Import Bank Act of 1945 is amended—

(1) by striking out "\$1,000,000,000" and inserting in lieu thereof "\$", and

(2) by striking out "\$825,000,000".

(b) The second sentence of section 2 (a) of the Export-Import Bank Act of 1945 is amended to read as follows: "The objects and purposes of the bank shall be

(1) to aid in the financing and to facilitate exports and imports and the exchange of commodities between the United States or any of its Territories or insular possessions and any foreign country or the agencies or nationals thereof, and

(2) to facilitate United States programs of aid to foreign countries in connection with the rehabilitation and reconstruction of their war-devastated economies by

aiding in financing purchases by such countries of needed articles and commodities of a character normally financed by short term or intermediate credit."

EXTENSION OF POWER OF ALLOCATION UNDER SECOND WAR POWERS ACT, 1942

SEC. 31. Subsections (b) and (c) of section 1501 of the Second War Powers Act, 1942, as amended, are amended by striking out "February 29, 1948," in each of such subsections and inserting in lieu thereof "June 30, 1949".

EXPORT CONTROLS AND ALLOCATIONS

SEC. 32. (a) Section 6 (d) of the Act of July 2, 1940, entitled "An Act to expedite the strengthening of the national defense", as amended, is amended by striking out "February 29, 1948" and inserting in lieu thereof "June 30, 1949".

(b) The powers, functions, and duties of the Secretary of Commerce under section 6 of the Second Decontrol Act of 1947 are hereby transferred to the Executive Director of the Foreign Aid Council. Such transfer shall take effect sixty days after the date on which the Chairman of the Board of Directors of the Emergency Foreign Reconstruction Authority first appointed under this Act qualifies and takes office.

Mr. JARMAN. Mr. Chairman, this is an all-important matter, a matter pertaining to which, as I understand it, the President will send a message to the Congress today or tomorrow.

I do not believe, in the first place, as I indicated by my vote, that such a matter should be taken up at the shank of the session when everybody is in a hurry to go home; further, I do not believe that such an important matter should be taken up without a quorum, and, therefore, I make the point of order that a quorum is not present.

Mr. VOYTS. Mr. Chairman, there are two actions that the committee can take. One is to adjourn and the other is to send the sergeant at arms for the absent members.

I ask the chairman to send the sergeant at arms for the absent members.

Mr. MUNDT. I second the motion, Mr. Chairman. This is a very important matter. We have dilly-dallied long enough.

Mr. JARMAN. I would suggest that is too important to dilly-dally on at this stage of the game, after you have tweedledeed and tweedledummed for 2 or 3 weeks on another matter.

Chairman EATON. If Mr. Crawford will act as the sergeant at arms we will ask him to go for the absent members.

I may say to our distinguished witness this morning that this committee has been under terrific and continuous strain for 36 days without a let-up. We are tired. I imagine that is why some of the members are not here this morning.

Mr. JARMAN. I thoroughly agree with the chairman and I want the witness to understand that the absence of the members and my point of order is not the least bit personal to him.

We will adjourn tomorrow or the next day and I don't think this is the time to take up such an important matter.

Chairman EATON. Off the record.

(Discussion off the record.)

Chairman EATON. The committee will be in order. A quorum is present.

Our first witness is the distinguished member of the House, Mr. Herter, who will address us on the subject of H. R. 4579.

STATEMENT OF HON. C. A. HERTER, MEMBER OF CONGRESS

Mr. HERTER. Mr. Chairman, I have a very brief statement here which, with your permission, I would like to read.

Chairman EATON. Yes.

Mr. HERTER. The bill which you are presently considering, H. R. 4579, was introduced by me on November 25 in order to carry out the recommendations of the Select Committee on Foreign Aid. These recommendations appear in House Report No. 1141. As you may recall, the select committee was directed to make a study of (1) actual and prospective needs of foreign nations and peoples, including those within United States military zones, both for relief in terms of food, clothing, and so forth, and of economic rehabilitation, and (2) existing or contemplated agencies, whether private, public, domestic, or international, qualified to deal with such needs.

In other words, the bill that is now before you represents the mandate which was given to this select committee to report on agencies either existing or contemplated, domestic or international, qualified to deal with any program of foreign aid.

The committee, in accordance with these directions, studied carefully existing organizations, and in its report recommended that two existing organizations, namely, the World Bank and the Export-Import Bank, should be called upon to play an important role in any program of foreign aid which the Congress might adopt; but that, in addition, a domestic agency should be created which would have the primary responsibility for (a) coordinating to the maximum degree the formulation of reconstruction policy; (b) the administration of so much of any program as involves the providing of food, fuel, and fertilizer; (c) screening the needs of foreign countries; (d) administering export controls; and (e) correlating any program of foreign aid with available commodities to meet such a program in order that the impact on our domestic economy might be held to a minimum.

This is essentially what the legislation now before you purports to do. I am hoping that the hearings which you are now beginning will be confined to the form of organization proposed in this bill and will not extend to an immediate consideration of the amount of money which should be made available for the carrying out of any specific program. It seems to me that it would be wiser not to confuse the two problems at this time, but to concentrate on the wisdom of setting up a new agency such as is proposed.

In the interim-aid bill which we have just passed, provision was made to transfer the functions, applicable records, and funds provided for in that act to such new organization as the Congress might approve. This clause obviously anticipated that some new organization would be set up, and I naturally hope that it will be of the type of organization which the select committee has recommended that will meet with your approval. I think I should make it clear that the approval of this type of organization would not in itself constitute an approval of any specific additional program.

The need for the creation of a new agency to carry out any program of foreign aid has been fully recognized, not alone in the report of

the select committee, but likewise in the report of the Harriman committee and in resolutions adopted by such bodies as the United States Chamber of Commerce, the Foreign Trade Council, and so forth.

In due time I would be glad to file those various resolutions and I think before you get through with the hearings on this those bodies themselves would like to be heard.

I shall, therefore, not argue that point further, but will confine myself to the major provisions of the bill itself.

The bill, after setting up the criteria upon which any foreign-aid program should be based, sets up two new agencies of Government. The first, called the Emergency Foreign Reconstruction Authority, is in corporate form with eight directors to be appointed by the President and confirmed by the Senate, not more than four of whom shall be of one political party. One of the eight directors is to be named chairman of the board of directors by the President. He would devote his entire time to the position and would be the administrative head of the Authority. The Authority would, in effect, be the administrative agency for any foreign-aid program. The second organization which the bill sets up is the Foreign Aid Council, which is in effect a consultative body with the Secretary of State as Chairman and comprising in addition to the eight directors of the Authority, the Secretary of Defense, the Secretary of the Treasury, the Secretary of Commerce, the Secretary of Agriculture, the Chairman of the Board of the Export-Import Bank, and the United States representative on the World Bank and Monetary Fund.

It would be the primary responsibility of the Chairman of the Board of the Authority, who would likewise act as the Executive Director for the Foreign Aid Council, to formulate the details of any program of foreign aid and before issuing directives requiring various agencies of Government to carry out the action necessary to implement such a program, to consult with the Foreign Aid Council and to receive the approval of the President. The personnel of the Authority would be selected and have salaries fixed by its directors, and the right to terminate any program because of failure of any given nation to meet the criteria set up in the bill would rest with the Authority. The personnel of the Authority would not be subject to civil service restrictions, but in the clerical grades, the position and pay would correspond to similar positions in other Government departments and agencies.

The Authority would have no power to loan money to anyone. It would have power to purchase or direct the purchase of food, fuel, and fertilizer, as well as some incentive goods, and the power to allocate these commodities to recipient nations. It presumably would coordinate its program with such loans as the Export-Import Bank and World Bank would make to these same nations for raw materials and capital goods in order that any given program of aid would effectively include such commodities and machinery as would constitute a program leading to the speediest possible recovery of the recipient nations. The Authority would have to take payment for such commodities as it allocated either in the form of dollars or, where dollars were not available, in the form of local currencies. It would be responsible for making separate arrangements with each recipient country for the most effective use of those domestic currencies in

order to effect the speediest recovery of the country itself, and in this connection, should lay particular emphasis upon the development of new wealth, particularly in the field of strategic minerals which are important for us to stock-pile.

While the above are merely the high lights of the more detailed provisions contained in the bill, they give its essential substance.

The reason why this type of organization was recommended by the select committee can be quite simply stated. In the first place, it centralizes the responsibility for a very difficult administrative job under a single individual. In the second place, it gives that individual a board of directors to consult with who presumably represent as good brains, experience and judgment as the two political parties can muster. In the third place, it provides for the coordination of all of our Governmental activities which bear on any given operation in their field without detracting from the final authority of the President of the United States, who, by the Constitution, is charged with the conduct of our foreign relations.

Not alone is responsibility centered in one individual. With the approval of the Board of Directors, he is in a position to select the small but competent staff required in this country and abroad to carry out an effective and efficient operation without too much red tape. He is in a position to secure, by contract or otherwise, technical services of the highest order, not alone for the planning, screening, administration, and supervision of any foreign-aid program, but likewise for assistance in a proper determination of the use to which local currencies should be put. It is my belief that the type of organization proposed would attract the highest grade of American citizen, since the personnel would be given a scope in the administrative field which could never be secured under any straight-line department.

Administering any foreign aid program is essentially a job for technically skilled personnel. The same is true of any evaluation of the impact of foreign aid on our domestic economy. We cannot afford to undertake any program without making the effort to have it administered in a really effective way.

The United States has made serious blunders in its humanitarian efforts to be of help to war-stricken nations. Those blunders should not be repeated. The right organization with the right personnel can be the very best assurance to the American people that such dollars or commodities as they are willing to provide to assist in recovery would not be wasted.

That, Mr. Chairman, is a very brief statement of a bill that comprises some 14 pages. I do not know, as a result of the colloquy which took place before I began my testimony, how far you want me to go, whether you want me to go through the bill paragraph by paragraph and describe the purpose of each of the provisions contained in the bill.

MR. MUNDT. I suggest we do that, Mr. Chairman.

Chairman EATON. I think that our distinguished colleague ought to complete his statement.

MR. HERTER. Mr. Chairman, the very first part of this bill, which is the general program, lays down certain objectives which, in the opinion of the committee, are the objectives that any foreign-aid program ought to attempt to achieve. The wording of those objectives as they appear in the bill are almost identical or follow very closely the wording of the objectives that were set out by the 16 nations in Paris as objectives that they themselves ought to meet.

In other words, these objectives as stated in here are not something taken out of the air as being invented by us as desirable objectives purely from our own point of view. They are objectives to which 16 nations in effect affixed their signatures as being the objectives of any program which would assist them in their recovery.

There is one paragraph that was inadvertently left out and which I would like to offer as an amendment at the proper time, which would come at the bottom of page 3, after section B. It reads:

Programs of foreign aid shall be instituted only in countries subscribing to the objectives enunciated in this section and continued in any country only so long as the Authority is satisfied that such objectives are being pursued in good faith in that country.

With respect to the objectives that are enunciated there I think I ought to say a word about the general form that this bill takes. It mentions no specific country. At the time that it was drafted the London conference had not yet convened and no one knew what the outcome of our discussions with Russia would be with respect to the German situation. We also, apparently, have no information as to when any peace treaty can be made with Japan. But we have under the American flag those two nations as well as Korea and it seemed to me in the drafting of this bill that if we were setting up an administrative body in which we had faith it should certainly include the operation of the economic recovery program in Japan and Germany as well as in Korea together with the 16 nations.

Mr. JONKMAN. May I ask a question?

Chairman EATON. Mr. Jonkman.

Mr. JONKMAN. By that do you mean that you contemplate setting up an agency in each country which shall handle the funds to be used there as we did, for instance, in 1926 and 1927 or are you going to deal with nations and governments?

Mr. HERTER. Well, to a certain extent you have to deal with governments. I think I ought to take a minute with respect to this situation. There is a very widely held misconception as to what can be done as a purely relief operation.

The relief organizations that were set up after the last war operated with governments insofar as bulk commodities were concerned and they set up their own operation only where they wanted to give a supplementary meal to a limited section of the population, such as the children in certain institutions, and so on. That was the only part of the operation that they themselves operated.

You cannot conduct an outside operation of relief in foodstuffs in bulk in very large quantities. For instance, what happens there is, with wheat, for instance, in every European country it is mixed with the local wheat. It is milled entirely differently than it is here. There is no such thing as white bread, for instance, in any country in Europe today. It is all pretty dark and is what we would consider a fairly inferior quality of bread.

That means that your supplies that come from overseas, whether from this country or the Argentine or Canada, are mixed in with the indigenous supply and you cannot segregate the two things. Then the actual process is that the wheat goes to the miller, the miller in turn mills it to the degree of fineness that the government provides for, then it is allocated to the different bakeries, the bakers in turn make the bread, and either distribute it themselves or the people receive it on a ration card.

That is the process through which the bulk operation goes.

Mr. JONKMAN. I understand that, but after all we must remember that this envisages economic recovery to a large extent. Now, after the First World War, when we went through the same experience that we are going through now, we pumped \$7,000,000,000 into those countries without getting anywhere. Then we found out that in order to do anything we had to send men in to see that the individual needs were met. As, for instance, in Poland. We saw to it that every penny went toward the production of consumer goods. That clicked and in 3 years we had Poland, for instance, changed from an importing country to an exporting country.

The criticism is that we don't reach the people we want to reach. All you are doing at the present time is increasing the general supply to the country that you were giving money to and it seeps down in the same way with little more seeping on to those that haven't anything at all. I fully agree that this type of administration that we hope to set up ought to take care of the objectives you have enumerated.

Mr. HERTER. In the first place, you would have three agencies operating in the field. One is the Export-Import Bank, second the World Bank, and third the new corporation that is set up. This new corporation is set up first to coordinate the entire operation and secondly to secure and distribute only the very limited category of goods which are what you might call the relief goods. The Export-Import Bank would handle the entire question of loans, and we believe they should be loans made with respect to raw materials, raw materials and certain types of intermediate machineries that would normally be financed privately by intermediate loans.

Mr. JONKMAN. Those loans to be made by the governments and then by the governments to the individual?

Mr. HERTER. Under the law the Export-Import Bank has to have a governmental guarantee of a loan. They have to have the governmental guarantee. What they are doing is specifying when they make a loan for a piece of machinery or any commodity that it shall go to a given industry.

Mr. JONKMAN. I see.

Mr. HERTER. In other words, if you will look at the last release of the Export-Import Bank on the most recent loan to Italy, you will see they have detailed to the smallest concern, for instance, how much coal that particular concern should get. They have their experts in the field studying the requirements of big and large industries and have made it a condition of the loan that there be delivered to each industry the quantity specified so there will be no juggling of the material for which that loan is made.

It is my belief that that is the only sound way in which to make any loan—to be sure that the material that is to be purchased with those loans gets to the right individuals.

Mr. JONKMAN. Is it your understanding that this reconstruction authority shall handle only human relief?

Mr. HERTER. And coordinate the other.

Mr. JONKMAN. Yes.

Mr. HERTER. The Export-Import Bank is an excellently managed concern, to my mind. They make a very thorough technical inspection of the industries to be helped and the quantity of raw material that may be required. That concern, as you know, has been oper-

ating for a number of years and has made many loans. It has not, as yet, had to write off any loans as bad loans and has been earning money. It is developing better and better technical skills as it goes along. The World Bank, I think, is operating in very much the same way.

But for all three organizations you need only one technical staff. You do not need three competing staffs. To my mind the success of any program is dependent on how good technicians you have in the field. You must have technicians who know what they are talking about before you make a grant or a loan. The purpose of this is to give you an elastic organization.

For instance, in many cases, if you want the services of an engineering firm, it is much better to get them by contract, rather than by hiring an individual here and an individual there.

Let me be specific from the point of view of an example in the recovery program. There have been a great many things suggested—a complete reconditioning of their machineries, the development of certain new industries, and so forth. I don't see how any prudent person trying to help in that situation could possibly tell what was the right thing to do and concentrate on it unless he had an awfully good engineering study made of the over-all picture. I think a very good one has been made by the World Bank. It has been kept up to date. So far as I know it hasn't been duplicated by any other agency.

I can see no point in having a skilled study made of the situation unless it is made use of by a coordinated agency of this kind that is going to bring to any program the very best brains we can find. I think it is the kindest thing we can do for foreign nations because I think the know-how and the skills we have are the greatest contributions we can make. We certainly ought to apply the very best brains we can to any program.

Mr. FULTON. Mr. Herter, would you comment on your amendment?

Mr. HERTER. This amendment [indicating]?

Mr. FULTON. Yes. I would like to hear you further on the amendment.

Mr. HERTER. The amendment should, obviously, be taken in conjunction with the objectives as stated in this bill. The objectives are in pretty general terms that from the point of view of what nations will do in the way of self-help and by way of cooperation. I cannot conceive of any nation with which we will be cooperating in a relief program not being willing to subscribe to these objectives.

Mr. FULTON. Germany has a mixed government and Korea has a mixed government.

Mr. HERTER. Germany, I am hoping, will, within a very short period of time, have some one type of government.

Chairman EATON. All of it?

Mr. HERTER. The three western zones. I can't see anything else coming out of this situation but that. After all you have a form of government in each one of the zones today. If those zones can be combined with some degree of centralization, certainly economic centralization, you have a group that can operate under the objectives perfectly well.

As a matter of fact, in the requirements that were put together at the Paris conference western Germany was represented by the British and American military authority and the figures for western

Germany were included in the so-called 16 Marshall plan countries at that time.

Mr. FULTON. How about China?

Mr. HERTER. China, it seems to me, could subscribe to every one of these objectives. I can't think of one to which they couldn't subscribe. If they refused to do so, I think it would be a useless thing to try to continue any program of aid.

Mr. FULTON. The Chinese Government would be able to get within the terms of your amendment on the objectives? You think they are in position to so come within your amendment?

Mr. HERTER. I think they certainly would. I can't imagine why they couldn't. If they would try in good faith certainly we ought to encourage them as much as we can to carry them out.

Mrs. BOLTON. Mr. Chairman, might we have the witness continue without questioning until he finishes his statement?

Chairman EATON. Some of us would like to ask a question now and then.

Mrs. BOLTON. Very well.

Chairman EATON. I would like to ask two questions.

Is this legislation proposed as a substitute for the Marshall plan, which is still in somewhat of an innocuous condition?

Mr. HERTER. Mr. Chairman, I have got to go back into past history to answer that question.

The original resolution that created the committee to study agencies of Government best suited to handle any foreign-aid program was filed last April, which was 2 months before Mr. Marshall made his speech at Harvard University. At that time it seemed to some of us obvious that the economies of European countries were in such shape that we would have them call very soon for help and ought to be prepared to know what those calls implied.

Chairman EATON. Just one more question.

I have read this bill with great interest and care and as a humble layman, it seems to me that it abolishes the Foreign Affairs Committee of the House of Representatives and the executive department and establishes a super-duper organization of Government such as has never existed before in this country.

Am I, as usual, wrong in that?

Mr. HERTER. Yes. I would——

Chairman EATON. As usual.

Mr. HERTER. I wouldn't say "as usual." I disagree with your appraisal of this bill.

Chairman EATON. What functions would the Government, or this committee, have in this super-duper organization if it takes over?

Mr. HERTER. I don't know just what function you contemplate any committee of the Congress having except that the committee of the Congress which creates any agency or body under the reorganization plan has full responsibility for the supervision of its operation.

Chairman EATON. So that when Congress and this committee relinquishes its responsibilities and turns them over to your organization, then we have nothing more to worry about?

Mr. HERTER. No. Under the reorganization plan you are the ones who are the watchdogs to see that the organization functions properly.

Chairman EATON. You are not going to establish something else that we have to watch, are you?

Mr. HERTER. That was adopted last year by the House in the reorganization plan of the House, that each committee under whose jurisdiction any agency or department of Government fell, that committee was responsible for the supervision of its administrative functions.

Chairman EATON. I hope to be enlightened as we go along. The impression it makes on me is this, that this is a new organization of government which supersedes the House of Representatives, and, most important, the Foreign Affairs Committee and the Executive downtown. This new organization, what constitutional powers are still left to control it or govern it?

Mr. HERTER. Mr. Chairman, I disagree with you very radically.

Chairman EATON. That is not unusual.

Mr. HERTER. The Export-Import Bank, in order to perform certain functions, is set up as a separate corporation, and cannot be reorganized under ordinary powers. The Reconstruction Finance Corporation was set up in very much the same manner. We have had a succession of agencies to deal with such matters. We are now getting into, presumably, the consideration of certain very difficult programs that, I assume, are going to be recommended. The proper administration of those programs, to my mind, is a *sine qua non* of any successful operation. If you are going to have an administrative set-up in which neither the Congress nor the people of this country have confidence—I can think of nothing more tragic.

Reading the press this morning, the New York Times had a front-page story to the effect that shortly the President would be sending us a program setting up a new agency. Today you have got things scattered all over our Government. If you have some coordination, so that you have an integrated, intelligent program, intelligently supervised, the hope of making effective use of the American dollar or the American commodity would be greatly enhanced.

I think you will agree, Mr. Chairman, that anything we do is a gamble, but it is a gamble that I, personally, think is worth taking. There is no assurance that any program that we might undertake is going to succeed. On the other hand, the best chance of success lies in able administration and, to my mind, this is a highly technical field in which to operate. It requires the best technicians and the purpose of the organization is to allow an elasticity and freedom in setting up such an organization.

In addition, we have heard a great deal said about a bipartisan foreign policy. If you are going to undertake any program, even the interim-aid program, from the point of view of giving Congress, which I think it is entitled to, and the people of this country, the feeling that the administration of it is entirely nonpolitical, and one concurred in by representatives of both political parties you have made a very real contribution to the so-called bipartisan effort.

Mr. MUNDT. Mr. Chairman, I would like to say that I certainly feel that the administration of any long-term comprehensive European recovery program should be in the hands of an independent agency of a bipartisan nature and I do not believe, Mr. Chairman, that this is, in any way, going to impinge upon the authority or the prerogatives of either the House or our committee, nor is it going to take away

from the fundamental functions of the Executive insofar as the shaping of foreign policies are concerned.

But it does set up, as I understand it, Mr. Herter, in the field of our foreign-aid program, a centralized and efficient administrative function similar to what the RFC has, largely, proved to be in our domestic reconstruction problem as it was set up originally in the depression movement; is that correct?

Mr. HERTER. That is correct.

I might, perhaps, go into some of the details as to the type of things that an organization of this type has to do.

Mr. MUNDT. I would like to ask one question, first. If I understand these six, and now seven, because you said one was omitted, sort of guide lines for administering the program, I believe in your prepared statement you said that this Authority should have the right to accept local currencies and accept payments in terms of strategic minerals, and so forth. Shouldn't there be in the statement of objectives an eighth paragraph indicating that we expect the foreign recipient of this aid, insofar as it is possible, to repay in terms of strategic materials?

Mr. HERTER. That appears further on in the bill.

Mr. MUNDT. It is in there?

Mr. HERTER. Yes, sir. There is a special section dealing with that situation.

Mr. MANSFIELD. Mr. Herter, I find that in section 2 you left out any reference to the Secretary of the Interior as a member of this coordinated Council. Don't you think that is unwise because wouldn't you say that it would be necessary for the Secretary of the Interior to keep constant check on the drain on our own natural resources?

Mr. HERTER. I think it would be probably desirable to include him. I don't think that was an intentional omission. There was some worry about the size of this Foreign Aid Council. In the discussions that we had in our own committee I think many members felt that it was unwieldy because there were too many members. On the other hand, to adopt at all the bipartisan theory of including among the directors of this organization representatives of both political parties, the only way in which you could have them represented in the Council was by making them members of this Council.

Mr. MANSFIELD. Now, Mr. Herter, another question. Under subsection (c) on page 4 it is stated that the chairman of the board of directors of the Emergency Foreign Reconstruction Authority shall be ex officio the executive director of the Council. Does that mean to imply that he shall be the executive director of the Council and also those other members mentioned above who comprise the membership of the Foreign Aid Council?

Mr. HERTER. That he shall prepare the material for their consideration.

Mr. MANSFIELD. I think that man is getting entirely too much power. I think that, next to the President of the United States, he would be the most powerful man in the Government, because, reading further, as such, he—not they—as such he shall have the responsibility of determining all the various needs of foreign countries in connection with the rehabilitation, construction, and so forth, formulating for the consideration of the Council proposed programs providing for efficient

execution, and down here, at the end of that particular subsection, every department or agency to which any such directive is issued shall, within the limits of the powers granted by law, forthwith comply therewith.

Now, it seems to me that that individual who will be the chairman or the executive director, chairman of the board of directors of the Emergency Foreign Reconstruction Authority, made up of a membership from both parties, will, in effect, be the real man in the administration of this program and will, in effect, have the real authority.

Mr. HERTER. He will. There is no question about it. On the other hand, he is appointed by the President and confirmed by the Senate. He cannot issue any directive to any Government department without consultation with the Foreign Aid Council and the countersignature of the President.

Mr. KEE. Will the gentleman yield?

Mr. MANSFIELD. Yes.

Mr. KEE. On page 9 it shows that the Authority is authorized—of course, the Authority is under the head of its chairman—is authorized to utilize the services, facilities, and personnel of any department or agency of the Government. Of course, with the consent of the head of such department or agency. That practically gives him power to utilize every organization that we have in the United States Government.

Mr. HERTER. I think he certainly should. In other words, somewhere responsibility has got to be centralized. Somebody has got to be responsible for these programs.

If I might answer that by illustrating the type of thing that has to be done if you are going to do any programming intelligently: You have a great many nations asking us for help. If you examine at any length the requirements as set forth at the Paris Conference by the 16 different nations you begin to understand the terrific complexities of screening intelligently the requests made on us by different governments. When a matter dealing with agriculture comes up, on food, obviously, you want to be able to utilize the best food experts that you have in your Government. If it is a question of steel requirements you want the best experts you have got in your Government. I don't think there is any need for building up a colossal new organization. I think you want intelligent direction and you want to make use of the facilities you have available. Somebody has got to be able to coordinate those things. At the staff level you have got to have people sitting together from the various agencies of government who are screening these things so they can come up with an intelligent answer.

Mr. MANSFIELD. This man is the only one of the 15 members who is on the job full time?

Mr. HERTER. He is the only one of the eight directors.

Mr. MANSFIELD. These other people who are in the Cabinet and the Government have other duties?

Mr. HERTER. Somebody has got to be responsible for preparing the program. Who are you going to make responsible?

Mr. MANSFIELD. Do you think it should be given to that one man?

Mr. HERTER. He is the individual who presents it for their consideration. Nothing can be done without the President's counter signature. There is a complete check there. Somebody has got to

be responsible for the actual programming. I don't care what organization you set up you have got to give somebody that responsibility.

Chairman EATON. In other words, you are creating a vice president and giving him functions that will really function?

Mr. HERTER. Mr. Chairman, if there is any conviction I hold strongly it is that you cannot do the type of job that has been contemplated in some of the proposals made unless you get the best brains applied to it and a centralized responsibility.

Chairman EATON. I agree with that.

Mr. JAVITS. Mr. Herter, isn't it a fact that the amendment states specifically that the Authority shall determine when aid shall be cut off?

Mr. HERTER. Yes.

Mr. JAVITS. That is a determination of high political policy generally exercised by the President or the Congress, is it not?

Mr. HERTER. Well, the Congress can always exercise that power. That, obviously, they can always do. They can do it by withholding funds. On the other hand, you give an administrator a responsibility to do a given job, if he is getting no cooperation whatever from the country that he is trying to help, and things are going from bad to worse in that country, somebody has to have the authority to stop that. If you want to say "with the approval of the President," that is something else again, but somebody has to take the responsibility.

Mr. JAVITS. But am I right in my deduction that the Authority would have that power under the gentleman's plan?

Mr. HERTER. That is correct.

Mr. JAVITS. Thank you very much.

Chairman EATON. Mr. Herter, it must be self-evident that the hour has come when the United States of America must assume its responsibilities in world leadership to the nth degree. This legislation refers simply to matters of financial and social relief, largely; doesn't it?

Mr. HERTER. Not entirely.

Chairman EATON. But it ought to fit in with a policy, a world policy, that we must evolve soon, that will have the support of both parties and the Executive and the Congress and the people and can be understood. Now, how would you integrate that program with that world policy, if it ever arrives?

Mr. HERTER. Well, under the Constitution, the President of the United States is responsible for the conduct of our foreign relations, and no one can take that away from him. On the other hand, the Congress has assumed an entirely new position in the determination of foreign policy because so much foreign policy today has to do with economic matters where the Congress has to appropriate money. So that the Congress, in spite of constitutional provisions, is, to a given extent, writing our foreign policy today.

I cannot see that in here you have taken away anything from the President. After all, it is his own man, he appoints him, and that man is confirmed by the Senate, and that is the individual who is formulating the program. The President has to countersign any directives. It seems to me that there is about as complete a protection as you can give unless you want to do the thing by some entirely different method.

This method follows very closely the recommendations of the Harriman committee. I say it follows it. I think this was drafted

before the Harriman committee report was drafted. As I say, these other bodies that have been studying the situation, like the Chamber of Commerce and the Foreign Trade Council, have recommended a similar centralization of authority for administrative purposes within the hands of a new agency.

Mr. FULTON. Will the powers conflict with the policies of the Secretary of State? Let us hear about the policy on that level. Tell us whether there is a conflict there or a correlation?

Mr. HERTER. There is a correlation. He cannot issue any directives to carry out this policy without the countersignature of the President.

Mr. FULTON. How does the Secretary of State take that?

Chairman EATON. He has got to take it.

Mr. HERTER. Well, what would you want the Secretary of State to do?

Mr. FULTON. He now has that policy decision and is the guiding hand on that end of it. You are setting up somebody else.

Mr. HERTER. The Secretary of State does not have that policy decision. Probably the greater power you have got today in the Government, from the point of view of adjusting foreign-aid programs, export controls, and so forth, is in the hands of the Secretary of Commerce; the allocation of food is in the Secretary of Agriculture. In other words, you have got them scattered all through the Government departments today. The Export-Import Bank can make loans without permission from the Secretary of State today. The World Bank is an international organization in which the Secretary of State cannot intercede to tell it to make any loans or to carry out any given program.

This is an effort to try to get a correlation of these various things through some agency and some individual that can force a correlation.

Mr. FULTON. Suppose the Secretary of State says we will keep on with aid to China, and this man, as Mr. Javits suggests, says cut it off, then what?

Mr. HERTER. I would say that if this man can show that China is contravening the objectives as set forth in this bill he should be able to cut it out.

Mr. FULTON. Then he overrules the Secretary of State?

Mr. MUNDT. If he can get the countersignature of the President.

Mr. FULTON. But he doesn't need that. Under the amendment the Authority could cut off relief to China without consulting anybody.

Mr. MUNDT. Only when they violate the principles which Congress establishes.

Mr. HERTER. Who today can cut off aid to China if they want to?

Mr. FULTON. I think what the chairman stated is true, that you are vesting a considerable part of the Executive function of policy-making in foreign affairs in the Chairman of the Authority. Now, once we understand it, then Congress can do it, if it chooses to; the committee can recommend it, if it chooses to, but we should recognize clearly what we are doing.

Mr. HERTER. The Congress on many occasions said to the President, "You shall, if certain conditions exist, or do not exist, stop aid." That has been done over and over again.

Mr. VORYS. The day before yesterday.

Mr. FULTON. All I am pointing out is that you are transferring a function formerly with the Chief Executive of the Government charged by the Constitution on foreign affairs to the Chairman of this Authority.

Mr. HERTER. I will be perfectly frank with you in regard to that: if China, or Greece, or any other country, is contravening the requirements put in here which qualify them to get help from the United States, I think aid ought to be stopped, and I think the individual responsible for the administration of the program, together with his bipartisan board which we have set up, are probably in a much better position to make that determination than the President of the United States is, and, frankly, I would not want to be a party to continuing a relief program that had purely political objectives, a reconstruction program, when it looked as though there was no hope of succeeding.

Mr. FULTON. How do you overcome that provision with regard to the Secretary of State?

Mr. HERTER. The conduct of our foreign relations does not necessarily imply that you have got to keep control over the operation of a reconstruction program on money furnished by the Congress. The Congress can put in whatever conditions it sees fit. Obviously the power to grant money carries with it the power to put conditions on the grant of that money. If the President signs such bill he has obviously accepted that.

Chairman EATON. Would this work just as well if the President was a Republican?

Mr. HERTER. I think exactly so. I think your determination as to whether you are throwing money away or not is a very serious determination and one that the Congress ought to be able to place where it sees fit.

Do you think it is most desirable to have the tap turned on and off at the sole whim of the Secretary of State?

Mr. FULTON. I think that is a very good question. Do you want the Secretary of State, the President's right-hand man, to have the power to determine these over-all international policies. That is an excellent question.

Mr. HERTER. Yes.

Mr. JAVITS. I think the question is as between the President and the Chairman of the Authority, not between the Chairman of the Authority and the Secretary of State. I think the question is, do we vest the authority in the President or in someone else? The gentleman, whom we know to be not only wise, but frank in his statements, the gentleman is frank enough to say he thinks the Chairman of the Authority is better qualified, with his Board, and I think that is the issue. You come back to the fundamental premise, are we going to try to carry out a bipartisan foreign policy or are we going to work on an entirely different basis of a straight grant of power without representation in its exercise, from the party that controls the Congress of the United States today?

Chairman EATON. It makes no difference, Mr. Herter, who can shut off the tap provided the Congress has the responsibility for furnishing the water for the pipes.

Mr. HERTER. That is right. The Congress always has that power.

Chairman EATON. That, of course, involves the long-suffering taxpayer.

Mr. LODGE. I don't quite understand the meaning of this figure of \$500,000,000.

Mr. HERTER. I was going to suggest that that not be included in a bill that was brought out, that you give enough money for the setting up of an organization before you determine what the final fiscal arrangement will be.

Mr. LODGE. I see.

Mr. HERTER. I was hoping to separate a discussion of any fiscal appropriation with the question of the organization itself. It would take a little while for an organization to be set up, for the President to nominate the individual, and have him confirmed by the Senate.

Mr. LODGE. But the agency would have no function until some program was passed by the Congress.

Mr. HERTER. It couldn't function until it had money with which to operate. It would have the function of taking over the interim aid at once.

Mr. LODGE. There wouldn't be quite time for that, I imagine.

Mr. HERTER. That is a question of how fast the committee works.

Mr. LODGE. You have a date of 1954 in here. What effect would that date have on any action by the Congress with respect to the so-called Marshal plan? Will that mean, necessarily, that any action that we take will look to the year 1954?

Mr. HERTER. No. 1954 was put in as an arbitrary date. The committee studied that at some length and did not agree on any termination date. I am responsible for that particular figure but I had a feeling that insofar as Germany was concerned I doubted very much whether our responsibility there would terminate in less than 5 years. But the determining factor as to how long any agency operates is the appropriation made by the Congress, the size of the appropriation, and the length of time for which it is supposed to operate.

Mr. LODGE. In other words, although that date is in there, if the Congress chose to appropriate solely for 1 year, then the agency would go out of existence at the end of that time?

Mr. HERTER. Congress can liquidate it any time or can extend it.

Mr. VORYS. Mr. Chairman, the committee has important other business to transact before 12 o'clock, and I move that we defer further hearing on this matter and go into executive session.

Chairman EATON. You have heard the motion. All in favor say "Aye."

Mr. JARMAN. Mr. Chairman, is the motion open to discussion?

Chairman EATON. Of course. All motions are open for discussion.

Mr. JARMAN. I want to ask the witness a question by way of discussion.

Chairman EATON. On the motion?

Mr. JARMAN. Yes.

How long have you been in the House, Mr. Herter?

Mr. HERTER. Five years.

Mr. JARMAN. Have you ever before heard any motion made, either in the House or in committee, to insult Members not present at a committee hearing in the House by sending the Sergeant at Arms after them?

Mr. JONKMAN. Mr. Chairman, I object to that. That is not germane to the motion.

Mr. JARMAN. I have been here for 11 years and I never have.

Chairman EATON. We can't take that question up now.

The motion before the committee that we now go into executive session.

All in favor say "Aye"; contrary, "No." Motion carried.

Mr. Herter, we are very grateful to you for your very illuminating discussion.

(Thereupon, the committee proceeded to the consideration of business in executive session.)

UNITED STATES FOREIGN POLICY FOR A POST-WAR RECOVERY PROGRAM

MONDAY, JANUARY 12, 1948

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met at 10 a. m., in room 1301, House Office Building, Hon. Charles A. Eaton (chairman) presiding.

Chairman EATON. In accordance with a motion previously adopted by the committee, we will begin hearings at this time on United States foreign policy for a postwar recovery program. The first step will be consideration of proposals for a European recovery program, including H. R. 4840 and H. R. 4579. The motion, which was made by Mr. Fulton and Mr. Javits, is as follows:

That the committee proceed with hearings on United States foreign policy for a postwar recovery program, and that the first step be consideration of proposals for a European recovery program, including H. R. 4840 and H. R. 4579 and similar measures.

The text of H. R. 4579 appears in the record of the first day's hearing. The text of H. R. 4840 will appear in the record at this point. (H. R. 4840 is as follows:)

[H. R. 4840, 80th Cong., 2d sess.]

A BILL To promote the general welfare, national interest, and foreign policy of the United States through necessary economic and financial assistance to foreign countries which undertake to cooperate with each other in the establishment and maintenance of economic conditions essential to a peaceful and prosperous world

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Economic Cooperation Act of 1948".

SEC. 2. (a) FINDINGS AND DECLARATION OF POLICY.—Recognizing the interdependence of the United States and of Europe, and recognizing that economic disruption remaining in the wake of war is not contained by national frontiers, the Congress finds that the existing economic situation in Europe endangers the general welfare and national interest of the United States and the attainment of the objectives of the United Nations. Unless normal economic conditions and stable international economic relationships are restored in Europe, it will not be possible for the countries of Europe to achieve a working economy independent of abnormal outside assistance, or to maintain free institutions and national independence. Accordingly, it is declared to be the policy of the United States that assistance be given to those countries of Europe participating in a joint European recovery program based on self-help and mutual cooperation.

(b) PURPOSES OF ACT.—It is the purpose of this Act to effectuate the policy set forth in subsection (a) of this section by furnishing material and financial assistance to the participating countries in such a manner as to aid them, through their own individual and concerted efforts, to become independent of abnormal outside economic assistance within the period of operations under this Act, by—

(1) promoting industrial and agricultural production in the participating countries;

(2) furthering the restoration or maintenance of the soundness of European currencies, budgets, and finances;—

(3) facilitating and stimulating the growth of international trade of participating countries with one another and with other countries by appropriate measures, including reduction of barriers which may hamper such trade.

SEC. 3. Any country (including the United Kingdom of Great Britain and Northern Ireland, Eire, Iceland, and any of the zones of occupation of Germany) wholly or partly in Europe, including its colonies and dependencies, is a participating country within the meaning of this Act while it remains an adherent to a joint program for European recovery designed to accomplish the purposes of this Act.

SEC. 4 (a) There is hereby established, with its principal office in the District of Columbia, an agency of the Government which shall be known as the Economic Cooperation Administration, hereinafter referred to as the Administration. The Administration shall be headed by an Administrator for Economic Cooperation, hereinafter referred to as the Administrator, who shall be appointed by the President by and with the advice and consent of the Senate, and who shall receive compensation at the rate of \$20,000 per annum. Except as otherwise provided in this Act, the administration of the provisions of this Act is hereby vested in the Administrator. All those functions of the Administrator which affect the conduct of the foreign policy of the United States shall be performed subject to the direction and control of the Secretary of State.

(b) There shall be in the Administration a Deputy Administrator for Economic Cooperation who shall be appointed by the President, by and with the advice and consent of the Senate, and shall receive compensation at the rate of \$17,500 per annum. The Deputy Administrator for Economic Cooperation shall perform such functions as the Administrator shall designate, and shall be Acting Administrator for Economic Cooperation during the absence or disability of the Administrator or in the event of a vacancy in the office of Administrator.

(c) The President is authorized, pending the appointment and qualification of the first Administrator or Deputy Administrator for Economic Cooperation appointed hereunder, to provide for the performance of the functions of the Administrator under this Act through such departments, agencies, or establishments of the United States Government as he may direct.

(d) Any department, agency, or establishment of the Government (including, whenever used in this Act, any corporation which is an instrumentality of the United States) performing functions under this Act is authorized to employ, for duty within the continental limits of the United States, such personnel as may be necessary to carry out the provisions and purposes of this Act; and funds available pursuant to section 9 of this Act shall be available for personal services in the District of Columbia and elsewhere without regard to section 14 (a) of the Federal Employees Pay Act of 1946 (60 Stat. 219). Personnel, not to exceed sixty, of the Administration may be compensated without regard to the provisions of the Classification Act of 1923, as amended, of whom not more than ten may be compensated at a rate in excess of \$10,000 per annum, but not in excess of \$15,000 per annum. Experts and consultants, as authorized by section 15 of the Act of August 2, 1946 (5 U. S. C. 55a) may be employed by the Administration, and may be compensated at rates for individuals not in excess of \$50 per diem.

(e) The head of any department, agency, or establishment of the Government performing functions under this Act may, from time to time, promulgate such rules and regulations as may be necessary and proper to carry out his functions under this Act, and he may delegate to such officers of his department, agency, or establishment as he may designate the authority to perform any of his functions under this Act.

SEC. 5. There shall be a United States Special Representative in Europe who shall (a) be appointed by the President by and with the advice and consent of the Senate, (b) be entitled to receive the same compensation and allowances as a chief of mission, class 1, within the meaning of the Act of August 13, 1946 (60 Stat. 999), and (c) have the rank of ambassador extraordinary and plenipotentiary. He shall be the chief United States representative to any European organization of participating countries which may be established by the participating countries to further a joint program for European recovery, and shall discharge in Europe such additional responsibilities as may be assigned to him with the approval of the President in furtherance of the purposes of this Act. He may also be designated as the United States representative on the Economic Commission for Europe.

SEC. 6. (a) For the purpose of performing functions under this Act outside the continental limits of the United States, the Secretary of State may (1) appoint or

assign persons to any class in the Foreign Service Reserve for the duration of operations under this Act without regard to that provision of the Act of August 13, 1946 (60 Stat. 1009), which limits appointments to periods of not more than four years: *Provided*, That, with respect to the appointment or assignment of persons to perform functions within the responsibility of the Administrator, the Secretary of State shall make such appointments or assignments in consultation with the Administrator; and (2) by regulations prescribed by him, provide for the appointment, for the duration of operations under this Act, of Foreign Service staff officers and employees, and alien clerks and employees. A person, whether or not such person is a war service or temporary employee, thus appointed as staff officer or employee from any Government agency without break in service and with the consent of the head of the agency concerned shall, upon the termination of the appointment as staff officer or employee, be entitled to the same rights as those provided for Foreign Service Reserve officers in section 528 of the Act of August 13, 1946 (60 Stat. 1010).

(b) The provisions of the Act of August 13, 1946 (60 Stat. 999), shall, except as provided in this section, apply fully to all persons appointed or assigned pursuant to the authority contained in this section.

(c) A representative of the Administration, designated by the Administrator, shall be a member of the Board of the Foreign Service, and section 211 (a) of the Foreign Service Act of 1946 (60 Stat. 1001), is hereby amended accordingly.

(d) Civilian personnel who are citizens of the United States appointed pursuant to this section to perform functions under this Act shall be appointed subject to investigation by the Federal Bureau of Investigation, provided, however, that they may assume their posts and perform their functions after preliminary investigation and clearance by the Department of State.

SEC. 7. (a) The Administrator may, from time to time, furnish assistance to any participating country by providing for the performance of any of the functions set forth in paragraphs (1) through (5) of this subsection when he deems it to be in furtherance of the purposes of this Act, and upon the terms and conditions set forth in this Act and such additional terms and conditions consistent with the provisions of this Act as he may determine to be necessary and proper—

(1) procurement from any source, including Government stocks, of any commodity which he determines to be required for the furtherance of the purposes of this Act, and the term "commodity" as used in this Act shall mean any material, article, merchant vessel, supply or goods necessary for the purposes of this Act;

(2) processing, storing, transporting, and repairing any commodities, or performing any other services with respect to a participating country which he determines to be required for accomplishing the purposes of this Act;

(3) procurement of and furnishing technical information and assistance;

(4) chartering any merchant vessel owned by the United States which the United States Maritime Commission certifies as excess to its current requirements;

(5) transfer of any commodity or service, which transfer shall be signified by delivery of the custody and right of possession and use of such commodity, or otherwise making available any such commodity, or by rendering a service, to a participating country or to any agency or organization representing a participating country; provided that merchant vessels, except as provided in subsection (d) of section 8, may not be transferred under authority of this Act otherwise than by charter; and provided further that if a vessel of the United States is chartered under the provisions of this Act its documents as a vessel of the United States shall be surrendered and it shall, during the charter period, be considered as a foreign vessel for the purposes of the navigation and vessel-inspection laws of the United States.

(b) The Administrator may provide for the performance of any of the functions described in subsection (a) of this section—

(1) by making funds available in the form of advances or reimbursements to any participating country, or to any agency or organization representing a participating country. Expenditures of advances made, or for which reimbursements are made, under authority of this paragraph for commodities or services procured outside the continental limits of the United States may be accounted for exclusively on such certification as the Administrator may prescribe to assure expenditure in furtherance of the purposes of this Act and such certification shall be binding on the accounting officers of the Government;

(2) by utilizing the services and facilities of any department, agency, or establishment of the Government as he shall direct, with the consent of the head of such department, agency, or establishment, or, in his discretion, by acting in cooperation with the United Nations or with other international organizations or with agencies of the participating countries, and funds allocated pursuant to this section to any department, agency, or establishment of the Government shall be established in separate appropriation accounts on the books of the Treasury;

(3) by making, under rules and regulations to be prescribed by the Administrator, guaranties to any person of investments in connection with projects approved by the Administrator and the participating country concerned as furthering the purposes of this Act, which guaranties shall terminate not later than fourteen years from the date of enactment of this Act, provided that—

(i) the guaranty to any person shall not exceed the amount of dollars invested by such person in the project with the approval thereof by the Administrator and shall be limited to the transfer into United States dollars of other currencies or credits in such currencies received by such person as income from the approved investment, as repayment or return thereof, in whole or in part, or as compensation for the sale or disposition of all or any part thereof;

(ii) the total liabilities assumed under such guaranties shall not exceed 5 per centum of the total funds appropriated for the purposes of this Act;

(iii) as used in this paragraph, the term "person" means a citizen of the United States or any corporation, partnership, or other association created under the law of the United States or of any State or Territory and substantially beneficially owned by citizens of the United States.

(c) (1) The Administrator may provide assistance for any participating country, in the form and under the procedures authorized in subsections (a) and (b), respectively, of this section, through grants or upon payment in cash or on credit terms or on such other terms of payment as he may find appropriate. In determining whether such assistance shall be through grants or upon terms of payment, and in determining the terms of payment, he shall act in consultation with the National Advisory Council on International Advisory Council on International Monetary and Financial Problems, and the determination whether or not a participating country should be required to make payment for any assistance furnished to such country in furtherance of the purposes of this Act, and the terms of such payment, if required, shall depend upon the capacity of such country to make such payment without jeopardizing the accomplishment of the purposes of this Act.

(2) When it is determined that assistance should be extended under the provisions of this Act on credit terms, the Administrator shall allocate funds for the purpose to the Export-Import Bank of Washington, which shall, notwithstanding the provisions of the Export-Import Bank Act of 1945 (59 Stat. 526), as amended, make and administer the credit as directed, and on terms specified, by the Administrator in consultation with the said National Advisory Council. The Administrator shall make advances to or reimburse the Export-Import Bank of Washington for necessary administrative expenses in connection with such credits. The bank shall deposit into the Treasury of the United States as miscellaneous receipts amounts received by the bank in repayment of principal and interest of any such credits. Credits made by Export-Import Bank of Washington with funds so allocated to it by the Administrator shall not be considered in determining whether the bank has outstanding at any one time loans and guaranties to the extent of the limitation imposed by section 7 of the Export-Import Bank Act of 1945 (59 Stat. 529), as amended.

Sec. 8. (a) The Administrator, in the exercise of any authority conferred under section 7 of this Act, may procure (i) commodities owned by any department, agency, or establishment of the Government if the owning agency determines that such commodities are available for such procurement, and (ii) services from any department, agency, or establishment of the Government which the owning agency determines to be available for such procurement. The Administrator shall reimburse or pay, at replacement cost or, if required by law, at actual cost, or at such other price authorized by law agreed by the Administrator and the owning agency, out of funds available for the purposes of this Act, the owning or disposal agency, as the case may be, for such commodities or services. The amount of any reimbursement or payment to an owning agency for commodities or services so employed shall be credited to current applicable appropriations,

funds, or accounts from which there may be procured replacements of similar commodities or such services and facilities; provided that where such appropriations, funds, or accounts are not reimbursable except by reason of the foregoing provision and when the head of the owning agency determines that replacement of any commodity employed under authority of this section is not necessary, any funds received in payment therefor shall be covered into the Treasury as miscellaneous receipts.

(b) Any commodity procured out of funds made available for the purposes of this Act may, in lieu of being transferred to a participating country, be disposed of for any other purpose authorized by law, whenever in the judgment of the Administrator the interests of the United States will best be served thereby. Funds realized from such disposal shall, upon approval of the Bureau of the Budget, revert to the respective appropriation or appropriations out of which funds were expended for the procurement of such commodity.

(c) The Administrator, in furtherance of the purposes of paragraph (5) of subsection (b) of section 10, and in agreement with a participating country, may promote, by means of funds made available for the purposes of this Act, an increase in the production in such participating country of materials which are required by the United States as a result of deficiencies or potential deficiencies in the natural resources of the United States.

(d) Whenever the Administrator shall determine that sale to a participating country, or to a citizen thereof, of any merchant vessel would be in furtherance of the purposes of this Act, and whenever the President shall so direct, the United States Maritime Commission shall effect such sale at the purchase price and under the terms specified in the Merchant Ship Sales Act of 1946 (60 Stat. 41), as amended, or other applicable law, and upon such additional terms and conditions as the Administrator may specify.

SEC. 9. (a) Notwithstanding the provisions of any other law the Reconstruction Finance Corporation is authorized and directed, until such time as an appropriation shall be made pursuant to subsection (c) of this section, to make advances not to exceed in the aggregate \$500,000,000 to carry out the provisions of this Act, in such manner, at such time and in such amounts as the President shall determine, and no interest shall be charged on advances made by the Treasury to the Reconstruction Finance Corporation for this purpose. The Reconstruction Finance Corporation shall be repaid without interest from appropriations authorized under this Act for advances made by it hereunder.

(b) Such part as the President may determine of the unobligated and unexpended balances of appropriations or other funds available for the purposes of the Foreign Aid Act of 1947 shall be available for the purpose of carrying out the purposes of this Act.

(c) There are hereby authorized to be appropriated to the President from time to time, out of any money in the Treasury not otherwise appropriated, such amounts as may be necessary to carry out the provisions and accomplish the purposes of this Act: *Provided, however*, That for carrying out the provisions and accomplishing the purposes of this Act from the date of enactment of this Act through June 30, 1949, there are hereby authorized to be so appropriated not to exceed \$6,800,000,000.

(d) Funds made available for the purposes of this Act shall be available for incurring and defraying all necessary expenses incident to carrying out the provisions of this Act, including accessorial and administrative expenses and expenses for compensation, allowances and travel of personnel, including Foreign Service personnel whose services are utilized primarily for the purposes of this Act, and, without regard to the provisions of any other law, for motor vehicles, typewriters, and printing and binding.

(e) The unexpended portions of any deposits which may have been made by any participating country pursuant to section 6 of the joint resolution providing for relief assistance to the people of countries devastated by war (Public Law 84, Eightieth Congress) and section 5 (b) of the Foreign Aid Act of 1947 (Public Law 389, Eightieth Congress) may be merged with the deposits to be made by such participating country in accordance with section 10 (b) (6) of this Act, and shall be held or used under the same terms and conditions as are provided in section 10 (b) (6) of this Act.

SEC. 10. (a) The Secretary of State, after consultation with the Administrator, is authorized to conclude, with individual participating countries or any number of such countries or with an organization representing any such countries, agreements in furtherance of the purposes of this Act.

(b) As a condition precedent to the performance for any participating country of any of the functions authorized under this Act, such participating country shall conclude an agreement with the United States, which shall signify the adherence of such country to the purposes of this Act and, where applicable, shall make appropriate provision for—

(1) promoting industrial and agricultural production in order to enable the participating country to become independent of abnormal outside economic assistance;

(2) taking financial and monetary measures necessary to stabilize its currency, establish or maintain a proper rate of exchange, and generally to restore or maintain confidence in its monetary system;

(3) cooperating with other participating countries in facilitating and stimulating an increasing interchange of goods and services among the participating countries with other countries and cooperating to reduce barriers to trade among themselves and with other countries;

(4) making efficient use, within the framework of a joint program for European recovery, of the resources of such participating country, including any commodities, facilities, or services furnished under this Act;

(5) facilitating the sale to the United States for stock-piling purposes, for such period of time as may be agreed to and upon reasonable terms and in reasonable quantities, of materials which are required by the United States as a result of deficiencies or potential deficiencies in its own natural resources, and which may be available in such participating country after due regard for reasonable requirements for domestic use and commercial export of such country;

(6) placing in a special account a deposit in the currency of such country, in commensurate amounts and under such terms and conditions as may be agreed to between such country and the Government of the United States, when any commodity or service is made available through any means authorized under this Act, and is not furnished to the participating country on terms of payment. Such special account, together with the unexpended portions of any deposits which may have been made by such country pursuant to section 6 of the joint resolution providing for relief assistance to the people of countries devastated by war (Public Law 84, Eightieth Congress) and section 5 (b) of the Foreign Aid Act of 1947, shall be held or used only for such purposes as may be agreed to between such country and the Government of the United States;

(7) publishing in such country and transmitting to the United States, not less frequently than every calendar quarter after the date of the agreement, of full statements of operations under the agreement, including a report of the use of funds, commodities and services received under this Act;

(8) furnishing promptly, upon request of the United States, any relevant information which would be of assistance to the United States in determining the nature and scope of future operations under this Act.

(c) Notwithstanding the provision of subsection (b) of this section, the Administrator, during the three months after the date of enactment of this Act, may perform with respect to any participating country any of the functions authorized under this Act which he may determine to be essential in furtherance of the purposes of this Act, provided that such country (i) has signified its adherence to the purposes of this Act and its intention to conclude an agreement pursuant to subsection (b) of this section, and (ii) he finds that such country is complying with the applicable provisions of subsection (b) of this section.

SEC. 11. When the President determines it to be in furtherance of the purposes of this Act, the functions authorized under this Act may be performed without regard to such provisions of law regulating the making, performance, amendment, or modification of contracts and the expenditure of Government funds as the President may specify.

SEC. 12. (a) The President is authorized to request the cooperation of or the use of the services and facilities of the United Nations, its organs and specialized agencies or other international organizations, in carrying out the purposes of this Act, and may make payments, by advancements or reimbursements, for such purpose, out of funds made available for the purposes of this Act, as may be necessary therefor to the extent that special compensation is usually required for such services and facilities.

(b) The President shall transmit to the Secretary General of the United Nations copies of reports to Congress on the operations conducted under this Act.

(c) Any agreements concluded between the United States and participating countries or groups of such countries in implementation of the purposes of this Act shall be registered with the United Nations if such registration is required by the Charter of the United Nations.

SEC. 13. After June 30, 1952, or after the passage of a concurrent resolution by the two Houses before June 30, 1952, which declares that the powers conferred by or pursuant to section 7 of this Act are no longer necessary for the purposes of this Act, the Administrator shall not exercise any of the powers conferred by or pursuant to such section 7, except that through June 30, 1955, any of such powers may be exercised to the extent necessary to carry out an agreement with a participating country concluded before July 1, 1952, or before the passage of such concurrent resolution, whichever is the earlier, and funds made available for the purpose of this Act required to carry out any such agreement shall be deemed obligated as of the date of such agreement, and shall be available for expenditure to carry out such obligations through June 30, 1957, and funds made available for the purpose of this Act shall be available for the expenses of liquidating operations under this Act for such time as the Congress from time to time, in the Acts appropriating such funds, may authorize.

SEC. 14. The President from time to time, but not less frequently than once every calendar quarter through June 30, 1952, and once every year thereafter until all funds made available for the purposes of this Act have been expended, shall transmit to the Congress a report of operations under this Act. Reports provided for under this section shall be transmitted to the Secretary of the Senate or the Clerk of the House of Representatives, as the case may be, if the Senate or the House of Representatives, as the case may be, is not in session.

SEC. 15. If any provision of this Act or the application of such provision to any circumstances or persons shall be held invalid, the validity of the remainder of the Act and the applicability of such provision to other circumstances or persons shall not be affected thereby.

Chairman EATON. Our first witness today is the Secretary of State, Mr. Marshall.

Mr. Marshall, would you take the stand, please?

STATEMENT OF HON. GEORGE C. MARSHALL, SECRETARY OF STATE

Secretary MARSHALL. The President on December 19 presented to the Congress a proposal for a European recovery program. Subsequent documents submitted to the committee from the executive branch provide amplification and detail. Further explanation will follow:

For my part, this morning I wish to place this proposal for economic assistance to the free countries of Europe in what I believe is its broad perspective.

The European recovery program necessarily must be considered in relation to the foreign policy of the United States, which in its simplest form is concerned with those conditions abroad which affect or could later affect the future security and the well being of our Nation. What we desire, I think, is a stable, cooperative, and confident world. But such a world does not exist today. x

We must deal with the existing situation in our effort to promote peace and security. The situation in Europe has not yet developed to the point where the grim progression from economic uncertainty to tyranny is probable. But without United States support of European self-help, this progression may well become inevitable. Therefore, it is proposed that our Nation take vigorous action now to assist in setting in motion the processes of recovery in the second most productive area in the world.

The aid suggested is designed to prevent the economic strangulation which now threatens western Europe and through that vital area

We want peace. We want security. We want to see the world return to normal as quickly as possible. We are in a position of leadership by force of circumstance. A great crisis has to be met. Do we meet the situation with action or do we step aside and allow other forces to settle the pattern of future European civilization?

That is the conclusion of my prepared statement, Mr. Chairman, and, if permissible, I would like to request that the previous statement that I made before the Senate Foreign Relations Committee be included in the record.

Chairman EATON. We will be very happy to do that, Mr. Secretary. (The information referred to is as follows:)

DEPARTMENT OF STATE,
January 7, 1948.

STATEMENT BY THE HONORABLE GEORGE C. MARSHALL, SECRETARY OF STATE,
BEFORE THE SENATE COMMITTEE ON FOREIGN RELATIONS, THURSDAY, JANUARY 8, 1948

On December 19, the President placed before you the recommendations of the executive branch of the Government for a program of United States assistance to European economic recovery.

This program will cost our country billions of dollars. It will impose a burden on the American taxpayer. It will require sacrifices today in order that we may enjoy security and peace tomorrow. Should the Congress approve the program for European recovery, as I urgently recommend, we Americans will have made an historic decision of our peacetime history.

A nation in which the voice of its people directs the conduct of its affairs cannot embark on an undertaking of such magnitude and significance for light or purely sentimental reasons. Decisions of this importance are dictated by the highest considerations of national interest. There is none higher, I am sure, than the establishment of enduring peace and the maintenance of true freedom for the individual. In the deliberations of the coming weeks I ask that the European recovery program be judged in these terms and on this basis.

As the Secretary of State and as the initial representative of the executive branch of the Government in the presentation of the program to your committee, I will first outline my convictions as to the extent and manner in which American interests are involved in European recovery.

Without the reestablishment of economic health and vigor in the free countries of Europe, without the restoration of their social and political strength necessarily associated with economic recuperation, the prospect for the American people, and for free people everywhere to find peace with justice, and well-being and security for themselves and their children will be gravely prejudiced.

So long as hunger, poverty, desperation and resulting chaos threaten the great concentrations of people in western Europe—some 270 millions—there will steadily develop social unease and political confusion on every side. Left to their own resources there will be, I believe, no escape from economic distress so intense, social discontents so violent, political confusion so widespread, and hopes of the future so shattered that the historic base of western civilization, of which we are by belief and inheritance an integral part, will take on a new form in the image of the tyranny that we fought to destroy in Germany. The vacuum which the war created in western Europe will be filled by the forces of which wars are made. Our national security will be seriously threatened. We shall in effect live in an armed camp, regulated and controlled. But if we furnish effective aid to support the now visibly reviving hope of Europe, the prospect should speedily change. The foundation of political vitality is economic recovery. Durable peace requires the restoration of western European vitality.

We have engaged in a great war. We poured out our resources to win that war. We fought it to make real peace possible. Though the war has ended the peace has not commenced. We must not fail to complete that which we commenced.

The peoples of western Europe have demonstrated their will to achieve a genuine recovery by entering into a great cooperative effort. Within the limits of their resources they formally undertake to establish the basis for the peace which we all seek, but they cannot succeed without American assistance. Dollars will not save the world—but the world today cannot be saved without dollars.

The Paris report of the Committee of European Economic Cooperation was a notable achievement. For the first time in modern history representatives of 16 nations collectively disclosed their internal economic conditions and frailties and undertook, subject to stated conditions, to do certain things for the mutual benefit of all. The commitments each made to the other, if faithfully observed, will produce in western Europe a far more integrated economic system than any in previous history.

The report revealed the measure of outside assistance which in their judgment would be necessary to effect a lasting recovery of the participating nations. The executive branch, with help and advice from a great many sources, has developed from this report a program of American aid to Europe which gives substantial promise of achieving the goal of genuine recovery. The program is not one of a series of piecemeal relief measures. I ask that you note this difference, and keep it in mind throughout our explanations. The difference is absolutely vital.

I believe that this measure has received as concentrated study as has ever gone into the preparation of any proposal made to the Congress. The best minds in numerous related fields have worked for months on this vast and complicated subject. In addition, the best economic and political brains of 16 European nations have given us in an amazingly short time their analyses and conclusions.

The problem we face is enormously complex. It affects not only our country and Europe, but almost every other part of the globe.

We wish to present to you in the simplest possible way a full explanation of the executive branch recommendations for aid to Europe. Our presentation will entail the appearance of high officials from the agencies of the Government intimately concerned. Others will give you more detailed information on the many factors to be considered.

I will confine my remarks to the three basic questions involved, first, Why does Europe need help?; second, How much help is needed?; and, third, How should help be given?

I. WHY?

The "why."—Europe is still emerging from the devastation and dislocation of the most destructive war in history. Within its own resources Europe cannot achieve within a reasonable time economic stability. The war more or less destroyed the mechanism whereby Europe supported itself in the past and the initial rebuilding of that mechanism requires outside assistance under existing circumstances.

The western European participating countries, with a present population almost twice our own, constitute an interdependent area containing some of the most highly industrialized nations of the world. As a group, they are one of the two major workshops of the world. Production has become more and more specialized, and depends in large part on the processing of raw materials, largely imported from abroad, into finished goods and the furnishing of services to other areas. These goods and services have been sold throughout the world and the proceeds therefrom paid for the necessary imports.

The war smashed the vast and delicate mechanism by which European countries made their living. It was the war which destroyed coal mines and deprived the workshop of sufficient mechanical energy. It was the war which destroyed steel mills and thus cut down the workshop's material for fabrication. It was the war which destroyed transportation lines and equipment and thus made the ability to move goods and people inadequate. It was the war which destroyed livestock herds, made fertilizers unobtainable, and thus reduced soil fertility. It was the war which destroyed merchant fleets and thus cut off accustomed income from carrying the world's goods. It was the war which destroyed or caused the loss of so much of foreign investments and the income which it has produced. It was the war which bled inventories and working capital out of existence. It was the war which shattered business relationships and markets and the sources of raw materials. The war disrupted the flow of vital raw materials from southeast Asia, thereby breaking the pattern of multilateral trade which formerly provided, directly or indirectly, large dollar earnings for western Europe. In the postwar period artificial and forcible reorientation to the Soviet Union of eastern European trade has deprived western Europe of sources of foodstuff and raw material from that area. Here and there the present European situation has been aggravated by unsound or destructive policies pursued in one or another country, but the basic dislocations find their source directly in the war.

The inability of the European workshop to get food and raw materials required to produce the exports necessary to get the purchasing power for food and raw

materials is the worst of the many vicious circles that beset the European peoples. Notwithstanding the fact that industrial output, except in western Germany, has almost regained its prewar volume, under the changed conditions this is not nearly enough. The loss of European investments abroad, the destruction of merchant fleets, and the disappearance of other sources of income, together with increases in populations to be sustained, make necessary an increase in production far above prewar levels, even sufficient for a living standard considerably below prewar standards.

This is the essence of the economic problem of Europe. This problem would exist even though it were not complicated by the ideological struggles in Europe between those who want to live as free men and those small groups who aspire to dominate by the method of police states. The solution would be much easier, of course, if all the nations of Europe were cooperating. But they are not. Far from cooperating the Soviet Union and the Communist Parties have proclaimed their determined opposition to a plan for European economic recovery. Economic distress is to be employed to further political ends.

There are many who accept the picture that I have just drawn but who raise a further question. "Why must the United States carry so great a load in helping Europe?" The answer is simple. The United States is the only country in the world today which has the economic power and productivity to furnish the needed assistance.

I wish now to turn to the other questions which we must answer. These are "how much" aid is required and "how" should that aid be given.

II. HOW MUCH?

Three principles should determine the amount and timing of our aid. It must be adequate. It must be prompt. It must be effectively applied.

Objective: Recovery

The objective of the European recovery program submitted for your consideration is to achieve lasting economic recovery for western Europe; recovery in the sense that after our aid has terminated, the European countries will be able to maintain themselves by their own efforts on a sound economic basis.

Our assistance, if we determine to embark on this program to aid western Europe, must be adequate to do the job. The initial increment of our aid should be fully sufficient to get the program under way on a broad, sound basis and not in a piecemeal manner. An inadequate program would involve a wastage of our resources with an ineffective result. Either undertake to meet the requirements of the problem or don't undertake it at all.

Time is vital

I think it must be plain to all that the circumstances which have given birth to this program call for promptness in decision and vigor in putting the project into operation. The sooner this program can get under way the greater its chances of success. Careful consideration and early action are not incompatible.

The interim aid law which the Congress enacted last December was designed as a stopgap measure to cover the period until April 1 of this year. In the meantime it would be possible to consider the long-term recovery measure which we are now discussing. Unless the program can be placed in operation on or soon after April 1, there will, undoubtedly, be a serious deterioration in some of the basic conditions upon which the whole project is predicated.

It is proposed that the Congress now authorize the program for its full four and one-quarter year duration, although appropriations are being requested only for the first 15 months. Annual decisions on appropriations will afford full opportunity for review and control. But a general authorization now for the longer term will provide a necessary foundation for the continuing effort and cooperation of the European countries in a progressive program of recovery.

Amounts of required assistance

The amounts, form, and conditions of the recommended program of American aid to European recovery have been presented in President Truman's message to the Congress on December 19, 1947. They were further explained in the proposed draft legislation and background material furnished to this committee at that time by the Department of State. Taking as the basis genuine European cooperation—the maximum of self-help and mutual help on the part of the participating European countries—the program aims to provide these countries, until the end of June 1952, with those portions of their essential imports from the

Western Hemisphere which they themselves cannot pay for. These essential imports include not only the food, fuel and other supplies, but also equipment and materials to enable them to increase their productive capacity. They must produce and export considerably more goods than they did in prewar times if they are to become self-supporting, even at a lower standard of living.

During the first 15 months, exports from the European countries will provide current revenue sufficient to cover almost their entire import needs from sources outside the Western Hemisphere and also about one-third of their requirements from the Western Hemisphere.

It is not proposed that the United States provide aid to the full extent of western Europe's remaining trade deficit with the Western Hemisphere. Funds from sources other than the United States Treasury, are expected to carry part of the load. These will be, principally, credits and other forms of assistance from other countries in our hemisphere, loans from the International Bank and private sources, and a further slight reduction in European reserves. It is the final deficit, after all those other means of financing essential imports have been utilized, that it is proposed be covered by American aid.

In each succeeding year of the program, increased production and increased trade from Europe is expected to reduce the amount of assistance needed, until after mid-1952, when it is calculated that the participating countries will have recovered ability to support themselves.

The recommended program of 6.8 billion dollars for the first 15 months reflects a searching and comprehensive investigation by the executive branch of European needs and of availabilities in the United States and other supplying countries, taking full account of the findings of the Harriman, Krug, and Nourse committees.

The program of 6.8 billion dollars for the first 15 months has been computed with precision. I wish to emphasize that this amount does not represent a generous estimate of requirements. It is not an "asking figure" based on anticipated reductions prior to approval. It reflects a rigorous screening of the proposals developed by the CEEC and a realistic appraisal of availabilities. In our judgment, American assistance in this magnitude is required to initiate a program of genuine recovery and to take both Europe and this Nation out of the blind alley of mere continuing relief.

The estimated cost of the program is now put at somewhere between 15.1 to 17.8 billions. But this will depend on developments each year, the progress made and unforeseeable variations in the weather as it affects crops. The over-all cost is not capable of precise determination so far in advance.

Can we afford it?

In developing the program of American assistance, no question has been more closely examined than the ability of the United States to provide assistance in the magnitudes proposed. Both in terms of physical resources and in terms of financial capacity, our ability to support such a program seems clear. Representatives of the executive branch more closely familiar than I with the domestic economy will provide further testimony on this issue, but I should like to remind you of the conclusions of the three special committees which explored this matter in detail during the summer and fall.

The proposed program does involve some sacrifice on the part of the American people, but it should be kept in mind that the burden of the program diminishes rapidly after the first 15 months. Considerations of the cost must be related to the momentous objectives on the one hand and to the probable price of the alternatives. The 6.8 billion dollars proposed for the first 15 months is less than a single month's charge of the war. A world of continuing uneasy half-peace will create demands for constantly mounting expenditures for defense. This program should be viewed as an investment in peace. In those terms, the cost is low.

III. HOW?

The third main consideration which, I feel, should be borne in mind in connection with this measure is that relating to conditions or terms upon which American assistance will be extended. It is the obvious duty of this Government to insure insofar as possible that the aid extended should be effectively used to promote recovery and not diverted to other purposes whatever their nature. This aspect of the program is perhaps the most delicate and difficult and one which will require the exercise of a mature judgment and intelligent understanding of the nature of the problem faced by the European governments and of our particular position of leadership in this matter. We must always have in mind that we are dealing with democratic governments of sovereign nations.

X We will be working with a group of nations each with a long and proud history. The peoples of these countries are highly skilled, able, and energetic, and justly proud of their cultures. They have ancient traditions of self-reliance and are eager to take the lead in working out their own salvation.

X We have stated in many ways that American aid will not be used to interfere with the sovereign rights of these nations and their own responsibility to work out their own salvation. I cannot emphasize too much my profound conviction that the aid we furnish must not be tied to conditions which would, in effect, destroy the whole moral justification for our cooperative assistance toward European partnership.

We are dealing with democratic governments. One of the major justifications of asking the American people to make the sacrifice necessary under this program is the vital stake that the United States has in helping to preserve democracy in Europe. As democratic governments they are responsive, like our own, to the peoples of their countries—and we would not have it otherwise. We cannot expect any democratic government to take upon itself obligations or accept conditions which run counter to the basic national sentiment of its people. This program calls for free cooperation among nations mutually respecting one another's sincerity of purpose in the common endeavor—a cooperation which we hope will long outlive the period of American assistance.

The initial suggestion of June 5 last, the concept of American assistance to Europe, has been based on the premise that European initiative and cooperation are prerequisite to European recovery. Only the Europeans themselves can finally solve their problem.

The participating nations have signified their intention to retain the initiative in promoting their own joint recovery. They have pledged themselves to take effective cooperative measures. They have established ambitious production targets for themselves. They have recognized the need for financial and monetary stability and have agreed to take necessary steps in this direction. They have agreed to establish a continuing organization to make most effective their co-operative work and the application of American assistance. When our program is initiated we may expect that the participating European countries will reaffirm as an organic part of that program their multilateral agreements.

The fulfillment of the mutual pledges of these nations would have profound effects in altering for the better the future economic condition of the European Continent. The Paris Conference itself was one major step, and the participating nations have not waited on American action before taking further steps, many of which required a high order of political courage. They have moved forward toward a practical working arrangement for the multilateral clearing of trade. France and Italy, whose financial affairs suffered greatly by war and occupation, are taking energetic measures to establish monetary stability—an essential prerequisite to economic recovery. British coal production is being increased more quickly than even the more hopeful forecasts, and there is a prospect of the early resumption of exports to the Continent. The customs union among Belgium, the Netherlands, and Luxembourg is now in operation. Negotiations for a Franco-Italian customs union are proceeding.

Application of American aid

Our aid will not be given merely by turning money over to the European governments. The European countries will prepare periodic statements of their needs, taking into account the developing programs of mutual aid worked out through the CEEC continuing organization. After review by the specialist economic co-operation officers in each country and by the special United States Ambassador to the continuing CEEC organization, they will be transmitted to the Administrator of the American agency carrying out our program of assistance.

The Administrator, in collaboration with other appropriate agencies of the Government, will determine to what extent the European requirements are justified and to what extent they can safely be met. The Administrator will also decide which specific requirements from among the over-all requirements will be financed by the United States, taking into account the ability of the country concerned to pay for some portion or all of its total needs. For those needs which cannot be paid for in cash, the Administrator will further decide, in consultation with the National Advisory Council, whether aid will be provided in loans—where a sound capacity to repay in the future exists—or in outright grants. When the program has been determined in detail, the Administrator will either advance requisite funds to the participating country concerned to enable the purchase of the approved imports or, more generally, he will reimburse the countries when they have procured and received these import items.

A substantial amount of the essential needs of Europe must come from countries of the Western Hemisphere other than the United States. In some cases the quantities required will not exist in the United States, in others the impact on the American economy will be greatly relieved if commodities can be procured elsewhere. A sizeable proportion of the funds appropriated for the European recovery program should therefore be available for the financing of purchases made outside the United States.

The application of American assistance will be in accord with bilateral agreements to be negotiated with each of the participating countries. The terms of these proposed agreements are outlined fully in the documents submitted to your committee on December 19.

Organization for the program

The administration of the program will demand the best talent and the greatest efficiency that our country can muster. The organization bearing the central responsibility should be small and select. It must hold the full and complete confidence of the American people and of the Europeans. It should combine efficient, business-like administration and operation with the qualities of judgment and discrimination necessary to achieve quick and lasting recovery in Europe at the least long-term cost to the American people and with the least impact on our economy.

The organization must fit into the complex mechanics of our world export picture. American food, steel, and other products are being exported to many areas other than Europe. In many categories American output represents the major source of shortage goods in the world. There is at present workable machinery in the Government for determining total export availabilities in the light of domestic needs and for allocating these items among the many bidders. We propose that this machinery be continued.

The organization must be granted flexibility in its operations. In my judgment this is the most vital single factor in effective administration. Without flexibility the organization will be unable to take advantage of favorable developments, to meet adverse emergencies, or to cushion the impact of the program on the domestic economy.

It has been suggested in some quarters that the administering agency should be established in the form of a Government corporation. It is claimed that a corporation can be vested with broader powers and flexibility than an independent executive agency. I do not believe that this is necessarily so. The legislation establishing an agency can clothe it with any or all of the beneficial attributes of a Government corporation. On the other hand, an executive agency under the responsible direction of one man, and fitted into the existing machinery of Government, will be better able to meet the requirements of the situation than a corporation directed by a board. This task of administration clearly calls for administration by a single responsible individual.

Finally, the operation of the program must be related to the foreign policy of the Nation. The importance of the recovery program in our foreign affairs needs no argument. To carry out this relationship effectively will require cooperation and teamwork, but I know of no other way by which the complexities of modern world affairs can be met. It should, I think, be constantly kept in mind that this great project, which would be difficult enough in a normal international political climate, must be carried to success against the avowed determination of the Soviet Union and the Communist Party to oppose and sabotage it at every turn. There has been comment that the proposed organization, the Economic Cooperation Administration, would be completely under the thumb of the Department of State. This is not so, should not be so, and need not be so. I have personally interested myself to see that it will not be so. The activities of the ECA will touch on many aspects of our internal American affairs and on our economy. In the multitude of activities of this nature the Department of State should have no direction.

But the activities of the ECA will be directly related to the affairs of the European nations, political as well as economic, and will also affect the affairs of other nations throughout the world. In this field, the constitutional responsibility of the President is paramount. Whether or not he chooses to ignore or eliminate the Secretary of State in the conduct of foreign relations is a Presidential decision. I think that in our effort to restore the stability of the governments of western Europe it would be unfortunate to create an entirely new agency of foreign policy for this Government. There cannot be two Secretaries of State. I do not wish to interfere in the proper operations of the ECA. The organizational structure we have proposed provides a means for giving appropriate direc-

tion and control in matters of foreign policy to the Administrator of the ECA with least interference in the businesslike conduct of his task. In this connection he must coordinate his affairs with the legal responsibilities charged to the Secretaries of Commerce and Agriculture.

The man who accepts the challenge of the great task of administering the European recovery program must be a man of great breadth, ability, and stature. I have no qualms but that with such a man, and the able aides he will choose, I and my staff can form a smoothly working team for handling the complicated problems in foreign relationships which will arise in the course of the program. In my judgment, the organizational proposals which have been put forward represent a sound and practical arrangement of functions and a framework for successful administration.

CONCLUSION

What are the prospects of success of such a program for the economic recovery of a continent? It would be absurd to deny the existence of obstacles and risks. Weather and the extent of world crops are unpredictable. The possible extent of political sabotage and the effectiveness with which its true intentions are unmasked and thus made susceptible to control cannot be fully foreseen. All we can say is this program does provide the means for success and if we maintain the will for success I believe that success will be achieved.

To be quite clear, this unprecedented endeavor of the new world to help the old is neither sure nor easy. It is a calculated risk. But there can be no doubts as to the alternatives. The way of life that we have known is literally in balance.

Our country is now faced with a momentous decision. If we decide that the United States is unable or unwilling effectively to assist in the reconstruction of western Europe, we must accept the consequences of its collapse into the dictatorship of police states.

Chairman EATON. Are you now ready for questions?

Secretary MARSHALL. We may put it that way, sir.

Chairman EATON. We will demonstrate as we go along how far wrong you are.

We have had a practice, in order to save time, of a 5-minute rule on the first round, but I think possibly that this is so important a question that we better give each member an opportunity to take whatever time he desires, so, speaking for myself as a member of this committee only, I am profoundly discouraged over various questions that you have raised.

The situation goes to the very root of our constitutional set-up, as I see it. We have 16 sovereign states. This is a sovereign State. We have 16 Ambassadors over there representing this Nation officially. They have their ambassadors here representing those nations or those governments officially. We propose to interview each of those sovereign states with an economic program under our own supervision and direction, supplying the funds and determining how they are to be expended and applied.

Are we going to do that by a special organization and, if not, by a special organization are we going to revamp the State Department so that it will be competent to deal with economic matters which, in days gone by, had not been its final concern? Its concern was policy.

You mentioned our foreign policy. I presume you would be able to give us what is the foreign policy of this Nation in a sentence or two, and, in my judgment, it would be one of the most inspired prophecies of all age.

Now, will you explain to us, Mr. Secretary, how we are going to go into these sovereign states and administer our funds for their interest without encroaching on the age-long method of intercourse between the governments of those sovereign states and this sovereign State?

Secretary MARSHALL. In answering that question, Mr. Chairman, I will leave, for a moment, the characteristics of the administrative

set-up in the United States, and initially discuss the procedure to be followed in carrying out the plan's impact on the situation in Europe.

It is proposed under the draft of the legislation submitted, that we have, first, an ambassador, to be formally confirmed by the Congress, to represent directly the Administrator or the administrative agency in this country, in contact with the representative group of the 16 nations.

There exists already such a representative group or a committee. You might call it, I presume, an executive committee. They have some special term for it, but that is what it is.

The Ambassador at Large would be in direct, constant contact with that group.

From there, the procedure would, so far as he is concerned, depend very largely on the changing situation and on the personalities involved.

It is conceivable that he would go directly to countries concerned in connection with purely businesslike matters, pertaining to the application of these funds, and the procedures involved, or to inform himself as to the procedure then in process in the nation concerned, in respect to the agreed pledges of that nation in its agreement with the other 15 nations, achieved in Paris.

If, in his conduct of his responsibilities, it becomes necessary for him to step from the business contacts into the national contacts of that nation's government, then, I would assume that he should make his contact in company with our Ambassador in that particular nation. In other words, they would go together and make the call on whomever it was they desired to see. So we would have no complete change or elimination of our age-old procedure in dealing with another nation. At the same time he would have a direct personal contact with the official of the government concerned with the particular matter under consideration.

Now, his reports pertaining to the ordinary business procedure involved in this matter would go directly to the Administrator here in Washington.

Where a question of foreign policy becomes involved, he would certainly report both to the Administrator and to the Secretary of State and they, together, would have to find the solution, or go to the President to get a solution.

At the same time we would have established in each embassy abroad a strengthened economic set-up. There is already an economic counselor with assistants in each embassy. That group would have to be greatly strengthened and the appointments to it would either come out of the Foreign Service or direct from the outside world, in the United States, that is, as determined by the Administrator.

There we have a situation which is indicated in the rather technical wording of the proposed bill. Its purpose is to make the maximum use of the reserve system recently established for the Foreign Service, which, I am told, was developed to take advantage of the talent that was brought in during the war years and other able persons available outside of the Government.

By the terms of the proposed bill, those men would be called into the Foreign Service where their recompense would be higher than otherwise would be the case, and their positions, therefore, would be improved to that extent.

There is no barrier at all in the proposed legislation to the Administrator going around the country, we will say, to obtain other talent that might become available or that he might find available and desirable for this work.

Now, as to the operation involved, considering the fact that this economic set-up is in the Embassy, or in the Legation, it is necessary in dealing directly with the other country involved, that we should not break down the whole procedure of our Government in such international relations. At the same time it is necessary that this economic set-up in the Embassy follow, as clearly as possible, the general policies laid down by the Administrator in Washington. That is perfectly practical, I think, under this procedure, but, of course, it would be a much more clearly defined affair if we set up in each country entirely independent agencies.

However, you cannot fight the problem. We have an existing set-up which has historic significance, just as we have here in Washington an existing set-up of many, many years of experience and tradition.

Therefore, instead of reorganizing our Government and reorganizing all our bases of foreign relations, in some way or other we have to find, I consider, a practical basis for operating to the maximum of efficiency.

I do not foresee conditions developing which would be unduly limiting in their effect on the businesslike administration of the agency. I feel, on the one hand, that the Administrator should be an individual, his powers only limited by the legislative statements which would constitute his directive, and the existing methods of our Government unless Congress sees fit to alter them by law.

For example, the Congress has charged the Secretary of Commerce and the Secretary of Agriculture with certain responsibilities regarding the allocation of materials as relates to this country, primarily, and as relates to any exports abroad. The Administrator here would have to maintain contact with those officials in order to keep the matter in balance, because, in the first place, that is the law, and, in the second place, the whole world is involved, not only western Europe, in all of these matters. The Administrator is not dealing directly of his own initiative presumably with the entire world, though his actions will be reflected entirely around the world as to what we do in this matter.

We have a set of conditions which have to be met.

In my statements I have referred to the relation of this administration to the foreign policy of the United States. I think everyone will accept what we consider to be the fact, that it will be a major consideration and will be a major influence on foreign policy. Now, I hazard the statement that in the process the program, probably 80 percent of the activities will be purely business and not require any reference to the pros and cons of foreign policy. Possibly 20 percent, maybe less, will have a direct relationship to foreign policy, and there I feel it would be absolutely necessary that there be no misunderstanding as to how that issue was to be met.

This whole matter is one of tremendous importance. On the one hand, we want to be businesslike and have efficiency and, on the other we have a situation of government and relationship to the world at large which you cannot change in a minute, and which I do not

believe it would be desirable to change. As a matter of fact, it would be rather unusual, where we are trying to strengthen the free governments of 16 nations or assist them in their rehabilitation, if we were to very materially alter our own processes of government.

I think we have to handle the difficulties and arrange our own procedure in accordance therewith in the most efficient manner we can devise under the well-established traditions and arrangements of government.

There is nothing unique in this situation. It is comparable with almost all operations of our Government. You cannot proceed in the direct manner that is customary in dealing with business affairs. We have quite a different set of conditions to meet.

I have had considerable experience with that during 6 years of similar troubles. You have to accommodate yourself to the conditions in the best way you can devise to meet the requirements. You certainly cannot change the face of the Government. It cannot be done that way. The same applies in this situation. We want an efficient administration. Now, are we going to change the characteristics of our Government in order to get that, or are we going to not fight the problem but meet it by determining the most effective way to set up a procedure that will produce the desired results?

However good the organization is, its efficiency is going to depend, necessarily, on personalities. The best organization will give a poor performance unless there is a reasonably competent individual at the head of that organization. That applies here as well as anywhere else. Also, we have to assume that where we do not get the necessary efficient coordination, cooperation and good judgment, we will have to make changes to meet such conditions. That is inherent in any procedure, and you have to have the courage to make decisions.

Does that answer your question, Mr. Chairman?

Chairman EATON. Yes, sir.

Who would make the changes, if, in this financial organization, it turned out you had someone who was incompetent? Who would remove him and replace him?

Secretary MARSHALL. I was not thinking only of the business organization; I was taking an over-all view of the entire necessarily complex setup which we cannot well avoid.

Chairman EATON. I have but one more question, because I want the other members of the Committee to have full time. How do you meet the assertion of a certain ideology in government that if we follow out this program, we will interfere with the sovereignty and enslave these countries whom we are trying to set free? How would you meet that criticism?

Secretary MARSHALL. Well, Mr. Chairman, pure propaganda is very hard to meet as such. It takes a period of time to establish the fact that you are clean-minded in your proposals and decent in your desires and that you are dependable.

Certainly, if this involved a conspiracy for economic imperialism, it would have to have a basis of more Machiavellian approach than is exhibited here with public hearings and public discussions on every side with regard to every issue. Such a procedure is totally lacking. This is a matter of public concern to the people of the United States, and instead of its being evident that we are engaged in a conspiracy, as alleged, it is quite evident we are interested in having the general

public understand the situation, and we are trying to find a sound, reasonable, decent approach to the solution.

Chairman EATON. Our actions are carried on with the full knowledge, consent, and approval of the nations we are trying to help?

Secretary MARSHALL. I think that is the case, sir, and I think also we might well have in mind at the present time the tremendous psychological effect of what has already been done and what it is proposed to be done.

As you all well know, at least from the papers if you were not yourselves in Europe this last summer, and particularly during the period of the London Conference, there was a tremendous effort by the Communists to overthrow the Governments of Italy and France, and it was done in a very barefaced manner. It was remarkable. There was little effort to disguise the central, dominating fact of what that was all about.

The people in Europe and the people certainly in western Europe are struggling with a very grave difficulty in establishing themselves in a strong position, and, as the committee would understand better than I do, one of the difficulties is in resisting the demagogic appeals to the public who are suffering from lack of this and lack of that to a very marked degree. It is very easy to stir up dissension and it is very natural that those who lack greatly will turn to almost any leader who promises a better situation for them. It matters not whether the promise has any possibility of being carried out. They are, I think, mainly—certainly France and certainly Italy—in the situation of a man who is suffering illness, and the purpose of the program as proposed by the administration is to take action leading to the rehabilitation, you might say, of the patient until he is strong enough to take the necessary action for himself.

Chairman EATON. Mr. Secretary, for the sake of the record, you are a master of the English language, and I doubt the appropriateness of the adjective that you applied to "propaganda." I wouldn't call it "pure." Call it "poor" but not "pure."

Mr. BLOOM. You said, I believe, you would appoint an Ambassador or the President would appoint an Ambassador. Did you mean the chief of the organization would have the rank of Ambassador? He would not be an Ambassador to any specific country, would he? He would have the rank of Ambassador, but he would not be an Ambassador, would he?

Secretary MARSHALL. The man in Europe would be an Ambassador.

Mr. BLOOM. To where?

Secretary MARSHALL. He would be Ambassador at large with specific contact with this Committee representing the sixteen nations.

Mr. BLOOM. He would have the rank of ambassador, but not to any special country?

Secretary MARSHALL. That is correct.

Mr. BLOOM. Following the question of the Chairman with reference to the sovereignty of these different nations, would we not be disturbing the sovereignty if we were to place in this legislation certain provisions that they would have to take and accept the provisions of our law that we would enact over here, the same as we did in the interim-aid bill, and in doing that, would we not disturb their sovereignty if we made their legislators accept our law? Otherwise, we could do nothing, could we?

Secretary MARSHALL. Well, Mr. Bloom, I think that is generally correct, but it is a rather general statement; there are certain acceptable provisos and undoubtedly they will have to go into whatever legislation is proposed.

Mr. BLOOM. Could that not be a matter of agreement?

Secretary MARSHALL. It should not be of a nature directly affecting their sovereignty. When I say that, I mean both legally and psychologically.

We are to have some bilateral agreements, and the fact that they are arranged on that basis should enable us to avoid what you indicated in your question.

Mr. BLOOM. The acceptance of any other organization to administer this legislation would be contrary to the Constitution and the decisions of the Supreme Court, and that should be held invalid as taking away the authority of the President of the United States in international or foreign affairs.

What would happen to the entire act if that one section of the law should be declared invalid?

Secretary MARSHALL. Mr. Bloom, your experience in such matters is much more extensive than mine.

Mr. BLOOM. I would like your opinion.

Secretary MARSHALL. That is a legal opinion you are asking me, sir.

Mr. BLOOM. Well, I am not a lawyer.

Secretary MARSHALL. Well, I would say that, in a general way, it would be a most unfortunate development.

Mr. BLOOM. I am with you on your idea.

Secretary MARSHALL. You would have no machinery left with which to execute the law.

Mr. BLOOM. That is right. So the whole law would fall, would it not?

Secretary MARSHALL. Presumably so; yes, sir.

Mr. BLOOM. So the only way, according to our Constitution, and the decisions of the Supreme Court with reference to this matter, is to leave this complete authority with the President of the United States, and not to have a separate corporation?

Secretary MARSHALL. That would seem to be the situation, sir.

Mr. BLOOM. Do you know of any other idea or way of doing it rather than according to our law?

Secretary MARSHALL. No, sir.

Mr. BLOOM. Do you believe, Mr. Secretary, at this time we should consider the recovery of any other part of the world except European recovery with the 16 nations that are specifically mentioned here?

Secretary MARSHALL. I think what we are now engaged in is of the first order of importance and should not be complicated any more than is absolutely essential through introduction into the discussions of other problems in other parts of the world. At the same time I recognize the congressional desire to know to what extent financially it may be proposed that we become involved in other matters.

Take the issue of China, for example. I would say, at the present time, that that is not pertinent to our discussion. However, in the reasonably near future, while you are still in the process of this investigation by the committee, I think the administration will put forward a proposal in regard to China, so that it will be apparent to the Congress what amounts might become involved in addition to what we are talking about here.

To that extent, these other issues are pertinent, but there is the great and immediately vital requirement that we are involved with here, and I think we only complicate our problem by any discussion of the details of some other procedure, particularly if the administration has not yet been able to clear it through the necessary agencies.

Mr. BLOOM. Are you able at this time to give the committee any amount that would be necessary for China or any other part of the world?

Secretary MARSHALL. Not at this time, sir, but I think I will very shortly.

Mr. BLOOM. Would you have that before we consider this \$6,-800,000,000?

Secretary MARSHALL. Well, you are considering it right now, sir.

Mr. BLOOM. What: China?

Secretary MARSHALL. No; the \$6,800,000,000.

Mr. BLOOM. Yes, but will you have that information before we go ahead and consider this European relief?

Secretary MARSHALL. I would say so, before you reach a final conclusion on it. It should be possible to give you an indication of the amount we think should be appropriated in relation to China.

Chairman EATON. Mr. Chipfield.

Mr. CHIPERFIELD. Mr. Secretary, we have been presented with a perfect maze of material and data, and so forth, which we have not yet had the chance to analyze and study. However, in going over that material, I do not find any break-down so far as countries are concerned as to the requirements or availability of material for these countries.

Are you going to be able to furnish that to us?

Secretary MARSHALL. Yes, sir.

Mr. CHIPERFIELD. For instance, you ask for \$6,800,000,000 for this first 15-month period. I would like to have for the various countries a break-down, so we will know what amounts and the different types of material go to each country.

Secretary MARSHALL. We have a report on each country.

Mr. CHIPERFIELD. I have not been able to find it as yet.

Secretary MARSHALL. It will be filed, I believe, on Wednesday.

Mr. CHIPERFIELD. You did furnish that same kind of statement to us on the 350 million dollar relief bill and also on the 597 million dollar bill.

Secretary MARSHALL. We have a similar report on this bill.

Mr. CHIPERFIELD. In this bill introduced by Dr. Eaton the termination date, so far as deliveries are concerned, is June 30, 1957.

Secretary MARSHALL. Yes sir; but not 1957 for deliveries.

Chairman EATON. It seems to me, therefore, that this is not a 4½-year program but a 9½-year program.

Secretary MARSHALL. No, sir. That means that any commitment that is made during the period of the 4½ year can run through to the conclusion of deliveries. The plan is limited to the four-plus-a-fraction year program, by the funds appropriated for the purpose, but in the last 6 months, with those funds, as appropriated by Congress, agreement may be made to furnish some particular material, that is not on the counter for immediate wrapping up and delivery. As to that we have to have a legal basis not to have it cut off in the process of manufacture, but the congressional control, with relation to the 4-year period, is in the money.

Mr. CHIPERFIELD. I understand you have to enter a contract before July 1, 1952, but this allows an additional 5 years for delivery.

We have had the same thing in lend-lease. Right today we are still delivering lend-lease because they entered into contracts before the termination date.

In other words, what I am afraid of is that on June 29, 1957, we will still be dishing this stuff out.

Secretary MARSHALL. I will ask Mr. Thorp to give you a more technical answer.

STATEMENT OF WILLARD L. THORP, ASSISTANT SECRETARY OF STATE FOR ECONOMIC AFFAIRS

Mr. THORP. At first there has to be a period of completion of deliveries and such things that were in the works as of the termination date.

As the act is now drawn, the period of time allowed is 3 years. I might say that I do not believe that 3 years is a date that has any special sanctity about it, and it is perfectly possible to consider what is an appropriate time for completing the deliveries. In the act as drawn there is 3 years for that. There is an additional 2 years for the winding up or termination of the operation which means primarily the checking through the vouchers and the closing out of the operation.

Mr. CHIPERFIELD. Will you point out in the bill where it limits it to 3 years?

Mr. THORP. It is in section 13, Mr. Chiperfield.

Mr. CHIPERFIELD. I have it before me.

Mr. THORP. The first date mentioned is June 30, 1955—

except that through June 30, 1955, any of such powers may be exercised to the extent necessary to carry out agreement with a participating country concluded before July 1, 1952.

That was intended to permit the deliveries of such things up until 1955, and the 1957 date was intended to provide 2 years for closing out the agency.

Mr. CHIPERFIELD. What does it say in line 21?—

Shall be available for expenditure to carry out such obligations through June 30, 1957?

Mr. THORP. That is for the purpose of paying bills.

Mr. CHIPERFIELD. It does not say so.

Mr. THORP. I should think one would interpret the first phrase as being a limitation.

That is, the 1955 date provides a limitation on powers to carry out agreements.

If the wording is not satisfactory, I have stated the intention and it can be reworded certainly to meet that intention.

Mr. CHIPERFIELD. Mr. Secretary, Mr. Bloom questioned you about the ambassador at large. Is this ambassador under the Administrator or is he coequal?

Secretary MARSHALL. He is under the Administrator.

Mr. CHIPERFIELD. I have a chart of an organization that is attached to the back of the outline of the "ERP," and it shows on this

chart the national defense establishment, the Labor Department, and the Interior Department.

How are they involved in this program?

Secretary MARSHALL. Would you repeat the last part of that?

Mr. CHIPERFIELD. It is indicated here the national defense establishment, the Labor Department and the Interior Department. How are they involved in this program?

Secretary MARSHALL. Taking the first one, the national defense; that is involved in the German aspect of the matter as well as the Austrian.

The relationship of the Interior Department is concerned primarily with the oil factor. The Department of Commerce is primarily concerned in relation to the allocation of materials other than food products. The Agriculture Department is involved in its responsibility for the allocation of food products at home and abroad.

The Treasury, I think, is self-evident, where it comes into the matter.

Mr. CHIPERFIELD. Thank you. That is all at the present time.

Chairman EATON. Mr. Kee.

Mr. KEE. Mr. Secretary, I was interested in your examination with reference to the appointment of the Ambassador. I believe that is provided for in section 5 of the bill. This Ambassador will be appointed, as I understand it, under the provisions of the Foreign Service Act.

Secretary MARSHALL. Yes.

Mr. KEE. He will become a foreign-service officer?

Secretary MARSHALL. Not exactly, sir.

Mr. KEE. The section provides that he will be the chief representative of the United States Government to any organization that may be created by the nations receiving aid and relief?

Secretary MARSHALL. Yes, sir.

Mr. KEE. He will be, as I understand, what we might call a roving ambassador to all of the 16 countries?

Secretary MARSHALL. Yes, sir.

Mr. KEE. He will have the rank of Ambassador?

Secretary MARSHALL. Yes.

Mr. KEE. I was also interested in the impact that this act will possibly have upon our foreign policy.

There is a provision in the act that it seems has caused considerable discussion. Section 4 (a) of the bill contains the provision that—

all those functions of the Administrator which affect the conduct of the foreign policy of the United States shall be performed subject to the direction and control of the Secretary of State.

There is a question that may be raised with reference to which of the functions of the Administrator do affect our foreign policy. Who is to determine and who will determine which of the functions of the Administrator do affect our foreign policy?

Secretary MARSHALL. I do not believe you can at this time define specifically what particular affairs in the operation of the administration will have a direct relation to our foreign policy. To start with, the whole procedure of this program certainly directly affects the foreign relations of the United States and its relations with 16 nations. Those are certainly foreign relations. The psychological effect is of a great, vast importance to our foreign policy and to its execution,

which, in turn, is quite decidedly dependent on the reactions of the peoples of Europe concerned.

Now, I might say in connection with this problem that when I studied the matter myself, the thought of a good many officials of the Government was that this agency should be put under the State Department. The reason given was that unless that was done, there would be such a difference as to responsibility; what was foreign policy and what was not foreign policy; that we would probably be in a state of continuous dispute as to whether a particular action did or did not affect foreign policy. The Administrator might feel he was so hampered that he could not proceed in a direct, businesslike way. On the other side, the Secretary of State might insist the particular action did have an effect on foreign policy and should be considered from that point of view and not purely from the businesslike point of view. The President would have imposed on him so many issues to decide that he would be quite overwhelmed with the requirements of making those decisions, regarding each one of which he would have to be very fully informed, and all of the situations are rather complex.

For that reason, then, it was strongly felt that the agency should be put within the State Department so there could be no debate about responsibility. My own reaction to that is that while the arguments from an academic point of view were excellent, from a practical, psychological point of view, the cure was worse than the bite, and what we should do is find another procedure to carry this out. Well, any other procedure is bound to be complicated, because we are not changing, I assume, our general governmental procedure. We are not changing traditions and actions of Congress that go back through generations. My own reaction was we had to find some way outside of the State Department to handle such a matter. I thought that, in the first place, that would insure our being able to get a more competent man, and more well-known man, than if he were submerged within the State Department.

I recognized clearly, I think, the difficulties involved when it came to the question of what was and what was not a foreign policy issue. However, I thought that could be handled, because if it comes to the worst, that is, a disagreement where the Administrator feels the matter so important that he just cannot accept the decision of the Secretary of State, it would have to go to the President, who has the constitutional responsibility for all foreign policy. But, I did not think that would occur with sufficient frequency to burden unduly the President, and I did not see any other way out.

With that view of the matter, I strongly supported putting this agency outside of the State Department, to the extent that when I found it apparently was going to be proposed that it should be within the State Department, I made a last appeal to the President when I was in London, not to put this in the State Department. He accepted my proposal in the matter. I found it, therefore, as it is written here. You also find the objections to it that it does not have a clear-cut definition of authority, except to the extent that when it comes to foreign policy, the Secretary of State has the say, unless the President overrules him.

Now, to go further into the matter, I assumed when I read the proposed provision that great issue would be taken with the "direction and control" language. I investigated at quite some length why it

was thought necessary to use that unmistakable language. I was given several historical examples of why it was put that way so there could be no doubt about it. The Executive order, in relation to the establishment of the Foreign Economic Administration, had this to say:

The powers and functions of the administration shall be exercised in conformity with the foreign policy of the United States as defined by the Secretary of State.

Well, I said, "Why not use that language? Why say 'direction and control'?"

They said:

The trouble is the decision was made in the Foreign Economic Administration that after the Secretary of State had submitted his brief, he had discharged his function and they would proceed as they thought best.

So there was not in the Executive order a sufficiently compelling statement to make it plain that in foreign policy the Secretary of State spoke for the President.

Again, in supplementing the Executive order establishing the Office of War Mobilization, this is used:

The functions of the Office of War Mobilization shall include the authority to arrange for the unification and coordination of the activities of the Federal Government relating to foreign supply, foreign procurement, and other foreign economic affairs in conformity with the foreign policy of the United States as defined by the Secretary of State. In providing for such unification, the Office of War Mobilization may utilize the facilities of other departments and agencies, including the machinery for the coordination of foreign economic affairs established in the Department of State.

That did not work. Now, if it didn't work with Mr. Hull, I was pretty certain it was not going to work with me and that is the reason "direction and control" was put in. The Executive orders I have read to you did not carry conviction, and the examples were, I think—I do not know how frequent—but I think are sufficient to make it quite clear that the control in the foreign-policy relationship was not in the hands of the Secretary of State.

Mr. KEE. Your answer, Mr. Secretary, is perfectly clear as to one phase of my inquiry. However, the particular phase toward which I was directly inquiring was a determination of just what function of the Administrator does affect foreign policy.

Now, the question might come up that the Administrator proposes certain action in connection with one of the countries we would be aiding, and the Secretary of State tells him that that action will affect our foreign policy.

Secretary MARSHALL. You would like an example?

Mr. KEE. Then, the Administrator denies the allegation and says, "I cannot see where in any manner the action proposed on my part affects foreign policy."

Now, who is to be the final court of determination?

Secretary MARSHALL. The Secretary of State would settle the matter, unless the Administrator thought the difference so serious that he desired to carry it to the President.

Now, I think perhaps I can clarify this somewhat by giving you some illustrations out of recent months, particularly in July, August, and September.

I was involved in a similar relationship with the Secretary of Agriculture. There was so much grain, there was so much demand; there

was so much requirement for the economy of the United States and at the same time there was a terrific pressure for grain, for example, for France; and at the same time there was an urgent necessity for grain for the American-occupied zone in Germany.

Now, the question was: "How urgent was this requirement in relation to France?" France was in a turmoil. There was a definite effort being made to throw out the government in power and institute a government which would be very plainly of a communistic character. The people were in urgent need of grain. The only place apparently it could be obtained was in the United States. We were laboring, the Secretary of Agriculture told me, with demands within the country and all over the world, which produced a shortage in grain, and there was also a great difficulty in the transportation of the allocated grain that was to go overseas.

At the same time the War Department was heavily involved in its requirements for feeding the population in the occupied zone in Germany. However, the main issue at the moment, for my consideration, was France. Something had to be done to help them in this dilemma, because the same procedure had been previously followed, we will say, by the Soviet Union, in shipping wheat and in advertising it tremendously and in trying to win an election for its people in France.

There was a question that had to be settled either by the President or between the Secretary of Agriculture and myself. Now, he, the Secretary, is charged by the Congress with allocations and we had to settle the matter on the basis of negotiations as to how we would meet the dilemma. He, finally straining this way and that, found how it was possible to do sufficient to avoid this dilemma with which we were confronted.

There was a problem of foreign policy involved in the allocation of grain within this country, and to the world at large.

When we come to this present proposal, we are, I think, in a very large measure secured against many issues which might arise in relation to foreign policies because of the character of the agreements of the 16 nations and because there are these various provisos and the like. Then, when we consider the Administrator, it makes those issues reasonably clear.

As I said a while ago, my educated guess this far in advance would be that 80 percent of the procedure would not involve foreign policy at all; it will be business. However, there will be the weather situation, crop situation, strikes, which we cannot foresee, and the control of which presents a very great difficulty, as we know, and particularly when they are being deliberately instituted in order to sabotage a program, and may create a situation where, from the business point view, the nation concerned is not able to meet its full obligation in the matter.

Now, then, the issue is: Do we take into consideration these things, this sabotage which might have been effective, which you cannot predict here in conclusive form, or do we just shut the gate?

The Administrator undoubtedly will have to come before the committees of Congress to justify his actions. In a measure, I think he is protected when he takes an action, as he might in the case I have depicted, where he goes ahead with a procedure, even though the nation concerned has not met its full commitment, because the Secre-

tary of State has indicated that, in the interests of foreign policy, the action taken is highly desirable.

But if he thought that was an exaggerated view because it was looking more to foreign policy than the businesslike administration of the affair admitted, the President is still there to decide the issue.

However, he really would be protected in his relationship with Congress, which, naturally, is going to be very intimate. If he is cleared from responsibility in a matter such as that, I would be the man held to account, presumably, by a committee of Congress, for the action taken.

In all of these matters you have the problem of what the individual himself is doing and how confined his thinking becomes to the particular issue with which he is laboring. We want a man who puts everything into the job. That produces a situation where it is conceivable that events in other parts of the world introduce factors which should have serious influence on the decision to be made and yet he himself is not aware of that. That is a very common reaction.

In the war, in relation to theater commanders, we called it localitis. It was not a very popular term, but it was the fact.

The question is, here, "Who is affected with 'localitis.'"

I think considering the agreement of the 16 nations and the directive proposed by the Congress, that the foreign-relations aspect would be very limited.

I might say, and I am thinking of this on the spur of the moment, that one of the things having a very intimate relation to foreign relations is public statements.

One branch of the Government says one thing and that puts another branch of the Government in a very bad position, and you gentlemen wish us to account for such lack of coordination and cooperation.

That, I think, possibly—and I am thinking aloud—would probably be more of an issue than any other one issue.

The character of the release could have a very definite relationship to our foreign relations, particularly in regard to the fact that anything said that can be given some other meaning by those who are trying to sabotage the program, will certainly be done.

That is a rather involved statement.

Mr. KEE. The issue, I think, that is going to cause us more trouble than anything else, is how to determine what actions of the Administrator do affect foreign policy.

Now, inasmuch as the President of the United States formulates our foreign policy under our system of government and has the last word on the subject, why would it not be well if we are going to make the President of the court of last resort in determining just what issues, if any, or what actions of the Administrator affects foreign policy to insert it in the act, here, and say "In the event any questions arise between the Administrator and the Secretary of State as to what functions of the Administrator affect foreign policy, all such questions, unless reconciled or resolved by the Secretary of State and the Administrator, shall be referred to the President and his decision shall be final?"

Secretary MARSHALL. Treating the last of that first, the President's decision would be rather final but I think in putting it that way, you would do exactly what the proponents of the plan for putting this agency under the State Department were trying to avoid. You

would greatly increase the number of references to the President, and there is a limit to what the President can undertake, if he is to be fully informed of the various factors involved in the issue.

As I said a little while ago, I think possibly we would have more complications over press releases and their effect generally in the world than in regard to any other one thing.

Now, if we had to go to the President every time we have a press release discussion, we would impose on him something that is just beyond the capacity of any individual, physically and mentally.

I hesitate to propose amendments offhand here, but if you said there could be a final appeal to the President perhaps that would meet your requirement.

However, I think that it should be on a definite basis where 9 times out of 10 the Secretary of State carries the decision but when it is felt that his is too biased a view, prejudicial to the best administration, it can be taken to the President.

Mr. KEE. The point I was getting at is that under the act as now written there is no court of last resort to determine any dispute that might arise between the Administrator and the Secretary of State as to what function does affect foreign policy.

Secretary MARSHALL. There is always the President.

Mr. KEE. I think we should have some court and not have it necessary to go to the President or anybody else.

Secretary MARSHALL. The court is there. The Constitution determines that.

Mr. KEE. Suppose the Secretary of State said to the Administrator, "This action of yours affects foreign policy. You cannot do it."

The Administrator says, "I don't agree Mr. Secretary. I do not think it affects foreign policy in any degree."

Well, you may say to him, "We will refer it to the President."

He would say, "I don't think it affects foreign policy. I object to going to the President."

Secretary MARSHALL. Under the draft of the proposed law the decision in that case would rest with the Secretary unless the administration insisted on carrying the issue to the President.

Mr. VOYTS. Mr. Secretary, I agree with everything you said in your opening statement concerning the broad purposes of this proposal, but I confess I am dreadfully disappointed by the draft legislation which Dr. Eaton has introduced for our consideration.

For instance, section 11, on page 20, says this:

When the President determines it to be in furtherance of the purposes of this act the functions authorized under this act may be performed without regard to such provisions of law regulating the making, performance, amendment, or modification of contracts and the expenditure of Government funds * * *.

Now, there are pages and pages of lawful requirements with reference to the contracts and expenditure of Government funds.

Secretary MARSHALL. What was the first part of the statement? There are what?

Mr. VOYTS. There are pages and pages of laws with reference to Government contracts and the expenditure of funds.

This would, for instance, permit an oral contract. It would provide no control outside this law on the expenditure of funds. What is the sense of this?

Mr. Secretary, I would be glad to know if you yourself are familiar with this.

Secretary MARSHALL. I am not familiar with the details of that particular matter and I was going to have Mr. Gross give you the details on that.

Mr. VORYS. Who is Mr. Gross?

Secretary MARSHALL. He is the legal adviser to the Secretary of State.

Do you wish to hear him right now, sir?

Mr. VORYS. If you have no views yourself, I thought possibly we might at a later date go into consultation with your legal adviser.

Your answer brings up this question: Who drafted this law?

Secretary MARSHALL. It is the composite result of quite a number of people.

I was in London during most of the drafting of this bill.

Can you give a fair answer to that, Mr. Gross?

Mr. GROSS. The bill was drafted, Mr. Congressman, as a result of an interdepartmental committee, representing some 14 Government departments and agencies.

It was then gone over in detail by the Budget Bureau's legislative drafting experts, so the bill represents the composite views of the principal officials and legal counsel of all Government departments and agencies concerned, finally screened by the experts of the Bureau of the Budget, which accounts for the present form of the bill.

Mr. VORYS. Could we say you are the chief counsel responsible for the draftsmanship?

Mr. GROSS. I am responsible for the Department of State.

Mr. VORYS. My next question is, whether you, Mr. Secretary, or your counsel, could point out any place in the bill that tells the Administrator what he is supposed to do.

I can find dozens of places which give him power to do anything he pleases without regard to law, if the President says so, and in many cases if he wants to.

However, is there any place in here that tells him to do something?

Secretary MARSHALL. There is no single place in the proposed legislation which does what you have just suggested.

The purposes of the act are defined, and later, under section 7, largely, are listed the authorities under which the Administrator acts in carrying out those purposes.

However, there is no single, combined statement which you might say was solely devoted to a directive for the Administrator.

Mr. VORYS. It is my point in these questions to bring out the following: I feel that the great concern of the Congress in the question of who is to be Administrator is the fact that there is nothing in the law telling the Administrator what to do.

On the other hand, there are many, many provisions that free him from any limitations whatever, and you have a situation where we are to embark on a long-term, world-wide policy, without any statement of what it is in the law and without any limitations.

Secretary MARSHALL. I don't think it is quite as bad as that, Mr. Vorys. We have the purposes of the act which certainly indicate the general premise. We make the point in the act, or at least I have made the point, that there should be flexibility because of the

impossibility of foreseeing all the trends, opportunities, and difficulties that will arise in the execution of the act.

There will be a Presidential directive drafted under the terms of this act for the Administrator, and then he will have his very definite instructions as to the extent that the President feels necessary he should be instructed.

This gives the basis for such a directive, but the directive is not in the act.

Mr. VORYS. Mr. Secretary, ordinarily when we start in on a long-term policy to spend billions of dollars, the directive is in the law.

We have tried it the other way under lend-lease and in some other bills, but our usual procedure in our Republic is to have the directive and the limitations in the law.

Now, you mention the purpose clauses and in glancing over those, I find them so general that Soviet Russia and all of her satellites would say, "Why, those are the purposes we have in mind."

"Self-help, mutual cooperation." When you come to section 3 on the subject of who participates, it could, under the provision of the law, include any of the satellites of, or Russia herself, by their merely saying, "We adhere to a joint program of European recovery."

Not "the" joint program, but any joint program.

You have included as a participant Newfoundland, Labrador, practically all of Africa, the Dutch East Indies, the Malay States, and all of the dependencies and colonies of all of the participating European countries, and there is no guide possible in here that I can find—I may have missed it—showing the Administrator whom he is to take in, or that shows any country on earth what they have to do to get in.

If I am wrong in this I want to be corrected or if it is a matter that should be taken up with the drafting counsel, I will be glad to do that.

Secretary MARSHALL. The details should be taken up with the drafting people because there are so many legal in's and out's here in connection with existing legislation and Government practices that are involved that I could not undertake to explain them satisfactorily.

You do, however, have certain basic conditions in relation to the comment you just made. In the first place you have the agreement of the 16 nations.

Mr. VORYS. Excuse me. There is no reference in the bill that would require any of the 16 nations to do anything with reference to that agreement, I would believe.

Secretary MARSHALL. I think there is reference of that sort. There it is in there, and I think you will find another reference under 10.

Mr. VORYS. I point out, the Comintern could say, "We have gotten up a program to carry out industrial and agricultural production, and all the other provisions of this act, and therefore we think we are participants here."

There is nothing I can find in the proposed bill that would authorize or direct the Administrator or the Secretary of State to say, "No; you are not in here," or "Yes; you are."

Mr. GROSS. The agreement would have to be coupled with the agreement with the other participating countries. It would have to be accompanied by an agreement with the United States, a bilateral agreement contemplated in section 10 of the act so the entire scheme of the legislation would require basically participation in a multi-

lateral arrangement, but all countries which subscribe to conditions which further the purposes of this act, plus a series of bilateral agreements between each participating country in the United States, which would conform to the more specific purposes set forth in section 10 of the act.

Mr. VORYS. That may have been the entire scheme of the legislation but it does not appear in there.

There is nothing in there about the agreement, which gave me such hope when the Secretary of State made his original proposal, that at last we were going to require joint action.

There is nothing in there about that, and furthermore, in section 10 there is a provision that they do not even have to sign a bilateral agreement for 3 months, if they say they intend to do it some day.

Mr. GROSS. The delay clause is in order to allow the program to get started, while the technicalities of the conclusion and ratification of the bilateral agreements are in process, according to the constitutional requirements of each of the participating countries.

That, however, is limited and safeguarded by the requirement that even during that limited 90-day period during which the President can move forward on the program, each participating country, to be eligible, must have indicated its intention to adhere to a bilateral agreement in accordance with the provisions set forth in section 10.

That is found in subsection (c) to section 10.

Mr. VORYS. I am familiar with that, and that says that if the Administrator finds that where applicable provisions of section 10 are being complied with and if a country says it is going to sign an agreement, that nation can proceed.

Can you tell me of any sovereign nation on earth that would refuse to sign an agreement, but say, "We are going to sign one some day," if the agreement were subject to control of somebody else?

I cannot see how an intention to sign an agreement would be worth anything if the country was then unwilling to sign an agreement.

Mr. GROSS. May I elaborate on that for just a moment, sir?

The intention of subsection (c) of section 10 is to permit moving forward with the program where the country has signified its adherence to the purpose of this act and its intention to pursue an agreement pursuant to subsection (b) which enumerates the conditions.

That was put in technically in order that during this limited period of 90 days, the program could be instituted where, for example—and this was the most likely example to arise—the executive agency of a foreign government would indicate to the fullest extent of its constitutional power and force within that territory that it was going to sign an agreement but would have to await approval by the parliament or congress of the country concerned.

It was simply for that purpose that this 90-day clause was put in.

The negotiation of the agreement would have taken place, its terms would have been known and would have to be acceptable to the Administrator, and it was simply to allow for a brief time on the assumption that in accordance with the constitutional requirements of the foreign country, some brief period of time might elapse between the signature by the executive and the ratification by the parliament of the countries concerned.

That was carefully safeguarded, if I may repeat, by requiring that agreement to conform to all the conditions specified in subsection (b) of section 10, considered applicable by the Administrator.

Mr. VORYS. That is, this is based upon the proposition that the American Administrator has no legislative guidance or limitation on him, but these other countries may have guidance or limitation required by their legislative bodies, or their constitutions. Is that right?

Secretary MARSHALL. I think there, Mr. Vorys, the issue to be considered is that the legislation must first be passed here, and only after it is passed here do European countries come into the picture as to their respective legislative requirements.

There is also another consideration which I think we must keep in mind; that we are fighting a time battle, which is very important, in view of the known, declared efforts to sabotage everything we are trying to do.

The longer we take getting started, the more possibility of our being confronted with a deterioration which would not only endanger the success of the whole program but would likely make it a more difficult operation, and a more costly operation.

Therefore, we are struggling against time, having in mind the normal, time-consuming processes involved in various governments, including our own, in formal and final confirmative action.

Mr. VORYS. Mr. Secretary, I appreciate keenly the time element and it is with the purpose of being helpful that I make these suggestions at the outset.

I think that if this bill has some limitations and directives in it, the time element in its enactment here will be cut down enormously.

If it is in such shape that it is the law in this country promptly, so that the Administrator, whoever he is, can say to other countries, "It is the law and has to be final over there before this thing starts," I think it might speed up rather than delay final action.

Secretary MARSHALL. That is a very interesting observation.

Chairman EATON. The Chair would like to be permitted to make a statement at this point:

This bill has been referred to as being introduced by Dr. Eaton. He wants it distinctly understood that he did not help draft this bill. He never saw it until it came to his desk, and he was not requested by anybody in the State Department or out of the State Department or anywhere else to introduce it, but he introduced it as a part of his duty in order to have it come before this committee and the Congress in due form.

His position on any of its provisions remains unknown as yet.

Mr. VORYS. Mr. Chairman, in view of the statement just made, I would like to ask one more question and that is this: Whether prior to the release of this bill for public consideration, there was consultation with Senators or Congressmen as to its provisions.

Secretary MARSHALL. I was not here during that period, so I will have to ask someone else to answer that question.

My advisers know of no such consultation.

Chairman EATON. The chairman wishes to announce that he was not guilty.

Mr. BLOOM. Of what?

Chairman EATON. Of being consulted, or insulted, either.

Mr. Richards?

Mr. RICHARDS. Mr. Secretary, to get away for the moment from the mechanics and details of the bill and the question of who wrote it, I want to get back to the background of the bill. x

Now, as I understand it, this bill is the result of your telling the countries of Europe that they should get together and help themselves and then come to us and we would try to do our part; is that correct?

Secretary MARSHALL. Yes, sir.

Mr. RICHARDS. Now, do you feel that these 16 countries have made honest effort and satisfactory progress in that direction.

Secretary MARSHALL. I think they have not only made an honest effort but a very remarkable effort, historically, judging by the past history of nations. They have made a tremendous effort since then to begin, of themselves, to proceed with the program.

Mr. RICHARDS. Mr. Secretary, as I understand it, since the Paris Conference, they have had only one meeting of the representatives of those 16 countries.

Secretary MARSHALL. Yes, sir; there have been a number of meetings of subgroups.

Mr. RICHARDS. Have they done anything about the matter of surpluses in certain countries of the group and shortages in others?

Secretary MARSHALL. Their principal activity has been to display considerable energy and good intentions, in trying to expedite their own production to meet the targets that were set in their agreements in connection with the others of the 16 nations.

Mr. RICHARDS. Have they made any satisfactory progress in the matter of the removal of customs barriers and the like?

Secretary MARSHALL. You already have the one customs union—Belgium, Luxembourg, and Holland. There is in process an agreement between France and Italy toward a customs union.

Mr. THORP. There has been one other significant development in the financial field, beginning as of the beginning of this year, an international clearing operation, in which certain countries are taking full membership and others are participating in part.

This is the first time since the war, where there has been any multilateral clearing of trade accounts between the different countries.

That is starting almost on an experimental basis and has a possibility of having a real effect on improving the currency situation in the different countries.

A customs union has been achieved in Luxemburg, Holland, and Belgium. They had gotten pretty well along with that before we came into this picture with the suggestion of a European recovery program.

Therefore, while that is exactly along the line that we thought highly desirable, the truth of the matter is they were under way with that and almost had reached the completion state before the suggestion was made.

Immediately Italy brought up the question of a similar arrangement with France and they have gotten together and presumably are about to reach an agreement there.

I think there is also a discussion going on among the Scandinavian countries, sir.

Secretary MARSHALL. I have a paragraph which was in the statement I made to the Senate the other day which is a better explanation than my offhand comments.

The fulfillment of the mutual pledges of these nations would have profound effects in bettering the future economic condition of the continent. The Paris conference itself is one major step and the participating nations have not waited

on America, before taking further steps, many of which required a high order of political courage.

I think I might say that the application of that latter phrase is not clearly understood here in an abstract view of the situation in Europe. We certainly understand in this country that many of our own problems require political courage.

They have moved forward toward a practical working arrangement, for the multilateral clearing of trade.

Mr. Thorp just referred to that.

France and Italy, whose financial affairs suffered greatly by war and occupation, are taking energetic measures to establish monetary stability, an essential prerequisite to economic recovery.

British coal production is being increased more quickly than even the more hopeful forecast and there is a prospect of the early resurgence of exports to the continent.

That of course has a very important bearing on the health of the European economy.

The customs union among Belgium, the Netherlands, and Luxemburg is now in operation. Negotiations for a Franco-Italian customs union are proceeding.

I have omitted from my statement to you the fact that France and Italy are taking energetic measures to establish monetary stabilization; also the Germans have shown very definite indications of moving for themselves to get under way so far as is within their capability for the rehabilitation of their economic situation.

I think I should also observe that during the period I was in London, Italy and France, in particular, were under terrific pressure of disturbances and organized strikes designed to affect very seriously their organized economy and to make it very difficult for them to get ahead in an orderly manner.

In spite of that, they have moved, I think, with great energy, in the way of their production particularly.

Of course, they have had imposed on them additional and unforeseen expenses to meet this turbulent situation which was a very definite effort directed against the European recovery program.

Mr. RICHARDS. I am glad to hear then, Mr. Secretary, that you do feel that very definite progress is being made by this group, toward the solution of their own problems, irrespective of what is proposed in this bill.

Secretary MARSHALL. That is my own reaction, sir, and it has been fortified by my contacts with the officials of those countries. They have inspired my confidence in what they are trying to do and the probability of their success in doing it.

I might say that quite an issue in this matter is the psychological factor. That is, the will to do. Lacking the will to do, no matter what exists in agreements, very little is ever accomplished.

Well, there is a great will to do and there is a great confidence that they can do it.

Mr. RICHARDS. Mr. Secretary, as I understand, it is your hope that the other nations over there, outside of the 16 nations in Europe, will also join this group.

Secretary MARSHALL. That is the hope. I do not know whether you can regard it as a probability or not, but I think it is a possibility, and I am inclined to think that if this program moves forward in a

successful manner, that it is going to work a great change in feelings and in European public reactions.

Again I am somewhat influenced in that expression by my contacts with the officials of satellite countries. They have expressed great concern in relation to trade possibilities, their fear that this proposed legislation involved a western curtain, which it did not at all, and their general concern over what happens to them if this general program moves forward successfully. All of which I think will have a decided influence on their general feeling, though there is no indication whatever of any weakening in their political stand at the present time.

Mr. RICHARDS. If any curtain is being let down by any nation, that nation is not the United States.

Secretary MARSHALL. That is correct, sir.

Mr. RICHARDS. Thank you, Mr. Secretary.

Chairman EATON. Mr. Jonkman.

Mr. JONKMAN. Mr. Secretary, did you envision a broad, comprehensive program such as we have before us in this or any recovery program legislation that we have before us when you made your speech at Harvard on June 5 last?

Secretary MARSHALL. When I made the suggestion at Harvard June 5, I had in mind several important considerations: First, that the situation in Europe was getting completely out of hand, that something had to be done or the results would be tragic.

I also had in mind that those nations who were threatened with a form of government which approximates that of a police state were in such a condition of economic distress, and in such dire circumstances that I hoped that they would be willing to make compromises among themselves and adjustments for the general good, to a degree that in normal times never would have been possible. In those circumstances, a proposal for combined action had some chance of success.

I also had in mind that any proposal from the United States would have to be on a very guarded basis, in order to avoid, first, commitments beyond our capacity, and second, and equally important, proposals which would interfere so directly in the affairs of sovereign nations that it would give rise to very vigorous reactions, certainly on the part of those sections of their people who were stirring up trouble at the time.

Therefore, I thought, if we were to do anything, it could only be done, with a reasonable prospect of constructive success, if the European nations in the first place got together among themselves on a mutual self-help basis.

I thought that the circumstances made it possible that they would get together, in a manner there would normally be no possibility of doing, except after a number of years of development of such affairs.

The reactions in my own mind at the time were divided between the possible reception in Europe and the possible reception in this country.

I felt that the reception in Europe—certainly among those western nations—would be very cordial. That is not a very good word, it would be more than cordial.

I thought I would probably have to wait to get the reactions of the people in this country who certainly at the time could not fully grasp what the situation was in Europe and why they should possibly undertake a heavy burden in connection with Europe beyond what they had already accepted during the past few years.

The final thought in my mind was that something had to be done. A "sit and wait" attitude would not suffice. Something had to be done, and done then.

Well, what was it to be? I felt our country stood in the forefront of the world situation, and that therefore, of necessity, it had a great responsibility that it could not evade.

There was no other procedure of which I could think that had any reasonable hope of success, other than the suggestion that was made on June 5, last.

I think this observation will more nearly answer your question: The rapidity of the European reaction was greater than I anticipated, because, to put it frankly, I expected the American reaction would be ahead of the European reaction.

What actually happened, I think—as recorded in the press—was, that interest was so completely focused on the rapidity of action in Europe, that there was very little reaction, in a sense, here in the United States, where the involvements were not even partially comprehended at the time.

The American reaction came much later than I anticipated, and the European reaction came more quickly than I anticipated.

Mr. JONKMAN. I gather from what you just said that your evaluation of the world situation prompted what was the initial step without any previous request from the European governments; is that right?

Secretary MARSHALL. That is absolutely correct, sir.

Mr. JONKMAN. Now, you mentioned a moment ago that the rapidity with which it was accepted in the European countries was somewhat of a surprise to you. The substance, I think you said.

Are we not undertaking a somewhat larger program in Europe than what you anticipated? For instance, what I mean by that, Mr. Secretary, is this: I have grouped these 10 nations into 4 groups; 5-5, 3-3 blocks.

The first five, for instance, are Ireland, Iceland, Portugal, Switzerland, and Turkey, which have never had any aid before to speak of, and of whom we always thought as not being in need of aid.

I distinguish between relief aid and economic aid.

Why should those five be included in this program?

Secretary MARSHALL. They are in this organization in order to cooperate with the other countries involved.

Mr. JONKMAN. I mean with reference to extending aid to them.

Secretary MARSHALL. As a matter of fact, I do not think the present program involves aid of that nature to those particular countries.

Mr. JONKMAN. Which of those five will receive aid according to the present program? Doesn't Portugal need aid?

Mr. THORP. That country would probably have sufficient dollar resources to pay for its imports from the Western Hemisphere.

Mr. JONKMAN. How about Switzerland?

Mr. THORP. Switzerland could probably pay for anything she received.

Mr. JONKMAN. How about Turkey?

Mr. THORP. Turkey would probably be a cash country.

Mr. JONKMAN. Ireland?

Mr. THORP. Ireland, in our calculations, might have some assistance, but it would probably be in the form of a loan and not in the form of a grant.

Mr. JONKMAN. There was some figure given, I think, of \$497,000,-000, before another body. Is that correct?

Mr. THORP. The CEEC report is, of course, quite different from the program being presented by the executive branch to this committee.

Individual country studies will be presented to the committee on Wednesday which will give the details on that; so with those reports, we can discuss the particular countries much more effectively than we can now.

However, I would say that in the cases of Iceland and Ireland, it is thought at this time that any assistance which they might receive, any commodities and supplies which they might obtain, would be on a loan basis and not on a grant basis.

Mr. JONKMAN. Those are all on the grant basis?

Mr. THORP. I think those five, from a financial point of view, have very little bearing on the program, but it does emphasize the fact that the program is a European program of countries which are joining together to do as much as they can for each other, and there will be substantial trade in these countries with each other, quite apart from the assistance received under this program.

Mr. JONKMAN. How about the United Kingdom, Norway, Sweden, France, and Denmark.

I understand from the CEEC report—that these countries have practically regained their prewar industrial production.

I realize that some of them have lost revenue from shipping, investment, insurance operations, and so forth, but if they have regained their 1938 production schedule, do you not think we will have more work to do in other parts of the world than to assist them; for instance, to make up what they have lost by this loss of unseen income?

Mr. THORP. In these particular cases, you have put your finger on one of the serious problems, and that is that while their domestic industrial production is close to prewar levels, they have lost substantially in their invisible sources of payment for imports that they are not in balance. In order to maintain the prewar levels of imports they will have to produce at substantially above the prewar levels, because that additional production has to be used to pay for the imports which used to be paid for through the items which you identified, income on foreign investments, and so forth.

Now, the other point I think is important, Mr. Jonkman, is that a substantial part of this high level of production has been going into rehabilitation, and a substantial part will still need to.

Therefore, from the point of view of their achieving progress on consumer levels, that is substantially less than the progress that has been made in total production.

Mr. JONKMAN. Take these five countries. Do you think you could eliminate Norway? Norway has been able to borrow in New York on private bond issues, some ten millions, I think.

If we read the statement in the CEEC report, it looks very favorable, and she does not appear to be in any need of financial aid from us at all.

What is your reaction to Norway as needing help, economically?

Mr. THORP. Actually, the situation is that the final determination will be made by the Administrator in consultation with the National Advisory Council.

If you are asking for our initial reaction in the State Department, from studying this, we feel that Norway probably is a loan country and probably does not need any grant of assistance at this time.

Mr. JONKMAN. Of those five?

Mr. THORP. Yes, Norway.

Mr. JONKMAN. Sweden is in a better position than Norway; is she not? The balance of payments are in favor of Sweden by \$100,000,000 are they not?

Mr. THORP. That question is difficult to analyze. Part of the Swedish problem is that they have been providing substantial assistance to other countries in Europe and are in the situation where they have an over-all balance of payments which is in balance, but in which they have been losing dollars or convertible currencies and piling up unconvertible currencies.

The Swedish have actually lost substantially during the last year of their available reserves.

I think the Swedish situation might be one in which no grant will be necessary. It will depend on the pattern, of their foreign trade and the convertibility of currencies into dollars.

Mr. THORP. I think that may be it, although one has to leave a substantial amount of flexibility, because the test, as provided in the proposed act, is the test of capacity to repay.

Mr. JONKMAN. Is it not true that Denmark is not only back to prewar conditions as far as industrial production is concerned but also as far as agricultural production is concerned?

Mr. THORP. I think there the problem is a problem of shifting markets, and non-convertible currencies and also a problem of a population change, which aggravates it.

That will be covered in substantial detail in a report on Denmark.

Mr. JONKMAN. How about Belgium, Luxemburg, and the Netherlands? They have been able to borrow from the International Bank; have they not?

Mr. THORP. There has been a loan for the Netherlands from the International Bank.

Mr. JONKMAN. Is it proposed to give them grants?

Mr. THORP. That is in the category which we would feel might necessarily be part loan and part grant, depending entirely on the future prospects for repayment.

Mr. JONKMAN. Do you mean all three of those countries?

Mr. THORP. Yes, sir; all of them.

Mr. JONKMAN. Why should they be grants-in-aid, Mr. Thorp, when they can borrow from the International Bank?

Mr. THORP. This program is based upon as much borrowing from the International Bank as one can anticipate, and borrowing from other sources.

The \$6,800,000,000 is a figure after there has been substantial assistance provided from other sources, such as the International Bank.

Mr. JONKMAN. Wait a minute. I have been figuring on the CEEC report which is five billion nine hundred and I confess sometimes I am not able to follow it. Is the change in figures due to the fact that you raised it from five billion nine hundred up to six billion eight because of extension in time.

Mr. THORP. That is the reason for the major change; and also because the figure you state is one which someone on your committee's staff has derived from data presented in the CEEC report. The figure of five billion nine hundred does not appear in the CEEC report.

Mr. JONKMAN. These CEEC figures remain the same as far as we are concerned?

Secretary MARSHALL. There have been alterations and revised estimates resulting from our screening of those figures.

For example, in relation to the French in West Africa, the amount, of goods, that French West Africa might export to South Africa was not considered in the CEEC report, and at the same time the probable imports from West Africa by the French was not considered in the CEEC report.

The result was that the summation of the two, one being a subtraction and one an addition, brought about a lowering of the estimate of the French deficit for 1948 given in the CEEC report. We did not accept the CEEC estimates. The Executive Branch made its own independent examination of the CEEC estimates.

However, I would like to say, Mr. Jonkman, as Mr. Thorp has previously said, we are presenting Wednesday the details regarding each particular country.

Mr. JONKMAN. What is your final answer with regard to Belgium, the Netherlands, and Luxembourg as to whether they will need grants, inasmuch as they could probably provide the loans and borrow from the International Bank?

Mr. THORP. I would say that any demonstration of ability to borrow did not necessarily indicate it could borrow still further.

It may well be that that loan has exhausted their ability to borrow, but in terms of those particular countries, I think, we feel that Belgium and Luxemburg, which have to be taken as a unit, is in a somewhat happier economic prospect than the Netherlands, that in both cases there may well be some grants and some loans, but the proportion which could be carried with loans might be higher with respect to Belgium and Luxemburg, than with respect to the Netherlands.

Mr. JONKMAN. Of course, that means practically seven countries we have eliminated from the program as far as grants are concerned, and perhaps Denmark, you say, and perhaps some of these three.

Now, I would like to have a break-down on Wednesday, of what you propose to give to these various countries.

For instance, in the CEEC program you have \$1,452,000,000 for food feeds and fertilizers. You have \$342,000,000 for coal and other solid fuels.

You have \$512,000,000 for petroleum supplies.

You have \$370,000,000 for iron and steel supplies; \$203,000,000 for inland waterways.

Then you have \$96,000,000 there, I think, for timber.

Would you give me a break-down on where this goes and to what countries and what countries participate in it?

Mr. THORP. We will give you a break-down on the program which we are prepared to defend but that is not the CEEC program.

That program has been reworked in terms of availabilities and will be somewhat different from that proposed by the 16 countries in Paris.

Mr. JONKMAN. I want to say I got that from the report by the staffs of the Senatorial Foreign Relations Committee, and the House Foreign Affairs Committee, and I have checked most of it and find that most of the figures were taken from the CEEC report, as requirements for the \$5,900,000,000.

Then you have under "Equipment," \$370,000,000 for agricultural machinery, \$80,000,000 for mining machinery.

You have \$150,000,000 for electrical equipment; \$168,000,000 for petroleum equipment.

Then you have some figures in there not analyzed: \$287,000,000 for machinery. What kind of machinery I haven't been able to find out.

Then there is \$1,787,000,000 for undefined purposes.

I think we should have a break-down on those things, as to what extent any participating country is going to participate in those considerations.

Secretary MARSHALL. That country break-down, as I have already said, sir, is to come to you on Wednesday.

Mr. JONKMAN. Thank you, Mr. Secretary. That is all.

Chairman EATON. Mr. Secretary, if you would like to get through today—

Secretary MARSHALL. I am at your disposal today, sir.

Chairman EATON. Could you return at 2 o'clock this afternoon?

Secretary MARSHALL. Yes, sir.

Chairman EATON. The committee will adjourn, then, until 2 o'clock and the hearing will proceed.

(Thereupon, at 12:20 p. m., the committee recessed until 2 p. m., same day).

AFTERNOON SESSION

The committee reconvened at 2 p. m., pursuant to the recess.

Chairman EATON. The committee will please come to order. Mr. Jarman.

Mr. JARMAN. Mr. Secretary, in your opinion, has the determined effort to communize the whole of Europe met with any success since the passage of the Greek-Turkey bill passed by our Congress last spring?

Secretary MARSHALL. I would say it has not, except within the satellite nations, where it was in progress all the time.

Mr. JARMAN. It had already progressed, as I recall?

Secretary MARSHALL. It was projected there.

Mr. JARMAN. It was behind the "iron curtain" which was in existence then.

Now Mr. Richards asked you if there was any other "iron curtain" being attempted on our part. Is there any other "iron curtain" being attempted by any other country? Is the creation of any other "iron curtain" being attempted by any country?

Mr. Richards asked you if there was any other "iron curtain" being created by the United States.

Now, I would like to know if there is any other "iron curtain" which is being created by any other country.

Secretary MARSHALL. I do not think of any new development along that line at the present time.

Mr. JARMAN. I have never heard of any. I am asking for information.

Secretary MARSHALL. I do not know of any new development along that line at the present time.

Mr. JARMAN. A certain amount of discussion was had this morning, Mr. Secretary, about the possibility of differences of opinion between the Secretary of State and the proposed Administrator of this legislation over foreign policy, and the fact that such differences would finally be decided by the President.

Now I imagine differences of opinion are not unusual among Cabinet members and heads of bureaus; are they?

Secretary MARSHALL. It is not uncommon among any group of Americans. That applies to Americans in government, as well as Americans generally, and members of Congress, for example.

Mr. JARMAN. There is no reason to expect any greater number of differences of opinion between the Secretary of State and the proposed Administrator, any more so than would normally occur among Cabinet members generally; is there?

Secretary MARSHALL. There will be a tremendously important agency operating, in a sense, in a new field. One complexity arises out of the fact that there are a number of nations involved in the plan, and there will be determined efforts to sabotage it. To be strictly accurate, I will say that there will be more opportunity for disagreement than would normally be the case between Cabinet members.

However, I think, as I endeavored to make clear this morning, that in view of the basic agreement we have from the 16 nations, and in view of the terms of the law which we have proposed, the main difficulties are wiped out in advance.

I think probably the most serious difficulties will arise over press releases, because of the many different motivating influences.

The more I think about it, the more I am confident that the problem of press releases will be an item for concern. There will always be press releases on what is being done and the manner in which a statement is drafted may have a very unfortunate effect in a certain country at a certain time. Yet the man drafting the statement can be totally unconscious of that, and be thinking only about reaction from the United States or from the Congress, or particularly reaction from a committee before which he or his chief has been appearing.

I have experienced considerable reaction of that character already, and I will say that that will probably become one of the trickiest procedures.

Yet in a sense it will have little to do with the actual administration of the plan.

In other words, a press release may cover a plain businesslike transaction. Its subject may be something that the Secretary of State was not concerned with at all in one sense. If the release was drawn in a businesslike manner, that might be so. However, the phrasing of a press release abroad will be used in attempts to pervert every thing we do into some evil purpose or some reflection on the sovereignty or the pride of the people concerned.

Mr. JARMAN. Even in those instances, is it not probable that you, the Secretary of State, and the proposed Administrator will be able to iron out those difficulties of opinion without referring them to the President?

Secretary MARSHALL. I think so, and that is the reason I think the drafting of the legislation makes it unmistakably clear how we

approach the issue so that, 9 times out of 10, we will settle it between us.

In other cases where the Administrator feels I have too much of a Foreign Relations point of view, he might say, "I think we ought to take this to the President."

Mr. JARMAN. Since it is automatic, it automatically goes to the President; does it not?

Secretary MARSHALL. Yes, but in most instances one or the other of us will have the lead in the matter, and endeavor to compose the problem before it gets that far.

Mr. JARMAN. I would imagine under your able leadership, there would be few of them that would have to go further.

Secretary MARSHALL. Thank you.

Mr. JARMAN. You were asked a question several times this morning to the effect, "Why should we not put that in the bill that goes to the President?" That is not entirely necessary, because it is just automatic. If you cannot agree, it becomes automatic.

I can understand very pleasantly this morning your reference to "localitis." I can understand it first, even though I was a very junior officer, I am an old Army man myself, and I can understand that viewpoint. However, we have a disease of which you have probably not heard, with which some of our Members of the House sometimes become afflicted over here called "Senatitis."

Now you were questioned this morning about the fact that the wording of this bill and one paragraph in particular of it was so general that it would permit Russia to benefit under the plan. Later on, you mentioned that other countries might come in. The door is open to Russia; is it not?

Secretary MARSHALL. Yes, sir.

Mr. JARMAN. Russia went to Paris, as I understand, and left in a few days. All countries were invited; were they not?

Secretary MARSHALL. It is wide open, and the more countries that come into this on a truly cooperative basis, the greater ease we would find in composing the economic situation in Europe.

Mr. JARMAN. Therefore, it is no criticism of the legislation that it is sufficiently general to open the door to any country that might want to come in?

Secretary MARSHALL. I would not think so. Of course, any country that comes in has to meet the conditions.

Mr. JARMAN. Naturally that is all, Mr. Chairman.

Chairman EATON. Mrs. Bolton.

Mrs. BOLTON. Mr. Secretary, I have been deeply interested in the discussion and the questions that have been asked you.

May I go into a somewhat more general aspect of it for a moment and ask you whether, in your consideration of the whole program, you would feel it very important that only so much absolute assistance be given as is imperatively necessary?

Secretary MARSHALL. That is correct.

Mrs. BOLTON. And that it be done in the most economical way possible?

Secretary MARSHALL. That is correct.

Mrs. BOLTON. For instance, some of the possibilities might include plans for shipping steel from this country to one of the countries abroad, having it finished, and sending back the finished product.

That might prove to be exceedingly expensive. It might well be that ore from the Scandinavian countries and mills somewhere else might not only give the same amount of material, but might furnish employment and raise the morale. After all, that is basic.

Are you anticipating a very close study of all these details of procedures, with a view to cutting down our expense as much as possible?

Secretary MARSHALL. The investigation so far has gone to great lengths into the question of what the European countries could do for themselves, in the first place, and secondly what in particular they could do more economically and with better returns than with our doing it over here.

Mrs. BOLTON. Who has made those investigations?

Secretary MARSHALL. They have been made by a variety of groups.

Mrs. BOLTON. Groups of ours or theirs?

Secretary MARSHALL. Ours and theirs. The Europeans came out with the original proposals, of course, in the CEEC report which was transmitted to this Government last September. Since then we have been examining into all their proposals and there has been more time to go into the general situation. Our people have had contact with the subcommittees of the CEEC and in some cases we have developed new propositions which seem more effective or which had not been thought of before.

That will be a continuing process, and that is one reason why emphasis was laid on the desire to have the matter as flexible as possible, so that we could take advantage of these various conditions. Because what might be desirable according to the prices and labor situation and other factors of that kind today, 3 months or 6 months or a year hence it might be much more desirable and much more effective to do it on another basis.

Mrs. BOLTON. You say our people have been working with them. Do you mean members of the State Department?

Secretary MARSHALL. Yes, and the members of executive agencies that have been assembled. This interdepartmental group worked and is continuing to work on the general program.

Mrs. BOLTON. Then in going into the whole problem of economic methods, it would be your idea that that is the part of the work which would be delegated to what you call the business end?

Secretary MARSHALL. Yes. In fact, that is the major part of the whole procedure.

Mrs. BOLTON. Then if that is so, when you speak of the political areas, do you mean those matters which would be brought up under normal conditions between our Ambassador and the government in question?

Secretary MARSHALL. In part, yes.

To express it in a little more detail we mean that if a discussion is required between the high officials of one government and the high officials of another government, as a government-to-government affair, the approach should be made in the light of the existing diplomatic relationship, but the individual who is conducting the business aspects of the thing might be the principal speaker and probably the negotiator. However, he would conduct himself in the light of our diplomatic representation.

As I tried to illustrate a little bit this morning, in connection with the Ambassador at Large, he might be requested to go to a country

by the local Ambassador. In other words, the local Ambassador must consider the effect on all his future relationships in that country. The Ambassador at Large might be the one doing most of the talking. Presumably, the two of them would have discussed this in advance and the local color would be given to the Ambassador at Large by the American Ambassador to that particular country. There you must trust to some good sense, some wise judgment and similar factors on the part of those gentlemen.

The Ambassador at Large in Paris will have a viewpoint there in relation to the CEEC committee which he himself might change to a certain degree when he gets to Holland or Italy and hears what is going on there. He gets a much better picture than he would from an ordinary written communication.

Mrs. BOLTON. That would appear to be good common sense.

Secretary MARSHALL. It has this other aspect. That is, the normal operating procedure of our Government. I do not think we should wipe out existing structural procedure and start on a new basis just because we might find ourselves doing one thing possibly more advantageously in this case and having a most unfortunate effect at the same time or later on in other parts of the world.

Mrs. BOLTON. Would you feel that a separation of the Ambassador and the Administrator might lead to very real misunderstanding on the part of the other countries, even to the point of their thinking governmentally we had disagreed here at home?

Secretary MARSHALL. If I understand your question correctly, that might be the case.

The Ambassador at Large in Europe will be in direct contact with the Administrator in Washington, and the reason in particular for having such a man is, the Administrator would otherwise be up against the complication of having 16 different groups to work with, whereas in this plan his Ambassador is right on the ground with the Central Committee of the CEEC.

I do not know whether I made it sufficiently clear this morning, in relation to the Economic Counsellor's set-up in the embassies, and the appointment of personnel from the reserve which has been created in the Foreign Service. The actual language in the bill is not that originally proposed by the State Department. In fact, it was changed governmentally and in consideration for what was felt to be better.

What we wanted was to have people brought in on the recommendation of the Administrator. The Secretary of State would nominate these people, because the law provides that the Secretary of State had to nominate them if they are going to be in the Foreign Service, and if they are to be included in that reserve. However, the intent is to have the Administrator name the man and then the Secretary of State carries out the legal requirements.

Mrs. BOLTON. You suggested that it come largely, I judge, from the Foreign Service reserve?

Secretary MARSHALL. It is merely an assumption. You will find more talent, definitely, that way.

The Administrator on one side and the Ambassador at Large, between them may have a number of men with whom they would want to work. It is their privilege to put forth those men.

Mrs. BOLTON. My all too slight knowledge of the personnel in the State Department and the Foreign Service leads me to ask that if the Service is so adequately staffed that it can spare these people?

Secretary MARSHALL. These are additional people.

Mrs. BOLTON. They are not being used at all now?

Secretary MARSHALL. They may be in any business in the United States. They may be lawyers, doctors, or something of that sort.

We will request them to come into this reserve position when the call comes for that particular talent.

Mrs. BOLTON. Most of them have seen service?

Secretary MARSHALL. I think some of them may have seen service but not necessarily in the State Department. The Foreign Service Reserve was established as a result of an act of Congress in 1946. However, I was told what will be endeavored is to collect the talent that had been demonstrated efficient, and I imagine, though someone else can tell you very specifically, that a great deal of that talent was not in the State Department at all.

Mrs. BOLTON. Now, if the Administrator and the Ambassador at Large agree on certain men and bring them in, how free will they be, and how free will the Administrator be, or does everything have to go through the usual channels which takes so everlastingly long?

Secretary MARSHALL. The main business transactions would be from the Ambassador at Large back to the Administrator and that would be just as quick as the radio, or the pouch or the ordinary mail. The Ambassador at Large would probably use the facilities of the State Department. That would mean if he were in Paris, he would probably turn to the teletype that we have, and in that way get quick communication with the Administrator here in Washington.

Mrs. BOLTON. It would not have to go through our Ambassador in France?

Secretary MARSHALL. No, not necessarily at all.

Mrs. BOLTON. It would go directly from the Ambassador at Large?

Secretary MARSHALL. From the Ambassador at Large back to the Administrator here.

I would think his report would go to both the Secretary of State and the Administrator, and if foreign relations complications were involved, we would endeavor to find the solution.

Mrs. BOLTON. It would be very necessary, would it not, to cut the usual red tape?

Secretary MARSHALL. In the ordinary business transactions, I see nothing to complicate that at all, because they would be using the quickest process, and could probably use the teletype of the State Department.

Mrs. BOLTON. You have spoken of the various reactions to public statements, Mr. Secretary.

I have had several reactions from one of the countries abroad already, in the matter of the discussions taking place here. It was amazing to many people that we should question any of it. They felt that they reached out to us and we were going to respond and they have been deeply disheartened by the fact that this was going through our usual processes of careful study. They have very definitely been disturbed by that.

Have you had any reactions of that kind at all?

Secretary MARSHALL. I do not know specifically of any. I know in general there is deep concern as to what is going to happen and how long it will be before it does happen. That is very normal and very natural.

Also, there is concern as to how much of our present proceedings will be picked up on a propaganda basis and used to our disadvantage. However, that is inevitable. It is the final result that determines, if it is not too long delayed.

Therefore, while we may find ourselves embarrassed by some of the accusations, in the end they turn out to be insignificant provided we come through; provided we come through in time.

Mrs. BOLTON. One of the problems is of course the matter of the amount. As I have studied it, it has come to me very strongly that the original CEEC proposition was, it boiled down in a comparatively short time.

That would make possible a special need on our part to study the figures exceedingly carefully, and it would be an unfortunate thing if the study we must make, as a responsible committee of Congress, should be interpreted as being detrimental to the ultimate results. Do you feel that there is an overamount of misunderstanding about that phase of our study?

Secretary MARSHALL. A misunderstanding where?

Mrs. BOLTON. A misunderstanding abroad.

Secretary MARSHALL. I do not know quite what to say in reply to that. It is to me very evident that we have a wealth of data such as we never apparently have accumulated before, and our problem is how to assimilate the information. From having very little technical information in the summer of 1947, we now have a mountain, and it requires considerable skill in getting at the basic heart of the problem in each particular case.

Now abroad, the reaction is from people who are in dire need of this and in dire need of that, and they are not particularly analytical about it. They just need it. All the different complications involved in their getting it are not understood by them. There may develop a feeling of misunderstanding, if not irritation, on their part, which will be provoked into hostility, if it is within the bounds of the propaganda effects.

I have no particular fears of these local individual reactions, if we come through. I think they will then be dissipated.

I say very frankly that I do not think we will ever be understood to the degree we would like to see our selves understood. When people are in the situation that you found them in your trip to Europe and they read about our life here and what we have, they are very human. I will put it that way.

Mrs. BOLTON. Mr. Secretary, just one more question on this general situation: It had seemed to us that one of the very real problems before us in setting up the administration of this whole plan, the relationship between the State Department and the Congress, it would seem imperative that some way be found whereby there may be the closest association between the two bodies.

Under the reorganization law, we have the Foreign Affairs Committee, committed to the responsibility of following everything in the foreign affairs field.

Would you be willing to give consideration to the possibility to some committee of the Congress, somewhat similar to the Atomic Energy Committee, that would sit perhaps weekly, or more often if it would seem necessary, to keep the closest contact and have a very detailed knowledge of how things are proceeding?

Secretary MARSHALL. I would like to think that over on the basis of workability, on the basis of frequency, and in relation to the powers of the committee.

However, I agree with you there is a necessity for very intimate relationship with the Congress.

Mrs. BOLTON. It would be in the top areas and not in the working areas, as envisage it.

It would not entail the committee of Congress going into the details of management, and so forth. That would be unworkable. However, they would be on the advisory plane, keeping in very close touch constantly. It would seem that that might solve some of the problems that face us in putting a bill through Congress, and so on.

I would be very happy if you would give it some thought.

In planning the recovery program for Europe, fuel is a very important factor, is it not?

Secretary MARSHALL. It is one of the most important factors.

Mrs. BOLTON. That would be of course coal over the various regions, and Polish coal would be of utmost importance, I assume.

Secretary MARSHALL. That is correct.

Mrs. BOLTON. In regard to oil, it was anticipated, was it not, getting oil from the Near East?

Secretary MARSHALL. It is hoped that the greater part of the oil required, particularly in the later years of the program, could come from the Middle East. If that does not prove true, we will have to have a restudy of the whole oil situation, because that will necessitate a revision of our present plans.

Mrs. BOLTON. A rather complete revision would be in line, would it not?

Secretary MARSHALL. Yes, a complete revision, but Mr. Krug can tell you more about that than I can.

Mrs. BOLTON. I am thinking of it rather more from the State Department's angle, Mr. Secretary, from the relations that are in such grave jeopardy between the countries of the Near East and ourselves at the moment, and that of course is a matter of State Department interest?

Secretary MARSHALL. Very much so.

Mrs. BOLTON. I think that is all, Mr. Chairman.

Chairman EATON. Mr. Gordon.

Mr. GORDON. Is the door shut for other nations to participate?

Secretary MARSHALL. What was your question?

Mr. GORDON. Is the door shut for other nations, such as Poland, for example, to participate in this program of European reconstruction, now or in the future?

Secretary MARSHALL. It is not.

Mr. GORDON. What would be the condition for it to participate?

Secretary MARSHALL. They would have to subscribe to the conditions which are laid down in the CEEC, and the later conditions that arise here by virtue of the laws which you gentlemen enact.

Mr. GORDON. Were Poland and Czechoslovakia asked to participate in this program?

Secretary MARSHALL. All countries in Europe were invited, except Spain. That was handled entirely by the nations in Europe.

Mr. GORDON. Can you tell us for what reason they refused?

Secretary MARSHALL. I will have to go into the records for that. I think I know the reasons they did not accept, but I have no official documents to indicate them. I am quite clear in my own mind, and I think all the rest of you are as to what actually happened, as for example, in the case of Czechoslovakia, which went through with acceptance, and then following the visitation in Moscow had to withdraw.

Poland did not get so far as to accept, but indicated the intention to accept and then went no further, I presume in view of what happened in connection with Czechoslovakia. They were invited and it was very much hoped they would accept.

Mr. GORDON. Mr. Secretary, in your opinion is there a determined Communist intent to kill off proposals in this legislation now before us?

Secretary MARSHALL. I could not hear the first part of your question.

Mr. GORDON. I repeat, in your opinion, is there a determined communist attempt to kill off the fulfillment of the proposals in this bill?

Secretary MARSHALL. Yes, sir; I think that is quite clearly stated in the pronouncements of a member of the Politburo, and by Mr. Molotov himself a leading member of the Politburo of the Cominform said:

The Marshall plan strikes at the industrialization of the democratic countries of Europe and hence at the foundation of their integrity and independence and in the planned for "Dawesization" of Europe was doomed to failure at the time when the forces of resistance to the Dawes plan were much weaker than they are now today, in postwar Europe, there are quite sufficient forces, even leaving aside the Soviet Union, and if they display the will and determination, they can spoil the plan of enslavement.

All that is needed is the determination and readiness of the peoples of Europe to resist. As to the U. S. S. R., it will bend every effort in order that this plan be doomed to failure.

That is a pretty direct answer, I believe, to your question.

Mr. GORDON. Thank you Mr. Secretary.

Mr. SMITH. Mr. Secretary, we are engaged in a gambling venture here, are we not?

Secretary MARSHALL. In the common acceptance of the term "gambling," I do not believe I quite agree on that. I would say we are not guaranteeing a result, but we think there is every prospect of success if we go into it wholeheartedly. It is in a sense like almost any business venture. You might call all of them gambles, as to whether the product is going to be worth while, whether the public will buy it, and whether other things happen that vitally affect the business.

I would not even say the program is speculative. I would say it is a very carefully considered action to meet a very critical situation along lines which we feel show a fair prospect of success, and I think a good prospect of success, if we carry through wholeheartedly.

Mr. SMITH. Do you feel at all it might possibly lead to war?

Secretary MARSHALL. I think it should avoid the issue of war rather than lead to war.

Mr. SMITH. Now then as I examine this bill, we are concerned here, are we not, with an economic problem, principally?

Secretary MARSHALL. We are concerned here directly with an economic problem which has a vital relationship to political matters.

Mr. SMITH. Do the political and humanitarian features tie in to the economic?

Secretary MARSHALL. They are tied inseparably to it. They are results that will flow from it.

Mr. SMITH. Now I notice on page 25 of the outline of the European recovery program which the committee has, it states on page 25:

Six years of war and enemy occupation has wrought heavy toll on the people and the economic structure of Europe.

Is there any other element present which has made for chaos in the European economic situation at the present time, or in the last 2 years?

Secretary MARSHALL. There is the constant demonstration of a consistent effort through all of the western European countries, but particularly Italy and France, to effect a complete change in the form of government to that of a police state or certainly a totalitarian state. A form of government destructive of those freedoms and liberties which have developed in western Europe and which we think are vital to world well-being and to our own security and future prosperity.

Mr. SMITH. Would you say that present Government policies from an economic angle have contributed to this situation?

Secretary MARSHALL. Present Government policies in Europe?

Mr. SMITH. I am thinking now, Mr. Secretary, about this matter of rationing and allocation. In other words, they have not permitted a free economy to operate since the war; have they?

Secretary MARSHALL. The governmental situations in some of those countries, notably Italy and France, have been such that they have had great difficulty in making normal efforts to restore their economic stability.

There have been actions taken by some members of the Government, as in France and later, after they left the Government, by some groups in France, to make it virtually impossible, at least for the time being, to engage in a well-ordered recovery program.

These actions have affected industry, and all of their normal relationships and have caused confusion and great concern among the population.

Mr. SMITH. We are concerned with production, are we not?

Secretary MARSHALL. Primarily; yes. The great cure in this immediate economic situation is production.

Mr. SMITH. How are we going to get it, by a continuation of the present policies of the governments, or are we going to make it possible for incentives to operate in the field of production?

Secretary MARSHALL. We are going to get it, I think, by the furtherance of agreements among themselves, which are already being started in their implementation, and by our providing a certain percentage of either funds or material that are in critical shortage over there, or in foodstuffs that the populations urgently require. Our assistance can begin to make the wheels turn.

Now the percentage of our part in the over-all plan is rather small. When you consider the bulk of the amount, it does not seem small over here, but compared to the total requirement in Europe it is a small percentage of the whole requirement.

I think perhaps it can be illustrated a little bit this way: We will say in June they were on a dead center, speaking mechanically and thinking of a locomotive. The wheels were hardly turning at all.

In addition to that there was great confusion among the crews, and great difficulty down the track.

Now more or less because of the psychological effect that arose, they got off dead center and began to make a little start. They got together and reached a very remarkable agreement, involving a great many commitments and concessions on the part of one nation and another. That again increased the momentum slightly. They are now struggling along on that basis.

However, with the forces working against such a recovery, and with the lapse of time, the oncoming winter and all of the attendant factors involved, a certain material support from us can have an effect far beyond the actual extent of that support. Therefore, our contributions should enable their effort to gain considerable momentum, until it begins to take care of itself.

Mr. SMITH. The thing that troubles me is this, Mr. Secretary: We know that coal is a vitally important commodity. We know that foodstuffs are very, very important. We know that steel is very, very important. Now there are no greater deposits of coal in the world than in England, Germany, and the Ruhr area. France can produce food if we can make the farmers work. We can do the same with steel, but in some way or other, the production has fallen down there because those who produce are not willing to do so.

My point is, should not this legislation anticipate some way or means whereby we can furnish an incentive to produce?

Now, to support the fact that incentives are important, I refer again to this report, page 71, subsection (a):

Observers of the present state of affairs in Europe are agreed that the lack of adequate incentive for individual effort is having a pervasive and serious effect upon mining and industrial production and upon the farmers' willingness to cooperate in governmental-goods programs, and to channel products into legal distribution.

One of the causes (though by no means the only one) of the weakness of incentives, is the shortage of consumer goods.

If incentives is the answer, how does this legislation assist in that respect?

Secretary MARSHALL. I think this legislation assists toward that end in that we feel it will, by its effect, under its provisions and its utilizations of the means authorized, tend to break these vicious circles, which cause a great deal of difficulty as depicted in the sentence you have just read.

For example, the greatest incentive of the farmer to plant more crops and to bring his foodstuffs to the city for sale, is something to buy in the city with his money. This money must have a reasonably stable foundation.

At the present time, there is not only little to buy—I am speaking very particularly now of Germany, for example, and the American zone, to be specific—there is very little to buy but, what is more difficult, the currency question just defeats the whole procedure. What you get in one country, or what one country can do, is not translatable into values in another because of the monetary breakdown. Unless all transactions are in dollars, of which there are very few, they have no assured basis of trade. They have "soft money," so everybody holds back.

The greatest incentive I can conceive of in this matter is, a production that is stimulated one way or another by the goal of an improved

monetary situation, so that goods are there for the man to buy, and the money he gets for his product will buy an equivalent amount of goods. The trouble is, the situation is now a vicious circle. Until the circle definitely breaks among all these countries, until they are given some solid foundation for the currency alone, they are up against a somewhat insoluble situation.

Take for example the endeavor to stimulate more coal production. Unless the coal miner can get more food for his extra efforts, he does not care about producing more coal. Then consider someone else, working at something else, just as hard. Does he get more food? No, he does not. Some action must be taken to establish an ordinary healthy state of commerce and trade in Europe.

The situation in Germany immediately relates to the other countries, which are very close by—Italy, France, and England. One difficulty we get into, is what do we use as the medium and basis for the transaction of business? The situation has resulted in merely a drain on dollars. Unless dollars were used there would be no business. We would find ourselves not providing the things that are necessary for Germany to obtain from these other nations, because there were no dollars for them. They simply did not have the dollars. Some means must be found for reestablishing the ordinary business of trade where the man has some confidence in the money, where he has an assurance that when he works he will get something back that has value, and he can use that to get something he needs at a reasonable cost. The whole situation will then begin to develop in a greatly improved manner, and eventually will blossom into a degree of prosperity.

MR. SMITH. You, of course, are making a very splendid argument for free economy, and you do not have that in Europe.

Secretary MARSHALL. Well, you have it and you do not have it. In Germany, there is a tendency to have State control of railroads, State control of this, and State control of that. There is also the British experiment with a certain socialistic form of enterprise. All those things I think will accommodate themselves after a healthy resumption of a trade basis.

MR. SMITH. I do not want to labor the point, but I have been thinking through this a bit and I am wondering what would happen to production in a coal-mine area, for example, if we plunked down a modern American drug store or an A. & P. store. Do you know what would happen to production? I would like to have Mr. Douglas answer that one.

Secretary MARSHALL. If the store would accept the money it would be desirable.

MR. SMITH. We might give them American scrip of some kind or another. It might be a way of getting dollars back into Europe.

Secretary MARSHALL. I don't know. You are over my head on this monetary problem.

MR. SMITH. I have but one more question, Mr. Secretary: Does this legislation anticipate a return of stock-piling materials in exchange for whatever loan or grant that we make to these countries?

Secretary MARSHALL. Yes; we have that in mind, to the degree that such materials are available and to the extent this country desires to purchase them.

MR. SMITH. I hope we will make a very strenuous effort to accomplish that purpose.

Thank you very much.

Chairman EATON. Mr. Mansfield.

Mr. MANSFIELD. Mr. Secretary, what will the effect of this proposal be on high prices in the United States?

Secretary MARSHALL. That is certainly a heavy question for me to answer. We propose in our planning to export a smaller amount of goods abroad than we did in 1947. I would assume that we certainly would wish under any circumstances, to continue our foreign trade and encourage it. How we accommodate that to the rising price spiral is something I will have to ask you to debate more with those who are the experts on that particular phase of the matter.

My own assurance in the relation of high prices to the program as a whole comes from the fact that I find so many complete disagreements among the experts that I think I may be sitting in the middle; maybe I can make as good a guess as the next man.

Mr. MANSFIELD. Mr. Secretary, in your opinion, what will happen if we do not adopt a proposal such as this now before us for consideration?

Secretary MARSHALL. My opinion is that we would find the European situation—certainly from our point of view—in a process of disintegration, which would quickly permit development of the police-state regime. We ourselves would be confronted across the Atlantic with, if not a trade barrier, certainly with a great detriment to our ordinary business, or commerce and trade. We would be confronted by a situation which we would view with greater forebodings, and that would require us to do much more here to reassure ourselves as to the security of our position.

Mr. MANSFIELD. Will we spend as much as contemplated here, and more, if we refuse to take this risk?

Secretary MARSHALL. I am quite certain we will spend much more.

Mr. MANSFIELD. I would like a general answer to this question: What will such a refusal mean in money, in national security, and in our own economic welfare?

Secretary MARSHALL. I would say as to money, in the end a much more costly procedure will be forced on us.

What was the second one?

Mr. MANSFIELD. In our national security.

Secretary MARSHALL. I would say our position would be very materially weakened and, therefore, the necessity would be for a materially weakened and, therefore would necessitate action to attain a stronger position from the viewpoint of national security.

Mr. MANSFIELD. And the third one, in our economic welfare.

Secretary MARSHALL. My own reaction to that, from what I have been told by those who have been working on this problem for a long time, is that the economic resuscitation of western Europe, or as much of Europe as possible, along normal lines, would have a very healthy effect on American prosperity, and the contrary would be greatly to our disadvantage.

Mr. MANSFIELD. If we do not proceed with this proposal, will we, in your opinion, lose western Europe by default, and, if so, to whom?

Secretary MARSHALL. I think I have partly answered that already. The vacuum which I have referred to several times, which I think must be filled if we are going to find a practical basis for a peace

agreement, will be filled by a governmental procedure that is antagonistic to all of our conceptions, and which will hang over us in Europe thereafter. It is quite plain that the leadership in such procedure, which is antagonistic to all we feel is normal and desirable, is dictated by the Soviet Union.

Mr. MANSFIELD. And if that should happen the cost to us would far supersede the amount of money now being considered?

Secretary MARSHALL. I think that would be the case; yes, sir.

There is another factor involved, which would have its effect on our future costs, on our security and on our future prosperity. There would be a tremendous reaction in western Europe were we to turn back now in this matter. The psychological impact of that is pretty difficult to calculate, but it would be tremendous, and I think it would be greatly to our disadvantage in the future.

Mr. MANSFIELD. Have we the resources to undertake such a program as now contemplated, so it will apply to the rest of the world?

Secretary MARSHALL. I refer to the Krug report and to the Harri-man report for an answer to that, Mr. Mansfield.

Mr. MANSFIELD. If we can go into this program halfway, is it your opinion that the end result will be just as bad as if we did not go in at all?

Secretary MARSHALL. I could not quite say "yes" to that. I think the result would be the expenditure of a great deal of money with very little return. A very small result that probably would not meet the situation from our point of view at all, in the end. In other words, we would have gone into an enterprise with inadequate funds, and the business would be a failure.

Mr. MANSFIELD. At that, it would be a delaying action?

Secretary MARSHALL. It would not only be a delaying action but would result in a rapidly deteriorating situation.

I made a statement before the Senate committee that if the program could not be adopted in full—meaning in its general over-all conception—we had better not go through with it at all. That was my advice to the Senate committee, and it is my advice here. I think it would be a very serious mistake to adopt halfway measures, because no one can tell us to what extent the resulting deterioration in Europe would carry us.

As I said a moment ago, there would be a tremendous psychological reaction, followed by a depression, I think, of spirit and effort. We must always have in mind that the smaller nations are always very fearful of whether or not we are going along with them into the future, or whether we are going to withdraw behind the Atlantic and the Pacific and allow their affairs to go on without any relationship to ours.

Mr. MANSFIELD. Mr. Secretary, part of the reason behind this legislation before us is to contain communism. If, during the life of this act, any of the 16 nations adopt a Communist form of government, what then would be our policy?

Secretary MARSHALL. I would not attempt to prejudge that at the present time, but I think I am probably correct in saying that they could not really go through with their pledges on such a basis as that.

Mr. MANSFIELD. I do not know whether this is the proper place to ask this question or not, but I am sure it will be brought up in connection with this proposed legislation: Can we afford both the European-recovery program and universal military training?

Secretary MARSHALL. Can we afford both?

Mr. MANSFIELD. Yes.

Secretary MARSHALL. I have very definite views on the subject, and I would prefer not to state them here. Frankly, I find some difficulty in having my recommendations considered as coming from the Secretary of State. There is, rather, a tendency to listen to me as an Army general and a former Chief of Staff, which is not particularly helpful to my position as Secretary of State. I would much rather not discuss the question of universal military training.

I will say I have very definite feelings on the subject, and I will add this much, that it is not a question of what you can afford to do. In my own view, if you do not do something like that you cannot later afford what you are going to be forced to do. It is an economy and not an expense.

Mr. MANSFIELD. I was very interested in statements made by Mr. Thorp about this proposed country by country break-down that we are going to receive Wednesday. I am looking forward to it with a great deal of interest, and I know all of the other members of the committee are.

One thing that struck me as a little odd was, I believe, Mr. Thorp's statement to the effect that as far as Luxemburg is concerned it might be a matter of both grants and loans. Is it not true that Luxemburg is the seventh greatest steel producer in the world, and is it not true also that the steel industry in Luxemburg is financed to a large extent by outside capital, and is it not also true that there is certainly no deficiency in the steel market throughout the world at the present time, and if those things are true why should grants be extended to Luxemburg?

Secretary MARSHALL. Well, can you not let Mr. Thorp answer that on Wednesday?

Mr. MANSFIELD. Very well.

Secretary MARSHALL. Thank you.

Mr. MANSFIELD. Is western Germany to be considered under the European recovery program as a unit, and are its resources to be used in the rehabilitation of western Europe in general?

Secretary MARSHALL. The American and British and, I think I am safe in saying, the French occupation zones are going to be part and parcel of the European recovery program.

You speak of Germany's resources being applied to Europe as a whole. Certainly, Europe is, at the present time, desperately dependent on coal from the Ruhr.

Great efforts are being made to produce more coal in the Ruhr, so as to increase the allocations of coal that are needed in the rehabilitation in Europe generally.

There exists concurrently the problem of rehabilitation of the American occupied zone and the British occupied zone, so that they will be self-sustaining and not dependent on us for funds to meet their deficits in the necessary imports of food and so on. Germany is an essential factor in the economy of Europe, and must be tied into this general program.

Mr. MANSFIELD. In my opinion, Mr. Secretary, it is probably the most essential factor in the reconstruction of western Europe.

Secretary MARSHALL. You might say it had been the heart of the great industrial development of Europe in the past.

Mr. MANSFIELD. I am wondering if some effort will be made to stop the dismantling of some of these plants to aid in the processes which go with this particular proposal.

Secretary MARSHALL. We are obtaining those detailed data regarding the plant situation at the present time, and they will be submitted to your committee. I have already made a statement before the Senate Foreign Relations Committee regarding those plants so that you gentlemen can have an opportunity to view all facts in the case and determine your own reactions in relation to it.

The matter is complicated by the fact that we want a self-sustaining Germany, and we want the output of production from Germany that is essential to the economy of Europe. But we do not want to create an industrial Germany that will be a menace—a menace in a military way—to the future of Europe. Another complication is the feeling of the people of France, in particular their extreme sensitivity to anything done in Germany which in their opinion some years hence might lead to another tragedy for France.

There you have the reaction of a population and its tremendous effect on the political leadership of the Government, and its effect on everything we undertake to do in connection with the industrial rehabilitation of Germany.

It cannot be ignored. They have had a tragic past. They admit that there must be a rehabilitation of Germany, sufficient to make it self-supporting, and particularly sufficient to assist the general economy of Europe. However, they find it difficult to agree with us and our staff as to just how that is to be done, and to what degree it is to be done, because they entertain very real fears. We may dispute the logic of those fears, but we cannot dispute the fact of the fears.

We are also confronted with a very real relationship in this matter with other countries. That holds good with respect to some of the satellite states, Czechoslovakia and others, who have suffered in the past through German military actions. In connection with these plant removals we not only have the previous agreements that were made, but we have the fears, if what they consider an excess number of plants are left there. There is our desire to make Germany, as quickly as possible, self-sustaining, and our desire under the European recovery program to rehabilitate the economy of Europe as quickly as possible. From that comes the feeling that this plant or that plant or the other plant might well assist in such a rehabilitation.

When you turn to the local situation—General Clay specifically, for instance—and the British, somewhat in the same position, there is an intense desire to settle the matter forthwith, in order to get the economy organized with a fair degree of permanency. All of these complications are not readily adjustable to a solution agreeable to all. That is a rather lengthy statement, but those matters are all involved in your question.

Mr. MANSFIELD. Thank you.

Chairman EATON. Mr. Merrow?

Mr. MERROW. If the Soviet Union should desire to take Western Europe by force, what could the countries in Western Europe do about it, or what could we do about it in our own inadequate state of preparedness?

Secretary MARSHALL. Of course, that would present a terribly critical situation. The countries of Western Europe are, in the main,

ill-prepared for a resistance. A great deal would depend upon the reactions of the populace, and their support of the government in its efforts to meet the crisis. It would require on our part a reconsideration of our entire foreign relations and our entire foreign policy, and I would prefer not even to predict at the present moment just what the action of our Government might be.

Mr. MERROW. Will they be any better prepared in Western Europe after this plan has been in operation for 4 years to resist such an eventuality?

Secretary MARSHALL. I would say certainly in morale they would be better prepared. I would say also that the possibilities for such an occurrence would be more remote as the prosperity of Europe is restored.

Mr. MERROW. I am asking these questions because I think there is an important principle that should be considered in connection with this principle which we are dealing with here today.

In the first place, we are talking about the rehabilitation of the economies of the countries in Western Europe, and we propose to rehabilitate those economies over a period of 4 years in the hope that the various countries will not go communistic. On the other hand, there is an equally important principle in foreign policy, in my opinion, and that is adequate preparedness on the land, on the sea, and, more especially, in the air.

It would seem to me that the plan under discussion would amount to pouring billions of dollars into Western Europe in the next 4 years without adequate air-force protection for the investment.

I wonder if you would be willing to comment on that.

Secretary MARSHALL. That has so many facets I would rather not discuss it.

Mr. MERROW. One thing more, Mr. Secretary: We have seen a good deal in the paper, to pursue this a little further, about a 70-group air program which, according to the Air Force, is the irreducible minimum of air power that we should have.

According to my information, we would have to have a supplemental appropriation of \$500,000,000 for the present fiscal year, and an appropriation of \$6,000,000,000 a year thereafter for each fiscal year for a period of 4 years to obtain that minimum. The number of first-line planes in the 70-group program being between 6,000 and 7,000, and the reserves of about 8,100.

Now, if that is the irreducible minimum for safety, it would seem to me that we ought to give consideration to the principle of preparedness, along with this principle about which we are talking today. If we spend \$16,000,000,000 or \$17,000,000,000 in the next 4 years in Western Europe, those countries have been enriched to that extent, and therefore they are greater prizes for any aggressor.

So it would be very difficult for me to go along with a plan of this type unless we have adequate air power so that our will will be respected. Otherwise, it seems to me we are throwing the money away.

Secretary MARSHALL. I do not see it quite that way, sir. I think the chances for warlike turbulence in Europe become more remote as Europe becomes stabilized. I do not think there is a threat along the line that was indicated in your statement. I think naturally that

we have to be strong for some years to come, and I am intensely interested that we find a way to do it that is not wasteful of our funds.

This program we are proposing is designed to create a situation which tends to stabilize a great area which is now in a state of economic weakness. Weakness easily leads to greater turbulence, which might in turn lead to something much more grave. We are not proposing an aggressive program, in one sense. We are not proposing specifically a defensive program in that sense. We are proposing a procedure to stabilize conditions in Europe, and by the very definition of the word I think the result would be to promote peace rather than to create a situation which would be more likely to develop a war.

Mr. MERROW. Mr. Secretary, I have long been in sympathy with the principle you have stated, but what alarms me is the statement made public only a few days ago by the head of the Air Force that the Soviet Union has three times the fighting planes that we have. In the recent bill reported by this committee for interim aid was a table showing the military strength of the Soviet Union on the land, which is tremendous.

Now, in view of what has happened in the past few months it would seem as though aggression is on the march again. Whereas I am for helping to stabilize western Europe, it would seem to me that if we do not have security at home, and are not adequately prepared, we are dissipating our funds.

In other words, we are building those countries up; they will be rich prizes for an aggressor. If we should go along for 3 or 4 years spending money in Western Europe, and do not develop an air force that could make our will felt around the world the time may come when the 16 nations will be overwhelmed and we can do nothing about it. In this event we have poured out our money and have lost it.

Secretary MARSHALL. I can only repeat what I said: That the more quickly the European situation is stabilized the less likely is the aggressive action you have indicated.

At the same time, I would say as Secretary of State that it is very important that we maintain our military strength. I think it is very important that we find the most effective way of doing it, and not the most wasteful way.

Mr. MERROW. Thank you, Mr. Secretary. As I have said, I am for the plan in principle, but I would like to see at the same time the amount of money that is necessary. If we proceed along that line then I think we will have the respect for our will around the world, and the money you would propose investing in western Europe will be protected if we have a strong air force. Otherwise, it will not be protected.

Chairman EATON. Mr. Colmer?

Mr. COLMER. I have no questions.

Chairman EATON. Mr. Judd.

Mr. JUDD. Mr. Secretary, as I read all the data that has been sent up and the various reports, it appears that these requests from European countries are based on an attempt to restore them to the general industrial and living standards they had in 1938; is that right?

Secretary MARSHALL. I do not think it contemplates a living standard on a par with 1938 at the end of 4 years.

Mr. JUDD. But it does contemplate industrial or production standards of that level?

Mr. THORP. I think that is correct, in terms of their original requests. That is, their requests would have brought them back to standards of about 1938, but those requests have been somewhat reduced in the screening and, therefore, as a result of the program that is being put forward here it would leave them below the 1938 level.

Mr. JUDD. Are you speaking of industrial standards?

Mr. THORP. I am talking in standards of living. I refer to terms of production, however, and say it would be above the 1938 level.

Mr. JUDD. How much above? Do you have that figure?

Mr. THORP. I think rather than to make a quick statement, I would rather work that figure out and supply it to you later.

Mr. JUDD. It would be different for different countries?

Mr. THORP. It would be different for different countries and different for different segments in the economy. It might average in the neighborhood of 10 to 20 percent above.

Mr. JUDD. Is it true, as I have heard said, that in the Paris Conference no country was permitted, and the group as a whole was not permitted to examine the figures and requests submitted by any other country?

Mr. THORP. No; that is not correct. What happened was each country submitted its own initial figures, but there were technical committees which took the main items and studied them as a group.

Mr. JUDD. For example, could you have Swedes and Frenchmen and Englishmen examine Italy's requests or the requests of Switzerland?

Mr. THORP. There were representatives from these countries on the committees. There were members representing the local picture, and they came up with their total estimate.

Mr. JUDD. So you think that their requests really were just to restore them to approximately 1938 or the levels you have mentioned, and not considerably in excess of that? There have been adequately you think, adequate collection and examination of figures, and they are not excessive?

Secretary MARSHALL. I am sure that they have been collected here in Washington, and we did find it necessary to make some reductions in the figures that were requested in the CEEC report.

Mr. JUDD. One of the reasons I brought that up was because of a letter I have received from a member of the Griswold Commission in Greece, a man of absolute integrity and wide experience. His letter reads as follows:

Today we are trying to put the final touches to a screening of the Greek Marshall plan requests and after witnessing in general the way it has been necessary to come up with some figures I feel compelled to intercede in behalf of the American taxpayers.

Gene Clay, of the Public Finance Division of this Commission, is leaving Sunday to appear before the proper committee on the subject and has made a heroic effort to analyze the Greek requests, and it is quite probable that the data coming from him will be more realistic than from many other countries, but surely the figures are the maximum amounts which the people of this country could conceivably absorb into their economy, and I am of the opinion they are much too high and in some instances would result in a disservice to these folks. There is a rather rigid limit to the standards of living which can be supported over the years by even the greatest effort of Greece. The general character of its farming areas does not recommend a mechanization, which in turn would greatly increase foreign-exchange requirements for repairs, fuel, etc.

I honestly do not believe we should attempt to impose western standards or the hope of achieving them on a country which simply never can support them. Too much of the Marshall plan planning, it seems to me, is predicated on everyone being elevated to western standards.

That is the impression I have received a good many times: That some of our people are trying to raise them to our standards, and if we get them up there by 1952, and then withdrew, they cannot possibly maintain themselves at such a level, and they will go down with greater chaos and confusion than if we had not raised them so high.

My question is, Are we being realistic in the estimates we are proposing for investment and assistance to those countries, or are the estimates too often in terms of what we would like to have rather than in terms of what is possible in some countries?

Mr. THORP. I think the estimates represent the best efforts of the executive branch of the Government to estimate what might be called the minimum assistance which is necessary to bring these countries back to something in the neighborhood of the prewar level. Also, to provide them with a balance, for the balance of payments. Of course, the reason the industrial production has to be above prewar is to offset the loss of invisible income, and they will have to have that extra production for the purpose of export, in order to get the imports they used to pay for from invisible income.

Secretary MARSHALL. I think, Mr. Judd, from my own point of view in that matter, the best protection we have against the idealistic procedure you indicated is the number of people we have had involved in the investigations.

It is possible that they may have erred in the idealistic direction, but to me it is hardly conceivable. There were too many hard-headed people in business and in economics and other matters involved in this program. They were considering the whole world situation, as well as these particular areas. It was not a small group. It was not a little, completely absorbed group that had "localitis" in their own activity. There was a large number of people, and many business people and economists and similar experts along that line.

That, I think, is our best protection against going idealistic.

Mr. JUDD. I would have more confidence in it if the screening had been done, or was being done, by other Europeans. I think they would be in a better position to scale each other down than we are. They are more realistic. That is the reason I asked the question as to whether there had been careful screening in the Paris conference of each country's figures by other European countries.

Secretary MARSHALL. You use the words "careful screening." That would require some definition.

The CEEC was an organization that was entirely new, almost without precedent in the world, and an organization that had only a limited number of weeks within which to operate. We have taken the CEEC report and have had a large number of people, experienced people, I will say, rather than experts, go through it.

There have been a great many conversations and discussions with portions of the CEEC committee, and finally we have come to certain conclusions.

It was not to be expected that an entirely new organization of that kind, and an organization of sovereign nations at that, could undertake the screening process that we turn loose on our own internal

affairs here, before we bring them up to Congress, and where you gentlemen frequently think we have done a very poor job of screening. We go through a screening process within our own operation, and then we go through another screening process before the Bureau of the Budget, and then we present the matter to Congress and there is still more screening done.

Well, that was not to be expected in this European organization; certainly, not in the first 2 or 3 months of its existence. Particularly where some countries were very poorly organized and were in a very turbulent state, which would be notably the case in Greece.

Mr. JUDD. In the next paragraph, this gentleman says:

Just yesterday a most significant remark was made to me by the chairman of the Greek Marshall Plan Committee as follows: "As long as France, Italy, England, and others are endeavoring to obtain for themselves more than their share of the Marshall plan funds we must make our requests on the same basis." That this is being done generally is too obvious for comment but recognizing it we still find ourselves hard put to screen their requests. Here we find that statistical information is too often compiled to prove a contention and not to disclose factual conditions. We have been compelled to mistrust their figures and, of course, it discredits their case from the start.

He is on the ground, he is sympathetic. He is doing his best, and yet he sees at the time he sends in his report that he cannot fully trust the figures.

Mr. THORP. May I add some facts to that story, Mr. Judd, because you gave a reference to the time when a man took a trip. I am able, therefore, to distinguish approximately the time when this letter was written.

The Greek deficit included in the CEEC report is for \$510,000,000. As a result of the screening which took place here in this country by the various committees it was quickly recognized that the Greek figure was excessive. It was realized to be a high figure, and the deficit which is included in our report is \$157,000,000 less than one-third the amount that is described in that letter that you are reading.

So I do think that at least that was caught in the screening by the executive branch, and I think we have to consider this now in terms of a suggestion of \$157,000,000, as the quantity of the deficit for Greece, rather than the \$510,000,000 which was originally suggested.

May I say one other thing, and that is that the original requests from the various countries, coming into Paris, totaled in the neighborhood of \$29,000,000,000, and they screened that, themselves, as you probably know, down to approximately \$22,000,000,000, so there was screening done in Paris by the countries themselves.

Secretary MARSHALL. You made several references, Mr. Judd, to their putting in larger figures in order to trade and get a better position. Somebody was getting this, so they were going to get that.

Well, I would not say that was peculiar to Greece, and I would not say that was totally due to the fact that it was a Government that was in very hard circumstances. I have heard that story right here in Washington many times.

Mr. JUDD. I was wondering if you had done to them what the Congress frequently does to you.

It is very important that we be able to defend the figures before the people, with relation to the level it is attempted to restore, and the realism of the figures as a means of restoring that level must be unassailable. That is, they cannot be torn to pieces.

Now, assuming we are agreed on our objectives and have hard-headed estimates, this matter of administration comes up. How can we do it? This particular American in Greece had a comment on that. He said—

It would be my earnest hope that this plan would be divorced from the Army and from the State Department, except that they be subject to draft by the administrator, as would other Government agencies. The State Department is not an efficient administrative agency, and the Army is too expensive. I hope the finest business administrative brains can be called upon to do the job without the strangulation which accompanies Government operation and its inherent red tape.

On this question of administration, and saying that it should not be independent, because it is tied in so closely with foreign policy, is it not true that this plan is tied in just as closely with domestic policy as it is with foreign policy?

Secretary MARSHALL. Yes.

Mr. JUDD. And that when whoever is at the head of it brings his requests to the Cabinet, they involve not only you, as Secretary of State, but they involve also the Secretary of Agriculture, the Secretary of Labor, the Secretary of the Interior, the Treasury, and the Secretary of Commerce; that is, it is a great deal larger than just a foreign-policy measure. Is that not true?

Secretary MARSHALL. That is true.

Mr. JUDD. Is that an additional reason why it must not be tied too closely to the State Department?

Secretary MARSHALL. We are not tying it more closely to the State Department than it is tied to the Department of Agriculture and the Department of Commerce. The law is already perfectly clear regarding those two agencies. It is not perfectly clear regarding the State Department. So no reference is made to the Department of Agriculture and no reference is made to the Department of Commerce, as such, specifically, because the Congress has provided the specific laws that define their responsibilities. The Administrator has to operate in accordance with those laws, which means he must deal with Mr. Anderson who is responsible for the allocation of foodstuffs between the United States and overseas. He must act in coordination with Mr. Harriman, because he, by law, is charged with the responsibility in regard to commodities other than foodstuffs.

The State Department's responsibility is specifically mentioned because it has not previously been defined in unmistakable terms. As I read you this morning, there have been two Executive orders on the subject which had been wholly ineffective, and this is too serious a matter to leave up in the air. It is basic how you place this organization in government. Had there already been a very specific clear law in regard to this particular issue there would have been no necessity for having the matter brought up in this manner, but there was not, and we had already two very definite failures. It is too critical a procedure to leave in a questionable state.

Mr. JUDD. Then this Administrator has to have for this emergency practically Cabinet status, does he not, in that he must present his requests and program before the whole Cabinet?

Secretary MARSHALL. That is right. He is in contact with almost every one of them, and several of them in some detail, in the principal activities in which he is concerned.

Mr. JUDD. And he must have a carefully defined status such as, for example, you had as Chief of Staff of the Army. The Army and the Navy are also instruments of foreign policy. But once the foreign policy has been determined—say, war with Germany, the Secretary of State could not determine what you, as Chief of Staff, do in achieving that foreign policy objective. You ran the Army.

Secretary MARSHALL. That is an overstatement.

Mr. JUDD. It would have been bad for the country, not to mention yourself, to have had you as the Chief of Staff, tied too closely to the Secretary of State, or any of the others, in carrying out the specific job that you were an expert in, qualified, trained, and specialized to handle. We need exactly the same sort of a set-up for this job with an individual specialized and qualified for it, and with as carefully defined and unrestricted powers for the job as you had as Chief of Staff for your job.

Secretary MARSHALL. For example, when I wanted to ship supplies during the war, and I wanted to do it quickly, I was in a continuous battle with the State Department because they wanted those ships to continue in the South American trade. I wanted those ships to take troops and matériel in certain directions. The matter was not settled in a day, and sometimes not in a month, and sometimes not in 3 months. I had to do business with that agency of the Government which was involved in foreign relations, which in this particular instance pertained to all of Latin America. I was just as impatient as it is possible for an individual to be and not give away to it. I had to transact business in that way.

That same matter was projected into North Africa. You may remember, we had quite a time about North Africa. Also, in the Far East. In all those things, the Secretary of State performed certain functions. I could not usurp those functions, and I was not a free agent to disregard them.

The same considerations apply here, only it is a very clear-cut case in this instance. I think because this was not defined in existing laws, it has become very much accentuated, far and away beyond what will actually happen. There must, to my mind, be no misunderstanding about it because in the past, where the language seemed to indicate to me a very good arrangement, in practice it proved not effective.

This particular issue is too far-reaching in its effects. I feel the reaction that comes into most of these discussions is the feeling that bureaucracy—meaning Government—is ineffective. Business is argued to be dynamic and to get results and have no red tape.

Well, it certainly can cut across a lot in many ways, and at the same time it gets involved very heavily I find sometimes in red tape.

By the very rules you gentlemen lay down, and of which this particular draft of a bill is a good example, matters come forward that introduce a great many complications in actually framing a bill which will meet the situation. That is government. That is inescapable.

In our Government, we have a great deal of that. I have struggled with red tape most of my life. I have been generally on the receiving end, but in later years sometimes on the cutting end. However, I will say this—I do not know that it has a direct application—it takes more knowledge and skill to cut red tape than any other particular endeavor I know in government, because you get into difficulty more quickly without realizing what the complications are going to be.

The State Department is well known as having never been an operating agency, an ordinary administrative agency. I am well aware of that. Also there has been a great deal of clamor about matters of protocol. Proponents of other organizational set-ups are thinking of protocol when they decide that the Department should have no dead hand resting on this vibrant administrator.

I am most anxious to see a very efficient administration of this affair, and to have a man at the head of it who knows how to do business and how to get results. Also, I hope he will be one of those rare individuals who has those qualities and still can get along with people. People like that are rather rare.

I think there has been considerable exaggeration in the reaction to this matter. The feeling of the Congress, on the one hand, is that a great deal is being asked of them, and, therefore, they want to see that it is very properly controlled. On the other hand, there is present the feeling that ordinary agencies of the Government are not as efficient as modern business. Well, Government agencies operate under the many and complicated laws that are passed by the Congress.

Mr. Judd. Mr. Secretary, do you feel there would be any benefit in this Administrator—assuming we have a singleheaded authority—having an advisory committee—but not in the sense that there were so many advisory committees during the war who were merely advised as to what had already been decided—an advisory committee of representatives of industry, commerce, agriculture, labor, and so forth, who would have, defined, in the law, sufficient authority so that if they thought that the Administrator was unduly under the influence of the Secretary of State, or somebody else; or the Secretary of Agriculture thought he was unduly taking things from the American farmer, that they would have the right to appeal to the President over the Administrator, in exactly the same way as we have provided in the unification bill. We have one Secretary of National Defense but we provide specifically that the Secretary of the Army and the Secretary of the Navy and the Secretary of the Air Force can appeal over his head to the President if they feel that there is not proper balance in his handling of affairs.

This whole thing is so involved and it can mean so much damage to our economy if it is not well handled that I am sure this is the greatest objection or question to most people, whether we can get a mechanism that will operate efficiently and still not have such power as to throw us off balance.

Secretary MARSHALL. I think what you are proposing, Mr. Judd, would so limit the man that he would be under too much restraint to be able to do a good job.

Here is what I think will happen if we go ahead at all in keeping with the proposed bill: The individual concerned will have to work most intimately with the Secretary of Agriculture and the Secretary of Commerce, and more intimately with me, but my issues, I think and I hope, would be infrequent, rather than constant. The Secretary of Commerce and the Secretary of Agriculture would be involved a good part of the time; and the National Advisory Council is another group he will have quite a bit to do with.

Beyond all that, is the fact that that individual inevitably will be held accountable, by the Congress as represented by the committees, for how this affair is proceeding. You have it in your power to call

him up to testify. That will probably have a more restraining influence along the line you have just spoken of than anything else, and that may have so much of a restraining influence that it will make the matter too difficult. However, you cannot avoid that, that is a part of the Government. That is the way we are organized, and that is the way it will proceed. There will be great restraint, because the Administrator, personally, will have to appear and testify to his action along this line, or that line, and that involves him in his relations with Mr. Anderson, his relations to Mr. Harriman, his relations with the National Advisory Council, and his relations with me. So he is in a difficult position.

Now suppose you add another committee. Apparently the one you are referring to is somewhat of a check on him, rather than as a protection for him.

I am very much inclined to think that would impose just another confusing limitation. The conditions of Government are such that he is involved in these contacts from which he cannot escape. That is difficult. It is very hard to get a great business executive who is, by all the processes of individual enterprise and free enterprise in this country, a rather supreme individualist, to come into the Government and accept certain frustrations that are inevitable in the dealings with the Government. Yet that is what has to be done here. There is no other course possible.

I think it is quite essential to have in mind what these difficulties are going to be. They are going to be many. We must also consider the restraints, not only of those contacts as provided by law, but that are imposed by the necessity of reporting up here to Congress and answering all the questions that will be asked of him in detail, regarding each activity. There will be many letters, such as you have just read, which will provoke a certain line of investigation and upon which he will be called upon to make the reply. At the same time he is conducting a tremendously complicated agency.

MR. JUDD. I would like to ask you a question along a different line. There is no question but what some of these 16 European countries have been doing very much better individually in the last 6 months, or 4 months, than I think most people anticipated might be possible.

Are they doing as well collectively, as a group, would you say, as some of them are individually?

SECRETARY MARSHALL. I hardly know how to answer that because the group action is only represented specifically by those sessions that are presently going on, particularly between France and Italy, in relation to both the monetary and the customs union. Discussions, I think, are now getting under way on the Scandinavian Peninsula.

The individual action, has been most encouraging, and I think it is very largely the result of the psychological impact of some hope of procedure.

MR. JUDD. Do you think it is primarily the result of hope of help from us rather than, for example, the bad behavior of the Communist minorities in certain of those countries? In other words, is it due more to the successes of our side, or to the blunders of the other side?

Perhaps, not blunders, but a disclosure of their real objectives?

SECRETARY MARSHALL. I think that last has hardened all of these countries into the necessity of firm action on their part. Where their Governments have taken strength from the results of the efforts to

sabotage them, there has developed a stronger Government with a more definite purpose and with a more definite intent to go forward.

That is particularly the case where these great strikes were fomented. When they came out of that successfully, in preventing a general strike, they came out with a much firmer purpose to go ahead.

Mr. JUDD. Is it also true that they are getting a good deal of information in western Europe about what has happened to the peoples behind the iron curtain, which also hardens them?

Secretary MARSHALL. I could not say as to that, sir.

Mr. JUDD. There is a further question I am troubled about: Do you think western Europe can ever be economically self-sustaining, if each of those nations remains a separate economic unit?

Secretary MARSHALL. That is a rather technical question. It would be hard for me to answer it with my training. They were able to maintain themselves in the past. There have been a great many drastic changes in the world situation, but most of those changes apply, we will say, to England rather than to the continental countries. England is so dependent on imports, which makes this drastic necessity for a tremendous export program, particularly with her limited overseas investments on which to call as a source of invisible income.

The industrial productivity of the Ruhr has a relationship to the whole economy of Europe. The relationship of the Silesian coal fields is very important.

Mr. JUDD. Europe was not self-sufficient even when she had eastern Europe, which is largely the surplus area, and the deficit area is western Europe. I have grave doubts that even if this recovery program is well administered, and we put in plenty of money and make our very best effort, they can still succeed in becoming economically self-sufficient, unless they take vigorous steps to reduce trade barriers. In this country we are made up of 48 political units, yet we are one economic unit. There are no barriers at State lines.

Secretary MARSHALL. I think I can agree with you as to the degree of initiative required. They have made a beginning, which is a rather historic move, and I am hopeful that it will develop still further.

The problem in my own mind is whether or not the necessity becomes so drastically clear as it was last July and August. I am hopeful—the beginning having been made—that many commitments and agreements can be gradually worked out which will make it possible for them to overcome the deficiencies of their situation under present conditions.

Mr. JUDD. You will agree that we cannot do this without weakening ourselves, putting great strains on ourselves, and therefore it is hard to ask the people to weaken the United States even temporarily unless they are reasonably sure that out of that effort will come a compensating increase in the strength of the free democratic peoples.

Secretary MARSHALL. I think that is about it, sir. I do not like the word "weaken," because I am inclined to believe that we are not going to weaken ourselves.

Mr. JUDD. If prices go up it weakens our economy.

Secretary MARSHALL. If that continues, of course you get into a very serious situation whether you have the European recovery program or not.

Mr. JUDD. Over on your last page you say:

The United States is the only Nation today with the strength to lend vital support to such a movement—

and surely that is true. But the United States cannot carry on this kind of a program long, and the world will hate us certainly if we continue indefinitely to be world nurse and policeman.

Is it not true in a sense that really, about all this effort does is buy us some time, and buy them time, in which to move ahead into a better world organization which hereafter can carry such loads?

In the emergency this job must be done by us because we are the only ones having the strength to do it. I am asking if your Department, or the Government, has in mind anywhere in the near future our country initiating steps to reform or amend the United Nations, or revise the United Nations' machinery so that it, over the long-term periods, can do this which we are called upon at great cost and effort and risk to do ourselves, now?

Secretary MARSHALL. Having brought the United Nations into it, you have given me a pretty large order. It is certainly our hope, and it is certainly my intention—and I was chairman of our delegation to the United Nations Assembly meetings—that we would develop along lines which in the future would make it possible for a situation like this to be met by the United Nations rather than by a nation like ourselves having to take the steps that we have taken, or are contemplating taking now, in order to put the situation in order.

This program is not aid, in one sense. It is a constructive proposition, with a constantly decreasing obligation on our part.

In other words, if all goes well, if it can be carried out as we visualize it now—if unexpected circumstances do not intervene to make it more difficult—we will be out of the woods by the end of the fourth year. Now, beyond that is the question you brought up as to whether or not Europe can, under its modern conditions, be self-supporting. I know perfectly well we cannot continually help indefinitely and that they will have to maintain themselves on their own part.

As to the United Nations, that is in growth, and I hope, will develop to full growth. We took certain steps at this last meeting to try to improve the situation, to try to build up an organization that could undertake problems such as this, but long before there might arise the situation in which Europe now finds itself. There must be continual evolution in the functioning and in the development of the United Nations.

I think we are inclined to be impatient. There is most certainly a desire to see a more effective organization on the part of all of us, and it is as strong with me as it is with anyone else in the country.

I recognize it is a long, tedious process to have fifty-odd nations reach basic agreements. The fact that we did get as far as we did recently, to me, is very encouraging. The gaps in the procedure, and the "flies in the ointment," are evident to all of us; but we did do certain things and took certain steps which I hope later will receive general confirmation, as a greater degree of trust develops among nations. This lack of trust is our great trouble at the present time.

Mr. JUDD. But it is still true that the United Nations in its present structure is so constituted that one of the big five, if it so chooses, can block recovery and put us in the spot we are in now. For two years and a half one nation has blocked recovery, and forced us to carry this load. Therefore, must we not use the time we purchase in this effort to get that road block out of there—with Russia, if possible; without her, if necessary? Otherwise we may get over this emergency, but we

still do not cure the situation. We do not set up a mechanism that can cure the situation.

Secretary MARSHALL. I would say, in answer to your statement, Mr. Judd, being put in the position we have been, and carrying out the action that is proposed, we would greatly strengthen the situation. We would greatly strengthen the United Nations by our actions. We would create a situation where there would be more firmness of purpose and more general accord in that purpose toward the end to which we all aspire.

I think it is imperative for us to try to keep the organization growing.

Mr. JUDD. I wish you Godspeed in that.

That is all, Mr. Secretary.

Chairman EATON. The chairman would like to state that we hope to get through with the Secretary today. In other words, to do that we would have to stay here until 5 o'clock. We have four more very distinguished members of this committee who would like to interrogate the Secretary and unless there are some reasons with which the Chair is not now familiar, I would like to suggest that these four distinguished gentlemen lean to mercy and consume the hour between them so that all will have a chance.

Mr. FULTON. We have already agreed to that among ourselves.

I wanted to point out to the Secretary that your coming before this committee is in a different capacity than in coming before the Senate committee.

You, I believe, appeared there testifying to a specific bill, which was the same bill as H. R. 4840.

According to a motion passed by this committee, you are not appearing on any particular bill. You are appearing on this bill, partly, and on the Herter bill, but chiefly on the forming of a United States foreign policy for postwar recovery. The generality of the questions here are directed toward the formation of a policy by this committee, which may or may not be the same as the State Department's policies and which may or may not result in an independent bill being offered. Did you understand that that was the case?

Secretary MARSHALL. Not as clearly as you just expressed it.

Mr. FULTON. If that is the case, I would like to ask you, then, how this particular European recovery plan of which you speak fits into a world recovery plan. Have you been approached by many nations—for example, from the Far East—for a similar recovery plan—or have you, in your official capacity, been approached by the Latin Americans for such a recovery plan for them?

Secretary MARSHALL. I have been approached by China and the Far East, and I do not know whether there has been a general Latin-American approach, but it does amount to an approach by certain of the other American Republics.

Mr. FULTON. Then there have been meetings by certain countries to make inquiries other than just the European countries; is that correct?

Secretary MARSHALL. That is correct.

Mr. FULTON. Do you know of any far eastern countries who have had meetings for this specific purpose?

Secretary MARSHALL. The Far East?

Mr. FULTON. Yes. Was not there a meeting of the 11 nations at Manila recently for a similar program for the Far East?

Secretary MARSHALL. I was checking here to find out. I do not think of any offhand, and I wanted to make an appropriate reply.

Mr. THORP. The Economic and Social Council of the United Nations have certain regional commissions, one of which is a commission concerned with the problems in the Far East. I believe it was their second meeting. They had earlier an organization meeting. They had their second meeting in Manila, to discuss, in general, problems of economic improvement.

Mr. FULTON. Has there been any figure come out of that meeting?

Mr. THORP. Not that I know of. The report of that Commission is to come to the United Nations and will be made public, but I do not believe that that report has reached the State Department as yet.

Mr. FULTON. Has there been any amount given by the Latin-American nations that they will require for economic recovery?

Mr. THORP. As a whole, or individually?

Mr. FULTON. Either individually or as a whole. Have you been receiving figures?

Secretary MARSHALL. Yes; we have been receiving figures, and we were receiving them before this plan ever came up.

Mr. FULTON. What is the over-all statement of the total amount of world recovery necessary from the United States? How much will our American taxpayers have to put up in all, and over what period?

Secretary MARSHALL. A statement of the over-all requirements, which will involve the China problem in particular, will be submitted at a later time.

Mr. FULTON. I was the fellow who asked about the Wedemeyer report once before. Will you, then, give Congress the Wedemeyer report which you previously said you couldn't give?

Secretary MARSHALL. No, I cannot.

Mr. FULTON. Then we will have to act on the China policy without having the full information of the Wedemeyer report.

Secretary MARSHALL. That is correct.

Mr. FULTON. That concerns me, then, on this administration that is going to be set up. Will Congress be given access to the figures that may develop or the reports that may be given to this administration if it is under the State Department—because if those figures are going to be submerged the way the Wedemeyer report has been submerged and Congress can't see them, how can Congress set a policy?

Secretary MARSHALL. I think that is a totally different reason, and a totally different problem.

Mr. FULTON. What is your reason?

Secretary MARSHALL. I cannot state that here, other than to say I don't think it is in the public interest of the United States, and particularly of China.

Mr. FULTON. Can I ask you, then, are you specifically opposed to the Herter bill, which sets up the outside administration and gives so many foreign policy powers to an outside organization?

Secretary MARSHALL. I am not quite familiar with the foreign policy provisions; but as I understand it, the Herter committee operates with a board of directors, isn't that correct, which represents the Congress, the State Department, and the various agencies of the Government?

Mr. FULTON. Now do you object to that?

Secretary MARSHALL. I think that is not a sound basis, because it plans a great limitation on the individual who has to accommodate himself to all these agencies and their Government contacts.

Mr. FULTON. Would you give this administrator, either under your bill—or the Herter bill, the power to cut off relief without consulting and taking the direction of the Secretary of State?

Secretary MARSHALL. Will you repeat the question again, please?

Mr. FULTON. Would you give this administrator, either under the State Department version of the bill or under the Herter bill, the power to cut off relief in a country without taking specific direction of the Secretary of State?

Secretary MARSHALL. I would say, in all probability, such action might have a very definite effect on foreign policy.

Mr. FULTON. So you would not give him that independent judgment of cutting the relief off with any country?

Secretary MARSHALL. I cannot conceive of that, not having a very definite effect on foreign policy, and the question would be whether we could hazard the result or whether we should make some concession to the situation.

Mr. FULTON. Now, suppose Russia came forward with an independent plan, similar to yours, for the reconstruction of Europe. Have you given any thought to what might happen then—whether you would correlate your plan with it or would you cooperate with the Russians on such a plan?

Secretary MARSHALL. It would depend, I would say very decidedly, on how the matter was put forward.

I think there is a Molotov plan right now. I think there was some reference to it yesterday or today.

Mr. FULTON. What is your opinion on it? Will you cooperate with, oppose, or correlate with it?

Secretary MARSHALL. Under the present conditions, there have been no circumstances that would permit cooperation with it, except the suspension of our own efforts in western Europe.

Mr. FULTON. They, in turn, oppose your plan as you oppose theirs?

Secretary MARSHALL. I don't think I would say I oppose their plan, because I don't think they are offering anything to western Europe. They are consolidating eastern Europe.

Mr. FULTON. Then, going along further on this plant dismantling. The dismantling of the plants is done under a reparations policy that was set at Potsdam; and, of course, those policies were instituted before anything came up on the European-recovery plan.

What on the policy planning level is the State Department doing, to revise the Potsdam policies of reparations?

Secretary MARSHALL. We are not actually engaged in a revision of the Potsdam negotiations, other than the decision with relation to whether or not the capital asset transfers of plants will be made at the present time, and if so, on what basis.

Mr. FULTON. Are you tentatively holding up this dismantling and transfer of the plant out of the western zone of Germany until you can determine what that policy will be?

Secretary MARSHALL. Do you mind if I read this?

Mr. FULTON. How long is it? I am limited on my time. If you put it in the record, we will just consider it in.

STATEMENT BY SECRETARY MARSHALL ABOUT REPARATIONS

We are in the process of continuing discussion with the British in an endeavor to arrive at adequate arrangements regarding any farther shipments of dismantled plants to the East. We are also restudying the whole question particularly as it relates to the recent announcement that deliveries by the Soviet Union are imminent under the reciprocal delivery provision of the Potsdam agreement. That is not a simple question, because the Soviets are just beginning to deliver badly needed commodities in compensation for capital deliveries already made to them. We do not want to adopt a definite policy for the future until all these implications are fully understood.

For the present, however, the only deliveries to the Soviet Union which are going on or are in immediate prospect from the United States zone represent the tag ends of the plants previously allocated to the Soviet Union, the delivery of which was not suspended when the United States stopped further dismantling of general purpose plants in May 1946. These deliveries consisted largely of general purpose equipment from war plants, the retention of which in Germany has never been contemplated. The final portions of three such plants in the United States zone are now being delivered—a Bremen shipyard which was allocated to the Soviet Union in 1945 and which was already 95 percent dismantled as of December 1, 1947; and the general purpose equipment from two war plants, which, as of December 1, 1947 were, respectively, 60 percent dismantled and 53 percent shipped, and 86 percent dismantled and 84 percent shipped.

The delivery of these final portions has not been halted because their retention in Germany would not assist the economy of the western zones, and no economic justification could be given for holding on to the remnants of plants already substantially delivered. It appears preferable to complete these deliveries which were not suspended when general reparations were halted in May 1946. Until a definite governmental decision is reached as to further deliveries, it is desirable to avoid any action which might precipitate the whole issue and possibly invite reprisal by the Soviet Union. We can well afford, we think, to complete these relatively minor commitments until a firm decision has been reached as to our future course.

There has been no suspension of the general dismantling program.

It is difficult to state fully why a temporary stoppage should not be made without a full discussion of the reparations program. But there are two considerations which, in our judgment, make it exceedingly unwise to call a temporary halt to the program as a whole. The first is that to stop dismantling, and then try to resume, would have a very serious political consequence within Germany. The Germans of the United States zone have been promised that the dismantling will be promptly concluded, and that that will be the end of the matter. In other words, they are now clear as to the situation, what they have to do. They know where they are and can plan accordingly. If there is a stoppage, there will be uncertainty and contention, and the reparations issue will again be in the forefront. Any further delay by this Government will encourage political opposition within Germany.

The second reason is that a stoppage would seriously prejudice our relations with the recipient governments, members of the Inter-Allied Reparations Agency. The disadvantages of a permanent halt apply in a large measure to even a temporary halt. Those countries need the equipment now. I am talking about the 18 nations (not including the Soviet Union and Poland), which are western nations. We are obligated to deliver the equipment by international agreement, and failure to do so would give propaganda material to the critics of the United States within those countries. It is true that most of those governments are prospective recipients of assistance under the European recovery program. But their policies with respect to German reparations are dictated by many considerations which cannot easily yield to our desires.

I do not wish to suggest that the Congress should not have a real opportunity to examine the reparations program. The Department will be able to provide the data soon and I hope that the Congress will be able to consider it in the next few weeks. I do not wish to appear to prejudge the conclusions of the Congress, but I venture to predict that when it has considered all the factors it will not desire to purpose any radical revisions of our existing policy toward the signatories of this Paris reparations agreement.

STATUS OF PLANTS IN UNITED STATES ZONE SCHEDULED FOR SHIPMENT TO USSR

A/S 84. Deutsche Schiffs und Maschinenbau, Bremen/Weser—Shipbuilding advance list.

Allocated December 6, 1945.

95 percent dismantled as of December 1, 1947; 95 percent shipped.

Estimated date for completion of delivery: February 28, 1948.

A/S 6. Press, Stanz und Ziehwerk, Ru. Chillingworth, Nurnberg—Pressings, war plant.

Allocated April 24, 1947.

60 percent dismantled as of December 1, 1947; 53 percent shipped.

Estimated date for completion of delivery: March 31, 1948.

A/S 62. Dynamit A. G., Stadeln—Explosives, war plant.

Allocated January 24, 1947.

86 percent dismantled as of December 1, 1947; 84 percent shipped.

Estimated date for completion of delivery: January 31, 1948.

Secretary MARSHALL. Well, we are in the process of discussing the situation with the British; in order to arrive at adequate arrangement for any further shipments of dismantled plants to the east; that is, to the Soviet Union.

Mr. FULTON. Does that pertain to France, too?

Secretary MARSHALL. There is no argument really about France or those countries, except as to whether or not plants in prospect of being dismantled and shipped should be maintained in Germany for itself for more prompt rehabilitation.

In that respect, the discussion that is going on now is obtaining all the data from General Clay and the British area—but particularly our area—as to just what is the status of these plants; in other words, to submit the information that had been asked for in Congress, so that you might form a judgment in relation to this dismantling process.

Mr. FULTON. Now, there had been some talk of this plan of yours being inflationary. As a matter of fact, I think it is just the opposite, and may I ask you a couple of questions on that line very quickly?

During the year 1947 we exported about \$14,000,000,000, and we got back in about \$5,000,000,000 worth of goods, so we had about \$9,000,000,000 deficit; is that correct?

Secretary MARSHALL. I think that is approximately correct.

Mr. FULTON. And that \$9,000,000,000 deficit was inflationary, because we got nothing for the money we put out, or the goods we put out. We sent the goods, and we got nothing back, so it was inflationary.

Now, if this program goes ahead, and by reconstructing Europe or certain areas of the world so that we can get goods in return to make up that \$9,000,000,000 deficit, we really are making an anti-inflationary measure rather than an inflationary measure, are we not?

Secretary MARSHALL. I think that is correct.

Mr. FULTON. So that instead of being inflationary, in a long-time view, this is really a deflationary plan or a reflationary plan, because it puts solid goods to coming back in to give us something instead of a deficit?

Secretary MARSHALL. It results in a more normal production in relation to trade; and certainly, on the long-term basis, it would have that effect.

Mr. FULTON. So that when you get this trade built back up and have a multilateral basis of trade, then you need some sort of an organization, do you not, to give rules of fair conduct of international trade? You need an international trade organization, do you not?

Secretary MARSHALL. Yes, sir.

Mr. FULTON. Will you tell us how that international trade organization that is being formed now at Habana—the charter—will fit into the Marshall plan?

Mr. THORP. It is complimentary. If the recovery of Europe is to be effected, it must be based on a more free flow of commodities among countries, which is the principle of the Charter. On the other hand, unless you have an elimination of the present extreme shortages of goods, you cannot hope to accomplish this free flow of trade, and therefore the ITO and the European recovery plan are really very much interlinked with each other of terms of each one furthering the objectives of the other.

Mr. FULTON. Now under the Bretton Woods agreement and, of course, the act that was passed, by the Congress implementing it, there was a requirement that no nation be allowed to deviate from a certain set, agreed-upon rate of exchange for their currency; that is, fixing the currency rigidly.

Do you not think it is time we made some change on that and had currency exchange on a more reasonable and a more realistic basis? Do you not think that would help the plan?

Mr. THORP. I think one of the purposes to be achieved in the plan is to get more realistic foreign-exchange relationships and rates. I think the difficulty up to now has been the difficulty of any country being able to determine at the present time what is the appropriate rate of exchange. Therefore, there have been tendencies to allow rates to persist, even though they tended to be unrealistic, somewhat longer than should be the case.

Mr. FULTON. Then do you not think something should be done on the United Nations level or the Bretton Woods level to get away from that fixed setting of unrealistic values of exchange and getting back to good business again, the way we were earlier?

Mr. THORP. That is something which the International Monetary Fund can deal with, and my impression is that it is a problem they are much concerned about.

Mr. FULTON. Are you going to integrate that question of exchange with the Marshall plan so that we will not get to a place where by changing the valuation of their currency we will lose out in the end and perhaps have inflation or deflation. Have you thought of that?

Mr. THORP. Yes. That is part of what we would expect to cover in the bilateral agreements with the countries and also in working closely with the International Monetary Fund, looking toward thawing out this exchange situation.

Mr. FULTON. Do you not then think there should be some limitations put in this bill on what we expect the countries to do on their exchange valuations, so that we will not get caught in the middle? Do you not think we should have some principles set out in this bill to take care of it?

Mr. THORP. They have already agreed among themselves, I am certain, on financial objectives, and there would be covered in multi-lateral agreements.

Mr. FULTON. Why do you not have Congress put some requirements in the bill for that? As I see this act, there is nothing in the act that sets good requirements that they should live up to.

Mr. THORP. In the act there is section 10 (b) (2), which describes what should be included in the bilateral agreements and one of them is:

Taking financial and monetary measures—

there is a commitment, of course, by the other countries—

necessary to stabilize its currency, establish or maintain a proper rate of exchange, and generally to restore or maintain confidence in its monetary system.

That language was intended to accomplish the purpose which I think you are describing.

Mr. FULTON. Yes; but the question I am bringing up here is that the methods of doing it are not set out—that is, the end result—and would the Secretary object to Congress saying by what methods that should be reached? Would you object to that?

Mr. THORP. I wonder whether one can be sure as to what method would be appropriate. That is, having in mind that you want a proper exchange rate fixed, you already have procedures set up in connection with the Monetary Fund for doing that, and the Bretton Woods agreement provided a basis of the procedure to be followed, and this provided the inducement to break down the present tendencies to freeze improper rates.

Mr. FULTON. In closing, I was going beyond the Bretton Woods agreement and suggested even a change in that.

Mr. JAVITS. Mr. Chairman, I would like to make a parliamentary inquiry: Would this be the appropriate time to ask unanimous consent to insert the motion adopted by this committee which is the frame of reference for these hearings? Would the chairman entertain such a unanimous-consent request?

Chairman EATON. I see no reason why not. Do you make that request?

Mr. JAVITS. Yes; I do. I request unanimous consent that the motion may be inserted at the opening of these hearings.

Chairman EATON. If there be objections, they may be stated now. I hear none.

Mr. JAVITS. I refer to that motion, Mr. Secretary, so that you might have in mind rather clearly the framework which was intimated by my colleague, Mr. Fulton.

I shall confine my questions to 10 minutes.

You have been asked a good deal about the alternatives of undertaking and not undertaking the European recovery program, and you have testified eloquently and excellently on that, both here and before the Senate committee.

Now I would like to ask you about the success of the program. Is it just as important from the point of view of our foreign policy that this program be crowned with success as it is that it should be undertaken?

Secretary MARSHALL. That is correct, sir.

Mr. JAVITS. Is it not a fact that a failure in the program, if the European nations do not to some extent get on their feet, will hurt us at least as much and possibly more, as a failure to go on with it at all?

Secretary MARSHALL. Probably so.

Mr. JAVITS. Now the success of the program is tied up, is it not, with what happens in the rest of the world, other than the United States and other than the countries affected; is that true?

Secretary MARSHALL. That is to a large extent the case.

Mr. JAVITS. For example, has the Department given consideration to the fact that a very large amount of the money we are asked to appropriate will be spent in Latin America?

Secretary MARSHALL. Yes, sir; very much so.

Mr. JAVITS. And that rising prices in the Latin-American countries, as they did with the British loan, will make much less useful this assistance which we are giving to the European countries?

Secretary MARSHALL. I am not so certain of that particular reaction. My own thought in that connection was that the money spent in Latin America will stimulate a certain amount of trade throughout the world. We will buy goods there to obtain goods in short supply here for the European program. They obtain money to buy goods here that are not in too short supply, and we are starting the blood circulating in that respect.

Mr. JAVITS. For example, \$6 wheat in Argentina will considerably devalue that which we lend or give to the Europeans?

Secretary MARSHALL. That is correct.

Mr. JAVITS. Is it not a fact also that raw material supplies must flow to the nations we are trying to aid; in other words, that they need such materials for recovery and that those material supplies would come in part from Asia and the East Indies?

Secretary MARSHALL. I think quite a bit is due from those countries.

Mr. JAVITS. So that stability in that area of the world and some measure of productive recovery there is also essential to the success of our plans?

Secretary MARSHALL. It is certainly connected with it. I am thinking in terms of the fact that trade from that area to Europe, had been almost terminated through lack of a monetary situation that permitted a firm basis for recompense.

As trade is stimulated, their position, I assume, would be strengthened. I say "their." I mean the Far East and those countries where at the present time the economic condition is weakened because business is so slack that their prosperity is in danger. So, in that sense they are important to the recovery plan, but I would also say the recovery plan is very important to them.

Mr. JAVITS. Does that lead, Mr. Secretary, to the deduction that to make a success of the ERP, we must immediately proceed to deal with economic rehabilitation problems in both Latin America and the Far East?

Secretary MARSHALL. We certainly have those matters to be considered. We are very shortly going to bring up to the Congress the problem on China. To what extent we would get into the general economic situation in the Far East as it relates to all the other countries concerned out there, I am not prepared to state at the present time.

Mr. JAVITS. Well, the bill itself states, does it not, Mr. Secretary, that we are to be concerned in the bill with the colonies and dependencies of the European nations?

Secretary MARSHALL. Yes, sir.

Mr. JAVITS. And that immediately gets us into a very large area in Africa, too?

Secretary MARSHALL. Yes, sir.

Mr. JAVITS. Is it not a fact we will meet with the Latin-American nations beginning at Bogota, at which time we will again discuss economic cooperation in America?

Secretary MARSHALL. That is the purpose of the meeting.

Mr. JAVITS. And the impact of that meeting upon the European recovery program will be very great?

Secretary MARSHALL. Yes, sir.

Mr. JAVITS. So we are really facing a global problem if we look at it from the point of view of success, rather than an isolated problem with 16 European nations?

Secretary MARSHALL. That is correct.

Mr. JAVITS. Is it not also true that one of the assumptions of the Paris plan is that within the next 4 or 5 years a much greater quantity of, for example, timber, will flow from eastern Europe to western Europe?

Secretary MARSHALL. That is the hope.

Mr. JAVITS. So the basic assumption in the whole European recovery plan even goes to betterment of relations with the Soviet Union and its satellites?

Secretary MARSHALL. That is what we hope.

Mr. JAVITS. And therefore the challenge to American foreign policy is not on the limited basis of one area, but on a global basis of every area?

Secretary MARSHALL. I think that is reasonably correct, sir.

Mr. JAVITS. Now within the limits of my time, Mr. Secretary, I would like to ask you about the plans for the participation by United States private investment in the rehabilitation of Europe and, as we have just concluded, probably the world.

Now that is covered by section 7 (b) (3) of this bill and I fail to find in that section enlightenment on one important point.

Is it not a fact that in the past there have been very real difficulties to reconcile the activities of American private concerns with the governmental foreign policy of the United States? May I give you an instance of that? For example, it had been charged and I think it had been fairly well shown that in pursuing business operations, cartel arrangements were made between American companies and German companies which had a material effect on our preparedness for war and German preparedness for war.

Now what does the Secretary recommend be put in this bill to protect us against any such future occurrence, in view of the fact that the policy of the bill is to encourage American private investment?

Secretary MARSHALL. This bill involves certain guaranties in addition to private investment.

The interpretation you bring up I am going to ask Mr. Thorp to endeavor to answer.

Mr. THORP. I think the protection here is that it is not automatic. It is a project that has to be approved by the Administrator and also must be approved by the foreign government, and therefore with those two approvals, one would hope that it would be a project that would be to the benefit of both countries.

Mr. JAVITS. Mr. Thorp, do you contemplate, then, in that answer a continuing supervision by the governmental agency, the United States governmental agency concerned, to be sure that that investment is being administered and carried through in accordance with the dynamics of American foreign policy, or do you not?

Mr. THORP. I believe we do not; that is, these particular concerns would be no more subject to review and scrutiny by the United States Government than other American enterprises functioning abroad.

Mr. JAVITS. Do you not therefore feel we are laying ourselves open to exactly the same mistakes that we have made in the past, except at this time we are participating in a much more active way, by guaranties and underwritings; that is, the Government is?

Mr. THORP. I am not at all sure that the way to deal with that is to deal with it through this particular limited group of companies. If there is a problem of the kind which you describe, that should be dealt with on the basis of all American foreign investments and not some segment of them.

Mr. JAVITS. May I say to the Secretary that I favor very much the idea of having American private industry and investment participate in the rehabilitation of Europe, but I do think we need a little more thought about the technique in view of past history.

Secretary MARSHALL. Thank you.

Chairman EATON. Mr. Lodge.

Mr. LODGE. Mr. Secretary, assuming that the four conditions which you laid down were to carry through—in other words, that the aid were to be rendered promptly, adequately, efficiently, and co-operatively—do you believe that the European recovery program will be sufficient to protect the governments of western European countries from capture by external force?

Secretary MARSHALL. Do you mean external to the particular countries concerned?

Mr. LODGE. Yes, sir.

Secretary MARSHALL. My reaction to that is that the more favorable the situation becomes, the less the opportunity for external sabotage and riots and strikes to be effective, to the extent of threatening the stability of the government. The greatest hazard we are involved in now is a weak country in a debilitated state, where there are evil forces endeavoring to stir up such dissension and such ill will that it leads to a break-down in the existing form of government.

Mr. LODGE. I would, of course, agree with you, sir, that this will do a great deal to minimize or diminish such disturbances.

I believe you said earlier in your testimony that a great many people became Communists simply out of misery. In other words, it perhaps might be put this way, they became Communists because they have no other constructive alternative.

In other words, this plan is designed to combat the contagion of communism.

I believe that in the "iron curtain" countries, in Poland for instance, there are perhaps 3 percent Communists and in Hungary there are perhaps 5 percent, and so on. It is a small percentage.

Therefore I am pressed to the conclusion that insofar as this program combats the popularity of communism, it is certainly a very vital and urgent thing.

However, I wonder if it is enough to simply combat the popularity of communism? Accordingly, regarding this as a strategical measure among other things, I would like to ask you whether you feel, sir, that there are other things that we can do beside this to protect these governments from capture by communism?

Secretary MARSHALL. I would take it that you have in mind possible military requirements?

Mr. LODGE. Well, sir, I had in mind all sorts of things which I realize you would not be able to discuss here, and which I would not ask you to discuss but what I would like is some indication that these things will be done because it occurs to me that with a minimum of expense we might protect a very huge investment and also safeguard our national security and the peace of the world.

I would like to have your comment on that, if you feel you would like to give it.

Secretary MARSHALL. I certainly cannot go into detail here at this particular time.

Naturally we have been thinking about the various factors involved in the issues you have brought up, and it is quite a problem as to just what might be done, in view of the various requirements for doing it, and particularly in view of the commitments involved in doing it.

That is a rather vague reply to what you have just asked me, but all of that will be considered, and I think quite carefully.

There is a considerable difference in view among my own advisors and those of the associated and particularly related branches of the Government. It is not an easy question to answer, but it involves considerations that are not being ignored at all, and are constantly in mind.

Mr. LODGE. I would like to know, sir, in that connection, whether you would agree with me that in Greece, for instance, the first thing to do is eliminate the disturbance. That is because you cannot restore economic stability until you have eliminated their disturbance.

It would seem to me that in France and Italy, to a lesser extent, that is true.

It seems to me that there must be some specific effort directed toward the restoration of political stability before you can have economic stability. Would you care to comment on that, sir?

Secretary MARSHALL. I think what you say regarding Greece is true. The question is, How are you going about doing it? That involves some issues in connection with Greece that I would not care to comment on publicly.

Mr. LODGE. Mr. Secretary, it is my understanding that Great Britain has recently made an agreement with Soviet Russia, providing for the exchange of British capital goods against Russian agricultural commodities.

Do you anticipate that under this plan these capital goods might be provided by us, or that we might provide goods to replace those capital goods in Great Britain?

Mr. THORP. This particular arrangement is, as you know, an arrangement for certain goods to be provided by the United Kingdom in return for things which they very much need, primarily wheat and coarse grains.

I doubt very much if one can develop any sort of program which would involve quarantining certain shipments. Actually our hope is that through the expansion of trade in various directions the net effect on the American economy will be reduced, and it has not been our position that we should take steps to curtail the ability of any of these 16 countries to obtain articles they can get from other parts of the world.

Mr. LODGE. In other words, the answer to my question is, "Yes"?

Mr. THORP. That is not right.

Mr. LODGE. My thought is that some of these goods might end up in Russia by way of Britain, while Britain obtains commodities in exchange from Russia.

Mr. THORP. Not any of our goods could do that. They would be goods that would be produced by the British. I am sure our goods would have to fit in with the requirements in the particular country.

Secretary MARSHALL. I had some discussion with Mr. Bevin about this.

The British were obtaining certain things from other countries which were in short supply over here, and it would reduce by that much any pressure on us to provide certain items.

Of course grains were involved in the transaction. Now you have carried it still further into replacement of the particular items that the British would utilize in that exchange.

The factor of our being involved to the extent of what we provide out of this European recovery program being utilized by Great Britain to meet the exchange payments for Russia had not been analyzed by me. The general procedure is one of a trade relationship, which is a healthy proposition, and of a particular arrangement which favored us to the extent that it reduced the pressure for the particular items which happened to be in short supply in this country.

Mr. LODGE. Yes. I can see how that might be beneficial.

Mr. Secretary, in connection with the dismantling of the plants in Germany, it is my understanding that there are some 47 pipe producing and assembling plants in the former British Zone of Germany.

I understand they are labelled for dismantling.

One of them in particular is capable of welding large-sized pipe up to 24 inches, which is the type, as I understand it, which is much needed for the transporting of oil, and would save scarce tankers if used in carrying Arabian oil from the Persian Gulf to the Mediterranean for use in Europe. My question would be this: In connection with this aid do we contemplate the dismantling of these plants in Germany, such as those which produce necessary short supply items?

Secretary MARSHALL. The original allocations were made on a very careful basis under our authority in the occupied zone of Germany.

Whether or not these calculations completely fit the general European recovery program, I cannot authoritatively state with finality at the present time, but I think in the main they do.

There had been a difference of opinion regarding some pipe plants. We have called on General Clay for a very detailed report, so that we could screen the proposal still further over here, to see if it will create any disadvantages to the implementation of the European recovery program.

Mr. LODGE. In other words, no damage has yet been done in that connection. We still have that problem to deal with?

Secretary MARSHALL. We are trying to settle it right now.

The real issue or complication will be that General Clay is very reluctant to stop in the procedure—it is a very lengthy, tedious procedure incidentally—but he is very reluctant to call a halt to what he is aiming to do because that makes it difficult for him to get the German people well organized and going ahead, when they are still in a state of doubt as to a particular plant, whether it stays or it doesn't stay.

Mr. LODGE. You mean the procedure of dismantling?

Secretary MARSHALL. No, but whether or not the plant is to continue in Germany. So the quicker that is settled from his local point of view, the more easy it is for him to go forward with the rehabilitation of Germany.

We have called upon him for a quite detailed report as to just what the status of each case is, the purpose being to bring that information to the attention of congressional committees, so that they may go over the matter and express themselves.

Mr. LODGE. Mr. Secretary, the present preamble of H. R. 4840 mentions foreign countries which undertake to cooperate with each other in the establishment of the maintenance of economic conditions essential to a peaceful and prosperous world.

Then section 3 refers to the countries which are participating countries.

At the time all these countries were called together, were all the countries of Europe invited to the Paris conference?

Secretary MARSHALL. All except Spain.

Mr. LODGE. Under this bill, the door is open for Russia and her satellites to participate if they can meet the conditions?

Secretary MARSHALL. That is correct.

Mr. LODGE. Is it open for Spain to participate if she can meet the conditions?

Secretary MARSHALL. That is another issue that I cannot answer at the moment.

Mr. LODGE. I wondered whether Spain was being treated on the same basis as Soviet Russia or not.

Secretary MARSHALL. There is nothing in the bill, as we say, that prevents that, but you have a general situation over there in the economic accord of these nations where they, on their own initiative, decided not to invite Spain to participate.

Mr. LODGE. That was decided by the nations?

Secretary MARSHALL. That was decided by them and not by us.

However, the bill makes no provision against Spain participating. That would have to be an issue that we would decide as it came up.

Mr. LODGE. In connection with the matters which have already been brought up to some extent, that is to say in connection with reciprocal aid between these various countries, the break-down of customs barriers, and so on, I fully appreciate that there are grave difficulties with respect to monetary matters and taxation, and so on. However, would it be possible, in view of the importance which you lay to that element, to provide this committee with more detailed information (a) as to what agreements already have been made among these various countries as to reciprocal help, (b) as to what has been accomplished to date pursuant to these agreements, (c) what agreements are in process of being made, and (d) what is your estimate of the future possibilities of reciprocity along those lines?

Secretary MARSHALL. That could be done, sir.

EUROPEAN RECOVERY PROGRAM

EUROPEAN ECONOMIC COOPERATION AND SELF-HELP

CEEC commitments

The Committee of European Economic Cooperation at its meeting in Paris last summer considered various measures to promote economic recovery by means

of (1) increased cooperation among the European nations; and (2) self-help and mutual help in the fields of production and internal financial and monetary reforms. The following statements summarize the commitments made, the progress thus far in putting these commitments into effect and further steps which are contemplated or which might be undertaken.

Progress along these lines must be the result of initiative by the participating countries themselves. They are well aware of the need for increased cooperation and self-help. As the following record shows, they have already made considerable progress and laid the foundation for further developments which should produce significant results. The European recovery program, if adopted, will assist and encourage this common European effort tremendously.

A. INTER-EUROPEAN PAYMENTS ARRANGEMENT

The Financial Committee of the CEEC Conference recommended the adoption of a proposal made by the delegations of Belgium, the Netherlands, and Luxembourg for setting off debits against credits in inter-European payments by means of the transferability of European currencies between each other. The Committee agreed: "The transferability of European currencies would permit a country which has a credit in its relations with another country to use it to settle a debit resulting from current payments to a third country. A set-off of this nature would reduce to a minimum payments in gold and convertible currencies [and] would make it possible to abandon the existing procedure for bilateral balance of trade * * *." It would permit dealing "only with the disequilibrium of the trade of a given country in relation to other [participating] countries of Europe taken together".¹ The Committee recommended that a meeting of experts should be held in London to work out the technical details of this proposal.

In accordance with this recommendation, a Payments Agreement Committee met in London from September 22 to 27, 1947, and also in Paris from October 15 to 25, 1947. As a result of these meetings, a multilateral compensation agreement was signed on November 18, 1947, by Belgium-Luxembourg, France, Italy, and the Netherlands. It provided for monthly compensations or clearing offsets among the contracting countries.

The nature of these offsets can be illustrated by a simplified hypothetical example. Suppose that under a bilateral payments agreement, country A owes country B \$20,000,000 as a result of trade between the two countries. This exhausts the credit margin which country B has agreed to extend. Country A can no longer import from country B in excess of its direct exports to country B except by paying in gold or dollars. The same situation exists between country B and country C. Country C, however, owes country A \$10,000,000. The position before clearing takes place is, then, as follows:

Country A owes country B.....	\$20, 000, 000
Country B owes country C.....	20, 000, 000
Country C owes country A.....	10, 000, 000

The clearing makes it possible for each creditor to reduce its claim on its debtor by \$10,000,000. This gives the following result:

Country A owes country B.....	\$10, 000, 000
Country B owes country C.....	10, 000, 000
Country C is in balance with country A.	

The credit margins of A and B have been restored to the extent of \$10,000,000 each thus permitting new trade to the extent of \$20,000,000 which otherwise could not take place.

The operation of the multilateral clearing arrangement was entrusted to the Bank for International Settlements, aided in its work by a committee composed of delegates of the contracting countries. The first meeting of this committee was held at Basle at the BIS offices from November 20 to 25, 1947, and a second meeting was held at Brussels from December 18 to 22. These meetings established two types of offsets: Those involving increases in balances or the creation of new balances, and those involving only decreases in balances. Directives were given the BIS for making proposals among offset possibilities.

The November agreement was left open to the adherence of other CEEC countries on either a fully participating or an occasional basis. Full membership carries the obligation to accept automatic offsets or those involving only decreases in balances under existing bilateral payments agreements. Occasional member-

¹ CEEC report, I, p. 133.

ship permits the participant to accept or reject in whole or in part any offsets proposed. A third category of participation would provide merely for the regular transmittal to the BIS of monthly statements of payments agreement balances in order that the BIS may have a complete view of the European payments situation. Denmark, Norway, Sweden, the United Kingdom, and Austria have thus far undertaken to participate as occasional members; consideration is also being given to the participation of bizonal Germany.

On January 19, 1948, the first inter-European clearing under the new system was announced, calculated as of December 31, 1947. While the extent of this first offset was limited, it demonstrated the technical feasibility of the mechanism. The effectiveness of the system will be increased as additional countries participate in the operations.

B. CUSTOMS UNIONS

Custom union study group

The Study Committee of Customs Unions, established in August 1947 at the CEEC conference, considered the question of customs unions as a means of achieving the speedier reduction and eventual elimination of tariffs between a group of countries. On September 12, 1947, thirteen of the CEEC countries declared their intention to create a study group "for the purpose of examining the problems involved and the steps to be taken, in the formation of a Customs Union or Customs Unions between any or all of those [13] governments and any other governments invited to participate in the work of the study group."²

This study group met in Brussels on November 10, 1947, upon the invitation of the Benelux countries (Belgium, Netherlands, and Luxembourg). Fourteen of the sixteen governments which participated in the Paris conference sent delegates. Norway and Sweden, as well as certain countries of the British Commonwealth, were represented by observers.³

The group examined the possibility of establishing a common customs union among all the countries represented and appointed a tariff committee which composed a questionnaire to be sent to the member states. The answers to this questionnaire, which were to be completed December 15, should permit the tariff committee to define the basis upon which a model of a common tariff may be prepared and offered for adoption by all interested countries.

The report of the tariff committee, which will take into account the principles laid down in the draft charter of the International Trade Organization,⁴ will be submitted to the group at its next meeting in Brussels January 26, 1948. This report will contain recommendations concerning, in particular, the establishment of a common nomenclature, the choice to be made between specific and ad valorem duties, and the evaluation of merchandise subject to ad valorem duty. It is anticipated that at this meeting arrangements can be made to complete the preparation of a specimen common tariff.

Regional customs unions

In addition to the project for a general European customs union including a large number of countries, there are several projects of more limited scope under consideration.

The four Scandinavian countries (Denmark, Iceland, Norway, and Sweden) following a conference of their respective foreign ministers in Copenhagen August 27-28, 1947, announced at Paris that they "were taking steps to examine immediately the possibility of an extension of the economic cooperation between their countries, including the question of the elimination, wholly or partly, of the customs frontiers between the four countries." Committees within the respective governments were appointed, but there has not yet been a further meeting of a joint study group.

The French and Italian Governments during the Paris Conference decided to appoint an examining group to study the conditions under which a Franco-Italian customs union might be established. On December 22 the Franco-Italian Mixed Commission for the Study of a Customs Union Between France and Italy announced the signing of a report, the complete text of which will be made public after examination and approval by the two governments. This report recommends not only a customs union but a full economic union between

² CEEC report, I, p. 35.

³ Representatives of the following countries attended as delegates: Austria, Belgium, Denmark, France, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Portugal, Switzerland, United Kingdom and Turkey. Norway, Sweden, Canada, Australia, New Zealand, South Africa and India sent observers.

⁴ In particular article 42 according to which inter alia the common tariff of the several countries participating in a customs union ought not on the whole to be higher or more stringent than the average level of the duties applicable in the constituent territories prior to the formation of such a union.

the two countries, to which other governments of Europe would be invited to adhere. The report is understood to make recommendations for integration in the fields of agriculture, industry, foreign trade, finance, transport, manpower, and customs matters, and for the establishment of mixed committees to devise a joint approach on monetary matters. The report estimates that the economic union might be completed at the end of 4 or 5 years.

The Benelux customs union, which was initiated prior to the meetings of the Committee of European Economic Cooperation in Paris, entered into effect January 1, 1948, as the result of the exchange on October 29, 1947, of instruments of ratification of the Benelux Customs Convention. In addition to the customs union, agreement has also been reached to press for enactment of legislation for the unification of excise, transmission, and luxury taxes, and to continue further study of the problems connected with an over-all economic union. A summary examination of the experience gained in the establishment of the Benelux union served as the point of departure for the Brussels study group.

On September 19 the Greek and Turkish Governments represented at the CEEC Conference in Paris agreed to devote attention to the study of a regional customs union between the two countries. Interministerial committees both in Greece and in Turkey are currently studying problems related to a Greek-Turkish customs union. After the two committees have completed their independent studies, each will prepare a specimen customs union as a basis for joint discussions.

C. FINANCIAL AND MONETARY STABILITY

In the general report to the Paris Conference the 16 CEEC countries stated that the "success of [their] program depends on internal economic, financial, and monetary stability being restored, or maintained" and that where stabilization programs are required, they will be carried out with determination.⁴ Twelve participating countries issued separate declarations to the Conference on the internal financial and economic reforms undertaken or contemplated.⁵

Since the Paris Conference, the CEEC countries have intensified their efforts to attain budgetary balance, reduce inflationary pressures in general, and restore confidence in their currency. The extent to which the participating countries are at present attempting to help themselves is perhaps most strikingly illustrated by the examples of Italy and France.

Italy

In its declaration on financial policy to CEEC, the Italian Government recognized that reestablishment of complete confidence in the currency is an essential element of economic recovery. In accordance with the declaration, the Italian Government has recently adopted several important anti-inflation measures. Quantitative restriction of bank credit by the Bank of Italy in September 1947 has limited its expansion for such inflationary purposes as the holding of speculative inventories and bidding up of scarce material prices.

This credit control has been primarily responsible for the price decline of recent months. Tax revenue has increased steadily at a greater rate than the rise in prices and production. Public expenditures have been reduced by cutting railway and postal subsidies.

To strengthen the legal barriers against inflationary public finance, the Government has decreed (1) that no increase in expenditure can be authorized until a corresponding increase in revenue has been found; and (2) that a special law is required to authorize the Bank of Italy to make advances to the Italian treasury. These measures should assist the Government in fulfilling its intention to balance the budget in 1947-48 except for reconstruction expenditures which are to be financed by internal loans and the lira proceeds of foreign loans.

Italy's recent monetary reform has contributed to the establishment of a realistic exchange rate. On November 27, 1947, the former system of a fixed Government buying rate (350 lire to the dollar) was changed to a monthly variable buying rate based on the average free market rate during the preceding 30 days. Under the new system the exporter sells 50 percent of his exchange proceeds in the free market and the remaining 50 percent to the Italian Government at the Government buying rate for the particular month in which the transaction occurs. The holder of the 50 percent free exchange is obligated to utilize it within two months for the importation of listed commodities. Since this new system tends to establish a more realistic exchange rate, it should prove a stimulus to Italian exports, thereby helping to reduce the deficit in the balance of payments.

⁴ CEEC Report, I, pp. 26, 27.

⁵ CEEC Report, II, pp. 461, 524.

France

In its declaration to CEEC the French Government proclaimed its intention to carry out a comprehensive fiscal reform for the purpose of putting an end to financing itself through advances from the Bank of France, and to keep investment expenditures strictly within the limits of the resources derived from internal or foreign loans.

A program, largely inspired by the French commitment to CEEC, was proposed by the Ramadier government before the November cabinet change. On the expenditure side, it called for administrative economies, the elimination of subsidies which had aggravated budgetary deficits, and the complete elimination of the practice of financing uncovered treasury needs through advances from the Bank of France. On the receipts side, the program called for a comprehensive fiscal reform whose main objective was to simplify and control more effectively the antiquated French tax system.

This program has been accompanied by restriction of private bank credit through raising the discount rate, quantitative limitation of the volume of credit, and measures to channel available credit away from speculative and other non-productive uses and into priority sectors of the economy.

These combined measures led to an immediate strengthening of the franc, but in November the Communist-inspired strike wave further increased the magnitude of both the economic and financial problems. After having successfully overcome the immediate threat, the Schuman government proposed the most drastic tax and economy measures any French Government has taken since liberation to achieve economic and financial stability. France's budget for the calendar year 1948 incorporates the principles proclaimed in the French report to CEEC and elaborated in the October program. The over-all civil budget is to be cut 10 percent compared with 1947 in spite of price rises. A beginning has been made on tax reform and an increase of taxation. Expenditures have been further reduced by downward revisions of reconstruction expenditures foreseen under the Monnet plan. These measures are expected to result in a balancing of the ordinary French budget for 1948 at about 900 billion francs and of the extra-ordinary budget at 300-350 billion francs. This compares with a budget deficit in 1947 of 274 billion francs.

In its recent actions the Schuman government has undertaken to impose necessary sacrifices consciously rather than to let them be worked out by the blind forces of inflation.

An adjustment in the foreign exchange value of the French franc was announced January 25 by the French Government. The new rate, the French believe, will encourage the export of French commodities, the cost of which had become excessively high to foreign purchasers under the old rate of 119 francs to the dollar. The expected increase in French exports and tourist trade should, therefore, help France to acquire needed United States dollars and other foreign currencies. For example, American tourists contemplating a visit to France will now receive over 300 francs to the dollar instead of the former 119 francs. The adjustment of French exchange rates so as to accord more accurately with present French costs and prices is expected to promote in general a balance in the French international economic position.

France also hopes that the more attractive rate will encourage French capital now in foreign countries to return to France. This repatriation of capital would supply France with additional dollars.

D. MANPOWER

In their final report, the 16 CEEC countries undertook "to remove progressively the obstacles to the free movement of persons within Europe."⁷ The Manpower Committee, established at the Paris Conference, was entrusted with "assessing the availabilities and requirements of labor among the participating countries and of determining ways in which the coordinated transfers of workers between these countries can be facilitated."⁸ After securing information from the participating countries, the American, British, and French zone commanders in Germany, and the International Refugee Organization, the Committee completed a report which (1) showed manpower resources and requirements of these countries as of June 1, 1947, (2) reviewed action taken by governments to meet manpower deficiencies or surpluses, (3) recommended that countries whose manpower deficiencies cannot be met from their own resources should examine the possibility of concluding

⁷ CEEC report, I, p. 13.

⁸ CEEC report, II, p. 437.

agreements for the recruitment of manpower, including displaced persons, in other countries.

A conference on manpower, sponsored by the Italian Government, is to convene in Rome on January 26, 1948. The International Labor Office, the International Refugee Organization, and the Food and Agriculture Organization have been invited to send observers, as well as the United States. The conference will develop measures to utilize more effectively surplus manpower in such countries as Italy, to facilitate the movement of labor across international boundaries, and to improve occupational qualifications and training.

E. THE PRODUCTION EFFORT

At the CEEC Conference the participating countries set certain production goals which in their estimation represented the scale of agricultural and industrial output which must be achieved to supply the needs of the European population in 1951. The 16 countries undertook to use all their efforts to develop their national production in order to achieve these goals.

However, before the national productive effort can be made effective, the essential raw materials must be forthcoming. The attainment of these production targets depends in varying degrees upon the increased supply of essential imports from the Western Hemisphere. Within the limits imposed by shortages of necessary commodities and disorganization of production due to strikes, there has been significant progress in three of the most important fields figuring in the production program set at Paris.

The United Kingdom has increased coal production from a weekly rate of about 3.5 million tons last summer to a rate of 4.4 million tons in December. Coal exports to the continent have been resumed. Coal production in the Ruhr reached a daily rate of 275,000 tons in December as compared with 216,000 tons last May.

Early last fall the French Government revised sharply upward the bread grain acreage goal for 1948, originally fixed at 84 percent, to 95 percent of the prewar average. It is therefore estimated that France will produce 400,000 tons more than the original CEEC estimate for the consumption year 1948-49. In addition, the French Government now plans to raise bread grain production in French North Africa to 4 million tons annually as compared with the CEEC estimate of 3.5 million.

All the principal European steel-producing countries except the United Kingdom (Germany, France, Belgium-Luxemburg, and Italy) substantially increased their 1947 crude steel production over 1946. In the case of Belgium-Luxemburg, 1947 production surpassed 1938. While 1947 production in the United Kingdom was slightly below 1946, output in the last quarter of the year was at an annual rate in excess of 1946, achieving in October an all-time high annual rate of 14.3 million tons.

F. PARTICIPATION BY CEEC COUNTRIES IN THE ECONOMIC COMMISSION FOR EUROPE

The CEEC report established the principle that "wherever suitable international machinery exists, it is the desire of the participating countries that these tasks should be effectively followed up within the framework of the United Nations,"¹ and referred particularly to the forthcoming meetings of the committees and subcommittees of the Economic Commission for Europe. Five of the sixteen countries, not as yet being members of the United Nations, are not members of the Economic Commission for Europe, but they have been invited to those meetings of committees of the Commission in which they have indicated an interest.

Commodity committees

Technical committees have been established by ECE to deal with a wide range of commodity problems. The Coal Committee has taken over the work of the former European Coal Organization in recommending allocations of coal. A Fertilizer Subcommittee has met to make recommendations for increasing production of nitrogenous fertilizers, and a Timber Subcommittee has been established to make recommendations for increasing production of timber, particularly softwoods. A Steel Committee has been created, with subcommittees on ball bearings, conveyor belting and ceramic insulators, all of which are in such short supply in Europe that they are hampering production of important types of manufacturing equipment. In addition the Steel Committee, in cooperation with the

¹ CEEC report, I, p. 33.

Coal Committee, plans to give consideration to the possibilities of increasing steel production by a more effective utilization of existing coking capacity and better distribution of metallurgical coke, as suggested in the CEEC report.

Inland transport committee

Some of the most significant achievements of ECE thus far have been in the field of European inland transport. The Inland Transport Committee has taken over the work formerly performed by the European Central Inland Transport Organization. As a result of the work of the Rail Transport Working Party, 12 countries and the bizonal area of Germany have agreed to reestablish as of March 1, 1948, the prewar system for exchanging freight cars. This arrangement had the advantage of providing a regular procedure for the return of individual cars to countries of ownership, thus facilitating the flow of traffic across international borders. Its adoption will eliminate the chaotic situation which has prevailed since the war under which no country would return cars without a compensatory movement from another country.¹⁰ As a result of the work of a Road Transport Working Party, eight countries, together with the western zones of Germany, agreed to grant on a reciprocal basis freedom of operation for 6 months to highway trucks engaged in transit movements through their territories. In addition, the three German zones, Denmark, the Netherlands, Sweden, and Switzerland agreed also to grant freedom of movement for all other international transport of goods by highways, thus allowing the direct delivery of goods from the factory or farm in one country to the consumer in another.

The Road Transport Working Party has also made progress on the longer run problems of highway development. It has formulated plans for a network of improved interconnecting international highways designed to increase the efficiency of through truck traffic by eliminating the poor roads which heretofore clustered around international boundaries.

Electric power committee

The Electricity Working Party of the CEEC Conference in Paris proposed an International Program for additional electricity generating plant projects in Italy, France, Germany, Austria and Switzerland, in order to supplement national programs for plant extensions.¹¹ Implementation of this program would require that the United States supply certain equipment which will not be available in Europe, so no further steps have been taken to commence actual construction of the plants. The Electric Power Committee of ECE has, however, continued the work begun at Paris. This has involved a continuing survey of European large-scale power resources, examination of a possible international high-tension network, and of the desirability of further standardization of electrical equipment.

Mr. LODGE. As I understand it from you, Mr. Secretary, you would not be very optimistic about the success of this program unless some very definite steps are taken, not only for self-help within each of these countries, but for a certain amount of, let us say, economic federation among these countries; is that correct?

Secretary MARSHALL. That is one of the most important considerations in the entire program.

Mr. LODGE. Thank you very much, sir.

Chairman EATON. Mr. Jackson?

Mr. JACKSON. Assuming you are twice as weary as anyone else around the table and believing that humanity like charity should begin at home, I yield back the balance of my time.

Chairman EATON. Mr. Secretary, on behalf of the committee, I wish to thank you for your very informative testimony today.

However, I would like to say one thing before we break up: Dr. Judd made a reference to the Chief of Staff and expressed the hope that this new Administrator might be something like the late Chief of Staff. I can only say on behalf of the committee and the entire House of Representatives, I think, that if we could find in this country an

¹⁰ The prewar system was administered by the RIV (Regolamento-Internationale Veicoli or International Wagon Union).

¹¹ CEEC report, II, p. 175-178.

Administrator comparable to the Chief of Staff, and his ability and success, the whole country would be immensely pleased.

We will meet tomorrow morning at 10 o'clock in the Ways and Means Committee room, and Ambassador Douglas will be the witness.

Thank you.

The meeting is adjourned.

Secretary MARSHALL. Thank you very much, Mr. Chairman, and you gentlemen for your kind treatment.

(Whereupon, at 5:10 p. m. the committee adjourned to Tuesday, January 13, 1948, at 10 a. m.)

UNITED STATES FOREIGN POLICY FOR A POSTWAR RECOVERY PROGRAM

TUESDAY, JANUARY 13, 1948

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met at 10 a. m., in the Ways and Means Committee room, New House Office Building, Hon. Charles A. Eaton (chairman) presiding.

Chairman EATON. The committee will please come to order.

We are very glad today to welcome back to his old haunts our distinguished former member and colleague, Ambassador Douglas. He made a very wonderful record here, and has done even better since.

I would like to say to the distinguished Ambassador that the House of Representatives represented here today is not exactly the same as it was in his time. It has improved somewhat, of course, in its politics, but apart from that it so happens that the world at this moment is in economic chaos. The one great solvent Nation so far is the United States, and all of the great problems come to us in economic form. For that reason, the legislation involved must, under our Constitution, originate in the House of Representatives. So, for the first time in 150 years, Mr. Ambassador, the House of Representatives is in the front rank of this Government and proposes to stay there.

We would now like to ask you what you are going to talk about today.

STATEMENT OF LEWIS W. DOUGLAS, UNITED STATES AMBASSADOR TO THE UNITED KINGDOM

Ambassador DOUGLAS. Mr. Chairman and members of the committee, I am very happy indeed to be advised that this branch of the legislative body in certain respects has been elevated to a position of eminence, which under the system prevailing when I was a member it did not enjoy.

One of the things I should say in opening is that there is very little that I can add to what the Secretary of State, Mr. Marshall, has said. He has adequately and, I think, impressively, covered a number of vital points. He has shown clearly the extraordinary significance of the part of the world of which we are now speaking, toward the recovery at which this legislation is aimed, what it means to the United States and our deep national interest.

Many members of this committee have traveled abroad, and have felt with their hands, as it were, the conditions there. Therefore, it is necessary for me to state at this time that I do not feel that I can

enlarge upon what the members of the committee already know, or extend the observations which the Secretary of State has so adequately made.

I confess that I am startled and amazed at the extraordinary speed with which, in but a very brief period of time, the American people have burst out of their traditional intellectual continental cocoon, and are observing the United States in its relationship to the world.

I venture to say, Mr. Chairman, that no country in history has experienced such a profound change in such a short period of time. It is appropriate that that should be the case, for our country has emerged from the war, as a result of its energies, its industry, and ingenuity, as the most powerful Nation on earth. With power, there goes responsibility. It is inevitably associated with authority.

So I can add little to what has been said in a broad way about the significance of the European recovery program to the United States, but I think that perhaps I can silhouette the character and the quality, the nature and the importance of the area of which we are speaking, by referring to certain facts which disclose its industrial power and its cultural background. They are important, for these 16 nations, the recovery of which we are determined to support, constitute a community of nations of western civilization, of which we are an inescapable member.

If I may, Mr. Chairman, I would like to refer to the charts that have been prepared which graphically disclose to me in a more emphatic way than I have ever before realized or appreciated the real significance of the area of the world of which we are speaking.

Before I refer to the charts, I should like to say that the geographic orbit of these 16 nations extends from the northern most tip of Europe, along the Atlantic littoral through the northern coast of the Mediterranean to a point contiguous to the Middle East.

However, this is not all because many of them have appended territories which embrace large parts of north and west Africa. Thus, the entire area over which these 16 nations exercise their influence, covers that extraordinarily important part of the world extending from the Arctic limits of the European Atlantic coast line to the tip of Africa.

Economically, Mr. Chairman, this area is highly significant.

Expressed in terms of population and in terms of percentages of the world, these 16 participating countries represent 12 percent of the total population of the entire world. I should add that when I speak of the participating countries I include western Germany.

The population of the United States represents about 6.5 percent of the total population. Thus the two together comprise almost 20 percent of the total inhabitants of the globe.

Twenty-six percent of the literates of the world reside within the European area of which we are speaking, and 14 percent in the United States. Thus, some 40 percent of the total literate people of the entire world live either in our own country or in the community of nations of which we are an integral part.

Twenty-seven percent of the total world output, world production, is derived from these 16 participating nations, and 35 percent from the United States. The two together, making up this community of which we are a part account for 62 percent, which is almost two-thirds of the entire production of the globe. This, of course, is based upon the prewar period, 1938.

Mr. BLOOM. How do you define that?

Ambassador DOUGLAS. It is agriculture, it is industrial production, it comprises every product.

Mr. BLOOM. Does it include steel and coal?

Ambassador DOUGLAS. Yes.

Mr. CHIPERFIELD. How much food does the United States produce as compared with the world?

Ambassador DOUGLAS. I am not sure we have that figure, Mr. Chiperfield, but if I do not have it here I can provide it.

(The information is as follows:)

I. In terms of calories, the United States produced in prewar years about 8½ percent of total world food output. It is now producing approximately 11 percent of total world food output.

II. In the prewar period, the United States produced about 23 percent of the world's grains (excluding rice) and in 1945-46, the United States produced about 32½ percent of world grain output.

Mr. VORYS. You speak of world output of the total production. Is that in dollars or is it in tons, and do you compare tons of wheat with tons of steel and tons of jewelry?

Ambassador DOUGLAS. It is expressed in terms of the dollar value, as of this period.

Mr. VORYS. As of 1938?

Ambassador DOUGLAS. Yes; 1938, and the production outside of the United States has been translated into the dollar value as of that period. That was a convenient method of arriving at these calculations.

Steel, alone, is interesting. These 16 participating nations and western Germany produce 37 percent of the total production of the entire world, or did produce that much, whereas the United States produced 38 percent in the same period, for a total of 75 percent of the entire amount of steel produced everywhere. These 16 participating nations and western Germany operated and controlled 68 percent of the merchant tonnage in 1938, whereas the United States operated and controlled some 14 percent, for a total of 82 percent of the overseas maritime transportation facilities.

In chemicals, the participating countries contributed 40 percent of the total output in production of the world, whereas the United States produced some 26 percent.

Of all of the exports from every country and area throughout the world, 24 percent emanated from the countries of which we are speaking, and 17 percent from the United States. Of all the commodities imported into all the countries and areas of the world, the participating countries accounted for 39 percent, and the United States for 11.5 percent.

Stated in different terms, the United States and these participating countries accounted for approximately one-half of the entire world trade, expressed in terms of imports and exports.

This chart, combined with the next one, discloses the occupations in broad categories of the populations of the participating countries—71 percent, for example, are nonfarm workers, whereas only 29 percent are farm workers. That is compared with 40 percent nonfarm workers throughout the world, and 60 percent farm workers.

This indicates quite conclusively that this area was in fact the second greatest industrial area in the world, second only to the United States.

The industrial power of this area was tremendous.

Mr. VORYS. Mr. Ambassador, if you are interested in having us read the figures on that chart, most of us cannot do it from this distance. I do not know whether it is of any importance or not.

Ambassador DOUGLAS. The next chart supports the disclosures of the first two charts. It is one which shows the fact that this area of which we are speaking was the center of the complicated, intricate, and sensitive system of world trade because of its industrialization. Most of its foodstuffs had to be imported, as the previous chart disclosed. It derived its raw materials from the far corners of the globe. It fabricated them into finished articles and sent them out across the seas, selling them to a variety of different peoples scattered about the seven seas, and thereby this area derived foreign exchange, with which it was enabled to purchase the foodstuffs which are required to maintain life at a reasonable level of living and the raw materials that it required for fabrication into finished articles.

Mr. RICHARDS. Mr. Ambassador, in speaking of this area, as I understand it you not only include the 16 nations but the American and British zones of Germany, as well?

Ambassador DOUGLAS. That is right, sir. In referring to the 16 participating countries I meant, and always mean, to include the western part of Germany among them.

This chart is illustrative of the complexity of the trading of this area of which we are speaking. It was bound together with highly complicated arteries, this highly intricate sensitive industrial system. It was held together by an inland transport web as finely spun as the web of any spider; by an overseas maritime fleet carrying its goods out and bringing back the imports that were required, and by a financial system which hinged upon the general convertibility of one currency into another.

For example, these countries of which we are speaking incurred traditionally a deficiency on trade balance with the United States. However, they had surpluses on trade balance with other parts of the world. Because they could convert one currency into another, they utilized the surpluses with other parts of the world for the purpose of meeting the deficiency which they had with the United States and with the Western Hemisphere.

Canada, for example, had traditionally a deficiency with the United States expressed in terms of dollars, but a surplus with the European countries. It employed its surplus with the European countries for the purpose of meeting its deficiency with the United States. As I have indicated, and as is amply demonstrated by performance over many, many years, this area was the center of a highly industrialized and extraordinarily complicated, sensitive system. We are a part of that community.

However, there are more than merely the economic aspects of the area of which we are speaking. These participating countries were culturally and politically a part of the area to which we belong. We derive much of our basic philosophy, our political and economic philosophy, from the people who inhabit this area. This area and ours constitute the seat of that view strongly held by free peoples, that

the dignity of the individual is the central and pivotal core of civilized living. This was an area in which in varying degrees political institutions were built up around the conception of the Parliament: the right of men through their elected representatives to control and direct the national affairs.

Now, what has happened to this area? I failed to say this, Mr. Chairman, before: A part of the bloodstream of these nations was derived from the accumulated savings that had been invested overseas and that therefore provided the exchange, or a part of the exchange, which, added to their exports, enabled them to buy the imports which they required.

As a pure product of the war, the invisible income derived from overseas investments of these 16 participating countries has been converted from a surplus of approximately \$1,500,000,000 a year to a deficiency of \$500,000,000.

Mr. CHIPERFIELD. Would you please explain why?

Ambassador DOUGLAS. The principal reason was that they were compelled to sell their overseas investments in order to derive the exchange with which they could buy, and had to buy, the necessary implements of war to maintain their national integrity.

Ambassador DOUGLAS. Much of the merchant shipping controlled and operated by these participating countries has been sent to the bottom of the seas, purely as a product of the ravages of war.

The war damage to this area and its plants and facilities has reduced inordinately the productive capacity of this area. Before the war, this area derived a considerable economic benefit from the fact that prices of imported food and raw materials fell by far more than prices of exports. However, since the war the prices of their imports has risen by approximately 50 percent more than the prices of their exports. Thus, they have had to pay more for their imports and receive proportionately less for their exports.

The population within this area has increased, as compared with 1928, by approximately 20 percent. As I recollect the figure, almost 40 percent of that increase has occurred in western Germany.

Mr. FULTON. Is that increase because of the bringing in of other people from other countries, or is it a result of a birth increase?

Ambassador DOUGLAS. It is both. There has been a migration from the eastern part of Europe into this area. In other parts of Europe the birth rate in large measure has accounted for the increase.

Mr. FULTON. In spite of the death rate?

Ambassador DOUGLAS. Yes. It is one of the extraordinary facts that despite the toll taken of human life by the war, the population within this area has increased some 20,000,000. I cannot say that 40 percent of it is due to migration from the eastern part of Europe into the western part of Germany, but a substantial part of the 40 percent has been due to that movement of people.

Mr. VORYS. Now, you say 20,000,000 people, and you mentioned 20 percent.

Ambassador DOUGLAS. It is 40 percent.

Mr. VORYS. We are talking about a population of about 270,000,000 people, are we not?

Ambassador DOUGLAS. Yes, before the war it was about 250,000,000 and now it is about 270,000,000.

Mr. VORYS. Then that is not 40 percent.

Ambassador DOUGLAS. I meant to say, if I did not say it clearly, that about 40 percent of the increase has occurred within Germany. That is about 40 percent of the increase of 20,000,000 has occurred in western Germany.

Mr. RICHARDS. That is what you said.

Ambassador DOUGLAS. If I did not say it that is what I should have said.

Mr. BLOOM. That is what you should have said, and that is what you said.

Ambassador DOUGLAS. More than that, there has arisen out of the postwar environment, a division, as it were, between eastern Europe and western Europe. Eastern Europe provided for western Europe a significant part of its essential imports, particularly of foodstuffs. There is now no flow, to speak of, of commodities of that sort from the great granary into the great consuming area of Europe.

As was indicated by implication in the previous chart, south-eastern Asia was an area which produced large imports into western Europe, and exports to other parts of the world, from which many of these participating countries derived exchange with which they could balance their deficiencies with the western world, that is, the Western Hemisphere. That source of exchange has been in large measure eradicated. Indeed, some of the areas in this part of the world instead of being now as they were before the war a source of income, are now a source of expenditure.

In one part, for example, the ratio has fallen by almost 75 percent, and in order that it may be increased at all, western European countries have had to incur an expenditure to import into the area.

It is not disclosed on this chart, but, finally, the war produced great dislocations and shifts in the sources of essential supplies. I have referred by implication to one of them; that is to say, the source of foodstuffs from eastern Europe and that source is now withdrawn.

Another item is coal. The United Kingdom and Germany were the two great providers of coal for this entire area. Purely as a product of war they are not now providers of any great amount of this essential source of energy. It is essential to human life and essential to the production of goods.

Mr. CHIPERFIELD. Mr. Ambassador, there is a scale on the chart. How much is it out of balance?

Ambassador DOUGLAS. I was going to come to that, sir, if I may, when I try to explain the way in which the amount incorporated in the program has been calculated.

Now, all of these factors together—that is, the loss of investment income, the decline in production, the loss in income on account of services rendered, shipping, the unfavorable price movements (that is, the discrepancy between the price of imports and the price of exports) the divorcement of eastern Europe as a source of food supplies, and the consequent focusing of demands for food supplies on other parts of the world, the increase in population, the dilapidated state of southeast Asia, the shifting of the source of the demand for coal—have completely unbalanced the position of these participating countries.

If you will recollect, in the first chart it was shown that some 40 percent of the literates are in this area, and, historically, it was true

that this area was one of the greatest states of free government, one of the sanctuaries of the parliamentary system. Most of them were overrun and occupied by the German hordes, and their traditional form of government was destroyed.

With the wave of liberation, that which had been substituted during the war was in turn erased. Accordingly, many of the governments of these peoples have been faced with the tedious and arduous task of reconstructing political institutions where none existed. If, therefore, they have not been as precisely correct in the politics which they have pursued; if they have not observed as clearly as they might otherwise have observed public policies of a valid nature, it can in part be ascribed to the task of reconstructing and rebuilding political institutions where none existed.

That, I think, describes and discloses the nature of Europe as it was before the war, the quality, character, and significance of it, and what has happened to it.

Mr. BLOOM. Do you mean where none existed at the time of liberation; is that right?

Ambassador DOUGLAS. Where none existed immediately after liberation. The present estate of these participating countries has been diminished. Their postwar condition has been impaired and their immediate condition has been further damaged by, as you know, the visitation of one of the most extraordinary droughts Europe has ever experienced. This was in the year of 1947.

Mr. CHIPERFIELD. Do you know how that drought actually affected the crops in those 16 countries?

Ambassador DOUGLAS. In the case of France, as I recollect, for the crop year 1946-47 the production of bread grains was just over 7,000,000 tons. In the crop year of 1947-48 the production is estimated at 3,700,000 tons.

Mr. CHIPERFIELD. Was this reduction due to the fact that the peasants, themselves, did not plant as much wheat?

Ambassador DOUGLAS. I think, Mr. Congressman, there are other factors which have aggravated the agricultural condition and I could not honestly say it was due entirely to the drought.

Later on, if I may, I would like to refer to what is considered one of those factors and tell you now briefly that it was due in part to the rather tattered internal fiscal and monetary systems of some of the countries.

Mr. JARMAN. It was in large measure due to droughts?

Ambassador DOUGLAS. Yes, following the very cold and bitter winter.

Mr. MANSFIELD. When we speak of the eastern part of Czechoslovakia, is it not true that that drew a line between the satellite countries, on the one hand, and the 16 participating countries on the other?

Ambassador DOUGLAS. That is right. Thank you, sir.

Now, these 16 participating countries, as you know, have met for the purpose of calculating that which they could do for themselves individually. They determined that which they could undertake to do in a cooperative enterprise for each other, and the outside support required to bring that scale of balances into equilibrium.

I should like, if I may, Mr. Chairman, to explain how the United States Government has calculated the amount for the 15 months' period from April 1, 1948, through June 30, 1949, which will be

necessary to achieve the recovery of this extraordinarily significant and important part of the world.

I do not know whether the figures on this chart are large enough to be clearly visible.

Mr. VORYS. The invisible assets are invisible.

Chairman EATON. What is the title of that chart, Mr. Ambassador?

Ambassador DOUGLAS. This we might call the calculation of the \$6,800,000,000 which we believe to be necessary if these 16 participating countries and western Germany are to recover and to regain political and economic stability and thus to be forthright members again of the community of free nations.

I shall compare this chart, after I have finished explaining it, with the calculations made at the Paris conference by the Committee on European Economic Cooperation, and with the calculations made by the Harriman committee.

There are certain selected commodities, and the members of the committee will find a list of the selected commodities on, as I recollect it, page 115 of the document dated December 19.

It is entitled "Outline of European Recovery Program."

The amount of dollars necessary for the participating countries to purchase these selected commodities from the United States is \$4,239,000,000.

Basis of the \$6.8 billion

	United States	Other Western Hemisphere	Total Western Hemisphere
1. Selected imports.....	4, 239	3, 346	7, 585
2. Other imports.....	2, 740	1, 478	4, 228
3. Total imports.....	6, 989	4, 824	11, 813
4. Selected exports.....	296	303	599
5. Other exports.....	1, 990	1, 455	3, 445
6. Total exports.....	2, 285	1, 758	4, 043
7. Merchandise balance.....	-4, 734	-8, 066	-7, 800
8. Freight (net).....	-293	-145	-438
9. Other invisibles (net).....	+263	+13	+276
10. Balance (July 1, 1947, prices) (break-down available by countries).....	-4, 764	-3, 198	-7, 962
11. Adjustment for higher prices..... All above figures based on July 1, 1947, prices, as was CEEC. This adjustment allows for a 7 1/4 percent rise in United States and 5 percent in other Western Hemisphere export prices, and a 5 percent rise in European export prices. The rise in prices may well be greater than this allowance covers.	-412	-158	-569
12. Adjusted balance.....	-5, 176	-3, 351	-8, 527
13. Total deficit Western Hemisphere.....			8, 527
14. Uncovered deficit, bizonal Germany, with nonparticipating countries outside Western Hemisphere.....			200
15. Total to be financed.....			8, 727
16. To be met by sources other than new U. S. Treasury financing.....			1, 285
17. Total new financing by U. S. Treasury.....			7, 442
18. Appropriations being requested by Army for prevention of disease and unrest in Germany.....			822
19. Subtotal.....			8, 264
20. Add funds required for obligation prior to June 30, 1949, to cover contracts for shipments in subsequent period.....			200
21. Total requirement for first 15 months, ERP..... Rounded to.....			8, 464

Mr. VORYS. Let us see if we can get this big chart tied into the chart on page 115.

Ambassador DOUGLAS. If you will add the first two columns of the chart on page 115 you will come out, I believe, with a total equal to these totals, before price adjustment. The table is entitled "Value of Selected Imports of Participating Countries from the United States Based Upon July 1, 1947 Prices."

The first column is the value of selected imports during the period April 1 to June 30 of 1948, and the second column is the value of the same selected imports during the period from July 1, 1948, to June 30 of 1949. I have put those two columns together to show how the calculation of the \$6,800,000,000 for the 15 months' period has been made.

Mr. VORYS. Have you not also made a price adjustment?

Ambassador DOUGLAS. The price adjustment is included in item No. 11. I will come to that.

These figures, in respect of the value of imports, were based upon July 1, 1947 prices, and then an adjustment on account of the increase in prices was made under item 11, but I think I can come to that, Congressman Vorys, and I hope to be able to explain it as we go through the chart.

Is this a useful method of presenting the matter to the committee?

Mr. CHIPERFIELD. Mr. Ambassador, to me abstract figures do not mean a thing unless you can tie it into the needs and requirements of a particular country. So many million metric tons does not mean anything.

Ambassador DOUGLAS. The first thing you have in mind is the availabilities. These calculations were based upon, among other things, two considerations. First, the requirements, and, secondly, the availabilities.

Mr. CHIPERFIELD. Otherwise, they would not mean a thing.

Ambassador DOUGLAS. They are based on precisely those two assumptions, among others.

The requirements on each one of the participating countries must be added to the requirements of all the countries and measured against availabilities, in order that we may have a complete picture.

Mr. CHIPERFIELD. However, Mr. Ambassador, those abstract figures you are now explaining just do one thing; they show that you had the right arithmetic to add it up to \$6,800,000,000.

Until we get this chart on Wednesday giving a break-down, I do not see anything to your chart except it is a total.

Ambassador DOUGLAS. It is a total for the 16 participating countries and western Germany and we are dealing with the 16 participating countries and western Germany.

The appropriation we are seeking is to establish or bring about and encourage recovery within these countries, and there is no way in which we could have an over-all view of the total amount unless we put the requirements of each one of the participating countries together and come up with the total requirements, always measured against the availabilities, and that is precisely what this chart undertakes to disclose.

There will be submitted to the committee the individual country studies embracing these countries.

Mr. VORYS. Is this not the fact, while your \$6,800,000,000 was arrived at by starting with, as Mr. Chipfield says, various countries and various commodities and building from details up to a total, all you are doing is starting to describe the thing going backward, so we can have in mind how the total got to be that way, and it will not be until Wednesday until a detailed study can be made of item No. 1.

However, we can at least today get in mind, by studying backward, the way you arrived at the thing going forward, and how you got your figures.

Ambassador DOUGLAS. That is precisely right. This is an overall attempt to disclose how the \$6,800,000,000, which is the total, was arrived at.

Mr. RICHARDS. You have just now started to describe it. You have not described it yet.

Ambassador DOUGLAS. That is right.

Chairman EATON. In spite of the figures, I think we could understand the printing if you would read them. We cannot see them.

Ambassador DOUGLAS. The first one is the value of the selected imports for each one of the participating countries, from the United States, amounting to \$4,239,000,000 and from the other Western Hemisphere countries, amounting to \$3,346,000,000, or a total of the selected imports, a list of which is to be found on page 115 of the document that has been published.

The total amounts to \$7,585,000,000.

Now, there are other imports that were not programed for each of the participating countries. They cover a wide, wide variety of articles necessary to highly intricate and complicated and sensitive industrial units.

Those other imports from the United States amount to \$2,750,000,000 and from the other Western Hemisphere countries, \$1,478,000,000, or a total of \$4,228,000,000.

The total imports, then, of the two categories, selected and other items from the United States, amount to \$6,989,000,000; from other Western Hemisphere countries, \$4,824,000,000; and from the total Western Hemisphere, \$11,813,000,000.

Mr. VORYS. I wonder if it is time yet to tell what you mean in general by selected imports and other imports. You used the word "programed" in the Senate hearings, and I did not get your explanation there.

It seems to me you have selected imports there. Someone has selected them and said these are the imports they ought to have. I would like to know what the other imports are.

Ambassador DOUGLAS. There are commodities which have been programed for these countries, and they are common to these countries. There is a great variety of other commodities in quality and kind for each one of the countries. Those programed are those which are generally common for all the countries.

Mr. JARMAN. Are those the selected imports?

Ambassador DOUGLAS. That is right.

Mr. JARMAN. The others are those which go to some countries but not to all?

Ambassador DOUGLAS. Generally speaking, that is true, although there are some commodities common to all the countries.

Mr. VORYS. Where do those show up in the book here, the other imports, in item 2?

Ambassador DOUGLAS. They are not shown. They are included in the country studies.

Now, the selected exports from the participating countries amount to \$295,000,000 to the United States and the exports to other Western Hemisphere countries amounts to \$303,000,000, for a total exports of selected commodities amounting to \$598,000,000.

Other exports amount to \$1,960,000,000 to the United States, and to the Western Hemisphere, \$1,455,000,000, or for the entire Western Hemisphere, \$3,415,000,000.

Total exports to the United States are \$2,255,000,000 and to the other Western Hemisphere countries \$1,758,000,000. For the entire Western Hemisphere, they are \$4,013,000,000. That is just on trade account.

These participating countries have a deficiency. That is, their exports are less than their imports in the amount of \$4,734,000,000 with the United States and \$3,066,000,000 with other Western Hemisphere countries, or a total, with the entire Western Hemisphere \$7,800,000,000. That is on trade account.

Mr. CHIPERFIELD. Does that last figure represent a balance of payments?

Ambassador DOUGLAS. This is on merchandise account only. I would like to explain that this calculation is not a pure monetary balance of payments calculation, because in respect of a large volume of commodities the figures have been derived by examining the essential nature of a variety of different significant and important commodities, the quantity of them, and translating the quantity into dollars.

Mr. CHIPERFIELD. Mr. Ambassador, in the interim-aid bill, and the \$350,000,000 relief bill, did not the State Department furnish a Balance of Payments chart for us?

Ambassador DOUGLAS. This is a total balance of payments, but I wanted to say it was not calculated in a purely monetary sense. We have taken commodities—at least, the selected and programmed items—and translated them into terms of dollars.

Does that answer your question?

Mr. CHIPERFIELD. Yes.

Ambassador DOUGLAS. On trade account and trade account alone the difference between exports and the imports with the United States is \$4,734,000,000. With other Western Hemisphere countries, it is \$3,066,000,000, and with the Western Hemisphere as a whole \$7,800,000,000.

Now, to that deficiency on trade account there has been added necessarily an item representing freight charges, and that is on a net basis. It will cost \$293,000,000 for us to transport the commodities to be exported from the United States to these participating countries, and from the other Western Hemisphere countries \$145,000,000. That is on a net basis. I want to make that clear.

Mr. VORYS. When you said "net," you mean the excess of freight charges for the imports over the freight charges for the exports as the net figure? Is that correct?

Ambassador DOUGLAS. No; that is not quite correct, sir. There are certain earnings and these figures, \$293,000,000 and \$145,000,000

represent the difference between the dollars which these European countries will earn on a shipping account and the dollars which they will have to expend on shipping account.

This calculation is further based upon the assumption that the Congress will authorize the sale of some 200 ships to the participating countries, and the bare boat charter during the period of the program, of an additional 300 bulk carriers, thus reducing the amount of dollars that would otherwise have to be expended to carry this freight and this traffic across the sea. Those ships will be manned by the country that controls them, they will fly the flag of the country that controls them, and the freight will be paid in the local currency and not in dollars.

Mr. VORYS. At this point could you possibly give us a figure of what the net freight deficiency would be if we did not follow the policy suggested and used all American bottoms and subsidized shipping?

Ambassador DOUGLAS. Over the entire period, the additional cost in dollars, which is probably a satisfactory way of saying the answer, would amount to about \$650,000,000.

Mr. VORYS. Is that over the 15 months?

Ambassador DOUGLAS. No; over the 4½-year period. Over the 15-month period, the savings in dollars on account of the chartering of ships will amount to about \$100,000,000. With respect to the savings derived from the sale of ships—I do not know that figure. I think there is an additional saving on account of the sale of ships. I will try to give you that figure.

(The information requested is as follows:)

ESTIMATE OF THE SAVINGS RESULTING FROM THE TRANSFER OF VESSELS UNDER ERP

Estimated requirements for dollar freights are based on the assumption that approximately 200 vessels would be transferred during 1948. If provision for such transfers is not made in ERP, the dollar freight costs would be increased by approximately \$115,000,000 per year. Since the requested transfers included Liberty ships as well as some C-type and Victory ships, the increased costs would apply both to bulk cargo and liner services.

As against the \$115,000,000 increase in freight costs per year, the sale of the vessels would require a 25-percent down payment and an additional 5 percent for each year. The down payment and 1 installment on the 200 vessels would approximate \$32,000,000. In addition, the vessels transferred to foreign flag would still require dollars to cover port charges and other disbursements in dollars to the amount of approximately 25 percent of what the freight cost would be.

Considering these two factors, it is estimated that the failure to transfer the requested 200 vessels would increase the cost of the program by \$54,000,000 for the first year and \$81,000,000 for each succeeding year. Since some time would elapse between the commencement of the program and the final transfer of the vessels, it may be assumed that this \$54,000,000 would be the added cost for the first 15-month period. The aggregate cost added over the entire program would be approximately \$300,000,000.

Under the program recommended by the executive branch, there is provided not only the sale of these 200 war-built vessels, but also the temporary transfer of up to 300 additional bulk-cargo carriers to the participating countries on bare-boat charter for handling commodities made available by the program of United States assistance. The latter transfer is expected to reduce the financial requirements of the participating countries by \$240,000,000 in reducing their requirements for dollar shipping services. This amount is divided \$100,000,000 during the first 15 months, \$94,000,000 during the following fiscal year, and \$46,000,000 in fiscal 1951. A further \$110,000,000 would be saved through a general easing of freight rates, especially during the last 3 years of the program. Both these savings have been applied to the calculations of the dollar requirements for European recovery on an over-all basis, but have not been distributed by countries.

Should the program for this temporary transfer not be adopted, the total cost of the European recovery program would be increased by \$350,000,000.

The aggregate added cost if neither transfers nor temporary transfers of ships are provided for would thus be \$650,000,000.

Mr. BLOOM. How are these ships going to be sold, are they going to pay for them, or is it another one of those transfers of ships?

Ambassador DOUGLAS. The hire for the charter of ships will be a nominal one, it is contemplated. With respect to sales, it will be 25 percent down for the first year, on the sale, and the regular terms defined under the Purchase Ship Sales Act. It will be 25 percent down the first year. I have forgotten what the total period covered is under the Sales Act.

Mr. CHIPERFIELD. Do we loan them the 25 percent?

Mr. BLOOM. Is it paid in dollars?

Ambassador DOUGLAS. That will be paid for out of their other resources.

Mr. BLOOM. In other words, we get it?

Ambassador DOUGLAS. That is right.

Mr. BLOOM. You do not know, but we do get it?

Ambassador DOUGLAS. That is right.

Mr. VORYS. We heard in Germany that the furnishing of 75 ships under charter, it was estimated, would result in a reduction in the cost for freight of \$40,000,000. That was not an official estimate. It was given to us by an American official and concurred in by German officials. I had thought if that figure was correct that the total savings through having the shipping handled otherwise than through American bottoms might be far in excess of the amount you mentioned.

Ambassador DOUGLAS. That \$40,000,000 saving was over what period?

Mr. VORYS. I understood it was a \$40,000,000 annual saving.

Ambassador DOUGLAS. That calculation would not be at variance with this calculation to any great extent. Seventy-five ships save \$40,000,000. Five hundred ships would save about \$250,000,000.

I do not know how that calculation was made. It may not have included the cost of bunkering and a variety of other things.

Then there is other invisible income from the United States amounting to \$263,000,000, and from other Western Hemisphere countries amounting to \$13,000,000. That is on account of tourist expenditures and a variety of items of that character. There is some income which is derived from the remaining foreign investments.

Therefore, the balance, the deficiency with the United States is \$4,764,000,000 and with other Western Hemisphere countries \$3,198,000,000, or a total for the entire Western Hemisphere, \$7,962,000,000.

Now, those figures, insofar as commodities are concerned, were based upon the price level as of July 1, 1947. However, between July 1, 1947, and October the price level had risen 7.5 percent. Therefore, insofar as the commodities are concerned an adjustment had to be made on account of the increase in the price level and that adjustment with the United States amounts to \$412,000,000, and with other Western Hemisphere countries \$153,000,000.

I have been reminded that for the other Western Hemisphere countries, the increase in the price level was 5 percent, whereas within the United States the adjustment was 7.5 percent. Therefore, the total adjustment on account of prices with the Western Hemisphere amounted to \$565,000,000. Therefore, the adjusted balance shows

a deficiency of \$5,176,000,000 with the United States; \$3,351,000,000 with other Western Hemisphere countries, and \$8,527,000,000 with the entire Western Hemisphere.

I would like to emphasize, if I may, one point. In regard to these imports it has sometimes been asserted it is proposed that the commodities to be imported into these countries will provide a standard of living higher than or equal to the standard of living in 1938. I would like to show you the standard of living it is calculated these imports will provide; it is based upon what is known as the caloric diet. It is measured in terms of calories. A diet of 1,650 calories has been estimated by the National Resource Councils to be the semi-starvation level of the diet.

In 1947 and 1948 the diet of the people living within these countries was approximately 2,250 calories. In 1948-49, the period for which these estimates of commodity imports have been calculated, it is estimated that the average diet will approximate 2,550 calories.

The prewar diet in these countries had a value of 2,800 calories.

The per capita diet in the United States of our nonfarm population is 3,200 calories.

I want to make the point that it is not contemplated by any manner of means that this import program, the quantities of goods required by these participating countries, is based upon the assumption that the standard of living, expressed in terms of caloric diet, will be even equal to the prewar.

Mr. CHIPERFIELD. Mr. Ambassador, you do, however, under this program expect to bring the production up in these countries beyond prewar levels?

Ambassador DOUGLAS. It must be done because it is only by increasing production, and very substantially, and thus increasing exports, that these participating countries will be able to compensate for the loss of their invisible income, the shifts of sources of supplies and the increased population.

Mr. JONKMAN. Mr. Ambassador, that is our principal ailment here, is it not?

Ambassador DOUGLAS. What is that?

Mr. JONKMAN. Production.

Ambassador DOUGLAS. I think the ailment here is due to a combination of different factors.

Mr. VORYS. On that 2,250 caloric figure for 1947 and 1948 I confess I am amazed to find it is that high, although I realize you have Turkey and some countries in there that have practically a normal diet. However, when I think that Austria and western Germany are in there, they are a lot nearer that 1,650 that you have marked as "semistarvation" than are the 2,250 that you say is the average.

Ambassador DOUGLAS. Yes. Well, averages are sometimes misleading, as you know very well. The level of the diet in a great many of these countries is substantially below the 2,250 calories indicated. There are some in which the caloric value of the diet is substantially higher. For example, that is true in the United Kingdom. The caloric value in the United Kingdom is somewhere in the neighborhood of 2,800 or 2,900. The caloric value in France would be very much less than that. You know what the bread ration in France

is now as compared to prewar. That was disclosed, as I remember it, during the hearings on interim aid.

Mr. BLOOM. Have you taken into consideration the children and what they are going to get?

Ambassador DOUGLAS. I do not know that there has been any segregation of the population by ages, in relation to diet.

Mr. BLOOM. In all the calculations I have heard, they do not seem to take into consideration the starving children in Europe, and that, to me, is the most essential thing that I know of at the present time.

Now, when you speak of starvation over there I understand the children are getting but one meal a day. If you do not take into consideration in this program the relief of the children of Europe I think you are overlooking one of the most important things connected with what you are trying to do.

Ambassador DOUGLAS. Certainly I think it is fair to say that there has been no indifference to the condition of children, but these calculations are not based upon any cataloging of the population, according to age. Obviously, however, if the caloric value were in this area increased from 2,250 to 2,550, the children will derive very substantial benefit from it.

Mr. BLOOM. That has been promised right along, but I have not seen anything effective.

Ambassador DOUGLAS. Mr. Nitze tells me the ration does favor children. I know that is true in Germany, but I do not know whether that is true in France or Italy. I know that is the case in Britain and western Germany. Whether that is the case in France or Italy I cannot say.

Mr. JARMAN. In these population figures here, a 2-year-old child is considered the same as a 50-year-old man, is he not?

Mr. BLOOM. A 2-year-old child does not need the same amount of food.

Mr. JARMAN. He does not need the same amount of calories, does he?

Ambassador DOUGLAS. It is a different type of diet.

I wanted to emphasize the point that this program is not aimed at increasing the standard of living to the prewar level in these participating countries.

Now, we come down on this chart to the deficiency of the Western Hemisphere, amounting to \$8,527,000,000. The uncovered deficit of the bizonal area in Germany with nonparticipating countries outside of the Western Hemisphere amounts to \$200,000,000, so the total to be financed amounts to \$8,727,000,000.

You see, Germany purchased commodities from areas outside of the Western Hemisphere and from nonparticipating countries, that is, countries other than the 16 that met in Paris and prepared their report. The deficiency that the bizonal area of Germany incurs, on account of its necessary imports with those countries, amounts to \$200,000,000.

Mr. VORYS. So far as the United States Treasury is concerned, you simply add that to the \$822,000,000 you are coming to later in item 18, and it is the cost of occupation for Germany, as far as we are concerned; is that right?

**STATEMENT OF PAUL H. NITZE, DEPUTY DIRECTOR, OFFICE OF
INTERNATIONAL TRADE POLICY, DEPARTMENT OF STATE**

Mr. NITZE. The average figure that will go to Germany is larger than the sum total of \$200,000,000 and \$822,000,000 because there is included in the \$6,800,000,000 some category-B items for Germany, that is over and above the amount necessary to prevent disease and unrest.

It is approximately \$347,000,000. However, this item of \$822,000,000 is just the Army appropriation for the prevention of disease and unrest, which is merely what are called category-A items. The items necessary for recovery are included in the \$6,800,000,000.

Mr. VORYS. However, the \$200,000,000 is in addition to the \$822,000,000?

Mr. NITZE. That is correct.

Mr. VORYS. So you have for Germany about \$1,400,000,000?

Mr. NITZE. It is something on the order of \$1,300,000,000, or \$1,400,000,000. That is for all zones in western Germany.

Mr. JARMAN. If the \$200,000,000 is in addition to the \$822,000,000, why is one plus and the other minus?

Ambassador DOUGLAS. This is a deficiency with countries other than the Western Hemisphere and other than the participating countries. That is a dollar deficiency with countries other than those enumerated and therefore it has to be added on to be accurate. It would be \$8,527,000,000.

Mr. LODGE. Does that \$200,000,000 represent a deficiency with the Soviet Union or her satellites?

Ambassador DOUGLAS. No.

Mr. LODGE. What is it due to?

Ambassador DOUGLAS. It is wool from Australia, hides from South Africa, and a variety of countries of that order.

Mr. FULTON. If you are excluding the participating countries and the Western Hemisphere countries and you are excluding the Soviet Republic, plus the countries that are within their sphere, and that then represents \$200,000,000, then the next question logically follows: What is the deficit to the countries within the Soviet sphere, the eastern European countries behind the so-called iron curtain?

Ambassador DOUGLAS. There is no deficit.

Mr. FULTON. That is an even basis?

Ambassador DOUGLAS. That is right.

The total to be financed is \$8,727,000,000.

To be met by sources other than new United States Treasury appropriations, there are a number of different items, or rather \$1,285,000,000 from that source.

Now the analysis of that \$1,285,000,000 is as follows: \$700,000,000 from other Western Hemisphere countries. That \$700,000,000 figure is based upon the past experience that these 16 participating countries have had with the other Western Hemisphere countries. The \$700,000,000 takes the form of credit extended. One of the Western Hemisphere countries has already extended a substantial line of credit to one of the 16 participating countries.

Mr. VORYS. Is that Argentine to Italy?

Ambassador DOUGLAS. I was referring to Canada, and that has not yet been exhausted.

Mr. MUNDT. Could you say which one of those have lines of credit?

Ambassador DOUGLAS. I will give you the general derivation of that figure now, and at another time I will be glad to discuss it with you in greater detail, because there are certain reasons why there should not be a complete analysis, in very great detail in the record.

Mr. BLOOM. There are certain of those figures that cannot be divulged; is that correct?

Ambassador DOUGLAS. Those are derived from lines of credit extended and previous rate of drawing on those lines of credit, and secondly it is derived from the fact that some of these Western Hemisphere countries will charge a price for the commodities which they export to the participating countries which is less than the price at which the cost of their imports was calculated.

For example, let us suppose that one of the participating countries calculated it needs 1,000,000 bushels of wheat, and that it costs \$3 a bushel. That is \$3,000,000.

Now let us suppose that that 1,000,000 bushels of wheat will be imported into one of the participating countries at a cost of \$2 a bushel.

The difference between the \$3,000,000, which is the cost of 1,000,000 bushels at \$3 a bushel, and the 1,000,000 bushels at a cost of \$2 a bushel, represents \$1,000,000, and therefore that must be subtracted from the cost of the imports. Is that clear?

Mr. CHIPERFIELD. No.

Ambassador DOUGLAS. If the imports were calculated to cost \$3,000,000 in this particular case because the price per bushel was \$3—

Mr. BLOOM. Suppose it is reversed. What would happen there in that so-called hypothetical case?

Ambassador DOUGLAS. At the moment, that sort of a transaction is not contemplated.

Mr. VORYS. You have made an estimate for that. That is your item 11, "Adjustment for higher prices."

Ambassador DOUGLAS. You will recollect that the adjustment on account of prices in the United States was 7.5 percent, because that is the amount by which the price level had risen, during the period July 1 to October.

The adjustment on account of prices for the balance of the Western Hemisphere was calculated at 5 percent. The reason for the difference is that we did not calculate any increase in prices for certain commodities already being sold at a price above the prevailing world market.

Mr. LODGE. Mr. Ambassador, we might eventually be called upon to pay that as a deficit during the course of the next few years, might we not?

Ambassador DOUGLAS. What was that, sir?

Mr. LODGE. Since that is a line of credit and not a grant, we might eventually be called upon to pay that; and therefore it is perhaps just as well, it seems to me, not to take that reduction too seriously.

Ambassador DOUGLAS. The \$700,000,000?

Mr. LODGE. No; the \$1,285,000,000 figure.

Ambassador DOUGLAS. No; I think that is a legitimate deduction.

Mr. LODGE. Are these countries not eventually going to have to pay up on this line of credit established by various South American

countries? If they do, that will constitute a deficit in their balance of payments which we, under this European recovery program, would perhaps feel that we would have to pay for.

Ambassador DOUGLAS. That is after the period is over.

Mr. LODGE. It is?

Ambassador DOUGLAS. Yes.

Mr. LODGE. I understand.

Ambassador DOUGLAS. If I have not made myself clear about the \$700,000,000, I will come back to it at another time; but it is a reasonably firm calculation of the amount of assistance and support for the western European countries based upon previous experience.

Then we calculate there will be \$500,000,000 derived from the International Bank, Export-Import Bank, and from private sources.

The calculation of the amount derived from the Export-Import Bank and the International Bank is based very largely upon the lines of credit outstanding and the rate at which they have been drawn down in the past. There is an item of about \$50,000,000 to \$100,000,000, to be derived from private investment sources, included in the \$500,000,000; and, in addition, some of the nonparticipating countries will provide \$85,000,000; so those two items, \$700,000,000, \$500,000,000, as well as \$85,000,000, go to make up a total of \$1,285,000,000.

Mr. BLOOM. Now you say "private sources." Are private loaning institutions permitted at the present time under our laws to make loans to foreign governments or the people of foreign governments?

Ambassador DOUGLAS. These may be direct investments.

Mr. BLOOM. According to the Johnson Act, I do not think that is permissible, is it?

Mr. CHIPERFIELD. Did not Bretton Woods repeal the Johnson Act?

Ambassador DOUGLAS. No. These would not be governmental transactions.

Mr. BLOOM. The Government may do it but not private loaning institutions.

Ambassador DOUGLAS. It is not contemplated that these will be loans to governments from private sources, but these will be investments made by private sources.

Mr. VORYS. Private sources in 16 countries that can secure loans?

Ambassador DOUGLAS. Yes; from private sources in the United States; or, alternatively, the investment by United States concerns, expressed in terms of dollars, in private undertakings in one of the participating countries.

Mr. BLOOM. You may be right, Mr. Ambassador, but I have never heard that the Johnson Act was repealed.

Ambassador DOUGLAS. The Johnson Act was passed in 1931 or 1932, as I recollect.

Mr. BLOOM. It still stands.

Ambassador DOUGLAS. During the period since 1931 and 1932, substantial sums have been invested by American corporations or individuals in these European countries.

Mr. JARMAN. That would include oil companies?

Ambassador DOUGLAS. Yes; oil companies and refining projects.

There is this feature, too, as I have just been informed: The Johnson Act does not apply to those countries who participate in and have contributed to the International Bank and the International Monetary fund.

Mr. BLOOM. Any foreign government who has defaulted in any of their payments to this country or in their obligations to this country—it does not apply there; but any countries who have defaulted in any of their payments to this country, or any of their obligations—the Johnson Act definitely does apply.

Mr. VORYS. It does not.

Mr. CHIPERFIELD. It does not.

Mr. BLOOM. Very well; I am wrong again.

Mr. JARMAN. The Johnson Act does not apply to any investment by the Ford Motor Co. in a plant in a foreign country, does it?

Ambassador DOUGLAS. A substantial part of the \$150,000,000 would comprise items to which the Congressman has referred.

At any rate, those three figures make up the total of \$1,285,000,000.

Mr. VORYS. Do I understand that \$85,000,000 is all that is contemplated from all the rest of the planet, by way of loans, grants, or anything else in this picture?

Ambassador DOUGLAS. No, sir.

Mr. VORYS. That is, outside participating countries?

Ambassador DOUGLAS. No, sir. Most of the participating countries cannot supply dollars to any great extent. I am talking only about the participating countries, because this balance of payments applies only to the participating countries. There are three or four countries who have dollars and can supply dollars to meet their deficits.

Mr. MUNDT. Let us approach it the other way, because it is certainly not clear to me or to Mr. Vorys yet: If we appropriate \$6,800,000,000, which is the requested amount for the 16 countries, how much is the rest of the planet going to contribute beyond that?

Mr. VORYS. It will be \$85,000,000?

Mr. MUNDT. It looks like \$85,000,000 by your figures, but you say that is not it.

What is the amount in figures that will be comparable to the \$6,800,000,000? We are supposed to put in that much. How much is the rest of the world going to put in?

Ambassador DOUGLAS. I have indicated that among the Western Hemisphere countries—

Mr. MUNDT (interposing). How much of the rest of the world will put something in? Give us a definite figure that will be comparable to the \$6,800,000,000.

Ambassador DOUGLAS. This calculation is based upon the deficiency expressed in terms of dollars with the United States and with the Western Hemisphere countries. Now, of the total deficiency, Western Hemisphere countries will provide some \$700,000,000 in support. The \$85,000,000 to which you refer represents the dollars that will come from the participating countries which have a deficiency but which will be able to meet that deficiency completely and wholly out of their dollar resources. Therefore, that has to be subtracted, because it is an item we will not finance.

Mr. MUNDT. There is now a total of \$785,000,000 to be contributed by countries other than the United States to the European recovery program?

Ambassador DOUGLAS. \$700,000,000 in support will be provided by Western Hemisphere countries.

Mr. MUNDT. And \$85,000,000 by the participating countries?

Ambassador DOUGLAS. To meet their own deficiency. They need no loan; they need no grant of any sort or character. They have a

deficiency in their balance of payments, and they will pay \$85,000,000 to meet their deficiency. It is cash on the barrel head.

Mr. MUNDT. Then we should be able to answer "yes" or "no" this question: Is the total amount which the rest of the world is going to contribute to the recovery program of the 16 countries \$785,000,000, outside of the United States contribution?

Ambassador DOUGLAS. The deficiency with the balance of the world is not expressed in terms of dollars. I might say that. It is expressed in terms of other currencies.

One of the other countries of the world has extended a line of credit to one of the 16 participating countries. This other country to which I refer is not a Western Hemisphere country. That is in the amount of some \$320,000,000. I cannot give you, sir, the amount of dollar aid the balance of the world may provide.

Mr. JARMAN. Is the answer to that question that the rest of the world will provide \$700,000,000 in dollar aid, plus an amount of which you are not sure, in other currencies?

Ambassador DOUGLAS. Yes; that is correct. I do know of one item of \$320,000,000, but that is to tide over one of these countries in a period of great stringency now and will be exhausted before this program goes into effect.

Mr. VORYS. We were told yesterday—one of our committee members was going through the countries and added up about 7 to 10 of the 16 countries which were labeled by Mr. Thorp as cash or loan countries.

Now does the \$85,000,000 represent all of the cash countries? Is that all of the amount that these 16 countries are going to pay of their own deficits?

Ambassador DOUGLAS. There are three countries having deficiencies in their balance of payments. The deficiencies of those three countries can be met and will be met out of their own resources. They will receive neither grants, loans, nor other support from us. And the deficiencies of those three countries amount to approximately \$85,000,000.

Mr. VORYS. Now, are there not some countries having no deficiencies?

Ambassador DOUGLAS. Yes; there are some having slight surpluses. I doubtless have failed to explain the \$1,285,000,000 satisfactorily. Those are amounts for financing other than from appropriations of the United States Treasury. The total is \$7,442,000,000. There must be subtracted from the \$7,442,000,000, \$822,000,000, on account of an appropriation which the Army will seek from the Congress, for the purpose of preventing disease and maintaining order in Germany.

Mr. VORYS. Now, right at that point, since it has been announced that the State Department is taking over the administration of Germany June 30, and since the State Department is here contending for control of the funds, it is purely a confusing bookkeeping entry not to have the \$822,000,000 from now on added into the \$6,800,000,000; because, in the first place, it is all part of the total prospective cost to the taxpayer of European recovery; and second, it is all going to be administered by the same crowd in the same Department of the Government, if the law goes through as proposed here.

It is perfectly silly to carry that as a deduction and pretend we are talking about \$6,800,000,000 when we are talking about \$7,600,000,000 from now on.

Ambassador DOUGLAS. This is the only way it can be disclosed under the present distribution of authority. The Army now does have the responsibility for the administration of Germany. The Army will present this request for an appropriation.

Now, the State Department will not present that request; and it would be misleading—it would not be taking circumstances as they are, conditions as they exist, if the \$822,000,000 were not subtracted. That is the amount calculated by the Army to be necessary to maintain order and to prevent disease. There is \$400,000,000 other than the \$822,000,000 which will become available for the recovery of Germany. However, there is \$822,000,000 to prevent disease and to maintain order.

I think, giving the circumstances as they are, the authority of the Department of the Army as it now is, it would be misleading if the \$822,000,000 were not subtracted from the \$7,442,000,000.

Mr. VORYS. Just at that point, the total for Germany is going to be not \$822,000,000, or not \$822,000,000 plus \$4,000,000, but \$822,000,000 plus \$400,000,000 plus \$200,000,000, or about \$1,400,000,000; is that correct?

Ambassador DOUGLAS. That \$200,000,000 is in the figure. It is not \$822,000,000 plus \$200,000,000 plus \$400,000,000; it is \$822,000,000 plus \$400,000,000 or a total of \$1,222,000,000.

Mr. FULTON. Can you clarify that figure of \$822,000,000? Is that \$822,000,000 for all three zones of Germany outside of the Russian zone, or is it just our zone?

Ambassador DOUGLAS. It is \$822,000,000 which the Army will request for the purpose of preventing disease and maintaining order within the area of Germany over which it has jurisdiction.

Mr. FULTON. Does that mean the British and French zones or just the American zone?

Mr. JARMAN. In other words, Mr. Ambassador, is that not a cost flowing from our occupation of that area, rather than a cost, like these other costs, to recuperate the country?

Ambassador DOUGLAS. That is right. That is a sum of money which the Army will request to defray the cost of preventing disease and maintaining order within the area over which it has jurisdiction, a part of which is derived from the bizonal agreement with the British zone.

Mr. FULTON. How much are we putting into the British zone of that and how much into the French zone?

Ambassador DOUGLAS. The French zone is not included in the \$822,000,000. Now, as to the analysis of that \$822,000,000, you will have to get that from the Department of the Army. I am sorry I do not have it, sir.

Mr. JARMAN. Let us assume we do not pass this legislation. Would it not be necessary next year and the year after next, and as long as we occupy that portion of Germany, to be faced with some figure for occupation, even though this legislation were not passed?

Ambassador DOUGLAS. If this legislation is not passed, and economic and political stability does not begin to reappear on a solid foundation in Western Europe, the whole condition of this area will so change that I doubt that anyone can calculate what the cost to us will be in Germany, what the status of Germany will be, what will be the political structure of Germany, what views will control in the

Government of Germany, so I doubt that one can give an adequate answer to your question.

Mr. JARMAN. However, as long as we occupy Germany, there will be some expense, whether the bill passes or not?

Ambassador DOUGLAS. That is precisely right, sir.

Mr. JARMAN. Therefore, I agree that this is not to be included in this bill, because it is for a different purpose.

Ambassador DOUGLAS. The second implication in your question—and, in fact, it was an expressed statement of the Congressman—was that the State Department is to have jurisdiction over the expenditure of the funds. I submit that is not in accordance with the intentions or the ambitions or the plans of the State Department, or of the administrative proposal which has been suggested. However, we will come to that at another time.

Chairman EATON. Mr. Ambassador, would it be agreeable to you to adjourn shortly, now?

Ambassador DOUGLAS. There is just one more item.

There will be needed funds for incurring of obligations after June 30 of 1949, or rather to cover contracts for shipments for a period of 60 days or so after June 30, 1949. That amounts to \$200,000,000.

The total therefore which is being sought, and the explanation of the total amounts to \$6,820,000,000.

Mr. BLOOM. Is that \$800,000,000 included in the \$6,820,000,000?

Ambassador DOUGLAS. The \$822,000,000 is not; \$400,000,000 for straight recovery is.

Mr. VORYS. And \$200,000,000 in addition to the \$400,000,000 is included—it is at least included on the chart you have there, because you have it added in as item 14.

Ambassador DOUGLAS. I can explain it this way: There is somewhat of an over-simplification in this, but I think it will perhaps resolve the confusion—\$400,000,000 will be made available in addition to the \$822,000,000, for the recovery of western Germany.

The \$8,527,000,000 represents the dollar deficiency with the Western Hemisphere; \$200,000,000 of the \$400,000,000 required for Germany is included in that \$8,527,000,000 figure. However, there is a deficiency with countries other than those located in the Western Hemisphere, and outside of the area of the nonparticipating countries, in the amount of \$200,000,000, and therefore that has to be added.

Mr. VORYS. So that the total is \$1,222,000,000, and not the other figure?

Ambassador DOUGLAS. That is right, \$1,222,000,000. They are rounded off figures, but they are substantially correct.

I am at your service, Mr. Chairman.

Chairman EATON. The committee will stand adjourned until 2 o'clock, if the Ambassador will return then.

Thank you.

(Whereupon, at 12:05 p. m., the committee adjourned to reconvene at 2 p. m. the same day.)

AFTERNOON SESSION

(The committee reconvened at 2 p. m., pursuant to the recess.)

Chairman EATON. The committee will be in order.

We will ask Ambassador Douglas to proceed with his testimony.

Ambassador DOUGLAS. Mr. Chairman, at the conclusion of the morning session of the committee we were discussing the final ending of the calculations which represented the basis for the request for \$6,800,000,000.

There are one or two points I would like to make, if I may, about the calculations.

The first has to do with the caption "Selected imports." The commodities included within that category of imports were selected, first, because they comprised the group of commodities which the Paris Conference, consisting of 16 participating countries, considered to be absolutely essential to the recovery of these countries, and, secondly, because the category comprised commodities of which generally there was a short supply.

It is not to be inferred from that statement that there are not other commodities in a very wide range of commodities that are not essential to the recovery of the European area of which we are speaking.

The second point I would like to make is that the National Advisory Council, which is charged with the responsibility of coordinating the lending policy of the United States—the National Advisory Council organization has made rough calculations and estimates of the amount of the \$6,800,000,000, which will be extended in the form of loans.

That rough and tentative calculation made by the NAC organization indicates that between 20 and 40 percent of the \$6,800,000,000 will take the form of extending credit.

Mr. BLOOM. That will be repaid?

Ambassador DOUGLAS. That is right.

These calculations that various departments of the Government have participated in making and which were explained to the committee this morning compare with other calculations. These other calculations were made by the 16 participating countries meeting in Paris and by the Harriman committee and I would like to explain to the committee what that comparison indicates. Before I do so, if the committee is not informed as to the historic development of the Committee on European Economic Cooperation, that is to say of the Paris Conference, and the evolution of the European recovery program, it might be well to have the record disclose what that history is. The Secretary of State on June 5 made a speech at Harvard, with which every member of this committee is thoroughly informed.

Immediately after that speech Mr. Bevin, the Secretary of State for Foreign Affairs in the United Kingdom, and Mr. Bidault extended an invitation to all the European countries, excepting Spain, to meet and discuss what could be done. An initial conference was convened in Paris, attended by Messrs. Bevin, Bidault and Molotov. When it was disclosed at that meeting that the purpose of the Conference which was to be held, among other things, was to determine what each one of the participating countries should do for itself and for each of the other countries, Mr. Molotov departed, after having used some forceful and significant language warning for example the United Kingdom and the French that the steps which they were proposing to take would have unfortunate consequences.

Notwithstanding Mr. Molotov's departure, invitations were issued and 16 of the countries which received them formally accepted and met in Paris on the 12th of July. They organized their working committees and an executive committee and they then proceeded to

calculate or estimate what each one could do for itself and what collectively and cooperatively they could do for each other. In addition, they calculated the amount of outside support which would be necessary for the recovery of the community of nations.

What was perhaps more significant were the commitments which each one of the participating nations pledged itself to fulfill, and at a later time perhaps reference will be made to those undertakings and pledges. However, for the moment, dealing with the calculations of the outside support, it is interesting that the Committee on European Economic Cooperation produced a figure which upon relatively comparable assumptions to the figures prepared by the various departments of the United States Government, amounted to \$8,035,000,000 for the calendar year 1948, as against the figure prepared by the executive branch of the Government of \$6,303,000,000 for the fiscal year 1949.

In other words, after the Paris Conference completed its work and had submitted its findings to our Government, various groups of people working in committees in which there was representation from many departments of Government, went through this Paris report, commodity by commodity, insofar as the selected commodities were concerned, measured the availability of commodities in question and all the factors that entered into the final calculation, and came forward with an estimated amount necessary for the recovery of western Europe, which was roughly \$1,700,000,000 less than the amount calculated by those attending the Paris Conference, and which was included in the report of the Committee on European Economic Cooperation.

At the same time, the Harriman committee, consisting of distinguished Americans, drawn from outside of the area of Government personnel, reviewed the report of the Paris Conference, and on a basis comparable with that on which the calculations of the executive branch were made, produced a figure approximately \$6,330,000,000, as the lowest estimate, and another figure as their highest estimate, based upon a higher availability of commodities, and somewhat different price assumptions, of \$7,060,000,000.

Those figures which I have indicated are the deficiencies in the balance of payments. You can find this table on page 100.

Mr. BLOOM. They are all for the first 15 months?

Ambassador DOUGLAS. No; this is all on the basis of 12 months for the Paris report did not make any calculations for a 15 months' period, nor did the Harriman committee. These figures which I have just recited are based upon a 12 months' period, because it is the only basis, the only standard which can be used since no figures were made by the Paris report for a 15 months' period.

Certain adjustments had to be made, first, in regard to the figure proposed by the Paris report. It was calculated that \$920,000,000 would be provided from sources other than appropriations by the United States Government, reducing their figure of \$7,120,000,000.

The Harriman report produced one figure of \$6,330,000,000, in terms of July 1, 1947 prices. Then an adjustment upward of that figure was made on account of an elevation of the price level, the same adjustment on account of prices which was made by the various departments of Government. Accordingly, after that adjustment was made the \$6,330,000,000 figure was increased to \$6,880,000,000. The

Harriman committee estimated that \$1,100,000,000 should be had for the purpose of meeting that \$6,880,000,000 from sources other than funds appropriated by the Congress, thus reducing the figure to \$5,780,000,000, whereas on a comparable basis the end figure produced by the executive branch was \$5,789,000,000. When certain further adjustments are made in those figures, the end result of the Harriman committee's report, that is after including, for example, the \$200,000,000 on account of forward obligations and the appropriation of the Department of the Army of \$822,000,000, the end result of the Harriman committee was \$6,811,000,000, as compared with \$6,800,000,000 for the executive branch.

This is a very important point, because it is quite revealing: I should say that there are a number of differences in the internal composition of the Harriman committee's calculations from those made by the executive branch.

For example, the Harriman committee was more conservative in the amount of imports from the United States and from the other Western Hemisphere countries than was the executive branch.

As a result of the smaller imports, it reduced the exports from these participating countries quite substantially, as compared with the estimates and calculations made by the executive branch.

The deficiency on trade account remains approximately the same, but it is significant and important as a consideration to bear in mind that a reduction of imports even to the European countries must be reflected in a reduction of exports.

Mr. JONKMAN. Right at that point, is that because their exports would depend upon raw materials?

Ambassador DOUGLAS. That is precisely why, sir. At any rate the end result of the Harriman committee's calculations and the calculations made by the executive branch of the Government, if you take the lower of the Harriman estimates, are approximately identical, and the estimates made by the executive branch are just in a minute way lower than those made by the Harriman committee. There has therefore been a check as it were on the calculations made by the executive branch.

I should like to tell the committee why, in our judgment, the \$6,800,000,000 figure represents a minimum.

Mr. VORYS. Would you mind an interruption, Mr. Douglas?

Ambassador DOUGLAS. No, sir.

Mr. VORYS. I have heard it said that in view of the fact that the administration made suggestions to the Paris Conference and set up the Harriman report and the executive branch has the responsibility of administration, it would not be surprising or merely a coincidence if the figures all came out about the same. There are many who do not think that these are three utterly independent surveys as to the source of the figures they worked with, or as to the compilations they made.

Ambassador DOUGLAS. Well, as to the Paris Conference, Congressman Vorys, the calculation was absolutely independent.

Mr. CHIPERFIELD. Mr. Ambassador, did you not have something to do with those figures at Paris?

Ambassador DOUGLAS. Not with the figures.

Mr. CHIPERFIELD. The press seemed to indicate thusly.

Ambassador DOUGLAS. No; I can tell you precisely what happened.

Mr. CHIPERFIELD. Would you tell us?

Ambassador DOUGLAS. The first addition or total of the calculated requirements of the 16 countries was put at a figure approximating \$29,000,000,000 for the 4-year period. It was perfectly tentative. It had not been approved by the Conference or by the executive committee. That figure was disclosed to Mr. Clayton and disclosed to me. We both made from separate parts of Europe, the same kind of a reply. When that figure was reviewed by the executive committee and the Conference, they reduced it very substantially to \$22,400,000,000, including the items amounting to \$3,100,000,000, which they calculated could be made available through the International Bank and from other sources, so that it was only in respect of the total that any expression of the view from the United States was given.

The United States Government did not participate in the calculation of the commodity requirements. Conversations were had toward the very end, when the Paris Conference was drawing to its close, in regard to the undertakings which each country would make to the other countries, the nature of the cooperative effort. However, it was made clear that what was said was done in the form of friendly aid in drafting which the secretary said in his Harvard speech we would make available.

The Paris Conference report was slightly more than \$1,700,000,000 in excess of the calculation made by the executive branch of the United States Government for a 12 months' period, and, of course, all the figures that I am talking about, except the one with reference to the \$22,400,000,000 have to do either with a 15 months' period or 12 months' period. At the moment I am talking about the 12 months' period.

So much for the way in which the Paris figures were made. As to the Harriman committee, and this is directed to the second part of your question, Congressman Vorys, many of the studies upon which the Harriman committee's report was based were made by independent people, shipping for example, and a number of others.

Now, Mr. Harriman or the executive officer of that committee can explain to you much better than I can the extent to which those calculations were wholly independent of the Government. However, I think it is fair to say that there was not collaboration in the calculation of figures as between the Harriman committee and the executive branch. Mr. Nitze says there was collaboration in getting the data together, but there was no collaboration in the measurement of the availabilities and a whole variety of items of that character.

I cannot say—perhaps Mr. Harriman can—that the two calculations were wholly independent, but I can say they were not made with a view to having them come out at the same end point.

Mr. VORYS. That is understandable. I am not saying that critically. If they all three came up with perfect answers, they probably would look the same. So the mere fact that there is a similarity does not necessarily prove anything wrong about the figures.

Ambassador DOUGLAS. No. It does indicate that there has been a reasonable amount of very careful screening and scrutiny and review of the figures. The point was that two relatively independent reviews had come out with figures which were approximately the same, based upon approximately identical hypotheses and assumptions.

Mr. BLOOM. You were figuring on 12 months. The calculations were all on 12 months. How did you get \$6,800,000,000 on the 15 months' period?

Ambassador DOUGLAS. As I explained this morning, Congressman—

Mr. BLOOM (interposing). I did not hear it. Maybe I was not here at that time. All of your figures that you have been talking about now as I understand concern the 12 months' period?

Ambassador DOUGLAS. That is right, except for the end figure, which is an adjustment of the Harriman committee's figures for the 15 months, \$6,811,000,000 as against \$6,800,000,000. The executive figures for the 15 months were based upon a minute calculation of certain commodities for the 3 months' period April 1 to July 1, and the following succeeding 12 months' period.

Mr. VORYS. Of course, I hope you appreciate that having this placed before us in tables of yearly figures, and then jumping to 15 months is dreadfully confusing, but let me also point out that on the chart you have before us, there is \$200,000,000 in for the period after the 15 months, so that that is just another little added confusion in there. The item 20 on your chart is \$200,000,000 to go beyond the 15 months. That may be a nice idea, but it does not help to dispel the confusion.

Ambassador DOUGLAS. However, that \$200,000,000, Congressman, is for the purpose of liquidating during the 60 days after July 1 of 1949, the obligations that have been entered into prior to July 1 of 1949. We could have put that \$200,000,000 or hidden it in another place.

Mr. BLOOM. When you differentiate between the 12 months and the 15 months do you prorate that extra 3 months?

Ambassador DOUGLAS. Not insofar as the executive branch is concerned. On page 108 of the published document you will find the calculation for the 3 months' period, that is April 1 to June 30, or July 1, and from July 1 of 1948 to June 30 of 1949. That was a calculation for both periods, made in the same way. The reason for putting the 3 months' period and the 12 months' period together was in order to explain how the total figures had been arrived at.

Mr. BLOOM. That is what I wanted to know.

Ambassador DOUGLAS. There it is, sir.

Mr. VORYS. It is not very helpful because there is a little item of \$200,000,000 difference between the one that you have up there and the one on page 108. This one ends up "\$8,727,000,000," and that one ended up "\$8,527,000,000."

Ambassador DOUGLAS. \$8,727,000,000, sir, on line 15.

Now as to the comparison between the executive branch estimates and the estimates of the Paris report and the estimates of the Harriman committee, we had to take a 12 months' period because both the Harriman committee and the Paris Conference made their calculations for a 12 months' period. We could not have made any comparison had we not had the comparison on the 12 months' basis, that is. Is that clear?

I should like to explain why—

Mr. BLOOM (interposing). No one said "Yes" when you said, "Is that clear?"

Ambassador DOUGLAS. Does anyone care to say "No"?

Mr. BLOOM. Congressman Vorys is interested in the \$200,000,000 figure. I am interested in the \$6,800,000,000 figure.

Ambassador DOUGLAS. I can go through this again, the \$6,800,000,000. The \$200,000,000 I think is included, Congressman. The uncovered deficit of the bizonal German areas with nonparticipating countries outside the Western Hemisphere is \$200,000,000.

(The Department of State has submitted the following additional material on this matter:)

THE BIZONAL DEFICIT WITH NONPARTICIPATING AREAS OUTSIDE THE WESTERN HEMISPHERE

1. The bizonal area is expected to import substantially more than it will export to the nonparticipating countries outside the Western Hemisphere in the first 15 months of the ERP. These countries, which are known as other nonparticipating countries include not only the countries of eastern Europe but all countries which are not in the Western Hemisphere or dependent territories of the 16 participating countries. Among them are very important raw-material-supplying countries such as Australia, New Zealand, South Africa, China, India, etc. Included in the 6.8 billion dollars appropriation request for the next 15 months of the ERP is \$200,000,000 to cover a portion of the imports from these countries.

2. Attachments A and B provide an illustrative pattern of this trade, showing how the deficit has been calculated and the basis of the request for an appropriation covering this deficit. In making use of these attachments the following explanation may be useful. These comments apply to attachment B which deals with fiscal year 1949 but they hold equally for the period April to June 1948 which is dealt with in attachment A.

3. Estimated bizonal imports from eastern Europe, including the Soviet zone of Germany and all the nonparticipating countries in eastern Europe, are expected to amount to 93.8 million dollars. These imports include bread grains, industrial raw materials and manufactured goods, as well as the freight cost on these goods. Imports from non-European nonparticipating countries are expected to amount to 267.2 million dollars, including freight cost. These imports include wool, nonferrous metals, tropical fats and oils, and industrial raw materials.

4. Having in mind the fact that trade with the areas of eastern Europe and with the Soviet Union itself must be conducted on a barter basis it was considered necessary to assign to these areas sufficient German exports to balance the imports from them. The bizonal exports to all areas in the first 15 months' period are relatively small, compared to import needs, and, in the program which has been constructed, have all been assigned to areas other than the non-European nonparticipating countries. If some of these exports are, in fact, diverted to these countries, the result will be a decrease in exports to such areas as the Western Hemisphere and an increase in the bizonal deficit with these areas corresponding to the reduction in the deficit with non-European nonparticipating countries. Therefore the entire amount of bizonal imports from the non-European nonparticipating countries, 267.2 millions, must be financed in cash.

5. The remainder of attachment B indicates the division of the deficit of 267.2 million dollars between British financing under the United States-United Kingdom bizonal agreement, and United States financing as requested under the ERP authorization. It is necessary to rely on United States and British financing for the bulk of this amount because the bizonal area has neither foreign exchange resources nor the possibility of any substantial credits from these areas which are themselves suffering from a shortage of dollars and curtailing their imports from dollar areas.

6. The Department of the Army is in general agreement with this presentation.

ATTACHMENT A

Explanation of \$200,000,000 item for uncovered deficit of bizonal area with nonparticipating countries

April-June 1948:

Imports (including freight cost) from U.S.S.R. and eastern Europe....	24.3
Imports (including freight cost) from other nonparticipating areas....	41.6
Total imports.....	65.9

April-June 1948—Continued

Exports to U.S.R.R. and eastern Europe.....	24.3
Total deficit with nonparticipating countries.....	41.6
Adjustment for price increase (7½ percent).....	8.1
Total deficit at adjusted prices.....	44.7
British contribution ¹	17.5
Uncovered deficit.....	27.2
Above in round figure.....	30.0

¹ Under the terms of the United States-United Kingdom bizonal agreement, revised as of Dec. 17, 1947 par. 1 (a) (iv). See Department of State Bulletin, Dec. 28, 1947, pp. 1263 et seq. It is contemplated that the British contribution will be largely available for procurement of goods and services from nonparticipating areas; if a portion of the contribution should be spent elsewhere, a corresponding shift in the destination of German exports would be required to cover a portion of the imports from the nonparticipating countries.

ATTACHMENT B

Fiscal 1949:

Imports (including freight cost) from U. S. S. R. and eastern Europe..	93.8
Imports (including freight cost) from other nonparticipating areas...	267.2
Total imports.....	361.0
Exports to U. S. S. R. and eastern Europe.....	93.8
Total deficit with nonparticipating areas.....	267.2
Adjustment for price increase.....	20.0
Total deficit at adjusted prices.....	287.2
British contribution ¹	70.0
Uncovered deficit.....	217.2
Plus deficit for 3 months.....	30.0
Total uncovered deficit for 15 months.....	247.2
Appropriation request.....	200.0
Deficit not covered ²	47.2

¹ Under terms of United States-United Kingdom bizonal agreement, revised as of Dec. 17, 1947, par. 1 (a) (iv). See Department of State Bulletin, Dec. 28, 1947, pp. 1263 et seq.

² As noted in text, revision of figures now under consideration will substantially eliminate this uncovered deficit.

Mr. BLOOM. I think we will have to have a private conference on that.

Mr. Ambassador, you say about the International Bank, that is a loan, is it not?

Ambassador DOUGLAS. Was the question whether the operation of the International Bank takes the form of loans?

Mr. BLOOM. Yes. How is that figure in here, that must be a direct figure the same as a bank loan.

Ambassador DOUGLAS. Certainly.

Mr. BLOOM. How do you figure that in with the aid to the 16 participating countries?

Ambassador DOUGLAS. The total requirements were calculated at a certain figure, \$8,727,000,000. That is the total requirements. Now, how were the total requirements to be met? We calculated, or the executive branch did, that \$1,285,000,000 would be derived from sources other than appropriated funds. \$500,000,000 of the \$1,285,000,000 would come from the International Bank, private investment sources, and the Export-Import Bank. There is a deficiency, for example, of \$100, somebody needs \$100. He may decide that he can meet his need by borrowing \$50, and drawing down on a

cash account, or some other device, for the remaining \$50. That is precisely what this calculation is. The total requirements are \$8,727,000,000. How are they to be met? \$1,285,000,000 from sources other than appropriated funds of the United States.

Mr. Mansfield. May I ask a question?

Ambassador DOUGLAS. Yes.

Mr. MANSFIELD. How much do you estimate American businessmen will invest in Europe under this proposal?

Ambassador DOUGLAS. We calculated roughly that between 50 and 100 millions during the 15 months' period would be either invested by American individuals, or American corporations or loaned. That would be from private American sources.

Mr. MANSFIELD. Do you anticipate in the period beyond that 15 months that providing these initial investments should meet with some degree of success that additional American investments would take place?

Ambassador DOUGLAS. Congressman, if economic and political stability begin to reappear on a solid basis in western Europe, I think a profitable field for American investment will develop.

Mr. MANSFIELD. Is it the purpose of this particular measure to offer any degree of security or to guarantee any security to the American investments in the first 15 months?

Ambassador DOUGLAS. The legislation contemplates the guaranteeing of investments made by American corporations or individuals up to 5 percent of the total amount of money appropriated, and then only on account of the transfer from foreign countries into dollars of the amount invested, provided the enterprise earns money.

In other words, the American investor will take a complete risk as to whether the project in which the investment is made is a profitable one, or a nonprofitable one, and the guaranty will apply only to the ability to transfer from French francs or pounds sterling from England into dollars, and then only up to the extent of the amount invested.

Mr. MANSFIELD. I understand. Thank you.

Mr. BLOOM. That is a conditional loan, is it not?

Ambassador DOUGLAS. It is not a conditional loan.

Mr. BLOOM. The private investor has a conditional loan. He is only guaranteed up to 5 percent.

Ambassador DOUGLAS. No. The total amount of the guaranties which may be extended, under this particular provision of the bill, and indeed under any provision of the bill, cannot exceed 5 percent of the total appropriated. That is to say the total amount of the guaranties cannot exceed 5 percent of \$6,800,000,000, if the Congress authorizes and appropriates \$6,800,000,000.

Mr. BLOOM. Are the loans made by the International Bank and the Export-Import Bank the same kind of loans or conditional loans or are they different kinds of loans?

Ambassador DOUGLAS. The loan made by the International Bank is a wholly different sort of a thing. That is a loan made by that bank to a foreign country or to a concern within the foreign country that has the approval of the central bank of that foreign country.

Mr. BLOOM. However, the Export-Import Bank loans are lower?

Ambassador DOUGLAS. The Export-Import Bank is an agency of the United States Government, and it extends loans out of funds appropriated or a lending authority extended to the Export-Import

Bank by the Congress. However, I am talking about something different with respect to guaranties. Total guaranties may not exceed 5 percent of the total sum appropriated, and then the guaranty can only be invoked up to the amount of the capital invested abroad, and then only to transfer from the foreign currency into American dollars, and then only if the venture abroad is a profitable undertaking. That is, we do not propose that there should be a guaranty of the ordinary business risk, other than the exchange risk.

Mr. VORYS. However, Mr. Ambassador, the guaranteed loans, while the amount of them is to be limited to 5 percent of the \$6,800,000,000, that amount is to be in addition to the \$6,800,000,000?

Ambassador DOUGLAS. No, sir. It is included within the \$6,800,000,000. That is certainly the intention.

Mr. VORYS. Would that not be \$340,000,000?

Ambassador DOUGLAS. That is right.

Mr. VORYS. That is if a whole lot of loans came up to take absolutely every penny that was available, and the authorization was \$6,800,000,000, the first year, is that correct?

Ambassador DOUGLAS. The authorization sought is \$6,800,000,000; yes.

Mr. VORYS. If the authorization were \$6,800,000,000, then there could be \$340,000,000 of guaranteed loans.

Ambassador DOUGLAS. Guaranteed investments; yes.

Mr. VORYS. Would that mean that \$6,800,000,000 minus \$340,000,000 could be appropriated and spent, or that \$6,800,000,000 should be appropriated, and in addition to that \$340,000,000 of loans?

Ambassador DOUGLAS. \$6,460,000,000 would be available.

Mr. BLOOM. Will the gentleman yield?

Ambassador DOUGLAS. Let me explain how that operates. Let us suppose an American company undertakes to invest \$10,000,000 in France for a certain purpose, and that the administrator has guaranteed, subject to all of the limitations to which I have referred, that investment. Then \$10,000,000 will have to be set aside in order to meet the guaranty, should it be necessary to invoke it.

Mr. BLOOM. Following Mr. Vorys' question, would you now have to reserve the full \$340,000,000, the 5 percent?

Ambassador DOUGLAS. No, sir.

Mr. BLOOM. Supposing you went up to \$6,800,000,000 and these investments were made. You still have no provision for the 5 percent. So you would have to earmark \$340,000,000.

Ambassador DOUGLAS. However, they would take the place, Congressman, of support extended in another form and merely be a substitution. An American company invests \$10,000,000 abroad. As to the foreign country, the balance of payments is relieved to the extent of \$10,000,000, just as much as though \$10,000,000 worth of tobacco had been purchased and sent to that country. The dollar resources of that country will have been relieved to precisely the same extent; that is to say, \$10,000,000. The administrator then guarantees the \$10,000,000, subject to all the limitations and conditions to which I have referred. That \$10,000,000 is merely a substitution for relief of their dollar shortage in lieu of something else.

Mr. MANSFIELD. Does that not in effect, Mr. Ambassador, take the strain off the expenditures by this Government and transfer some of

the responsibility to American private industry or American private business?

Ambassador DOUGLAS. Indeed it does.

Mr. JARMAN. However, you would not have to set aside the whole \$340,000,000 initially because those items of \$10,000,000 might not add up to \$340,000,000.

Ambassador DOUGLAS. That is right. As the administrator makes the guaranties, he will set aside the amount necessary to cover the guaranty should it be invoked.

If he makes guaranties only to the extent of \$40,000,000, then that will be exactly the amount which will have to be set aside to make good on the guaranty should it be invoked at some subsequent time. If, on the other hand, he makes guaranties in the amount of \$340,000,000, then he will have to set aside the \$340,000,000 in order to make good on the guaranties which he has extended.

Mr. JARMAN. He has no authority to make more?

Ambassador DOUGLAS. That is right.

Mr. MERROW. How would the \$340,000,000 be affected then as to the loans that are guaranteed 100 percent out of that?

Ambassador DOUGLAS. They are not going to be guaranteed 100 percent, Mr. Congressman.

There is no loan given. The American business corporation makes an investment of its own money. Let us say it is \$10,000,000. The administrator then guarantees that corporation that, should the venture abroad be a profitable one, and should the American corporation experience difficulties in transferring the foreign currency which it earns abroad into American dollars, the guaranty of \$10,000,000 or the extent to which it is impossible to transfer from a foreign country into American dollars will be made good. But there will be on guaranty issued as to the business soundness of the enterprise, nor will the guaranty extend beyond the actual dollar capital invested.

Mr. MERROW. He sets aside dollar for dollar then, using the illustration that the corporation invests \$10,000,000. The \$10,000,000 must be set aside?

Ambassador DOUGLAS. That is right, sir.

Mr. VORYS. That must be held for 14 years. Is that not correct?

Ambassador DOUGLAS. Whatever the period of guarantee is.

Mr. VORYS. The limitation is 14 years.

Ambassador DOUGLAS. That is right. The guaranty might run for a shorter period. It might be liquidated in 4 years or 5 years.

Mr. MERROW. If all that money is lost, then what?

Ambassador DOUGLAS. If the money is lost the venture is unprofitable. That would show on the profit-and-loss statement of the company or corporation. There is no guaranty by the United States Government that the investment will be made good.

Mr. MANSFIELD. Mr. Ambassador, this would be in the form of risk capital on the part of private enterprise, and it would appear to me on the basis of your explanation that if American business does go into any of these European countries, under the plan contemplated by you, that they would in effect be doing something which the Government in another way might have to do, and it would appear to me also that this would be a very worth-while procedure because the stronger business goes in, then the greater stability of the particular countries concerned would be because business will not take a chance

unless there is a reasonable assurance that they would find a profit attached to what they do.

Mr. VORYS. Mr. Ambassador, as I understand your statement and the text of the bill, this has nothing to do with profit. If there is no profit in the venture there is no loss to the United States Treasury.

Mr. MANSFIELD. That is right.

Mr. VORYS. If, however, the venture is profitable in the sense that the American entrepreneur is paid in francs and cannot get dollars for his francs, that guaranty provides assistance, and we have under this a new form of guaranteed foreign exchange.

As I understand it has nothing to do with the profit of the venture. It is merely to unfreeze foreign exchange by a new way, guaranteeing that you can get dollars for your francs or other form of foreign currency.

Ambassador DOUGLAS. Let me give you an example. I know of an American concern that would like to make an investment in one of the foreign countries. It is a company whose assets are in dollars. It wants to make an investment in dollars. It is reluctant to do so because it is fearful that having invested dollars abroad it will not be able to get dollars back because of limitations on the convertibility of the exchange. This device is designed to give the American investor a guaranty only as to exchange, a conversion of the foreign exchange into dollars, and then only if the venture abroad is a profitable one, and finally only up to the extent of and not beyond the capital invested.

Mr. JARMAN. If a \$10,000,000 investment made \$5,000,000, the guaranty would only apply to the \$10,000,000? In other words, if the \$10,000,000 investment to which you referred made \$5,000,000 during the time it was in operation, the guaranty will apply only to the \$10,000,000 and not to the \$5,000,000?

Ambassador DOUGLAS. If the investment were \$10,000,000 and over and above the repayment of the capital invested, the profit were \$5,000,000, or a total of \$15,000,000 were derived from the investment, the guaranty would apply only to the \$10,000,000.

Mr. BLOOM. Mr. Ambassador, I have the bill before me. It is an obligation of this Government to guarantee 5 percent of the sum appropriated under this bill or under the act? It is the sum total of 5 percent. Now if you guarantee, and that is what it says, the Government guarantees 5 percent of the amount of money appropriated, I cannot see that it is not encumbent upon the administration to hold back 5 percent for this provision of the bill. It says so, if you look on this page of the bill, and you will see that wording is very explicit and very clear. It is 5 percent guaranteed under the sum total of the appropriation.

Ambassador DOUGLAS. You are talking about what section?

Mr. BLOOM. Page 11.

Ambassador DOUGLAS. It is section 7 (b) (3) (ii)?

Mr. BLOOM. That is right. Now it said guaranty of 5 percent of the total amount appropriated.

Ambassador DOUGLAS. Yes; the language says:

the total liabilities assumed under such guaranties shall not exceed 5 per centum of the total funds appropriated for the purposes of this Act.

Mr. VORYS. That is a ceiling, not a floor.

Mr. JARMAN. It does not say it may not be less.

Mr. BLOOM. If there is less invested, there would be a lesser amount of guaranty of the Government.

Ambassador DOUGLAS. That is right.

Mr. BLOOM. It is in my mind what you say about the 5 percent. Answering Mr. Vorys, I cannot see where it is not incumbent upon the Government to reserve 5 percent of the total amount appropriated so as to pay any of these things if the investment is made.

Ambassador DOUGLAS. Not until the guaranty is made.

Mr. BLOOM. The guaranty is made under the act.

Ambassador DOUGLAS. No. The guaranty is to an individual company and at the moment no one knows what individual corporations will seek a guaranty. Therefore, it is not necessary to put aside any sum until the guaranty is made.

Mr. BLOOM. Can you conceive of any company or any business firm, if they can get a guaranty of the Government to 5 percent of the amount of money they are going to invest, they are not going to take advantage of this act?

Ambassador DOUGLAS. Yes; I can. I know of one.

Mr. BLOOM. He is not of my faith, then.

Mr. CHIPERFIELD. Mr. Ambassador, why did they put a limitation of 5 percent in there? If this is a good thing, why do they not go beyond 5 percent?

Ambassador DOUGLAS. I cannot tell you why the limitation was put in, Congressman. It seems to me that it is a good thing to do.

Mr. MUNDT. They just grabbed the 5 percent out of the air to try it out?

Ambassador DOUGLAS. That seemed to be an approximation of the amount. The National Advisory Council, which is located in a position and is clothed with the authority to coordinate lending policies, produced that figure.

Mr. MUNDT. There are so many possibilities in view of the current discussions as to who is going to administer the act because the bill says that whoever administers the act will determine, I presume, whether corporation A or corporation B is going to get a guarantee to produce a certain product in a certain country. Is that right?

Ambassador DOUGLAS. It will have to be approved by the local government, and by the administrator.

Mr. MUNDT. By the administrator?

Ambassador DOUGLAS. By both.

Mr. MUNDT. That to me provides one very small argument why we should have a bipartisan board administering the act. I can see some very embarrassing situations arising. Suppose in Vienna the New York Times and the Chicago Tribune both get the idea they would like to put in a \$500,000 plant to produce newspapers there.

Mr. BLOOM. That is an atrocity.

Mr. MUNDT. They would like to produce a paper there under the terms of this guarantee. The administrator is under an embarrassing set of circumstances. Is he going to grant it to the Times or to the Tribune? I think a man might make money guessing which one would get the permission at the present time, but I think this should be a place where a board could decide. That is a pretty big responsibility in view of some of the things which have been happening in the commodity markets.

Ambassador DOUGLAS. In the first instance the administrator would not be in a position of approving one or the other until the local government had approved one or the other.

Mr. MUNDT. They make the first approval?

Ambassador DOUGLAS. That is right, sir.

Mr. MUNDT. Is it probable, then, that our Government endorse this decision?

Ambassador DOUGLAS. Not necessarily. We might have some serious doubts about the soundness of the proposed investment.

Mr. MUNDT. Did the advisory board conceive this idea, and I think it has some intriguing possibilities, but did they have in mind some limited time of economic activity to which it would apply, or was it anything of an economic nature?

Ambassador DOUGLAS. Anything within the program, a petroleum refining plant, et cetera.

Mr. MUNDT. It would deal only with those projects?

Ambassador DOUGLAS. Those projects which are within the program, that is right.

Mr. MANSFIELD. I think that the creators of this particular bill are to be congratulated for putting this particular item in there because while you mentioned companies which might be interested in investment in these European nations now being considered, nevertheless it is a fact, I believe, that at the present time certain American companies in both Japan, Germany, and elsewhere are not able to convert money which they have legitimately made from the occupation currency or the francs or whatever it might happen to be, into American money and consequently are suffering a financial loss. Is that not correct?

Ambassador DOUGLAS. Yes. That applies almost everywhere in the world. There would be no guarantee that would cover any previously made investments.

Mr. MANSFIELD. However, you are working on the basis of experiences which you have already incurred?

Ambassador DOUGLAS. Yes.

Mr. LODGE. In other words, it would not protect, for instance, publications which already have the difficulty of conversion?

Ambassador DOUGLAS. Do you mean enterprises?

Mr. LODGE. Such as the New York Herald Tribune in Paris, Time, or Newsweek, any of those publications which at the moment have difficulty in converting their local currencies into dollars. They would not be taken care of, only future enterprises would be taken care of.

Ambassador DOUGLAS. It is not intended that this guarantee shall apply to any investment of any character that has previously been made.

Mr. LODGE. Nevertheless it will not serve as an inducement for them to remain. It will serve only as an inducement for new enterprises to be brought in.

Ambassador DOUGLAS. That is right.

Mr. LODGE. Let us assume that none of this \$340,000,000 is obligated during the first 14 months of the program. Well now, since this is a balance of payments proposition, does that mean that you must either within that final month obligate the \$340,000,000 or else use it for other purposes?

Ambassador DOUGLAS. If it is not obligated it may be used for other purposes.

Mr. LODGE. What is the time limit on that? Within what time does it have to be obligated, or used for other purposes?

Ambassador DOUGLAS. Let me see if I can put it this way: The 16 European countries are short of dollars. We have calculated the amount of dollar assistance in relation to the available supplies of commodities, which will be necessary to cover that balance of payments.

Mr. LODGE. Over a 15 months' period.

Ambassador DOUGLAS. Over a 15 months' period. Now if an American enterprise considers it wise to make an investment of \$10,000,000 in one of these 16 participating countries, let us take France for example, and accordingly invests \$10,000,000 in France, France has \$10,000,000 which she did not formerly have.

Mr. LODGE. That is right.

Ambassador DOUGLAS. With that she can buy cotton, wheat or whatever her requirements within the limits of the \$10,000,000 may be.

Mr. LODGE. That is right. I understood that. But let us assume that none of this \$340,000,000 is so obligated when the entire 15 months' period is over. Then the balance of payment is \$340,000,000 off, because there is not that amount with which to purchase wheat and so on as you just specified. What happens in connection with that \$340,000,000?

Ambassador DOUGLAS. That does not necessarily follow, Congressman, because if the guarantees are not made, not extended, then the funds appropriated will be available to provide the same dollar assistance that an investment made under a guarantee would have provided.

Mr. LODGE. However, the \$340,000,000 has to be open for guarantee during the entire 15 months?

Ambassador DOUGLAS. Yes; but only as long as the guarantees are extended.

Mr. LODGE. Yes; but the point I make is that after that, the 15 months' period, if no guarantees have been made, then the \$340,000,000 will be no longer available as guarantees, but will be applicable to the other provisions of the act in order to complete the balance of payments deficit; is that correct?

Ambassador DOUGLAS. Yes; but in any 1 month or week or day it makes no difference, so far as dollars available to the 16 participating countries is concerned, whether they are made available in the form of goods purchased with American dollars or whether they are made available in the form of an investment of American dollars in a foreign country.

Mr. LODGE. I quite agree.

Ambassador DOUGLAS. The result is quite the same.

Mr. LODGE. My supposition is that the funds will not be made available for either, since they have to be kept open for guaranties during the entire 15 months' period as I understand it; therefore if there were no corporations interested in investing money, no guaranties would be made available but the money would nevertheless be held until the end of the 15 months' period. Is that not correct?

Ambassador DOUGLAS. No, I do not think that follows, because the language says total liabilities assumed under such guaranties shall not

exceed 5 percent. Now let us suppose, as you put the case in your hypothetical question, no request for guaranties is made during the first 14 months. The dollars appropriated under the act would be expended to meet the program, and whatever the balance might be during the fifteenth month left in the appropriation, let us say for the purpose of illustrating, that it amounts to one-fifteenth of \$6,800,000,000.

Mr. LODGE. That is my question, then.

Ambassador DOUGLAS. The Administrator is not required under the act to extend the guaranty.

Mr. LODGE. How long must the Administrator do that?

Ambassador DOUGLAS. He need not keep any of it, because he is only authorized to make the guaranties and the total amount shall not exceed 5 percent.

Mr. LODGE. It seems to me the whole clause is illusory. He can obligate the \$340,000,000 in other respects and need not authorize any of it for this purpose.

Ambassador DOUGLAS. This is a permissive power.

Mr. LODGE. It seems to me that that is not right. There is no limitation of time. He can do it the first day it seems to me under what you said. He can remove this \$340,000,000 from this particular clause within the first day that the act goes into effect.

Ambassador DOUGLAS. If there are enterprises that seek guaranties up to the full amount of the guaranties which he is authorized to extend, he may.

Mr. LODGE. And therefore, a corporation might come to the Administrator 15 days after the act is into effect and he might meet the requirements in every other respect, and the Administrator could say, "I am sorry, but this total amount has already been allocated and therefore nothing doing."

Ambassador DOUGLAS. Hypothetically, that is possible. It is not likely.

Mr. LODGE. Therefore, it seems to me that the clause as written is illusory, and to that extent has very little meaning.

Ambassador DOUGLAS. I think there is an interesting point there, Congressman. The first is that it is illusory because it may not be used and the second is that it is illusory because it may all be used during the initial period.

Mr. LODGE. Precisely. The reason it is illusory is because it seems to me that there is no obligation on the part of the Administrator to withhold this 5 percent or any lesser amount for any given periods within the 15 months' period for this particular purpose. It is entirely permissive, discretionary, and therefore illusory as far as any obligation is concerned.

Ambassador DOUGLAS. You see, Congressman, I would presume that the Administrator would make the best business calculations that he could make in the light of experience as to how much he would be called upon to guarantee, and he would try to program it with reasonable orderliness throughout the period for which he was authorized to extend guaranties. This is the type of guaranty for which or in respect of which we have very little experience. It is pretty difficult, and indeed I think it is impossible, to prescribe definite and precise regulations as to how the guaranties shall be employed, what sums shall be set aside to cover anticipated guaranties that may be sought.

Mr. LODGE. I simply wanted to make it clear that it is illusory in that respect and that therefore this clause is permissive rather than mandatory.

Ambassador DOUGLAS. It is permissive; that is right.

Mr. MUNDT. I would like to pursue a little further the type of activity to which this guarantee can be applied. Did I understand you to say it should be applied only to economic activities involving the products which are to be distributed under the purview of this act; food, fabrics, fuel, and fertilizers, et cetera? Can it be applied to any activity of an economic nature which the administrator feels is serviceable to the United States?

Ambassador DOUGLAS. It can be applied, Congressman, to those ventures and enterprises which have been programed and approved. That is within the program. Let us take an example.

Mr. MUNDT. Let me ask you this specific question, because it seems to me this is a field where by all means it should be approved, and that is the activity mentioned down the line I believe by Mr. Lodge when he started in. The distribution of American news events by the Rome American, by the New York Herald-Tribune, Newsweek, Time, Life, through the showing of American moving pictures abroad, and the publication of American books, all of which are having difficulty now because they cannot translate their income into dollars, would it or would it not apply to those activities?

Ambassador DOUGLAS. If those activities were within the program, it would. If not, it would not.

Mr. MUNDT. How is a Member of Congress struggling for information to find out whether or not they are within the program going to determine it if you cannot tell me?

Ambassador DOUGLAS. I doubt in the present moment the program contemplates investments in moving-picture undertakings in the countries, or in the establishment of publications in these respective countries.

Mr. BLOOM. Does paragraph 1 apply there? Paragraph 1 on page 11, does that not apply?

Mr. MUNDT. I read that one. That is what gave rise to the question. It is not clear in my mind whether it would apply or not.

Mr. BLOOM. If the gentleman will yield, I think, Mr. Ambassador, the questions which have been asked you with reference to this 5 percent and the amount of money necessary to be held, I think the bill itself would be amended so as to make it certain what is really meant by it. I think the way it is now, that Mr. Lodge is correct in his statement that \$340,000,000 would have to be kept and you would have to keep it for a long time, whether for 14 months or 14 years. However, the bill presented here is very broad. It means certain things and it does not mean a lot of other things.

I think it should be amended so as to bring in all the points that have been brought out.

Mr. MUNDT. If I may continue my interrogatory, I do want to find out from somebody who knows, speaking for the administration or speaking for those who have conceived this bill, whether in your opinion it would apply to these information media, which I have recited; to press, magazines, book publishers, and motion picture operators, to be specific.

Ambassador DOUGLAS. These guaranties apply to the investment of new capital and not to investments previously made.

Mr. MUNDT. I understand that. So a new investment is made in pulp paper by Time magazine to print Life, Time, and Fortune in France, to be sold over there in France and they want it translated into dollars. Can they do it or can they not?

Ambassador DOUGLAS. That would depend upon whether they had the approval and consent of the local government in the first place, and as a part of the recovery program; and, secondly, it is conditioned upon whether the enterprise furthers and is in accordance with the fundamental purposes of the act.

Mr. MUNDT. Is it your position that that great vast area of latitude is to be left to some administrator of the bill and not be included in the legislation by Congress, as Mr. Bloom has suggested?

Mr. JONKMAN. Will the gentleman yield to me for a question?

Mr. Ambassador, it is all covered on page 2 in the act. The question is whether or not we include it in those purposes. At the bottom of page 2 you will find the purpose of the undertaking.

Ambassador DOUGLAS. That is right.

Mr. MUNDT. There is nothing there that by any stretch of the imagination could be specifically interpreted to exclude or include the question in point.

Ambassador DOUGLAS. In talking about the reconstruction and the recovery of a large part of the world, there are many things which this part of the world requires, and which contribute to its recovery and rehabilitation and restoration of stability within it.

That which is related to and is within the purposes of the bill, which is to achieve a recovery would be subject to the approval of the local government and having been approved by the local government would then be entitled to the extension of a guaranty, should the Administrator consider that it was within the purposes of the bill.

Mr. MUNDT. In order that we can begin to drift away from the sea of imponderables over to something understandable, it is not in the act. However, you are speaking now for the administration in support of the act.

Would it be in line with your recommendations and convictions that such activities as you have described would be suitable to be included or would you be inclined to think they would not?

Ambassador DOUGLAS. I would think I should give that more consideration because to be perfectly honest with you I have not thought about that particular type of an enterprise.

Mr. MUNDT. I know exactly where I stand on it. I want to stand out where you fellows do.

Ambassador DOUGLAS. Before I give you an answer I would like to consider it.

Mr. MUNDT. When you do that, will you also give thought to this: If you conclude that that is a wise economic activity to be treated under the provisions of this act, might it not also be wise and helpful to make it apply to enterprises which have already accumulated amounts of this unusable currency, because that would still get into the hands of the foreign country. The dollar exchange which they require would be included and it would tend to reinforce activities which presently are helping very greatly in carrying the American story abroad.

Ambassador DOUGLAS. If that were done, Congressman Mundt, the amount of the appropriation would have to be increased to the extent to which guaranties of that order were extended because otherwise no dollars would flow into the European countries on account of making good on such a guaranty. Is that clear?

Mr. MUNDT. I think that is clear.

Mr. BLOOM. That is a pretty good answer.

Mr. MUNDT. That is all, Mr. Chairman.

Mr. CHIPERFIELD. Would you care to proceed?

Ambassador DOUGLAS. I wonder if I might finish one other phase?

Mr. CHIPERFIELD. Proceed.

Ambassador DOUGLAS. I was about to say that in our judgment the \$6,800,000,000 is the minimum necessary to achieve recovery during the 15 months' period, or to carry out the purposes of the act within the 15 months' period, and I would like to tell the members of the committee why we consider or believe that to be the case: In the first instance, the grain available for the participating countries for the first year under this program is some 11,000,000 tons less than the stated requirements of these 16 participating countries, and as I showed or was disclosing this morning, the program does not contemplate, during the period 1948 and 1949, elevating the established standard of living to even the prewar standard of living.

Now secondly in respect of petroleum the deficiency is 8.8 million metric tons.

Mr. CHIPERFIELD. Are there available supplies up to \$6,800,000,000?

Ambassador DOUGLAS. The commodity requirements have been reduced because the amounts were not available and the deficiency in the first year in respect of grain is some 11,000,000 tons; in respect of petroleum it is 8.8 million metric tons; in respect of timber the deficiency is about 30 percent of the stated requirements. More than that, these calculations were based upon a price level as of October.

Since October the price level in the United States has risen, as compared with July of last year, almost 12.5 percent, in other parts of the Western Hemisphere, just under 15 percent, and throughout the entire Western Hemisphere to be exact 13.4 percent. In other words, the price level has risen far above the price level as of October which was the basis for the calculation. And that increase in price level since October has already reduced the amount of support contemplated in the \$6,800,000,000 by \$400,000,000.

Now the third reason why we believe that this is a minimum is because we have assumed a certain restoration of trade with Eastern Europe. For example, it is assumed that Poland will deliver 16,000,000 tons of coal to western Europe in 1948, increasing to 30,000,000 tons in 1951. It is likely that Poland will deliver that tonnage. However, there are uncertainties about it. For example, I think it was during the month of August the four northern European countries scheduled a meeting for the purpose of developing among them a customs union. They were immediately informed that should they proceed with their meeting and establish a customs union, coal from

Poland would be withheld, so that there are a number of uncertainties involved in the movement of commodities, essential commodities, from eastern Europe to western Europe, and yet the calculations are based upon the delivery of those commodities.

Mr. BLOOM. Is that Silesian coal?

Ambassador DOUGLAS. From that field, yes.

Mr. BLOOM. Is not that conditioned upon a loan?

Ambassador DOUGLAS. No, the delivery of 30,000,000 is not conditioned upon a loan. My recollection is the total amount exported was about 18,000,000 out of which 11,000,000 went to western Europe. That is my recollection. I will have to check my recollection as to those figures.

(The statement on this matter is as follows:)

Polish coal exports to countries outside the Soviet bloc: Table 1 attached indicates that Poland exported approximately 7,200,000 metric tons of hard coal and coke to countries other than eastern European countries in 1947. In 1946 she exported 2,300,000 tons to the same countries indicating that in 1947 she more than trebled her exports. Table 2 attached indicates Polish exports to eastern European countries in 1946 and by half-year periods for 1947. The data in table 2 reveals that the volume of exports to eastern European countries remained stationary in 1947 as compared with 1946.

The trend in Polish coal exports to countries outside the Soviet bloc since the inauguration of the Committee for European Economic Cooperation. The data in table 2 which give the exports for 1947 by half-year periods indicate that during the second half of the year Poland exported twice as much coal to countries outside eastern Europe than she did during the first half. Table 2, on the other hand, indicates that Polish coal exports to these countries rose approximately 1,200,000 tons during the second half of 1947 as compared with the first half.

For both groups of countries shown in the tables, the total volume of exports rose from approximately 12,000,000 tons in 1946 to almost 18,000,000 tons in 1947. Total exports to both groups of countries were approximately 5,500,000 tons greater in 1947 as compared with 1946 and the total increment inured almost wholly to the benefit of the western countries.

TABLE 1.—*Polish hard coal and coke exports to European countries other than eastern Europe, 1946 and 1947 (estimated)*

(Thousands of metric tons)

¹ Actual data available for period July–November, inclusive. Full 6-month figures based upon actual data for 5 months plus State Department estimate for December. December estimate calculated by projecting average for July–November and adjusting for seasonal factors.

Mr. JONKMAN. Will the gentleman from New York yield?

Mr. BLOOM. Yes.

Mr. JONKMAN. Of course Russia could shut off that supply?

Ambassador DOUGLAS. That is precisely the point I was making, thank you, sir.

Mrs. BOLTON. Would you care to comment upon the 8.8 million tons of petroleum which you say is in deficiency? What would be required in your opinion if petroleum supplies were interfered with that are being counted on?

Ambassador DOUGLAS. That, of course, is another uncertainty and if they were interfered with, if for one reason or another sources of supply in the Middle East were shut off or diminished, then the whole petroleum program for Western Europe would have to be reviewed in the light of the diminishments thus created.

Mrs. BOLTON. So the refusal of Syria to ratify the agreement for the pipe line is of serious moment to the whole program?

Ambassador DOUGLAS. Yes, it is a consequence.

Mrs. BOLTON. That is only one instance.

Mr. MUNDT. How would that volume of petroleum be supplied, from the United States? It is coming from the United States now?

Ambassador DOUGLAS. It is calculated during the 15 months' period about 25 percent of the petroleum and petroleum products for Western Europe will come from the United States and that by 1951 only about 5 percent. For the increase in production of petroleum products it is assumed in other parts of the world will increase substantially, together with refining.

Mrs. BOLTON. In other parts of the world, largely the Near East?

Ambassador DOUGLAS. Yes, and the Caribbean.

Mr. MUNDT. Does that include petroleum-producing equipment or just products?

Ambassador DOUGLAS. Just the products.

Mr. MUNDT. Has your advisory commission or economic board determined that we have available for export of petroleum an amount represented by the 15 percent?

Ambassador DOUGLAS. There has been a long and complicated study on each one of these major commodities, including petroleum. I would be very glad to give you a copy of that. Mr. Krug is the person who has that.

Mr. MUNDT. I am just trying to find that out.

Ambassador DOUGLAS. Mr. Krug is the person who could answer your question in respect of petroleum much better than I. The program which is now being discussed before the committee is based upon the calculation of availabilities and Mr. Krug of course played a very, very important part in estimating available supplies.

There are other reasons why we believe the \$6,800,000,000 is a minimum.

Mr. LODGE. May I interrupt you there to ask you this: With respect to your third reason, aside from this problem in connection with the Silesian coal and in connection with petroleum, I assumed that this minimum figure is based on a maximum of reciprocal self-help among the 16 participating nations, and I would be interested if you would be kind enough to dilate for a bit on the extent to which we may expect reciprocal self-help among these nations and what has already been accomplished along those lines.

Ambassador DOUGLAS. I would be very glad indeed to do so. I wonder whether you would be good enough to withhold that question until I have completed these considerations, and then come back? Would that be satisfactory to you?

Mr. LODGE. That would be quite satisfactory.

Ambassador DOUGLAS. There are other important imponderables. This calculation which has been presented to the committee is based upon a certain volume of exports. That volume of exports from the participating European countries has to be achieved if the \$6,800,000,000 is going to be adequate. It may not for a variety of different reasons be achieved, not because of lack of desire to achieve it, but because of the intervention of factors over which these countries have no control.

Mr. CHIPERFIELD. Mr. Ambassador, if you leave that full amount of \$6,800,000,000 for the success of the program, then if something happens and you get less, then what is the situation?

Ambassador DOUGLAS. In our judgment, Congressman, it will impair the chances of the success of the program. However, there are a great many different risks as you know; Providence may be unkind. We may have crop failures, not only in Europe, if not in Europe, somewhere else in the world. There are a whole series of risks of that order over which man has no control, but there are a number of risks over which certain men have some control.

Mr. MUNDT. Mr. Ambassador, I think we are dealing with a highly important point when you are talking about the reason why \$6,800,000,000 should be the minimum amount appropriated. That is what you are starting out to prove in your statement.

Ambassador DOUGLAS. That is right.

Mr. MUNDT. It would be very helpful to the committee I am sure, and to the country if in establishing that as the basic figure you would establish it in terms of dollars as you go along. Now you say we need \$6,800,000,000 because we must have X number of bushels of wheat; X number of tons of oil, but that does not get it back in terms of dollars. Can you not put the dollar sign on those amounts as you go along, so we can add it and see how it comes out?

Ambassador DOUGLAS. I think a calculation can be made of that sort. There are imponderables as you recognize. One cannot say the extent to which the export target may not be reached.

Mr. MUNDT. There must be some kind of mathematics behind your arrival in your use of those factors to reaching that figure. I would like to know what that is.

Ambassador DOUGLAS. I have given you one mathematical calculation, expressed in dollars. The rise in prices, for example, has already reduced the effectiveness of the aid or the support by \$400,000,000.

Mr. MUNDT. I want to see the mathematics by which you start from scratch and reach \$6,800,000,000.

Ambassador DOUGLAS. Perhaps I do not understand, I am sorry.

Mr. MUNDT. I mean frankly if I had to go out and tell some South Dakota farmer tomorrow why \$6,800,000,000 is the least amount of money we need to get the program over, I could not do it simply by saying "The reason we need that much money is because we need 8.3 million tons of oil," and something else. I will have to show him we need 8.3 million tons of oil which is going to cost so many billions of dollars, or so many million, and we need so much grain which is going to cost so many million, so he can add up the dollar signs.

Ambassador DOUGLAS. That is in page 115 of the published document. There is a list of selected commodities expressed in terms of value and of quantity upon which the deficiency with the United States and the Western Hemisphere was calculated. That is page 115, 116, and 117 as I recollect.

Mr. MUNDT. Thank you.

Ambassador DOUGLAS. There is no table in regard to the item "Other imports."

Mr. JARMAN. Will the gentleman yield?

Mr. MUNDT. Yes.

Mr. JARMAN. Mr. Ambassador, may I comment to the Senator over there? On that proving to your people out there in dollars, you could not do that because of the fluctuation, day by day. Wheat might be 15 cents a bushel lower tomorrow. Oil might be 15 cents a gallon less. So it would be very difficult on that basis.

Mr. MUNDT. That is true, but if I tell them that, that is probably correct, they will say that \$6,800,000,000 is just somebody's wild guess because you have that fluctuation to contend with. I have to have some reason to firm up that figure.

Mr. JARMAN. That is what it cost, then. It costs that much, but the costs have gone up since then.

Mr. MUNDT. It would have cost about 13 percent less than that last October, as I understand.

Ambassador DOUGLAS. Last July.

Mr. BLOOM. I believe this morning you gave all of those figures.

Ambassador DOUGLAS. Yes.

Mr. BLOOM. You were analyzing those charts.

Ambassador DOUGLAS. I tried to.

Mr. BLOOM. I think it is a matter of record.

Mr. MUNDT. It is a matter of record, but not clear.

Mrs. BOLTON. I think you did not hear, Senator.

Ambassador DOUGLAS. This rise in prices which has already occurred will reduce the amount of the imports into the participating European countries by \$400,000,000, and therefore the effect of the rise in prices will be either to reduce the total production within the

countries and the amount available for export, on the one hand, or it will compel them further to draw down upon their already pretty well exhausted reserves. In either case, the amount of imports which they can continue to acquire will progressively diminish, thus affecting adversely in turn again their production. That was clearly evident and it was the significance of the calculations of the Harriman committee. The estimate of imports upon their lowest calculation was less than the estimate by the executive branch, and accordingly, the estimate of the exports from the participating countries was correspondingly less, which illustrates the significance of and the importance of imports into the countries if they are to achieve their production targets, export the commodities which they can export, acquire the exchange thereby for the purpose of purchasing additional imports, and thus keeping their full economic and industrial plant operating at an increasing momentum. And finally there is another imponderable: The Soviet through the Cominform has declared its open opposition to this program. We have witnessed during the course of the last 2 months organized efforts to interrupt and interfere with the production of several of these western European countries. To what extent organized efforts to frustrate the recovery of western Europe, to interrupt, interfere with the productive effort will be undertaken in the future, no one can say, but it is not likely that we have seen the end of such endeavors.

Mr. JONKMAN. You have extensive knowledge of the situation. Would you care to comment as to why Russia has not cooperated? Comment only if you care to. I do not want to put you in an embarrassing position.

Ambassador DOUGLAS. I think if the chairman would consider it to be appropriate at some time, it would perhaps be profitable to suggest a variety of different aspects of this problem in executive session.

Mr. JONKMAN. I will withdraw the question.

Mr. CHIPERFIELD. We would like to arrange that sometime, Mr. Ambassador.

Ambassador DOUGLAS. Those are the reasons generally why we believe this program represents a minimum which is necessary to achieve the purposes of the act during the 15-month period.

Now, Mr. Chairman, I might go on and talk about the administrative provisions of the bill. I might talk about the commitments which the European countries made to each other. Perhaps this would be an appropriate time for me to refer to them, because Congressman Lodge has already put a question.

Mr. LODGE. Mr. Ambassador, I understood the Secretary of State to say that the entire success of the recovery, rather than the relief aspects of this program, depended upon this reciprocal settlement, and that seemed to me also very important in view of this 1938 comparison which always crops up. I wonder if that is what we are trying to do, if we are trying to restore things to 1938 or whether we are instead going to recognize that the world in 1938 was changing, and that, therefore, what we must try to do is to achieve some sort of economic federation in Europe, rather than put Humpty-Dumpty together again, so to speak.

Ambassador DOUGLAS. Well, Congressman, these 16 participating countries met and they made certain undertakings which are as important in themselves as any calculations which they might have

made. For if these undertakings are observed faithfully, and I see no reason to believe that they will not be observed faithfully, the Paris Conference may well be a landmark in modern history. These 16 countries disclosed their internal economic position to each other, the first time it has been done, and they undertook to do certain things which would alleviate their positions, progressively and mutually, and I would like to refer the committee if I may to those commitments. They are to be found on page 13—at least all except one, in the report of the Committee on European Economic Cooperation.

The first of these was to develop production to reach the targets set, especially for coal and food.

I think it might be interesting in this connection to look at the production chart, to show what production was in 1938, what production fell to, and what the goals set may be. I think it is the third chart.

The black bar represents the production of all grains, meat, coal, finished steel, hydroelectric power, respectively, in 1938.

The next bar represents the production in 1946. That is this bar here—that is 1947.

The next bar represents the production in 1948.

The last bar represents production in 1952. With respect to all grains, these countries have undertaken to increase their production to a level substantially above the prewar level. With respect to meat, unfortunately it is still below, about 1½ million tons below the prewar level.

However, in coal they undertake to increase their production from 551,000,000 tons, where it stood before the war, to 586,000,000 tons roughly, by 1952.

In finished steel, they undertake to increase the production from 34,000,000 to 40,000,000 tons. In hydroelectric energy they undertake to increase their production from 60,000,000,000 to 112,000,000,000 kilowatt-hours.

Those undertakings in regard to production are important and significant. They are necessary, because of the various adverse consequences inflicted on these countries by the war, which cannot in a short period of time be overcome except through increased production and an increase in the volume of exports.

Mr. LODGE. I think that is extremely vital, Mr. Ambassador, but it was not precisely what I had in mind.

Ambassador DOUGLAS. I understand you had some other things, but these are undertakings by themselves.

Mr. LODGE. These are individual undertakings on the part of each nation?

Ambassador DOUGLAS. That is right. It is the sum total of them.

Mr. LODGE. What I was interested in was the trade aspects between the nations, and the way in which we could coordinate the bilateral arrangements which we make with each individual nation on a collective European federated economic basis.

Ambassador DOUGLAS. I understood. I was just taking these commitments in order. I was coming to some of the others which are of the nature you have in mind.

The second one was to make fullest and best use of their existing productive capacity and of course their available manpower.

The third is to modernize their equipment and transport. The fourth is to apply all necessary measures leading to the rapid achievement of internal financial, monetary and economic stability. That is an extraordinarily important consideration. I think Congressman Jonkman made some reference this morning, to the dilapidated internal fiscal affairs of some of these western European countries, associated with an unnatural exchange level. It has had an extraordinarily great depressing effect upon the production in each one of these countries whose financial system is tragic. These countries undertake to put their internal monetary and fiscal houses in order, and establish appropriate exchange rates that may be maintained. That is an extraordinarily and important significant factor because it means it has the effect of improving the whole financial and monetary system of this area of which we are speaking.

Mr. LODGE. Mr. Ambassador, before you discuss that, may I ask you, in talking about putting this internal house in order, what your attitude would be with respect to price controls within these various countries, and how you believe it affects the burden on the American taxpayer? Do you believe that price controls have acted to increase production and to rehabilitate these countries and therefore finally diminish the burden on the American taxpayer or do you believe that there must be a gradual relinquishment of price controls within these countries?

Ambassador DOUGLAS. I think the Congressman knows my traditional view on matters of that sort. I have not seen any reason to change my fundamental belief. I suspect that there are, perhaps, emergency conditions in which controls are perhaps necessary, but in my peculiar position I would like to discuss that, too, with the committee on another occasion.

Now, these 16 participating countries committed themselves to cooperate with one another, and with all like-minded countries in all possible steps to reduce the tariffs and other barriers to the expanding of trade both between themselves and with the rest of the world.

That is an undertaking to make of this area one in which commerce can move much more freely than it has moved before, in which the barriers, interferences with the flow of trade will be reduced. Indeed it is a step in the direction toward a goal which the Congressman has in mind.

Mr. LODGE. With respect to these bilateral agreements, not only between this country and the participating nations, but between the participating nations, who is to be the judge as to whether these agreements are being properly lived up to? Will that be the Administrator of the program? Is that to be entirely within the discretion of him to determine, or what degree of flexibility he believes is proper, what concessions should be made within the spirit of these agreements?

Ambassador DOUGLAS. There will be a continuing organization, and one of the purposes of the continuing organization will be to review the progress made toward the satisfaction of the pledges that these countries have made toward each other. So the first step will be the judgment of the organization itself.

Mr. LODGE. That would be the Administrator?

Ambassador DOUGLAS. The continuing organization of the 16 participating countries.

Mr. LODGE. They will determine whether the agreements are being lived up to, the Administrator will not?

Ambassador DOUGLAS. I would say that would be the first step. These 16 countries have committed themselves to the establishment of a continuing organization, consisting of representatives from each one, for the purpose of reviewing the progress made towards the satisfaction of the pledges given and to achieve in a cooperative measure the purposes in mind. This organization would make the first assessment of the extent to which the pledges had been fulfilled. The United States would have a representative to this continuing organization.

Mrs. BOLTON. Are those commitments parts of the record of the Paris Conference?

Ambassador DOUGLAS. They are. You will find them all, except with regard to the commitment of the continuing organization, in paragraph 32 of the record of the Paris Conference.

Paragraph 13 refers to the continuing organization.

Mr. LODGE. Now, with respect to the bilateral agreements with these several countries which participate, who is to determine whether any individual had failed to live up to any one of those bilateral agreements?

Ambassador DOUGLAS. The Administrator.

Mr. LODGE. The Administrator would determine that?

Ambassador DOUGLAS. Yes.

Mr. LODGE. If he finds there has been a substantial failure to live up to these agreements, what can he do then, or what should he do?

Ambassador DOUGLAS. The intention is clearly expressed in the document which was published. The United States reserved the right to withhold in whole or in part any further assistance or support.

Mr. LODGE. However, he has a very large discretion there as to whether he believes that certain concessions should be made with respect to those pledges?

Ambassador DOUGLAS. Yes; there may be a failure due to acts of God, over which there is no control at all. There may be failure because of the interventions of unfriendly forces, over which the participating countries will have no control. One will have to assess the reasons for any failure.

Mr. LODGE. Would you feel, Mr. Ambassador, that both with respect to the bilateral treaties and with respect to the arrangement made between the participating nations, that this nation, or our administrator, must definitely take the lead in attempting to achieve a maximum of reciprocal self-help among these nations?

Ambassador DOUGLAS. I think it is clear that he must do that.

One of the basic premises upon which this proposal was put forward was that the participating countries engage in an enterprise of mutual help.

Mr. LODGE. That will inevitably involve certain internal reforms which hitherto have been regarded as strictly a matter of internal affairs of certain countries, such as the coordination of tax systems and of fiscal matters and what not which would make effective the customs union or a sort of economic federation within the intention of this program. Is that not correct, sir?

Ambassador DOUGLAS. I am not at all clear that you have not covered a broader field than that which is covered within our own

Federal Union. We have a variety of different tax systems among the 48 States, and yet we have this free-trade area.

I think I know what you have in mind.

Mr. LODGE. I have one specific example that perhaps will suffice. Let us assume that under the Benelux agreement you have the removal of the trade barrier between Belgium and Holland on beer. However, Belgium retains its excise tax on beer. Naturally, people would purchase in Holland where there is no excise tax. Obviously Holland must put on a comparable excise tax, or Belgium must remove her tax, in order to create a fair competitive market. It seems to me that the European nations must tend toward that. Would you agree with that, sir?

Ambassador DOUGLAS. I think the larger area of free trade, the better it will be. The more closely integrated is the economic system, the better.

Mr. LODGE. I am sure you feel we must do our utmost to bring that about.

Ambassador DOUGLAS. Yes. I believe we must be prudent and cautious, lest we be actually guilty of invading the sovereignty of the countries.

I am sure the Congressman knows what I have in mind.

Mr. LODGE. Yes. On the other hand, I believe that there are many customs and traditions which are perhaps obsolete; and if the advantages of doing away with them were properly pointed out, very definite progress might be achieved along those lines.

Mrs. BOLTON. Would the gentleman yield?

Mr. LODGE. Certainly.

Mrs. BOLTON. I think it perhaps would be pertinent to remember some of our own history. It took us some years to drop the barriers between the States, did it not?

Mr. LODGE. Yes. That is just exactly why I make these suggestions, Mrs. Bolton.

Ambassador DOUGLAS. There are these other commitments, too, they have made to remove the barriers on the movement of people.

Mr. LODGE. It is particularly important, in view of the surplus population in Europe.

Ambassador DOUGLAS. That is right.

Mr. LODGE. I presume that although there is nothing in the bill about it—there will be some efforts made to solve that problem which is, as you yourself have pointed out, one of the basic causes of economic distress.

Ambassador DOUGLAS. Among other things, Mr. Congressman, it is only by achieving a more closely integrated economic system in western Europe that they will be able to overcome some of the extraordinarily heavy burdens that the war has imposed upon their backs.

Mr. CHIPERFIELD. Because of the fact that there are five more members in attendance at a conference with the Senate, Dr. Eaton suggested that we recess at 4 o'clock.

We would like to have you in attendance at 10 o'clock tomorrow morning, if that is agreeable.

Ambassador DOUGLAS. That is agreeable.

Mr. CHIPERFIELD. We will adjourn at this time and reconvene at 10 o'clock tomorrow morning, in the same room.

(Whereupon, at 4 p. m., the committee adjourned, to reconvene Wednesday, January 14, 1948, at 10 a. m.)

UNITED STATES FOREIGN POLICY FOR A POST-WAR RECOVERY PROGRAM

WEDNESDAY, JANUARY 14, 1948

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met at 10 a. m., in the Ways and Means Committee room, New House Office Building, Hon. Charles A. Eaton (chairman) presiding.

Chairman EATON. The committee will be in order.

Mr. Ambassador, will you proceed with anything you have before the questioning begins?

FURTHER STATEMENT OF LEWIS W. DOUGLAS, UNITED STATES AMBASSADOR TO THE UNITED KINGDOM

Ambassador DOUGLAS. Mr. Chairman, yesterday Congressman Jonkman, I think it was, asked the extent of support that would be provided in the recovery of the 16 participating nations by countries other than the United States. Unfortunately, at the time I was not prepared to give him an answer to the question which was put. I can this morning, and in this form: The participating countries incur a deficit during the 15 months' period with nations other than the United States and other nations located in the Western Hemisphere, in the amount of \$811,000,000. Of the \$811,000,000, you will recollect the United States proposed to cover \$200,000,000 because the deficiency was incurred by the bizonal area of Germany over which we have jurisdiction. Accordingly, there is left an uncovered deficiency in the amount of \$611,000,000. That \$611,000,000 will accordingly be made up in the form of credit or other support extended by countries not located in the Western Hemisphere.

Members of the committee will recollect that the total amount of support provided by the countries in the Western Hemisphere other than the United States approximates \$700,000,000, so that the total amount of support provided for the recovery of the participating countries from sources other than the United States represents approximately \$1,310,000,000. That of course is exclusive of the South African loan to the United Kingdom to which I made reference yesterday in the amount of \$320,000,000. That loan is designed to carry the United Kingdom through until the period covered by the European recovery program commences.

There is a reference to the \$811,000,000 deficit to which I just referred, incurred by the 16 participating countries with nations not located in the Western Hemisphere on page 97 of the document entitled "Outline of European Recovery Program."

Chairman EATON. Is this amount of outside assistance in addition to that proposed by the United States?

Ambassador DOUGLAS. Yes, sir.

Chairman EATON. Are you ready for the questioning?

Ambassador DOUGLAS. Whenever the members of the committee are ready.

Chairman EATON. We will begin with Mr. Chipfield.

Mr. CHIPERFIELD. Mr. Ambassador, in your opinion will the impact of this program on our domestic economy be such that it would require rationing and price control to be restored in this country?

Ambassador DOUGLAS. Mr. Chipfield, in the first place the exports from the United States contemplated under the European recovery program during the 1948-49 period will be substantially less than the exports during the previous year. There will be, of course, commodities in short supply. Therefore there will be a certain amount of relief within the United States during the period in question, assuming that Providence is kind to us in the matter of climate, weather, and crops, as compared with the previous period.

Mr. CHIPERFIELD. Then you are hopeful, I take it, that we would not have to restore price control, is that the answer?

Ambassador DOUGLAS. Not on the basis of this program, Mr. Congressman.

Mr. CHIPERFIELD. Of course, there are other factors in the price spiral besides this program. I realize that.

Ambassador DOUGLAS. All great wars have produced, in their wake, a period of inflation. It was true after the Napoleonic wars, it was true after the Civil War, it was true after the First World War, and so it is true after World War II.

Mr. CHIPERFIELD. Do you think price control is helpful to production? That certainly is what we need now, is it not, to carry on a program like this?

Ambassador DOUGLAS. Production of course is the essence, really, of human life, and the progress and development of human conveniences and the elevation of the standard of living. I think that price control can be so extensive as to have a depressing effect on production, but agricultural products are, of course, very high.

Mr. CHIPERFIELD. Would you favor or propose a provision in this bill which would direct the Administrator to discontinue aid to any country, which through its own fault, refused to substantially supply the cooperative effort agreed upon at the Paris Conference?

Ambassador DOUGLAS. It is stated in the published document to which I have previously referred, the Outline of European Recovery Program, that the United States intends to reserve the right to withhold aid—I do not recollect the exact language—either in whole or in part, in the event that undertakings made by any one of the respective countries are not honored.

Mr. CHIPERFIELD. I find no such provision in the bill, although some say it is implied.

Ambassador DOUGLAS. I am not clear, Mr. Congressman, that there is such an express provision in the act.

Mr. CHIPERFIELD. Section 10 I think employs it, does it not?

Ambassador DOUGLAS. The Congressman is correct, and section 3 partly implies it. It reads:

Any country wholly or partly in Europe, including its colonies and dependencies, is a participating country within the meaning of this Act, while it remains adherent

to a joint program for European recovery designed to accomplish the purpose of this Act.

Mr. CHIPERFIELD. Since you have turned to section 3, let me ask you this question about section 3: Under your explanation in this published document, you say that it permit any other country to join, if they cooperate in this program. Is that correct?

Ambassador DOUGLAS. That is right, and become a full-fledged member of the cooperative effort.

Mr. CHIPERFIELD. What does the language say? "While it remains an adherent."

It cannot so remain something that it has not already been a part of.

Ambassador DOUGLAS. I see the Congressman's point. It does not express a provision for the extension of the list of countries. However, it does not prohibit the extension of the list.

Mr. CHIPERFIELD. Very well, take this language in lines 3 and 4 of this same bill, where it says, "including reduction of barriers which may hamper such trade." You do not have to be a free trader to be for the Marshall plan, do you?

Ambassador DOUGLAS. I do not understand.

Mr. CHIPERFIELD. It is the language just above where you read. It is page 3, lines 3 and 4.

Ambassador DOUGLAS. You see the participating countries have committed themselves and made undertakings to facilitate the exchange of commodities internationally, and expressly to reduce the barriers to the flow of trade, including the reduction of tariffs and the elimination of exchange restrictions and a variety of impediments of that order.

Mr. CHIPERFIELD. If I approved this bill as written, would I be expressing my approval of the reciprocal trade agreements, or the principal of free trade?

Ambassador DOUGLAS. Definitely not, Congressman.

Mr. CHIPERFIELD. I am glad to learn that.

Ambassador DOUGLAS. I would have no apprehensions on that score, because this applies to the undertakings made by these particular countries, and is not intended and indeed it does not expressly commit the United States to any such policy.

Mr. CHIPERFIELD. Will you furnish this committee with a breakdown as to how Great Britain spent the \$3,750,000,000 loan?

Ambassador DOUGLAS. I will furnish that information during the course of the hearings.

Mr. CHIPERFIELD. How much is Great Britain asking approximately under the Marshall plan?

Ambassador DOUGLAS. That depends upon unforeseen things, of course.

Mr. CHIPERFIELD. I understand.

Ambassador DOUGLAS. During the 15-month period, the British deficiency with the Western Hemisphere approximates some \$2,500,000,000.

Mr. CHIPERFIELD. If she did not receive that amount would Great Britain go communistic?

Ambassador DOUGLAS. The population of Great Britain is a very stable body of people, of long experience and tenacious character. I would doubt very much whether what we call communism would take hold of the minds of those who reside in the United Kingdom,

But if Great Britain does not receive additional support, then the imports into Great Britain will fall, the already relatively low standard

of living in Great Britain will fall, and a variety of other consequences, Congressman, touching us in other parts of the world will follow.

Mr. CHIPERFIELD. In the purposes of this act it is stated that unless normal economic conditions and stable economic relations are restored in substance, the countries of Europe will not be able to maintain free institutions and national independence.

Now, is not that "unless normal economic conditions are restored, these countries are going to lose their sovereignty and their freedom"?

Do you believe that?

Ambassador DOUGLAS. I believe that, Congressman, that unless the western part of Europe achieves economic and political stability, based upon the traditional conception and application of the parliamentary system and the dignity of the individual, that there will necessarily follow at a minimum a series of restrictions and controls on the liberty of individuals both in the economic field and in the political field, and that a fertile area will be provided for the planting of the seed and the taking root of ideas which are wholly hostile to our conception of civilized existence.

Mr. CHIPERFIELD. Mr. Ambassador, I mentioned to you a moment ago, about giving the personnel under this program the benefits of the Foreign Service Act. Will you comment on that?

Ambassador DOUGLAS. I should like to say, Congressman, that the administrative proposals put forward in advance, constitute "a" system of administration which appears to us to meet certain fundamental specifications. I would like to emphasize the word "a".

With that as a preamble may I go on and answer your specific question. I confess that the language of the act can be construed to be, if not in conflict, at least not necessarily consistent with the explanation in the document which I have referred to, the Outline of European Recovery Program. Under the language of the act, dealing with the appointment of ECA personnel in overseas posts, it is intended, although the language may not be clear and precise, that the recruiting of the personnel normally shall be undertaken by the Administrator, combined with such recruiting as the Secretary of State, may jointly undertake with the Administrator. There might be some recruiting among the career officers, for there may be a few members of the permanent career Foreign Service who meet specifications of certain of the overseas ECA personnel. The appointing power is vested in the Secretary of State because he is the only one under existing law who can appoint to the Foreign Service Reserve, and it is intended that the ECA officers, other than those in the regular Foreign Service who meet specifications, shall be covered into the Foreign Service Reserve.

The Foreign Service Reserve was established by the Congress in order that there might be appointed for specific and specialized jobs, competent personnel from outside of Government service, and outside of the permanent Foreign Service. There are today approximately 200 such Foreign Service Reserve officers.

Now, as to why it is considered advisable to appoint the ECA officers to the Foreign Service Reserve, the administration of the European recovery program abroad requires real competence, men who have had experience and have been sufficiently backgrounded to qualify them to undertake extraordinarily difficult tasks.

Now, in the Foreign Service Reserve, men enjoy a title and emoluments which give them a status and a position in foreign countries——

Mr. CHIPERFIELD. (interposing). Is it not true that personnel may be taken out of the Foreign Service Reserve and put under the benefits of the Foreign Service?

Ambassador DOUGLAS. There seems to be a little misapprehension as to just what the Foreign Service Reserve is.

There are just a handful of inactive Foreign Reserve relief officers. The Foreign Service Reserve was established by the Congress in order that the competent and experienced people, equipped to do specific jobs and undertake specific tasks, might be recruited from an area wholly outside of any reserve, wholly outside of the Government service for relatively temporary periods of time.

Mr. CHIPERFIELD. Thank you very much.

Ambassador DOUGLAS. About the Foreign Service officers, and the Economic Cooperation Administration officers abroad, I have said that the appointment to the Foreign Service Reserve gives such a Foreign Reserve officer a status in a foreign country, and emoluments which could not be provided insofar as status is concerned, in any other way, I believe; and as to emoluments which could be provided only by specific provision of the statute.

A minister, for example—and in the major embassies, it is contemplated that the ECA officer would have the rank of minister—including his pay, his allowance and other emoluments, receives approximately \$21,000 a year—just short of \$21,000 a year.

A counselor selected from outside and brought into the Foreign Service—and in the minor embassies, the ECA officer would be a counselor—receives emoluments, totaling approximately \$17,000 a year, though he can, under the statute, be increased by another approximately \$1,500.

(The following letter is inserted to clarify the points raised in the foregoing:)

DEPARTMENT OF STATE,
Washington, February 10, 1948.

Mr. BOYD CRAWFORD,
Clerk, Foreign Affairs Committee, House of Representatives.

DEAR MR. CRAWFORD: This is to clarify what might appear to be a discrepancy between the testimony of Ambassador Douglas and information furnished by Mr. Donald W. Smith of the Office of the Foreign Service during a telephone conversation with Mr. Frank Lindsay.

As pointed out by Mr. Smith, it has been contemplated that the chiefs of the special missions for economic cooperation would be appointed Foreign Service Reserve officers, or the equivalent. However, as Ambassador Douglas testified, it is contemplated that in the more important countries, the chief of the special mission would be given the personal rank of Minister.

In such cases, the salary of a minister, \$13,500, would be paid by utilizing the maximum rate of class 1. Together with the allowances appropriate for a Minister, the emoluments thus could total nearly \$21,000 in a major post such as London.

With reference to adherence to various personnel standards of the Foreign Service, such as age-in-grade standards, it has been the intention that applicability of such standards would be determined jointly by the Secretary of State and the Administrator in so far as ECA personnel were concerned. Adequate flexibility will be further insured under proposed legislative changes giving the Administrator an option as to whether or not the Foreign Service system is utilized in making appointments, as is now under consideration.

If there are any other points on which you desire further clarification, please let me know.

I am returning herewith your file on this subject which you brought to my attention.

For the Secretary of State:

Sincerely yours,

CHARLES E. BOHLEN, *Counselor.*

Now I do not mean to say that there are not many Americans who would be willing to serve overseas at a smaller rate of compensation, but I do mean to say that it is difficult to obtain the sort of competence that is necessary, properly to administer in a businesslike fashion, and in a way that will provide the Congress and the American people with an assurance that it is being properly done, unless we can offer compensation which is at least partially commensurate with the significance and importance of the task.

Moreover, in dealing with the representatives of foreign countries, the title which a person has gives him a status.

It is for those reasons that the bill contemplates the covering into the Foreign Service Reserve, of those who have been recruited by the Administrator to perform the functions overseas, and to discharge the responsibilities incident to an appropriate administration of the program.

Now in London, if I may give you a personal idea of what I would contemplate if the Congress saw fit to approve this particular provision of the legislation, I would place the ECA officer who would have the title of minister, in charge of all the economic operations of that embassy, for there is no economic facet of the British economic condition which is not related to the European program of recovery.

I would be very glad to show the members of the committee the type of monthly report which we now get out on Britain, covering every phase of the economic life of the country, excepting one feature of it, which is secret but that too is now a part of our monthly review of the British industrial, economic and financial operation.

We do that in London, even though there is not a European recovery program, because it is an important and a significant bit of information—a cumulation of information for us to have. Is that clear?

Mr. CHIPERFIELD. Thank you very much, Mr. Ambassador.

Chairman EATON. Mr. Ambassador, before calling on Mr. Richards, I would like to have clarified two ideas advanced by Mr. Chiperfield.

He raised the question of whether price control would affect production. It would seem to me when he raised that question, price control has as its object, if it has any, increased consumption and if you have increased consumption it would seem you would have actually increased production to meet that. Is that correct?

Ambassador DOUGLAS. Price control often does have the effect of redistributing in ways which the marketplace would not distribute the various commodities produced by any country.

Chairman EATON. The second point was, Mr. Chiperfield raised the question of if he had to advocate this bill, which I expect he will, of course, it would mean he would have to commit himself in favor of free trade. Now is it the intention that among these 16 nations, there will be established a complete free trade, or a partial free trade?

Ambassador DOUGLAS. The commitment is to reduce the barriers to trade, to reduce tariffs, and through the financial undertakings, to establish exchange rates which can be maintained, and that are appropriate, and thus to remove the exchange controls and also to remove quotas.

Now one of the devices that various countries have, they believe, necessarily employed, to protect their position, their financial resources, has been the imposition of quotas and exchange control. They are far greater, far more insuperable barriers to the flow of trade than tariffs, and that is one of the reasons why such emphasis has been placed upon the reformation of the internal fiscal affairs of the countries. Such reforms are desired to permit establishment and maintenance of exchange rates representing the relative cost-price conditions first; and, secondly, with achievement of that first result, that quotas and exchange restrictions may be removed, thus erasing and eradicating the two greatest of all impediments to the flow of commerce. But beyond that the 16 countries have committed themselves to go further and reduce tariffs.

Now it is interesting that the Benelux countries have formed a customs union which is a free-trade area and that France and Italy are now negotiating for the purpose of forming a customs union.

I made reference yesterday to the abortive endeavor of four other countries to form a customs union.

These 16 countries have committed themselves to study a customs union among them all, and embracing them all.

One of the great difficulties in establishing a customs union—I do not suggest that it is an insuperable difficulty—or free trade area among the entire group of countries is the peculiar relationship which the United Kingdom has with her crown colonies and the members of the Commonwealth.

Mr. RICHARDS. Mr. Ambassador, to go back a little bit, the Secretary in his Harvard speech proposed to the European nations that they get together and work out a plan to help themselves, and assured them if they made progress in that direction some assistance, toward the restoration of Europe could be expected from the United States.

Now as a result of the Secretary of State's suggestion, an invitation was extended—I believe Great Britain made the first move—to the nations of Europe to get together as suggested by the Secretary of State.

Sixteen nations in Europe accepted that invitation. I think their last meeting was in Paris last summer.

Now as the result of that meeting, and the Secretary's proposal, the United States has shown its good faith—the Congress of the United States has shown its good faith by passing an interim-aid bill in the full light of what the Secretary of State had proposed.

Now what I am interested in right now is what those nations have done since the Paris conference to help themselves. I think the peoples of the United States are very much interested in that point.

I understand that some of the group have taken steps to solve the problem of customs barriers. So far as the Luxemburg group is concerned I think studies had begun before the Marshall proposal.

Ambassador DOUGLAS. That is correct.

Mr. RICHARDS. Outside of that, I know of no steps that have been taken to solve this problem, except the studies that have been instituted by the Governments of France and Italy to solve their separate customs problem.

Now what has this group of 16 nations done to work out its own salvation, since that time?

Ambassador DOUGLAS. You will recollect, Congressman, that one of the commitments these participating countries made to each other was to reform their internal financial and monetary systems and to establish currencies within their countries in which their citizens had confidence.

That was an important commitment, for as many of the members of the committee realize who were in Europe during the summer, and others because of their knowledge of the effect of padded currencies the lack of confidence in the local currencies has been a depressant upon production and in addition has been one of the barriers to the flow of goods. It has been a depressant on production in a number of different ways, Mr. Congressman—and this is apropos of a question which Congressman Jonkman put yesterday morning in respect to agriculture—for in some of these European countries where there is no confidence in the local currency, there has been in a certain sense a flight from currency into goods.

Farmers have not disgorged, as they otherwise would have disgorged, the full measure of their harvests for the market. They have stored a part of their harvests.

Secondly, instead of cultivating as large an acreage as they might otherwise have cultivated for the purpose of growing grains, some have tended to shift their operations to livestock, for livestock is more lasting than some of the agricultural harvests. Therefore, in respect to agriculture and agricultural production, the restoration or establishment of currencies in which there is confidence will be positively a spur to agricultural production as compared with the depressant on production arising out of the lack of confidence in currency.

Mr. RICHARDS. While you are on the matter of currency, I fully agree with you about that.

It seems though that the European nations are depending upon the United States to stabilize their currencies through the provisions of the Marshall plan.

Now, what I know is what they have done themselves to stabilize.

Ambassador DOUGLAS. Perhaps I was dwelling on this point at too great length and if so I beg your pardon.

There has been another depressing effect on production arising out of the effect of currencies: Workers have worked as long hours as it was necessary to acquire that amount of currency which they could immediately spend.

The lack of confidence in currency was discouraging saving. They were not disposed to save that which might become of decreasing value in the immediate future, and accordingly some of them, instead of working for production, bought leisure which they could buy at a very low price, on account of the tax structure in the first instance and on account of the lack of commodities which they could buy on the market in the second instance.

Now, France, in order to cure this situation has recently enacted legislation which is very drastic and which is aimed at curing the condition. Indeed, it was a brave and forthright action on the part of the existing Government in France. They have taken a very forward step, aimed at achieving or satisfying one of the pledges which France, among other nations, has made.

It is doubtful in my judgment, though, Congressman Richards, as to whether any country in Europe can fully restore complete confidence

in the currency unless production increases, for there is a relationship between the price level, the value of currency on the one hand and the volume of production on the other, and accordingly if there is to be a real and a lasting restoration of confidence in currencies, production in each one of these countries must rise. There must be a larger volume of consumer goods upon the market. There must be a greater production in order that there may be greater exports, and as a result of the greater exports, in order that there may be a greater volume of exchange with which the necessary imports may be purchased. While each of these countries inherited a pretty dilapidated estate from the wartime period of occupation, they have pledged themselves to take the necessary steps within their power to cure the condition. It is highly unlikely that they will be able completely to cure their infirmities in this respect, unless they can buy more imports.

Have I made my point in that respect clear? Italy too has taken forthright steps aimed at curing her internal confused fiscal and monetary situation.

Mr. RICHARDS. Have they done anything collectively?

Ambassador DOUGLAS. Yes; they have, Congressman. They have established what is called a clearing exchange. All of the 16 participating countries are not members of that exchange, but a clearing exchange among a large number of these countries has been established. It went into effect during the first days of January this year.

As to production, they are making a determined effort. In the case of Britain for example the present rate of production on an annual basis is higher than in any year since 1940, and it is contemplated that Britain will export coal during the year 1948 in an amount greater than the amount which she committed herself to export in the Paris Conference.

Mr. RICHARDS. Now, Mr. Ambassador, as I understand it, some of the 16 nations have surpluses of certain commodities.

Some of them of course have shortages.

Has anything been done by the 16 nations as an entity, to pool the resources of these 16 nations? For instance, Italy has a surplus, or did have last year, of olive oil. Great Britain is beginning now to have a surplus of coal over and above her own needs. A few of the other countries have surpluses in some commodities. Now, what are they doing to pool their resources before they call on the United States to get in there and save the whole situation?

Ambassador DOUGLAS. Well, Congressman, the Paris Conference report contemplated that the surpluses that any of the countries might have that were needed by the other participating countries would flow to them.

Mr. RICHARDS. However, they have done nothing concrete about it since the Paris Conference?

Ambassador DOUGLAS. Britain has begun to export coal to the continent of Europe. That is a specific example of what has already taken place.

Mr. RICHARDS. How do they pay for that coal? Do they take local currency for that?

Ambassador DOUGLAS. They are making financial arrangements with other countries. We are not financing it and it is not contemplated that we finance it.

Mr. RICHARDS. What I am interested in is whether or not these nations have gotten together and said to each other, "We will give and take and help each other." The United States through interim aid, sent this stuff in there, and to increase their incentive to work, and also to meet their every-day needs, we agreed to accept local currency in payment for these relief supplies, and the fund built up in this way is used for further relief. Now, if Great Britain is producing more coal than she needs and there are many nations over there which do not have anywhere near as much coal as they need, is Great Britain willing to accept payment in local currency for the coal she ships to them, or does she demand payment in pounds or dollars?

Ambassador DOUGLAS. Of course, a multilateral trading system of the manner the 16 European countries are trying to restore involves the exchanges of their currencies, pounds into francs, French francs into Belgian francs, Belgian francs into lire, so that these currencies circulate around and have a purchasing power which can be exercised through their convertibility.

I do not know precisely what the financial arrangements are that Britain is making in this particular instance on the export of coal, but it is certain that the United States is not paying for it.

(Additional information on this point is as follows:)

TERMS ON WHICH THE UNITED KINGDOM IS EXPORTING COAL

The United Kingdom is not receiving dollar payments for coal exported to other participating countries. The United Kingdom is attempting to obtain essential food and raw material imports in exchange for its exports. Strenuous efforts are being made to reduce the trade deficit with other countries by increasing exports of coal and other commodities. Exports are being directed to those countries which will make available immediately and on reasonable terms the goods needed.

The United Kingdom is negotiating comprehensive trading arrangements with coal importing countries which are able to supply it with needed commodities. A bilateral trade agreement involving coal has already been concluded with Sweden. Similar agreements are being negotiated with Denmark, the Netherlands, and Finland. Since January 1, 1948, small shipments of United Kingdom coal have been sent to France and Italy.

Mr. JONKMAN. Mr. Ambassador, do you think that England is taking dollars for this coal, even though we do not furnish them?

Ambassador DOUGLAS. No. England needs dollars, of that there is no doubt.

Mr. JONKMAN. Are you certain that these exports of coal are being paid for in local currencies?

Ambassador DOUGLAS. I am certain that they are either being paid for in the local currencies of the 16 participating countries and not in dollars. It is not determined whether they will be paid for in goods or not. Barter of course restricts the thing we are trying to accomplish.

Mr. RICHARDS. Instead of each individual nation trying to stabilize its own currency based on its individual economy, would it not be helpful for these 16 nations to proceed along the lines they have said they would proceed along, and fix a standard value for all the currencies in those 16 nations, and thus facilitate trade and commerce between them?

Now as I understand the 16 nations have taken no collective action along that line.

Ambassador DOUGLAS. Congressman, it is almost an impossible task to undertake unless there is reasonable stability in each one of these countries. No one believes more than I do in a sound and valid internal fiscal and monetary system for any country, and no one believes more than I do in the stability of some sort of a currency that has elements of commonality in it, for it is a common currency that is one of the most useful servants of trade.

Now the elements of commonality, such as they were, which existed before the war, and such as they were to a lesser extent during the period of occupation, have been completely shattered by the devastation of the war, and the task of restoration is not an easy one.

It will take courage, forthrightness on the part of governments, and time. It cannot be done overnight.

Mr. RICHARDS. I agree with you, Mr. Ambassador, about that. This currency problem, and stabilization of world currency, is one of the greatest problems of this age or any age, for that matter.

If they cannot do that, and it is evident that they cannot do it overnight, do you think that a barter system among the 16 nation to handle the surpluses in one nation and the shortages in another would not be helpful, during this period of depression?

Ambassador DOUGLAS. Congressman, I think that clearing arrangements have been established that are more effective than barter, because barter is a purely bilateral arrangement, one country with another; whereas money is an instrument of exchange and it can be translated into a whole variety of different commodities in a variety of different areas. The significant thing is that notwithstanding the difficulties implicit and inherent in the restoration of fiscal stability, these countries have already established this clearing arrangement through which the currencies of one country may be cleared with currencies of another.

Therefore, the steps that have been taken are not unimportant. Indeed they are quite important.

I would like to make one further observation and it is this: For the reasons which I have indicated, if the support from the United States is forthcoming, the cooperative effort of these countries to which they have pledged themselves can be, and I believe will be, advanced. The pledges will be met. However, unless there is a European recovery program of such magnitude that these countries will be able to buy the imports which they need, they will necessarily be compelled to impose further and further restrictions upon imports, exports, the convertibility of exchange; further and further quotas and exchange restrictions.

I doubt, sir—this is an honest and very considered opinion—if the type of economic integration to which you refer and which you would like to see established can be had among these participating countries unless their present estate is so organized that they will be enabled to purchase the raw materials which they need, and thus to increase their production for export, accordingly to buy in turn imports, and as a result to break through this stifling and strangling group of

devices which have been taking the breath of life out of the economic system.

Mr. JARMAN. Going back to the increased production of coal in Britain, France had been importing coal from the United States; had she not?

Ambassador DOUGLAS. Yes, sir.

Mr. JARMAN. That coal that goes from Great Britain this year to France—it does not make any difference whether Great Britain collects in pounds or francs. Of course, she is not going to collect in dollars. Does it not relieve to that extent the need of dollars from the United States by France?

Ambassador DOUGLAS. It does indeed, sir.

Mr. JARMAN. Regardless of what she collects?

Ambassador DOUGLAS. It does indeed, sir.

The profound and far-reaching alteration in the source of supply of coal, purely an incident of war, has imposed upon the European countries during the year 1947 a dollar cost approximating \$700,000,000 which those European countries before the war did not have to defray.

Mr. RICHARDS. May I ask a question?

Ambassador DOUGLAS. According to the extent to which coal requirements of these countries can be met from indigenous sources of the United Kingdom or the Ruhr, to the same extent the dollar burden on these countries will be diminished. This program contemplates restoration of the indigenous sources of supply of coal.

The prewar production of coal among the participating countries, as I recollect it, was 552,000,000 tons a year. By 1952 the production of coal will be 585,000,000 tons of coal.

Mr. RICHARDS. Now, Mr. Ambassador, in that connection the point I wanted to make is this: If Great Britain has, say, 1,000,000 tons of surplus coal, is there any authority in the collective organization of the 16 nations to allocate that coal to the member nations needing it most?

As I understand it, Great Britain can send that coal to Canada. She can promote her own program of trade. But unless the central agency within the 16 member group can compel Great Britain to send that surplus to help other members of the group, I do not see where we are going to get anywhere.

Ambassador DOUGLAS. Well, Congressman, the prewar flow of British coal would be approximately as follows: Some for bunkering, some to Argentina, for the coal that was shipped out to the Argentine provided Britain with the exchange for which she bought meat and other agricultural products and raw materials from the Argentine, or even other parts of the world. So as to the extent to which Britain resumes the exportation of her coal to the Argentine, to the same extent her demand for dollars is diminished.

Britain exported coal to Norway and to Sweden. Ships went out from Britain carrying coal and they brought timber and other essential raw materials back to Britain.

They satisfied approximately one-half of the coal requirements of Italy. My recollection is that about one-third of the prewar coal requirements of France were satisfied directly or indirectly from the United Kingdom. The Netherlands was one of the countries whose coal demands were met by British exports of coal.

Indeed, Britain and the Ruhr were the two great suppliers of coal for that continent.

Now the exports of coal from Britain, and I understand two cargoes have already gone, has been destined for France. This is the way the allocation machinery operates, where coal is now in short supply: There was established 3 years ago, I believe, what was known as the European Coal Organization, on which the United States was represented. The European Coal Organization, in the light of the amount of coal available for export from the Ruhr, the Saar, and from the United States and certain other sources, then recommended to the suppliers the allocation of that coal among the members of the Organization.

The coal in the light of the allocations when confirmed by the specific countries was then generally purchased through agents within those countries.

The European Coal Organization was superseded, I think it was in January of this year, by a new committee called the Coal Committee of the Economic Commission for Europe.

That Commission has now taken over the functions of the European Coal Organization so there is allocation machinery in existence now. I should say that that organization is a United Nations organization and I should like to point out one factor in regard to one aspect of the Commission: although the Soviet may be represented on it, it does not have the power of veto.

Mr. RICHARDS. Now, Mr. Ambassador, let us take into consideration another commodity—steel—which is one of the scarce commodities in Europe right now.

Ambassador DOUGLAS. I beg your pardon. The Soviet Union has not participated in the coal committee, but some of the satellites have.

Mr. RICHARDS. Steel is one of the short commodities. I understand Great Britain is building more shipping now than all the other nations of the world combined. I understand she is asking for allocation of 2,000,000 additional tons of steel.

How would we propose through this legislation to handle a situation like that?

Ambassador DOUGLAS. There has been established under the Economic Commission for Europe a steel subcommittee which will study ways and means of increasing steel production.

I am not at all clear, sir, and I would not want to give a definite impression that that committee has authority to recommend international allocations. I have doubts as to whether it has and I would not want to mislead you in any way in my answer. I doubt that it has allocating powers.

Mr. RICHARDS. No power has developed through the 16-nation group to handle a situation like this in Europe?

Ambassador DOUGLAS. Not yet. Not in respect to steel. I think that is a correct answer.

Mr. RICHARDS. Now, Mr. Ambassador, I am very much interested in this matter of stock piles.

Ambassador DOUGLAS. May I just make one further observation about the cooperative effort of the countries?

Mr. RICHARDS. Yes.

Ambassador DOUGLAS. They are anxious to cooperate, but for reasons which I have indicated they may find it impossible to honor

their pledges unless support for their recovery is provided. They have committed themselves to the establishment of a continuing organization, consisting of the representatives of the participating countries, and the United States will have a representative, if the Congress approves this recovery program, and this is what the group of nations said precisely in relation to this continuing organization:

This organization will insure to the fullest extent possible by joint action the realization of economic conditions necessary to enable the general objectives to which each country has pledged itself to be effectively achieved.

They have committed themselves to establish this organization when there is reasonable assurance that the amount of support necessary to the carrying forward of the cooperative effort will be forthcoming.

Mr. RICHARDS. Thank you, Mr. Ambassador.

Now we have two bills here before us, one of them is the one carrying the name of Dr. Eaton as its author, and the other is that of Mr. Herter, the chairman of the Herter committee.

Now each bill makes reference to stock piles of strategic materials of which we are in short supply. Now if you will look on page 18 of the Eaton bill, section 5, it says that the sale to us is to be facilitated of the strategic materials in which we are in short supply, and the Herter bill at the bottom of page 13 suggests that these strategic materials should be turned over to us in payment for some of these materials and supplies we are going to furnish to Europe. What do you think about that?

Ambassador DOUGLAS. To the extent, Congressman, local currencies are used for the purchase of strategic materials, to that same extent the amount of dollars that the countries possessing the strategic materials may earn through commercial exports is diminished, and accordingly, to the same extent the amount of dollars which we would have to appropriate would be increased if there is to be European recovery.

Let me put it this way: One of the exports of the participating countries is a strategic material to the United States and through it the participating country derives dollars. They are included in their estimated dollar income as a result of sale to us.

Mr. RICHARDS. Then you do not feel that there would be any real advantage in the United States requiring that surplus strategic minerals be turned over to us in part payment.

Ambassador DOUGLAS. No, sir. We will have to make up the deficiency in their dollars caused by the purchase of the strategic materials with local currency.

Mr. RICHARDS. The gentleman from Connecticut would like to ask a question.

Mr. LODGE. In view of that could this money be given these participating countries with the understanding that it will be repaid in the form of strategic materials at a subsequent date?

Ambassador DOUGLAS. Perhaps it would be appropriate for me to refer to the provisions in H. R. 4840 that cover strategic materials, and the way in which it is proposed that the administration of this bill in this regard would be conducted.

The bill provides that each one of the participating countries possessing strategic materials shall facilitate the sale to the United States of strategic materials on reasonable terms and in reasonable

quantities after allowance is made for the country's domestic and commercial export requirements.

I think the bill provides that the administrator may advance funds for the exploration and development of production of strategic materials.

Now it is contemplated in the administration of the bill that in the event of a loan, for example, strategic materials valued as of the date they are imported into the United States could be applied toward the repayment of a loan.

Moreover, it is contemplated under the administration of the bill that local currencies received as the counterpart of any grant that the United States might make, could be used for the purpose of engaging in exploration for and the development and increased production of the strategic raw material.

My recollection is that it is estimated that as a result of the operation of the provisions of the bill and the administration of them, some \$171,000,000 should be available. I would like to review the matter, and I will put a statement in the record.

(The information is as follows:)

STATEMENT ON STRATEGIC MATERIALS

The primary consideration in connection with obtaining strategic materials is an increase in their production, since production at current levels is generally not adequate to meet existing needs. It is the considered judgment of the executive branch that the method of obtaining strategic materials proposed in connection with European recovery program legislation is more likely to result in our obtaining a larger quantity of such materials than alternative plans which have been suggested.

Under the proposed legislation it is contemplated that (1) part of the funds appropriated may be used by the Administrator of ECA to finance development of increased sources of supply (sec. 8 (c)), (2) technical information and assistance may be provided to aid in increasing production (sec. 7 (a) (3)), (3) under the bilateral agreements with participating countries, local currency proceeds may be used to foster exploration development for production (sec. 10 (b) (5)), and (4) the bilateral agreements will provide for the recipient countries' facilitating the sale to us in quantities, on terms, and for time periods to be agreed, of strategic materials beyond their requirements for domestic use and commercial export (sec. 10 (b) (5)). The time period may extend for a considerable number of years.

Furthermore the legislation authorizes the Administrator under certain circumstances to require the repayment of loans under the program in the form of delivery of strategic materials. Ordinarily, however, it is contemplated that such materials will be purchased by us with dollars separately appropriated. It is believed that the incentive furnished by our purchasing such materials for dollars will result in a greater production and a larger procurement by us than would be the case if the countries were required to furnish such materials without dollar payment as a condition of our assistance. Moreover this procedure will permit the transactions to be handled directly with private producers and distributors rather than confining them to Government channels.

For the reasons stated above the Munitions Board representative on the inter-departmental subcommittee which prepared the policy recommendations on strategic materials summarized in the Outline of the European Recovery Program strongly favored the proposal in the form presented to the Congress.

The ultimate monetary cost to us should be approximately the same regardless of whether we pay for such commodities in the future or whether we require the countries to furnish them to us without dollar payment. This may be explained as follows:

It is contemplated, in any case, that assistance under the European-recovery program should be in the form of loans rather than grants up to the estimated capacity of each participating country to repay without jeopardizing the objective of sustained economic stability. In calculating the capacity of a country to repay, its receipts from future exports of all types including strategic materials

operations we made with Bolivia, we would not be able to make a mower in this country. That is the control that England and the Netherlands have on tin. There is no substitute for it.

Ambassador DOUGLAS. I agree with you, Mr. Congressman. The war in the Far East cut all the Allies off from the high-grade tin deposits in Malaya and the Netherlands Indies. If I omitted tin it was because I was merely giving an illustrative list, and I should have put tin at the top of it as an item in which production expansion is vital.

For the record, \$72,000,000 out of the \$171,000,000 figure to which I referred is on account of tin, which is an indication of the importance that is placed upon expanding tin production.

Mr. BLOOM. The important part of it is this: They have the control of this thing. They make the price. They make the allocation of what we are to get, and this country today cannot transact its ordinary business unless we have at least 50 percent of the tin ore that is mined throughout the world.

Ambassador DOUGLAS. The International Tin Committee has been disbanded. The tin cartel no longer exists. However, I agree that the bilateral arrangements that are made with the countries should protect the interests of the United States adequately, with respect of tin, just as the interests of the United States should be protected in respect of all of the other strategic materials.

Mr. JAVITS. Is not the nubbin of this matter we are discussing now, Mr. Ambassador, to be found in the inflexibility of this bill with regard to the needs for mutuality of consent between the participating government and the United States as to the use of impounded local currency? Is not that exactly the point that we are to change if we are to meet the very proper views, and that you yourself agree with, which have been expressed here?

Ambassador DOUGLAS. I am not sure I understand what you mean, Mr. Javits.

Mr. JAVITS. It is the provision that local currency shall be spent only by mutual consent between the United States and the participating countries. Is it not exactly at that point that we are to have greater freedom of action, with respect to these strategic materials?

Ambassador DOUGLAS. I think there has to be flexibility in the administration of the Act, Congressman.

The explanation of the use of the local currency is included in the document that was printed by the committee entitled "The Outline of European Recovery Program," and as I recollect it there are six purposes for which the local currencies may be used.

Mr. JAVITS. Only with the consent of the other countries.

Ambassador DOUGLAS. That raises a question, Congressman, which I would like to discuss with you at great length.

Mr. JAVITS. I did not want to intrude on the time of my colleagues.

Ambassador DOUGLAS. The matter of local currency is one of the most perplexing problems in the administration of this act. I could give you some figures of the magnitude of the local currencies that

may be accumulated which, if left subject to our control exclusively, would give us the power of financial life or death over these countries.

I would appreciate the opportunity very much to go into it with you and get your views.

Mr. JAVITS. On my own time.

Ambassador DOUGLAS. All right, sir.

Mr. MUNDT. Mr. Ambassador, you have been talking about these bilateral agreements, dealing with strategic materials. We have some experience tables I presume now on the ease or lack of ease which we can make bilateral agreements as a result of the passage of the Fulbright bill, some 16 or 18 months ago.

Could you tell us with how many of these 16 countries you have been able to conclude satisfactory working agreements on the Fulbright bill in the last 18 months?

Ambassador DOUGLAS. I would have to supply that, Mr. Congressman, because I do not have it.

Mr. MUNDT. Have you been able to do it with England in your own particular field of specialization?

Ambassador DOUGLAS. I cannot answer the question.

Mr. MUNDT. You will provide the material?

Ambassador DOUGLAS. Yes.

(The information referred to is as follows:)

The Fulbright Act, passed on August 1, 1946, introduces a concept of international cultural relations without precedent. While it has similarity in principle with the boxer indemnity fund and the Belgian-American Foundation, the administrative practices implicit in the act fit into no familiar pattern.

While it may appear that little progress has been made, a careful review of the situation will indicate that the achievements to date have been considerable. It should be pointed out that even at the time of the passage of the act it was not contemplated that actual exchanges would begin until the academic year 1948-49 and assurances can be given that such exchanges will take place before that deadline.

The principal complications have arisen from the regulations issued by the Treasury Department governing the use of currencies derived from surplus disposals abroad with the responsibilities which they impose upon the financial offices of the Department for the meticulous consideration of the financial aspects of the program as they involve possible convertibilities of currencies, protection of United States interests in times of wide fluctuations of exchange rates, etc.

In spite of the intricacies involved and the great amount of time required to resolve many fine questions of international financial relations, agreements have been concluded with two countries for the operation of the program and their educational foundations have been established and initial programs are ready for departmental approval for getting the programs into operation. The status of the programs in the remaining 20 countries in which programs are actively being considered at this time is as follows: The necessary implementing agreements are in the hands of 9 foreign governments for discussion looking to signature and may be signed at any time depending upon the speed of action in the other countries. One agreement is now in the process of transmittal and 5 more are in the final stages of clearance and should leave the Department within the next 2 weeks. In the case of 5 countries, agreements are ready for discussion with other countries but considerations of foreign policy require that signature be postponed. In view of the many problems involved, and the number of agencies of the Government concerned, the progress to date does not appear to be unsatisfactory.

Status	Country	Amount in current agreement	Duration of program under present agreement :
2 signed.....	China.....	\$20,000,000	20 years.
	Burma.....	3,000,000	Do.
9 under discussion.....	Italy.....	5,000,000	5 years.
	France.....	8,000,000	20 years.
	Belgium.....	3,000,000	Do.
	Egypt.....	1,500,000	5 years.
	Iran.....	200,000	1 year.
	New Zealand.....	2,300,000	20 years.
	Austria.....	250,000	1 year.
	Philippines.....	2,000,000	20 years.
	Turkey.....	500,000	2 years.
1 in transmittal.....	Czechoslovakia.....	2,000,000	5 years.
5 in clearance.....	United Kingdom.....	5,000,000	Do.
	France.....	1,000,000	1 year.
	Netherlands.....	5,000,000	5 years.
	Australia.....	5,000,000	20 years.
5 held for political reasons.....	Norway.....	1,250,000	5 years.
	Hungary.....	5,000,000	20 years.
	Poland.....	8,000,000	Do.
	Slam.....	4,000,000	Do.
	Netherlands Indies.....	7,000,000	10 years.
	Finland.....	1,250,000	5 years.

¹ In most cases the 5-year programs are subject to renewal up to a limit of \$20,000,000.

Mr. VORYS. Mr. Ambassador, the figures that have been presented refer to a return to the year 1938 as a basis for European recovery. Is that not an approximate date used?

Ambassador DOUGLAS. That is right. However, I do not think it is fair to say they are compared with 1938. Production figures were compared with 1938. The standard-of-living figures, expressed in caloric value of diets, were related to 1938, and a variety of things of that order, but the calculation of the amount required is not related to 1938.

Mr. VORYS. That is the point I wanted to bring out. This draft bill before us, in a sort of general statement at the beginning mentions a return to economic normalcy in Europe.

Now, I note in the CEEC report the following reference to the 1938 status of the 16 countries.

Their income from foreign investments and other invisible exports was sufficient to purchase nearly one-quarter of their imports from the rest of the world.

That is on page 4.

If Europe before the war got a fourth of their imports from investments and invisibles, I just do not see any chance of our facilitating their return to that sort of a situation.

Ambassador DOUGLAS. It is not contemplated the United States will make up the foreign investments, Congressman, but it is contemplated in this program that the production of these European countries shall be so increased that the losses of their investment income can in part be made up.

Mr. VORYS. Who is supposed to buy that production? If they need dollars are we supposed to buy this increased production? I do not think we can. I do not think we can absorb the gigantic increases in production that are contemplated by a number of these countries.

Ambassador DOUGLAS. It is not necessary that we absorb them, Congressman. What is necessary is that ultimately as western Europe recovers, currencies will become convertible, and that therefore countries other than the United States will absorb a part of the

increased production. It is, of course, contemplated that we will absorb some of it but not all of it by any manner of means.

Mr. VORYS. It seems to me that the CEEC report and the administration bill contemplate in general a restoration of normal economic conditions in Europe, as in 1938, that those are the conditions that led to war, and those are the conditions that can never be restored, and I do not see very much vision any place around in attempting to create some new way for these Europeans to live. I do not think they all can live as they once did. I think many of them are going to have to move away. However, throughout this thing it seems to me, they have been talking about dollar shortages; they are talking about restoration of that 25 percent, a quarter, of the imports that they used to get through invisible means. I do not see how it is going to work out based on the information placed before us so far.

Do you think it is going to work out otherwise than by our simply buying their stuff and continuing to pump dollars into there, one or the other?

Ambassador DOUGLAS. I think it can be worked out, Congressman. As I have said to the committee on a previous occasion, I think there are risks in this program, and I would be the last one to make the statement that this program will certainly and without question achieve the purposes for which it was designed. However, I think, Congressman, in measuring the risks that are implicit in this undertaking, we have to measure the risks that are certain if we do not undertake it.

Mr. VORYS. By the way, at this point—if somebody else has asked this question skip it—I hope that you will have prepared and bring up to us here a dollars and cents sort of budget estimate on what a policy of withdrawal would cost.

You have discussed it, General Marshall has discussed it, I myself have discussed it in public speeches and otherwise, the possible cost of withdrawal. I have made some rough estimates in my own mind, but it seems to me that it might be quite possible to make a fairly reliable estimate of what the policy of doing nothing might add up to in military expense and otherwise.

Ambassador DOUGLAS. I would be very glad to discuss that with you and see what can be done in accordance with your request. Would that be satisfactory?

Mr. VORYS. Yes. Now to come back to this matter of 25 percent invisibles for Europe. What that means is this: That the European economy became older, as they exhausted their natural resources, through investment all over the world, they had arrangements that enabled them to secure an excess of imports over exports that worked rather well until the war. That is right, is it not?

Ambassador DOUGLAS. Except it was not the product of their becoming older that furnished invisible incomes.

Mr. VORYS. In any case, the proposal now is that the United States take up the torch of civilization and assume a position of world leadership and stewardship and that we furnish all this stuff to the needy world in the time of its need.

Whenever we talk about making it in the form of investments rather than gifts, we are reminded of the temporary shortage of dollars and are urged not to make it in the form of loans, so that we will have some invisible returns come in.

I wonder why, as we exhaust our resources through this crucial period to meet the needs of Europe and of the world, we should not do what Europe did in arranging for some invisible assets to bring in some imports?

Ambassador DOUGLAS. Congressman, to compare the existing situation with that long period that started somewhere in the middle of the eighteenth century and earlier, and that extended up to 1914, and to a lesser degree during the twenties and the thirties is, I think, incorrect.

The foreign investments made by the European countries were not made in an environment such as the environment which now prevails. They were not made by governments on the whole. They were made by private investors who provided the capital for the development of our railroads. It was private investors that provided the capital for the development of many of our industries. That was the type of private transaction that occurred all over the world: the accumulated savings of the foreigners in many of these respective countries went out to seek overseas investment in an environment in which there was little doubt about the future; the foundations of society had not been undermined; confidence as to the organization and permanence of society prevailed and accordingly private investors sought a profitable employment of their accumulated savings in the far corners of the world.

That environment now does not exist. Private investors in the United States are not disposed in this sort of an environment to invest funds overseas, until economic and political stability begin to reappear in a form which will justify the taking of the risk. That is the first part.

Mr. VORYS. I would like to comment on that, if I may, though I also want your full answer: Would it not be a good idea if we could arrange our long-time policy so that a somewhat similar pattern would be followed, that instead of having forced investment by Government action of private citizens' money, we would attempt to stimulate private investment over the world?

Ambassador DOUGLAS. Congressman, that is one of the purposes of this act. It is implicit in it. The fundamental purpose of this act is to encourage the restoration of stability in their part of the world, so that private investment may thereafter legitimately and properly and prudently play its part.

Mr. VORYS. Is this not supposed to be a long-term policy we are discussing now? I thought perhaps after many, possibly necessary, emergency stopgap actions here and there, that we were attempting now to settle upon a long-term policy for the United States. Am I wrong about that?

Ambassador DOUGLAS. You are quite right, sir. This bill is designed to provide a coordinated program, not for relief but for the recovery, and the resurgence of stability in this critically important part of the world. It is because of that, that the authorization sought is for a period of four and a quarter years.

Mr. VORYS. Yes, but in terms of the policy, wholly without regard to specific authorizations of money, we ought to be thinking about a policy that runs longer than 4 years, should we not?

Ambassador DOUGLAS. Of course we are, Congressman. The fundamental purpose of this act is to achieve recovery and stability in western Europe.

Mr. VORYS. Then what?

Ambassador DOUGLAS. Once recovery and stability in western Europe are achieved, there is no further need for American public support for the participating countries, and private investment may then play its part. The assets that are hidden in western Europe will begin to emerge during the period, and government will be withdrawn from this type of operation. That is the fundamental policy. That is the fundamental purpose and objective.

Mr. VORYS. After that period, then will come the time when we will need a Government policy of such a character that private investment will be encouraged and protected. Is that not true?

Ambassador DOUGLAS. I am not certain what you mean, Congressman. The creation of an environment in which private investment plays its part, yes, and the establishment of peace. Private investment plays its part in a peaceful atmosphere.

Mr. VORYS. The mistake we made during and after the last war, many people think, was not requiring commitments from other nations when we were needed. It seems to me most important that we do not make that mistake again, and that we do not get up a policy of throwing in aid in war and in the sort of peace that we have now, if it can be called peace, without any commitments from our beneficiaries, as to what is going to happen when we are no longer needed but when we may need strategic materials and other things.

It seems to me what I thought was a long discussion of policies, which would go beyond the 4- or 5-year period of dislocation but into the future, is being too much confined to just what we are to do during this period of need, and not what the rest of the world is to do when the immediate period is over and when we may want something, strategic materials, for instance.

I cannot see why, on strategic materials, we should not make a provision which might, as Mr. Jarman said, make our present procedure a loan, but a very limited type of loan. Those countries should agree that they will pay us back in strategic materials some day, if, as, and when new sources of strategic materials are opened up, in return for what we are doing for them now.

I cannot see what is wrong with that. That is the particular item of discussion this morning that makes me think we are not looking ahead far enough.

Ambassador DOUGLAS. Congressman, these contracts and obligations may run for a long period of time.

I refer you to section 10 (b) (5) which reads in respect to strategic raw materials for stock-piling purposes:

for such period of time as may be agreed to.

Now those contracts may run for a period of 10, 15, or 20 years.

Chairman EATON. Will the gentleman yield?

Mr. VORYS. I yield.

Chairman EATON. I have had a very interesting suggestion here sent up to me, that we buy all the strategic materials that we wish to stock pile, pay for it in money and subtract that amount from these proposals that we now are considering. How would that strike you?

Mr. VORYS. We have just been told that part of that is already budgeted and in response to the suggestion that we go ahead and agree to buy some more, or that they agree to sell some in the future

for the stuff they get, we are told that must not be done, as I understand it.

Ambassador DOUGLAS. I do not say that cannot be done, Congressman; I am prepared to say, however, that during the period which we are now considering, to any extent to which the device of requiring payment to the participating countries in local currency is followed, to the same extent during the period which we are discussing their dollar deficiency will be increased. The results will be that either the program will be correspondingly decreased and recovery be correspondingly postponed, the chances of achieving our objectives impaired, or, alternatively, an equivalent increase will be necessary in the amount of dollars appropriated.

Mr. LODGE. Mr. Ambassador, I do not quite see how the deficiency of dollars would be augmented by agreements providing for the turning over of raw materials which we need or strategic materials, upon the termination of this program. It seems to me that the dollar deficit would be handled exactly the same way, and I will take an example. Let us assume that we need coal. Well, I believe you said that the British have 200 or 300 years reserve. They could not possibly mine all that at once and use it, but in the course of time they can, and that would apply to other materials which are strategic. At the time that they would turn over these strategic materials, the crisis would on my assumption have lapsed and they would be no longer in need of the dollars which we are providing under this program.

Ambassador DOUGLAS. May I make this observation: Congressman Vorys has very properly referred to one of the very great changes that has occurred as a result of the war, in the position of the participating countries. He has referred to the statement made in the Paris report that the situation was that in the prewar period 25 percent of the imports of these countries were acquired as a result of the income from foreign investments.

He has pointed out that the income derived from that source is now very substantially diminished. What was formerly a surplus is now a deficiency, and the implication of his observation was that that change in position of these countries has imposed an obstacle in the way of the achievement of prewar recovery and stability.

As I understand it, that was the effect of the observation he made.

He can see that is one of the difficulties.

At the same time, after having made the observation that that great change is a difficulty, it is suggested that the difficulty be aggravated by requiring these countries which would otherwise derive dollars from their exports of strategic materials, to deliver them to us without receiving an equivalent amount of dollars.

Mr. LODGE. They would not otherwise derive dollars from them unless they sold them to us.

Ambassador DOUGLAS. You are suggesting that the difficulty be aggravated by requiring them to deliver the strategic materials to us for nothing, or in consideration for their local currency counterpart.

Mr. LODGE. It would not be for nothing, it would be to increase the percentage of this sum to be loaned only as a long-term proposition and at a time when there would no longer be a dollar deficit in the country.

Ambassador DOUGLAS. If it is possible to achieve recovery, according to the observation of Mr. Vorys, then the difficulty is aggravated by requiring them to deliver for nothing, or for a local currency, strategic materials during the period in question or later on.

The sole question here, and this is a question about which I cannot have a fixed opinion, and about which I doubt anybody can have a fixed opinion, is the ability of the foreign country, without incurring continuous deficiencies in their balance of payments with all things that follow from it, to deliver their resources to us for nothing, or for local currency. That is something that has to be reviewed in the light of their then capacity and ability to pay.

Now as to the extension of loans for the development of strategic raw materials, it is contemplated in one of the bills which you are considering, that the Administrator may make available funds for the purpose of exploring for and increasing the production of strategic raw materials.

It is contemplated that those loans for purposes of that character or for some other purpose may be repaid during the life of the loan for whatever period it may run, in terms of, or by the delivery to the United States of strategic raw materials, valued, perhaps at the time of delivery, according to the prevailing market price of the materials delivered. Does that answer your question?

Mr. VORYS. Of course, there are gambles involved in this whole program. Would anything give more evidence of the confidence of the United States in the future of these 16 nations than for us to lend them money to be repaid in convenient ways a long time in the future; loans which would obviously be no good unless those countries had a long and prosperous future.

Ambassador DOUGLAS. Well, Congressman Vorys, it is an inescapable part of the capacity of the exchange mechanism and of the countries to get dollars with which to repay.

Now they may be going concerns internally, but unless they can transfer their local currency or their exports into dollars, they cannot repay.

Mr. VORYS. That is not the kind of loans we have been discussing at such great length this morning. We have been talking about a possible loan—I think Mr. Jarman made the point that you might call it a loan. We are talking about a possible loan of dollars, repayable not in dollars but in say a certain percentage of production of lead or in tin 15 years from now.

Ambassador DOUGLAS. That is contemplated under the act.

Mr. JUDD. Will the gentleman yield?

Mr. VORYS. I yield.

Ambassador DOUGLAS. I think it is explained on page 49 of the document submitted.

Mr. JUDD. Following up the question of the gentleman from Ohio as to what would be the psychological effect on these countries of our saying "We expect you to be able to pay a portion of these grants or loans over a period of years by the transfer to us of certain strategic materials for stock piling."

I agree with the gentleman from Ohio it would have a favorable effect. On the other hand, coming back to the section you read, page 18, section 10, what could have a more adverse effect psychologically

than the first words of that subsection which indicate that we never expect them to be able to get back to the point where they can repay in critical materials of which we hope they will have surpluses? We say that they must enter into agreements that hereafter they will sell "to the United States for stock-piling purposes for such period of time as may be agreed to and upon reasonable terms" and so on.

We say to them, "You do not have the privilege of being so mean as to refuse to sell us some, but instead give it to our enemies. However, we do not expect you to get in such shape that you can repay, not in dollars, but in materials."

Ambassador DOUGLAS. Let me repeat, it is contemplated that loans made may be repaid by delivery to the United States of strategic raw materials, the value of which will be calculated at the current prevailing market prices.

Mr. JUDD. This does not speak about repaying, it says "facilitating the sale to the United States."

Ambassador DOUGLAS. That is one of the things, Congressman. Certainly during the period they are short of dollars, that should be appropriate. Certainly, we want to facilitate the sale to us of strategic raw materials, but it is also contemplated that some at least of the loans may be repaid by delivering to the United States strategic raw materials, valued as of the current market prices prevailing at a certain time.

Mr. JONKMAN. Mr. Chairman, will the gentleman yield to me?

Chairman EATON. I wonder if it would be possible to recess until 2 o'clock at this point?

Mr. JONKMAN. Is not our difficulty here that we do not distinguish between the times we are talking about grants and the times we are talking about loans?

Now only 20 to 40 percent of this proposed amount is going to be loans. The rest is going to be grants.

Now as I understand your line of reasoning you say, if you are going to ask them to give us in return for credit, stock-piling goods, there will be taken away the dollars they expected to get for it that they have already figured on?

Ambassador DOUGLAS. That will, sir.

Mr. JONKMAN. If they have \$200,000,000 worth of oil in their exports counted at the present time and we say "We want you to give us that for stock piling," they are going to have less dollars, are they not?

Ambassador DOUGLAS. Let me put it this way, Congressman: Let us suppose we extend to a country a loan—

Mr. JONKMAN (interposing). I am talking about grants now. A loan has to be repaid. The very fact that you talk about the possibility of a loan being repaid shows it is a bad loan.

Ambassador DOUGLAS. I thought you were talking about a loan. I beg your pardon.

Mr. JONKMAN. I was talking about grants.

Ambassador DOUGLAS. Would you mind, Congressman, repeating what you have just said?

Mr. JONKMAN. If instead of giving them a grant we say, "Well, now, we do not like to give it all away. Why do you not give us back some strategic materials? You do not need them, and we will apply them on account."

That I think if I follow your reasoning is taking away the dollars that you have already figured on in basing your dollar needs?

Ambassador DOUGLAS. That is right, Congressman.

Mr. JONKMAN. Then what is there to prevent us from saying that even on these grants, after this 5-year program is completed that we expect them to repay some of these grants? Let us say Britain will have \$2,000,000,000, and I think it is going to be mostly grants. Let us request them to give us a certain amount of oil, say 5,000,000 barrels at \$5 a barrel. I am not talking about loans, I am talking about grants.

Ambassador DOUGLAS. It would depend entirely, Congressman, upon the capacity of Britain to make up the dollars which she would thereby lose.

Mr. JONKMAN. That is not going to be now, but 5 years later.

Ambassador DOUGLAS. Let us suppose they have recovered 5 years from now, Congressman, and let us assume that they are in balance. Then let us suppose that they deliver to us, 5,000,000 barrels of oil at \$5 a barrel, they will be thrown out of balance again, or maybe.

Mr. JONKMAN. At that time?

Ambassador DOUGLAS. At that time. That is why I said, Congressman, at the present moment I do not believe anybody can forecast the ability of any country 5 years from now, to undertake to do certain things of the order you suggest.

Mr. JONKMAN. Then we come back to Mr. Vorys' statement, that a quid pro quo for the United States, whether tangible or intangible, always lies in futurity.

Ambassador DOUGLAS. If they could afford to pay it we would expect something of that sort. However, would it not be rather inconsistent for us to engage in this undertaking, aimed at the restoration of recovery and stability in western Europe during the period in question, and then to require these European countries, or to exact from them, conditions which will undermine the stability and recovery which they have achieved?

Mr. JONKMAN. My understanding of the situation is that in that very statement you are begging the whole question.

The plan, as you said a moment ago, to turn from relief to reconstruction but nevertheless to plan there to help them help themselves. Now, under the new plan we are just getting in worst. For instance, under the residual aid bill we had six recipients. Under the interim aid bill we had three. Now we have 16. It is "Come one, come all." It is a free program. That is all.

Chairman EATON. Mr. Ambassador, would you be willing to recess now?

Ambassador DOUGLAS. If I may, I should like to present to the committee the country studies to which reference has been made and which the committee has requested, and I should like to make it very clear exactly what these country studies are, but perhaps it would be better if I did that after lunch.

Chairman EATON. The members of the committee that have not already recessed will now recess until 2 o'clock.

(Whereupon, at 12:30 p. m., the committee recessed to reconvene at 2 p. m. the same day.)

AFTERNOON SESSION

(The committee reconvened at 2 p. m.)

The CHAIRMAN. The committee will be in order, and we will resume with our witness, the Honorable Lewis W. Douglas, Ambassador to Great Britain.

STATEMENT OF HON. LEWIS W. DOUGLAS—Resumed

The CHAIRMAN. Mr. Jarman.

Ambassador DOUGLAS. Mr. Chairman, before questions are put to me, may I say that the country studies which we had promised to be submitted to the committee were submitted this morning. May I make just a short explanation for the benefit of the committee of what these country studies are?

The CHAIRMAN. Yes.

Ambassador DOUGLAS. And how they were made and the purpose of the studies.

The CHAIRMAN. Yes.

Ambassador DOUGLAS. The accompanying set of country studies has been prepared by the executive branch for use in connection with the consideration of the European recovery program. These studies deal in the first instance with the economic and political backgrounds of the 16 countries represented at the Paris Conference, as well as western Germany.

In so broad a field, it was necessary to pick out the aspects which seemed most relevant to the subject at hand. The studies are not, and could not be, within the necessary limitations of space, comprehensive, but it is believed that they will be useful in presenting pertinent background data.

The background statements are accompanied by separate analyses of the part to be played by each country in the recovery program. Since increased production is the keystone to European economic recovery, particular attention is given in the studies to the production programs contained in the report of the Committee on European Economic Cooperation. These programs have been analyzed and evaluated by technical United States working groups after representatives of the CEEC who came to Washington had given further explanation of the Paris report.

With respect to the components of such trade, the United States technicians treated exports and imports in two broad categories. The first category includes a list of selected items which, with certain minor exceptions, were those intensively studied by the CEEC technical committees. This category also includes certain other major commodities exported from the United States in which supply problems are likely to arise.

The second category includes all other imports and exports.

The estimates in the first category for each country are more accurate as to each commodity than the estimates in the second category. Special United States commodity committees were established to study production, import and export potentialities of items on the selected list. Moreover, these items include those in which, by and large, there has been wide experience in planning international allocations and supply.

On the basis of the analyses mentioned above, estimates of the balance of payments positions of the respective countries were prepared. The balance of payments estimates as well as estimates of production, exports and imports must be understood to be illustrations of what may reasonably be expected.

In setting forth estimates of imports there is no intention to suggest specific country allocations or commitments of any kind. Actual commitments will be made in the future by the Administrator—or whatever agency is charged with the responsibility of administering the program—in the light of specific programs and all of the estimates.

These estimates, therefore, are derived assumptions which are necessarily inherent in all forecasts particularly of a complex problem. Nevertheless, it is believed that careful consideration has been given to relevant factors and that the estimates, taken as a whole, reflect the magnitude.

The CHAIRMAN. Thank you.

Ambassador DOUGLAS. May I also state just for the record that commodity reports covering all of the commodities on the selected lists excepting petroleum have been submitted to the committee.

With these commodity reports, there have been also submitted the confidential supplements to the commodity reports. They disclose in tabular form the value of exports and imports and a variety of other items.

Mr. CHIPERFIELD. You would not be able to read those here, would you?

Ambassador DOUGLAS. Oh, no, sir, not here; that would absorb so much time.

The CHAIRMAN. But if we do not read them now, when will the time come from to read them later?

Ambassador DOUGLAS. Well, that is the problem of all of us—shortage of time and shortage of dollars.

Mr. BLOOM. May I ask a question?

Mr. JARMAN. I have not yielded yet.

Mr. BLOOM. I am sorry; it was just one question.

Mr. JARMAN. All right.

The CHAIRMAN. If it is only one question, you may be permitted to ask it.

Mr. BLOOM. Mr. Ambassador, I believe you stated this morning that there were in that long list of strategic commodities a total of \$172,000,000 commodities. Could you give me the articles that are included in it?

Ambassador DOUGLAS. Yes; but it is a long list.

Mr. BLOOM. Since it is a long list, I shall not take the time, then. But, for tin, you have nearly 50 percent of that \$172,000,000. I believe that is correct.

Ambassador DOUGLAS. I could, Congressman, submit into the record this long list. You asked how many items there are there. Let's see how many items there are.

Mr. BLOOM. Well, never mind counting them right now. At any rate, I believe that tin alone is 50 percent of the entire amount of \$172,000,000.

Ambassador DOUGLAS. Tin would represent about one-third, a little over a third.

Mr. THORP. About 40 percent.

Ambassador DOUGLAS. Yes; about 40 percent.

Mr. BLOOM. And, how many different articles are of that nature?

Ambassador DOUGLAS. Of this particular group, there are 16 items specifically referred to, and a variety of items not referred to.

Mr. BLOOM. Tin is the most essential of them?

Ambassador DOUGLAS. There are about 30 to 35 in the entire list.

Mr. BLOOM. Well, anyway, the tin is the most essential of the articles you have in the list?

Ambassador DOUGLAS. It occupies the largest place in the list, yes, sir.

Mr. BLOOM. There would be no difficulty in the few countries that control the tin output, or rather the cartel in tin controlling the world output, there would be no difficulty through them for that requirement; I mean, the requirement for use in this country for stock piling and for domestic use both.

Ambassador DOUGLAS. In the first place, Mr. Congressman, the cartel has been dissolved, it is not now in existence. In the second place, as to those amounts necessary for stock-piling purposes, arrangements can be made for them.

Mr. BLOOM. You say the cartel has been dissolved?

Ambassador DOUGLAS. So I am informed, yes, sir.

Mr. BLOOM. Well, the same smelters are still in existence and the same stockholders have the same stock, so I do not see how the cartel could have been dissolved.

Ambassador DOUGLAS. The same companies may and do continue in existence, Mr. Congressman, but the arrangements that had been made among them for the purpose of fixing production and price are no longer in force and effect.

Mr. BLOOM. That is all. Thank you.

The Chairman. Now, Mr. Jarman.

Mr. JARMAN. Mr. Ambassador, in introducing your figures originally, you referred to the fact that they were quite revealing, very revealing. I wish to emphasize that by saying that while I have realized that these 16 countries constituted a very important segment of the world, I had no idea that they were as important as I learned from your figures on those charts. Incidentally, somebody did a mighty good job in preparing the chart, and deserves commendation for it.

I have made a number of speeches in my district since my visit to Europe last fall, speeches in which I had thought I had done a reasonably fair job of selling this program and, particularly, selling the reasons for the necessity for it. I have since been hearing you have been exceedingly regretful, however, that before I made the first of those speeches I had not had the opportunity of hearing your testimony, in which event I think I would have discarded at least half of what I said and taken at least half of my speech from your testimony.

I wish sincerely to thank you for it. I think your testimony has been very valuable and very helpful. I wish to say further that I do not think there has been any witness who has appeared before this committee during my 11 years membership on it who had the subject relevant to which he was testifying so thoroughly at his fingertips as you have. I think you have done an excellent job here for us, just as I am sure you and your assistants have done an excellent job for the country, and I wish to thank you for it.

It naturally follows that I do not have a great many questions along the line that heretofore have been propounded to you. I do want to emphasize certain of your replies and also gain certain further information which I did not get, perhaps, perfectly clear.

You spoke of the trade balance between the 16 countries and Soviet Russia, and you spoke of it as being balanced as between them. Now, how great is that?

Ambassador DOUGLAS. Well, I meant to say, Congressman, that the trade between western Germany and the European countries to the east is in balance over the period of the recovery program.

Mr. JARMAN. As between the 16 countries and eastern Germany, however, there isn't any trade of any consequence now?

Ambassador DOUGLAS. I think there is, Congressman, but it is very difficult, if not impossible, to get the relation between the trade between eastern Germany, which is the Soviet zone, and the countries located east of the "iron curtain." So, I cannot answer precisely that question. But, there must be coal, timber, for example, which are being exchanged.

Mr. JARMAN. Along that line, you were questioned at length this morning, you will recall, about what, if any, the 16 countries were doing to aid themselves. The point seems to have been made that, for instance, England ought to sell coal to the 16 countries, and not to other countries.

I was wondering, if England should sell coal which they have to Rumania and if they should get wheat in return, would that not serve exactly the same purpose as if they sold it to France—with respect to relief under this program, I mean.

Ambassador DOUGLAS. It would have the effect of taking some burden off us.

Mr. JARMAN. Because they need wheat, and if they get it from Rumania, they need not get it from us—to the extent they obtain it from Rumania.

Ambassador DOUGLAS. That is right; yes, sir, I agree.

Mr. JARMAN. Now as to the foreign customers of the 16 participating countries, I would like to ask you a question. They do have a little foreign investment, don't they, or it may even be more than a little? Are there any figures as to the approximate amount?

Ambassador DOUGLAS. I do not have them in my mind, but I think yesterday the question was put and I indicated that we would insert those figures in the record. I am sorry I do not have them in my mind at the moment.

Mr. JARMAN. Well, you said something about it this morning, at least I made this note here, that instead of these being investments, they were in reality liabilities. Do you know what I had in mind when I made that note?

Ambassador DOUGLAS. You are referring to the invisible account.

Mr. JARMAN. Yes.

Ambassador DOUGLAS. Well, on the entire invisible account, the surplus that these 16 countries prewar enjoyed amounted to approximately $1\frac{1}{2}$ billion dollars. That includes income from investments overseas, shipping services, and a variety of other services of that character, and there was in 1947 a deficiency of \$500,000,000. If you will notice in the chart, it is calculated for the period of 15 months. The invisible account includes the income earned on their foreign

investments, which is approximately \$4,900,000,000. That is to be found on page 103 of the public document.

Mr. JARMAN. I do not find myself in agreement with the criticisms that have occurred concerning these committees, such as the Harriman and other committees—the criticism that they seem to have reached practically the same conclusions. I do not agree because I am impressed with the fact that they are dealing with the facts as they are, and that in a committee diligently studying them and studying them sufficiently long, that committee will necessarily reach approximately the same conclusions as another such committee. Therefore, I think it is complimentary to those committees, rather than subjecting them to criticism—the fact that their conclusions agree.

It reminds me—the criticism reminds me—of something that none of our colleagues here except the chairman knows anything about, because they are sufficiently new here that they have not had the experience with civil-service examinations. They will have that experience, if they see the time when they have the misfortune to gain control of the Congress, and if they do gain that control, then they will find that they will be subjected to exactly the similar criticism we have known. They will find that everybody who wants to be a rural carrier or a postmaster will want an examination fixed so that they will be on the eligibility list, and they will be severely criticized just as we are and just as these committees are criticized for having reached exactly the same conclusions, one with each other.

It follows that one of my colleagues asked you some question about this 5 percent guaranty to private industrialists; he asked you if it was grabbed out of the air. I have forgotten what your reply was, but my impression was that from the thorough way in which you have this at your fingertips and the thorough investigations that these committees have made, there could be no question but that it was not grabbed out of the air; that is, that on the other hand, this 5 percent was based on good and sufficient justification and that the reasons for it were thoroughly justifiable. Is that not true?

Ambassador DOUGLAS. It was based on a necessarily very rough calculation of the amount of American private investments which might be undertaken under the guaranty. In one sense, it was therefore arbitrary; in another sense it was not a wholly unrelated guess. It is sort of a guaranty, Congressman, and it is very difficult to arrive at an estimate that is reasonably accurate. I might put it this way: that it was thought that 5 percent of the total fund appropriated, as a limitation upon the amount that could be guaranteed, was somewhat higher than the total amount for which guaranties would be sought.

Mr. JARMAN. But that 5 percent, as compared to the 95 percent, was not grabbed out of the air.

Ambassador DOUGLAS. No.

Mr. BLOOM. Will the gentleman yield?

Mr. JARMAN. Yes.

Mr. BLOOM. Following up this 5 percent, that is not 5 percent of the amount of goods going to be sold; it is 5 percent of \$6,800,000,000?

Ambassador DOUGLAS. That is right.

Mr. BLOOM. So that the 5 percent is not 5 percent of 100 percent, but it is 5 percent, to a total amount of \$340,000,000; isn't that right?

Ambassador DOUGLAS. That is right.

Mr. BLOOM. So if you sell \$10,000,000 worth of goods, he is getting—instead of 5 percent of the sum total, he is getting 5 percent of this appropriation of \$340,000,000?

Ambassador DOUGLAS. No, Congressman. An American investor who believes that there is a good business risk in Europe, a good venture in which he can invest his funds profitably, can ask for a guaranty of the total amount of his investment. This has nothing to do with goods. It is a guaranty of investment only, the capital sum of the investment, and then only if the project is profitable, and then only if he experiences difficulties in transferring the local currency into dollars.

Mr. BLOOM. But, it is still \$340,000,000?

Ambassador DOUGLAS. That is the limit beyond which the guaranty cannot go.

Mr. BLOOM. That is right.

Mr. JARMAN. I just wish to emphasize the fact that while the 5 percent, as between, say, 4 percent or 3 percent or 7 percent, is a little harder to get, it is my guess that it was not grabbed out of the air, as compared to the 95 percent. In other words, you could not use 95 percent of the money that way because there would not be enough left from the remainder.

Ambassador DOUGLAS. That is right.

Mr. JARMAN. And, therefore, it was not grabbed out of the air.

Ambassador DOUGLAS. That is right.

Mr. JARMAN. Now, I would like to know whether, Mr. Ambassador, I have been correct in the statement in which I have indulged, when I spoke to this effect—that while there are exceptions, I gained the impression that, on the whole, the people of Europe, as individuals, as governments, and as countries, although they are working under very considerable handicaps, are doing a very good job in trying to help themselves. Do you agree with me on that?

Ambassador DOUGLAS. I think that is substantially correct.

Mr. JARMAN. And, now, the gist of the whole thing is that these countries need dollars. It does not make a great deal of difference how many francs the Frenchmen have, or how many pounds an Englishman has; if he has got to pay dollars for the food he needs to keep himself alive, then he will be just as hungry as if he did not have any local currency. Isn't that true, generally speaking?

Ambassador DOUGLAS. Yes, sir.

Mr. JARMAN. And so, anything that was discussed here this morning which would operate so as to tend to reduce the supply of dollars in these countries during the next few years can but add to the amount we must supply, if we assume that we have a duty in this; and I am going to indulge that assumption strongly—that we do have a duty.

Ambassador DOUGLAS. Yes.

Mr. JARMAN. I am wondering what the situation would be—I wonder if I could have an expression from you—if, suppose all currency today were convertible, what would be the situation of these 16 countries? Of course, I realize that is an utopian assumption.

Ambassador DOUGLAS. If all currency were immediately convertible, the economic environment of the world would be entirely different.

Mr. JARMAN. Would be what?

Ambassador DOUGLAS. Would be wholly different. We would have achieved a condition of international economic stability which I think would make it unnecessary for the United States to provide the sort of program which we are now contemplating and considering.

Mr. JARMAN. I am pleased to hear that. Without having talked to you, that is exactly what I thought. It simply emphasizes the fact that the need is for dollars; there was a time when we were a debtor nation rather than a creditor nation—we can assume, if we do not dwell too lengthily on our resources and our industry and what not—by a stretch of our imagination we could say there could have been a time before the First World War, could there not, when we might have found ourselves under similar conditions of that kind?—as I say, we would have to stretch our imaginations to reach that conclusion.

Ambassador DOUGLAS. Well, sir, our economic situation is so unlike that of the European countries that it is hard or impossible to make a comparison like that.

Mr. JARMAN. As I say, you would have to use your imagination.

Ambassador DOUGLAS. Oh, sure.

Mr. JARMAN. Returning to the question of tin, about which Mr. Bloom spoke and asked you concerning, and referring now not only to tin but to other strategic materials, although tin was the major one, it is your position, is it not—and I agree with it, if I understand correctly—that these agreements for the furnishing of tin or such materials, the mechanics of it, so to speak, of furnishing the materials to us at some later date—that those details need not necessarily be spelled out in the bill?

Ambassador DOUGLAS. I doubt if there is any need to spell it out in detail in the bill. The bill authorizes certain things. It provides that when loans are made that the Administrator shall negotiate the terms at which the loans will be repaid, and if not repaid in terms of money, in terms of what; that is, the bill does now authorize the repayment of loans either in money or in stated goods.

Mr. JARMAN. You are referring to section 5?

Ambassador DOUGLAS. No; it is section 7 (c) (1):

The Administrator may provide assistance for any participating country, in the form and under the procedures authorized in subsections (a) and (b), respectively of this section, through grants or upon payment in cash or on credit terms or on such other terms of payment as he may find appropriate.

So that he is authorized under the terms of the act to require repayment of a certain portion of loans in goods.

Mr. JARMAN. Considerable reference occurred this morning, you will recall, to the fact that we should evidence our confidence in the ability of these countries to come back by indulging in additional loans to those contemplated here and indicating that it was somehow a reflection upon them for us not to do so.

Now, I wonder how valuable our confidence in those countries would be if the evidencing of it in that manner was such that it resulted in this—that they never can come out of the slough of despond in which they find themselves, or creating a situation through conditions put into the loan such that they must fall back again into that slough.

Ambassador DOUGLAS. I doubt if they would accept it as a manifestation of confidence on our part if they considered they were unable to meet the conditions of the loan.

Mr. JARMAN. I agree with you on that.

Ambassador DOUGLAS. As a matter of fact, with respect to those countries that cannot repay or cannot repay in full all of the support that is contemplated to be extended, the requirement that they should repay would impose future dollar burdens upon them and thus aggravate the difficulty instead of relieving it.

Mr. JARMAN. Speaking of the repayment of the loans, some reference was made before adjourning this morning—and I have forgotten what it was exactly—to the repayment of a loan to this country in dollars, for any loan. I am wondering if any loan is ever repaid to this country on account of a loan to Europe in actual dollars, or whether it is not done by balance of trade.

Ambassador DOUGLAS. Yes; it is repaid in dollars.

Mr. JARMAN. Actual dollars?

Ambassador DOUGLAS. Either dollars derived from the export of goods or dollars derived from the sale of goods to some other country or countries, or the export of gold.

Mr. JARMAN. But those dollars—maybe I did not say exactly what I meant. If there is actual transportation of dollars, say in gold, from a European country to this country, those dollars still are derived from the sources mentioned, and those are over here, isn't that right?

Ambassador DOUGLAS. That is right.

Mr. JARMAN. Actual dollars do not really cross the Atlantic.

Ambassador DOUGLAS. Well, they may, of course, actually mean gold.

Mr. JARMAN. Bullion?

Ambassador DOUGLAS. Yes; gold bars.

Mr. JARMAN. It seems now to me that all of this discussion about strategic materials, whether they should obligate themselves to pay for some of this assistance in the future in strategic materials and so forth, it seems to me that it all resolves itself to the question of whether it is our duty, the duty of this country, to try to remedy the situation in which that great and important segment of the world finds itself, largely at least through causes not of its own making and for which it was not responsible.

If we do reach the conclusion that we do owe a duty, then it seems to me that we are simply wasting time in discussing whether we should take money out of one pocket and put it in another by requiring them to pay us in materials in the future. For my part, I think we—and I have said this repeatedly—do owe a duty in this unfortunate situation from a strictly humanitarian standpoint, and that, secondly, the position of leadership in which this country has found itself through no particular effort on its part, either—it is just like Topsy, it is just because of its resources and vast area and the industry of its people that it got into that dominant position—I am impressed by the fact that there results from that position the duty, that there rests upon the shoulders of this country an obligation as being by far the leading nation of the world not to permit this great section of the world to fall into ruin and be dominated by communism if we can possibly avoid it.

I think further that we owe a duty to ourselves, to our country, and particularly to the little lads, the little boys who today play around the firesides in the homes of the United States, to do whatever we can to prevent the domination of the rest of Europe and then,

perhaps, the rest of Asia, by communism and the probable consequent slaughter of those little boys on the battlefields of World War III or IV.

So, for my part, whether they do pay us back in tin or some other strategic materials in 10 or 15 or 20 years or not, it seems to me the duty devolves upon us, a duty so grave and so tremendous that we are not accomplishing a great deal in indulging in argument about whether we should carry this out so as to let them drift back into that slough of despond by commitments to us for the future which they probably could no more make good than they could after World War I, when we proceeded to help them out by loaning them billions of dollars which they could not possibly have repaid.

Thank you very much for indulging me.

Ambassador DOUGLAS. I think our national interests could best be served by playing a part in the restoration of stability in western Europe, and if there are countries who can afford to repay over a period of time loans extended them or repay by returning to us strategic materials, then I think it is to our national interest that it be required; but the important thing is, as you have indicated, we have an exceedingly vital national interest in the restoration of stability in this important part of the world.

Mr. JARMAN. Now, the repayment back in strategic materials that we have spoken of, if they can do it; that is contemplated by the bill without amendment by this committee?

Ambassador DOUGLAS. That is right.

The CHAIRMAN. Mr. Vorys is recognized for one or two additional questions.

Mr. VORYS. Thank you.

I note in today's paper that the International Bank was marking time until they see how the Marshall plan is coming out. Now, when we had the bank and fund before us, we thought that the fund would stabilize currencies, and that the bank could do the reconstruction and maybe, if it was not enough, that we could come along afterward and help out.

I am wondering on this matter of stabilization of currencies; what is the situation with reference to the International Fund? Why can't they do it now?

Ambassador DOUGLAS. I do not know what the plans of the committee are, but I presume that possibly the committee will hear the executive director of the International Monetary Fund before the hearings are concluded.

I suggest also that the Secretary of the Treasury, who is the chairman of the National Advisory Council, could perhaps throw more light on the question than I can. You understand, I am not trying to duck the question.

Mr. VORYS. No. I think that is a good suggestion, and I hope to have these witnesses. Now, there has been a good bit of discussion about the type of administration. In fact, it has even been pointed out that you could have two secretaries of state.

Do you feel that the lend-lease mechanism was a mistake or that it was wrong?

Ambassador DOUGLAS. No; I think it operated very well.

Mr. VORYS. Back in 1944 I attempted to put the administration of UNRRA under the Secretary of State and my motion to have that

carried out was taken out on a roll-call vote after we got back in the House. You may remember we first operate in committee of the whole. I thought at that time that it was a good thing to have the international organizations under the Secretary of State, but, of course, I was greatly persuaded by the arguments used to defeat the amendment that I placed in that bill.

I guess you were not in the Government either during UNRRA, or Lend-Lease, were you?

Ambassador DOUGLAS. Yes; I was in the Government for 2 years in the life of Lend-Lease, during the war.

Mr. VORYS. During the war?

Ambassador DOUGLAS. Yes.

Mr. VORYS. Were you in Lend-Lease, connected with the Lend-Lease Administration?

Ambassador DOUGLAS. No, sir. I was about a week, and then stayed in the War Shipping Administration.

Mr. VORYS. You will remember we had a Lend-Lease Administrator.

Ambassador DOUGLAS. Oh, yes. I had a great many associations with Lend-Lease during the war.

Mr. VORYS. And, while there were conflicts at times in other countries and possibly here from the fact that we had two separate administrations and that the directive merely gave advisory powers to the Secretary of State, as far as I know it was not considered fatal to the efficient operation of lend-lease. Perhaps I should ask these questions of some other witness.

Ambassador DOUGLAS. As I recall it, and my memory may be wrong, the basic lend-lease agreements were made by the Department of State and under those agreements the Lend-Lease Administration operated.

Moreover, as I recall it, there was the Munitions Assignment Board, and there were a variety of agencies of that character that allocated the materials to Lend-Lease which in turn made arrangements for the delivery of that material so allocated to the recipient countries.

I can just make this point, that in the administrative proposals that have been submitted to the Congress providing a method of meeting what we think to be the principles that should be observed, it is not contemplated that the administration should be under the Secretary of State, and I say that in all candor. The impression has gotten abroad that that is the intent but I can assure the Congressmen that it is not the intent. As I understand the history, there was a group in the administrative or executive branch of the Government that first insisted that the administration of the Economic Cooperative Administration be in the Department of State and subject entirely to the jurisdiction of the Secretary.

The Secretary took a firm position in opposition to that view. He said there was only one thing in which he was concerned and that was that the administration of the European recovery program be subject to foreign policy. He did not want to be concerned with the vast variety of business undertakings and operations that he would have to be engaged in.

Mr. VORYS. Well, on that matter of the degree to which foreign policy might be affected, I think the statement was made before us that it could be 20 percent of the questions coming up, but the state-

ment was made before the Senate that conceivably every question could involve a question of foreign policy.

That could be true, could it not? There is no percentage way in which we can determine in advance what aspects of the administration of such a vast and important program as this would involve foreign powers?

Ambassador DOUGLAS. I think it is possible to define at least a segment of the operations that is not related to foreign policy. Then, of course, Congressman, the administration of the European recovery program has to be fitted into the functions and responsibilities of a variety of different governmental agencies. It is not only the State Department. I do not want to take your time to enumerate them, or to take the time of the committee, but there are a great many departments of government that have responsibilities and are discharging the responsibilities that are intimately related with our internal economic position and with the allocation of materials for export and the granting of export licenses, and a variety of things of that sort.

Petroleum, for example, and wheat, are wholly outside the State Department, and the responsibilities for the discharging of functions of that order are vested in other agencies—the Department of Commerce, Department of Agriculture, Department of the Interior, and then there is the Department of the Army which has jurisdiction over Germany.

Mr. VORYS. I am quite familiar with that point. I just wanted to bring up this one aspect, that when I made an attempt to put UNRRA under the Secretary of State, it was voted down, and now they are advocating this. I just wondered—

Ambassador DOUGLAS. UNRRA was an international organization and the State Department did handle the relationship between our Government and UNRRA. In the case of the Board of Economic Warfare the line of jurisdiction was not clearly drawn and it created a great deal of trouble—I don't mean in the Western Hemisphere, but in other parts of the world. It became a part later on of the Foreign Economic Administration.

Mr. VORYS. But it did have a separate administrator?

Ambassador DOUGLAS. Oh, yes; but we provide for that, too, Congressman, wholly separate from the Department of State.

Mr. VORYS. I have just this one other question. How does anybody decide—more specifically, how does the Administrator decide how much is to be a grant and how much is to be a loan? What is to be his test?

Ambassador DOUGLAS. The ability to repay. Of course, he has to consult with the National Advisory Council.

Mr. VORYS. The ability to repay in dollars?

Ambassador DOUGLAS. That is right; or, as the bill provides, in other terms.

Mr. VORYS. Then the whole test is a stabilization of currency test; is that it?

Ambassador DOUGLAS. No, that is not the whole test. The ability to transfer would be one test, but there would be a great many other tests, too, that would be applied.

Mr. VORYS. You see, we had two former experiences where we gave away or furnished for free or granted vast amounts. One was

when the consideration was military, in lend-lease—a matter of security. The other was where it was a matter of relief. Now, while there are or at least may be substantial security considerations, and while also there are relief or humanitarian considerations in this, there is still a third thing that bulks more largely, and that is the economic situation.

The amounts that are necessary for military purposes, that is money well spent, or at least money that must be spent; and the amounts that are given for humanitarian or relief purposes, of course, we expect no pay for that—we look for no repayment there.

But, when it comes to giving away money for economic-purpose activities for which I have not been able to figure out a formula and have not found one and have not heard of one that has satisfied me, that is something else, and that is what I am asking about in particular.

Ambassador DOUGLAS. On page 45 of the document which was published under the title, "Outline of European Recovery Program," there is an explanation of the criteria that it is contemplated will be applied. It really starts on page 45 and extends over to page 46.

Mr. VORYS. Yes, I am familiar with that. It comes back to their ability to repay in dollars, and that again comes back to a stabilization proposition, it seems to me.

Do we pour in dollars until there is a new kind of stabilization required, or what is the test? Another way of stating it is that the test is ability to repay, and that we make grants when there isn't any ability to repay. There are a lot of people in the world and a lot of nations in the world that are not able to pay, and that test alone is insufficient—inability or ability to pay—and there is not enough to grant to take care of all the requests where there is inability to repay. Is that right?

Ambassador DOUGLAS. That is right, but we are not taking care of all of those requests, Congressman, by any manner of means. This program was designed and prepared to achieve a clear objective, and that was the recovery of stability, the restoration of stability, both economic and political, in a part of the world which is of extraordinary significance to western civilization, of which we are an integral member.

Mr. VORYS. I have no further questions.

Mr. CHIPERFIELD. Mr. Mansfield?

Mr. MANSFIELD. Mr. Ambassador, there have been a number of reports spreading around the country concerning the effect on the American economy of this proposal. Just how much wheat is it contemplated will go overseas under this plan?

Ambassador DOUGLAS. Secretary Anderson, I presume, will be asked to testify before this committee, and he will be able to answer your question specifically. The commodity reports should disclose the percentage of wheat. It is 15.3.

Mr. MANSFIELD. Do you have any idea about the quantity of box-cars in percentages?

Ambassador DOUGLAS. That is about 13.9 percent of estimated capacity.

Ambassador DOUGLAS. That is 13.9 percent.

Mr. MANSFIELD. How much of our coal?

Ambassador DOUGLAS. About 5.5 percent.

Mr. MANSFIELD. How much of our steel?

Ambassador DOUGLAS. Finished steel, about 2.9 percent; crude and semifinished, 1 percent.

Mr. MANSFIELD. Now, Mr. Ambassador, you are perhaps more conversant with the situation in England than any other person in the Government, and I would like to ask you what, in your opinion, is England's economic position today in regard to coal, for coal consumption and shipments overseas?

Ambassador DOUGLAS. The present rate of production of coal in the United Kingdom is at the annual rate of approximately 215,000,000 tons. The British themselves for the year 1948 have set a production target, as I recall it, of 214,000,000 tons.

During the year 1948 they will continue restrictions on the domestic consumption, in order that there may be available for export the amount which they undertook to export during the year, which is, to my recollection, 7,000,000 tons. It is likely they will export more than that.

By 1952 their program calls for a production of 249,000,000 tons of coal a year, which is greater than the annual rate of production during the period 1934-38. I believe they can achieve that goal if they attack the problem with vigor and determination.

Mr. MANSFIELD. Is it true that one of the reasons for the British coal deficiency in recent years is because of bad management under the government which preceded the present Socialist government, by which I mean to state that approximately 70 percent of what was taken out of the mines was retained, and something between 20 percent and 30 percent was put back into the mines, which, if true, would offer a contrast almost in exact opposite to what the coal producers were doing in this country—is that true?

Ambassador DOUGLAS. That is right. The British coal industry is in its present state for a variety of different reasons. One, the mining properties suffered from indifferent management extending over a long period of time. Moreover, the industry became bound up in certain emotional prejudices, and the figure which you have recited is an indication of the difference between the way in which the coal properties were managed in the United Kingdom and the way they have been managed in the United States.

Of course, that situation was aggravated by the war. During the war, when Britain was confronted with the dilemma of leaving the younger men in the mines in order to assure production or to draft the men out of the mines into the army, they took the second horn of the dilemma. The younger men were withdrawn from the mines, and the number employed by the mines fell from something over 800,000, where it stood in 1937 or 1938—it was about 1,100,000 at another period—to something under 700,000 at the beginning of 1946. Therefore, there was not only an absolute decline in the number of coal miners, but there was a qualitative change in the age distribution.

Mr. MANSFIELD. That, coupled with the fact that there has been relatively little modernization with machinery, plus the fact that a good many of these young men who have left the mines have refused or have been reluctant to go back into the mines, has contributed to the decline of British coal production.

We hear the statement made that the people of England and other European countries just will not work. Is that statement a true statement or are the factors which you have brought out been responsible

in large part for the decline in production and not the lack of effort on the part of the workers themselves?

Ambassador DOUGLAS. Generally speaking, in Britain there is a desire to work. In the coal mines, as you know, commencing, I think, on the 1st of May, Britain adopted a 5-day week. That 5-day week has been abandoned, and coal miners are now working $5\frac{1}{2}$ to 6 days a week. In the steel industry they are working 7 days a week.

Mr. MANSFIELD. What is England's relative position in shipping today, as compared with the period just prior to the war?

Ambassador DOUGLAS. In round numbers, Britain lost approximately 25 percent net of her merchant fleet.

Mr. MANSFIELD. How much has she regained?

Ambassador DOUGLAS. I am sorry that I cannot give you that.

Mr. MANSFIELD. Could you find that and put it in the record?

Ambassador DOUGLAS. Yes; I can find that. I can give you the number of ships that are now on the ways, but I cannot tell you what percentage, precisely, of that which she lost during the war has been replaced by new construction. I will give you that figure.

(The information requested is as follows:)

United Kingdom merchant fleet (in millions of dead-weight tons)

Total United Kingdom fleet, 1939	22.7
Deduct:	
War losses	15.3
Marine losses	1.2
Total	16.5
Balance	6.2
Add:	
Captures and acquisition from enemy	1.1
Purchases of United States war-built tonnage (since passage of Ship sales Act of Mar. 8, 1946)	2.3
Purchases of old United States tonnage (period 1939-June 1947)	.8
Purchases from elsewhere (period 1939-June 1947)	.1
Total	4.3
Balance	10.5
New building over period 1939-June 1947	10.6
Grand total	21.1
Net loss during period 1939-June 1947, including the allied tonnage replacement scheme	1.9
Leaving June 1947 tonnage at	19.2
Tonnage 1938 equals	22.5

Source. British Embassy and Ministry of Transport Office, London.

Note.—The difference between figure of 19.2 and 20.1 in ch J, Maritime Transport Report, is accounted for by the difference in time, and by inclusion in 20.1 figure of United States lend-lease vessels.

Mr. MANSFIELD. Could you give the committee just what that 25 percent loss means in tonnage?

Ambassador DOUGLAS. In dead-weight tons it amounted to some 15,360,000.

Mr. MANSFIELD. Yesterday you brought out some very interesting illustrations about the decline in the 16 western European countries of certain of their industries. How much of a percentage of shipping have these 16 nations, as a whole, recovered since the war?

Now, I have in mind the fact that as far as Greece is concerned, it is practically back to normal, due to the fact that we turned over so many ships to them. Other countries have likewise been helped in part by us, and I am just wondering, on a percentage basis, how much they have recovered from the losses of the war.

Ambassador DOUGLAS. At the end of 1938, the dry-cargo tonnage under the control of the participating countries amounted to approximately 36,000,000 tons.

At the end of 1947 the figure amounted to 32,000,000 tons; that is, exclusive of Germany.

Mr. MANSFIELD. What kind of tons did you use in answering my question with regard to the loss in British shipping?

Ambassador DOUGLAS. I used dead-weight tons.

Mr. MANSFIELD. What is the difference between dead-weight and gross tons?

Ambassador DOUGLAS. I have been using dead-weight tons all the way through. The capacity of a ship expressed in dead-weight tonnage is, roughly, the capacity of the ship to carry cargo.

Mr. MANSFIELD. Their the figure you gave me concerning Britain was in dead-weight tons?

Ambassador DOUGLAS. That is right.

Mr. MANSFIELD. And the latest figure you gave me for the 16 participating countries was also in dead-weight tons?

Ambassador DOUGLAS. That is right.

Mr. MANSFIELD. How could it be they would have approximately 32,000,000 tons at the present time when British shipping through a loss of 25 percent of its shipping alone suffered a loss of 15,300,000 plus?

Ambassador DOUGLAS. We sold some tonnage to Britain during the postwar period, and we have sold some to other participating countries since the war. The total I do not have in my head, but I can get it for you.

Mr. MANSFIELD. I wish you would get those and put them in the record.

Ambassador DOUGLAS. Yes, sir.

(The information requested is as follows:)

Deadweight tonnage of United States merchant ships sold since war to 16 European recovery program countries

Source: U. S. Maritime Commission, Jan. 20, 1948. Information as of Dec. 31, 1947.

DEFINITION OF SHIPS' TONNAGES

Dead-weight tonnage

Dead-weight tonnage is the lifting capacity of the ship. It is the number of tons of 2,240 pounds of fuel, water, stores, cargo, and passengers that a vessel is designed to carry with safety. It is the basis for quotation as to cost of con-

struction, sale, and charter and as such is the measure of potential revenue capacity of vessels.

Gross tonnage

Gross tonnage is the capacity of the spaces within the hull of the vessel and of the closed in spaces above deck available for cargo stores, passengers, or crew with certain exceptions expressed in tons of 100 cubic feet. This term is an indication of size and is used primarily to designate passenger or combination passenger and cargo vessels. Gross tonnage has no fixed or exact relationship to a vessel's commercial possibilities or earning capacity.

Mr. LODGE. Will the gentleman yield for a question there?

Mr. MANSFIELD. I will be glad to.

Mr. LODGE. That objections, I understand, have been voiced in Great Britain concerning the United States proposal with respect to sales and cargo in connection with this program—in other words, that this would compel the British to reduce their shipbuilding program—can you confirm this?

Ambassador DOUGLAS. Sir Stafford Cripps made an announcement that Britain would have to reduce her shipbuilding program because of the shortage of steel, quite irrespective of any chartering proposals of the United States or proposals for the sale of presently United States controlled merchant ships.

Mr. LODGE. In other words, this proposal for the sale and charter of United States vessels will have no effect on a shipbuilding program of Great Britain?

Ambassador DOUGLAS. I cannot say it will have no effect, but I can say what Sir Stafford Cripps announced the day before yesterday.

Mr. LODGE. You believe there will be no great objections raised on the part of the British?

Ambassador DOUGLAS. I presume there would be some objections, but the announcement of Sir Stafford today—or, rather, day before yesterday—would have the effect of diminishing the volume of objections.

Mr. LODGE. You still believe that we should go ahead with that aspect of the legislation.

Ambassador DOUGLAS. Yes; I do, too, sir.

Mr. LODGE. Thank you very much.

Ambassador DOUGLAS. The fact of the matter is, it saves us a great many dollars.

Mr. MANSFIELD. Mr. Ambassador, there is a great deal of talk in this country by people opposed to the proposal now before us, that we should not do anything for governments which they look upon as socialistic, and they say funds of this kind will serve to further socialize governments. What, in your opinion, should be our opinion toward the governments in Europe who have changed their forms of government, such as Italy, and those who have leaned leftward—I believe is the term—such as England?

Ambassador DOUGLAS. The end result is the matter with which we are concerned. The recovery of western Europe and the restoration of what I have called stability is the purpose which we have in mind. If these countries, some of them, can achieve that purpose and fulfill their pledges under the mild type of socialism which exists in some of them, that is their business.

It would be, I think, too much of an invasion of the right of free people to determine the sort of economic system under which they wanted to live, provided always it is dedicated to the proposition that

men should be free—it would be too much of an invasion on our part to undertake to dictate or influence them in the matter.

Mr. MANSFIELD. It is a fact, is it not, that countries such as Italy and England, which I have mentioned, have changed their forms of government because it was the desire of the majority of the population in each to do so?

Ambassador DOUGLAS. It appeared to be at the time that the elections were held.

Mr. MANSFIELD. What they have done, in effect, is to go through the regular balloting process to achieve the types of government which they have at the present time?

Ambassador DOUGLAS. They have an equal right to modify, change, or reverse the economic policies that have been adopted by the governments which they elect to office.

Mr. MANSFIELD. There has been some talk about various kinds of coal as it affects the European economy.

I recall that American coal—and a lot of it was not very good coal—was shipped to Europe during the past year, and perhaps still is being shipped there in sizable quantities and in sizable tonnage, and that these European nations, generally speaking, had to pay anywhere from \$17 to \$23 a ton for this coal.

Now is there any possibility under this proposal whereby shipments of American coal could be decreased and greater shipments of German and British coal are used to take up the slack?

Ambassador DOUGLAS. That is the fundamental objective of the coal-production target, as set for Britain by her and for Germany; The purpose of increasing the production of coal indigenous to the participating European countries is to relieve the participating European countries of expending dollars in huge amounts for this particular source of energy. You will see that by 1952, I think, it is calculated that the deficiency in the production of coal from among the participating European countries amounts to 2,000,000 tons. Only 2,000,000 tons then would be required from the United States.

Mr. MANSFIELD. Has there been a slacking off of Polish coal shipments to other European countries in the west since the start of the consideration of the Marshall proposal?

Ambassador DOUGLAS. I think not.

Mr. MANSFIELD. Have you any idea of the prices the Poles are asking for their coal?

Ambassador DOUGLAS. The Polish price of coal is \$15 a ton at shipside or at the Polish border.

Mr. MANSFIELD. That indicates a tremendous advantage in Polish coal prices over a comparatively short period of 2 or 2½ years, does it not?

Ambassador DOUGLAS. Yes. And, of course, since prewar, the advance in price all over the world has been inordinate.

Mr. MANSFIELD. I would like to ask this question of Mr. Thorp, if I may—I have been waiting all day for this country-by-country report, because I want to study it and ask some questions about it: Will we get that report today or tomorrow?

Ambassador DOUGLAS. The country-by-country report has been submitted to the committee, Congressman.

Mr. VORYS. Would the gentleman yield? I wonder if you have any summary? I went through the 17 volumes this noon. I could not get through all of it, but I found no summary page. I wonder if you have in there, or if you are going to furnish us with, a summary page?

Ambassador DOUGLAS. There is a general introduction. It is very difficult to get up a summary because of the variations between each one of the countries.

There is a document that has not been submitted to this committee which is purely an estimate of the deficits on current account of the participating countries, and I would be very glad indeed to offer that to the committee. That may be helpful to the members of the committee, or it may be a relief program to the members of the committee.

Mr. CHIPERFIELD. I think the committee would like to have that. (The information requested is as follows:)

ESTIMATED DEFICITS ON CURRENT ACCOUNT OF EUROPEAN COUNTRIES PARTICIPATING IN THE PROPOSED EUROPEAN RECOVERY PROGRAM

The proposed United States support for a European recovery program, as presented by the executive branch to the Congress, is based substantially on the estimated balance of payments positions of the participating countries with the Western Hemisphere for the period of the proposed program. The estimated deficit and surplus balances on current account which have been prepared by the executive branch for each participating country are presented in the attached tables.

The executive branch concludes that approximately 15 percent of the combined deficits with the Western Hemisphere for the period April 1948 through June 1949 can be financed from sources other than new United States Treasury funds, although the percentage of the deficits of individual participating countries that can thus be financed will vary greatly from country to country.

The attached tables also show the estimated deficits and surpluses of the participating countries with nonparticipating countries outside the Western Hemisphere. The executive branch has not requested any authorization to cover the participating countries' deficits with this area except for a certain portion in the case of bizonia Germany.

The nature of a deficit balance on current account can be briefly stated in the following terms. Transactions between a particular country and other countries such as imports and exports of merchandise and services, earnings of interest, amortization, dividends and profits, and transfers of remittances, are customarily regarded as "on current account." These transactions result in payments and receipts. If a particular country's receipts from foreign countries are smaller than its payments to foreign countries within a certain period, it has incurred a deficit on current account. It can only incur such a deficit if it has reserves of gold, foreign exchange or other foreign assets which are used to settle the deficit, or if it receives credits or grants, or if foreigners make new investments within that country.

An estimate of a deficit in a particular country's balance of payments for a future period should not be regarded primarily as a forecast. Rather, it is a measure of the country's need for outside assistance to supplement use of its own resources in achieving certain levels of consumption and investment. The deficits in the balances of payments of countries participating in the proposed European recovery program, as estimated by the executive branch, are the measures of their external needs for maintenance of tolerable living standards and achievement of self-supporting economies.

NOTE.—Attention is directed to the fact that the individual country balances in the attached tables have not been adjusted for changes in export and import prices, and in freight rates, that may occur during the period. Such adjustments have been confined to the combined balances of all the participating countries.

206 FOREIGN POLICY FOR A POST-WAR RECOVERY PROGRAM

NOTES

EXPLANATORY NOTES FOR TABLES SHOWING ESTIMATED SURPLUS (+) OR DEFICIT (—) OF ERP COUNTRIES ON CURRENT ACCOUNT

* Total equals balance with "Total Western Hemisphere" plus balance with "Other nonparticipating areas"; excludes balance with other participating countries and balance between participating country and its dependencies.

^b Estimated dollar savings resulting mainly from recommended temporary transfer of up to 300 additional bulk cargo carriers on bare-boat charter basis.

^c Calculated for "United States" and "Other nonparticipating areas" on basis of 7.5 percent price rise of imports (5 percent for "Other Western Hemisphere") as against 5 percent price rise of exports since July 1, 1947.

^d Calculated for "United States" and "Other nonparticipating areas" on basis of July 1, 1947, price for imports and exports, and a 10 percent decrease in ocean freight rates since July 1, 1947; for "Other Western Hemisphere" on basis of 2.5 percent price decline for imports, July 1, 1947, price for exports, and a 10 percent decrease in ocean freight rates since July 1, 1947.

^e Calculated for "United States" and "Other nonparticipating areas" on basis of 7.5 percent price decline for imports, 5 percent price decline for exports, and 10 percent decrease in ocean freight rates since July 1, 1947; for "Other Western Hemisphere" on basis of 10 percent price decline for imports, 5 percent price decline for exports, and 10 percent decrease in ocean freight rates since July 1, 1947.

^f Calculated for "United States" and "Other nonparticipating areas" on basis of 15 percent price decline for imports and 10 percent decline for exports, and a 10 percent decrease in ocean freight rates since July 1, 1947; for "Other Western Hemisphere" on basis of 17.5 percent price decline for imports, 10 percent price decline for exports, and a 10 percent decrease in ocean freight rates since July 1, 1947.

NOTE.—Figures showing range of adjusted estimates to the nearest hundred million dollars for fiscal years 1949–50, 1950–51, and 1951–52 (line 31 in the attached tables) will not necessarily add across to totals because of rounding. Differences in rounding also account for discrepancies between the range estimates in the attached tables and those contained in the pamphlet Outline of a European Recovery Program. The unrounded data in millions of dollars in the attached tables correspond with those in the Outline of a European Recovery Program.

Mr. JONKMAN. If the State Department under bill H. R. 4840 is going to meet the CEEC requests in full or practically so, will we not be allowing Europe to build up by separate nations, an unbalanced export program as against an integrated Western European program?

Ambassador DOUGLAS. I would not think so, Congressman.

Mr. JONKMAN. For instance, I brought out on Monday five nations, the United Kingdom, Norway, Sweden, France and Denmark who had already recovered their 1938 industrial output schedule. The answer is that might not be enough because for instance the United Kingdom has lost an invisible income of a not inconsiderable amount. I think it must run in the neighborhood of \$1,500,000,000 or \$2,000,000,000 because I heard you say this morning that that is what is allowed for the United Kingdom in 1947-48 schedule.

If the United Kingdom is going to be permitted to make that up by exports, at whose expense is it going to be done and what correlation is there going to be between the development of other countries?

Ambassador DOUGLAS. Obviously the only way in which the United Kingdom can make up the losses which she has suffered during the war is by the restoration of a productive area in southeast Asia, and by an increase in her productive capacity.

The mere fact that her industrial production has increased, in order to compensate the loss does not mean there necessarily need be any great impact of that industrial production on other nations because there is a constant shifting of the area of production and the types of things that are being produced.

For example, Britain is one of the leaders today in the production of certain types of high precision instruments. After all, Congressman, the market place in which I place a great deal of confidence is one of the most automatic adjustments that the mind of man has yet been able to develop.

Mr. JONKMAN. Who programs all the exports under bill H. R. 4840?

Ambassador DOUGLAS. From where?

Mr. JONKMAN. From here, under the Marshall plan, who programs them?

Ambassador DOUGLAS. First of all, there is the problem of determining in respect to foodstuffs, that amount which will be available for export, and that amount which will be retained for domestic consumption. That function is discharged by the Department of Agriculture.

Mr. JONKMAN. I understand that you, with our help, are going to let the law of supply and demand or the market price decide who is going to progress most under this program of the 16 European countries?

Ambassador DOUGLAS. I am saying, Congressman, that these participating European countries have to submit themselves to the market price, so far as their exports are concerned.

Mr. JONKMAN. I repeat, if you are going to make up the deficit that the United Kingdom has lost, by loss of its invisible income, that she had far more than any other country of that, are not things going to get out of balance, and will we not get the blame for it? Also, are you not getting right back to the 1938 situation and the struggle for trade supremacy and all its consequences?

Ambassador DOUGLAS. I doubt it very much. The alternatives, Congressman, must be viewed too. What happens to the United Kingdom if she does not develop?

Mr. JONKMAN. Of course, the answer to that might be in the question, What has she done up to this time? Has she done any worse since the exhaustion of her \$3,000,000,000 loan?

Ambassador DOUGLAS. It has not been exhausted yet, but there has certainly been a reduction in the ration in Britain since the crisis began to develop in August.

Mr. JONKMAN. Well, she has improved her coal output, has she not, since this spring?

Ambassador DOUGLAS. She has.

Mr. JONKMAN. And she has been very leery about using any of the \$3,750,000,000 since that time, has she not?

Ambassador DOUGLAS. She has.

Mr. JONKMAN. What is the difference?

Ambassador DOUGLAS. She has been compelled to reduce the food ration, and she has drawn down on her reserves at an extraordinarily rapid rate. Now there comes a time when those reserves are completely exhausted and then, Congressman, what happens?

Mr. JONKMAN. My point is what occurs because of certain influences or what cause brings what effect. Now the United Kingdom began to feel that her credit was running out under this \$3,000,000,000 loan, so she has reduced her luxury imports, has she not?

Ambassador DOUGLAS. Yes. She has imposed a very, very heavy tax on movie imports, but, Mr. Congressman, the total net drain in dollars on account of American movies displayed in England is approximately \$60,000,000 a year. I do not say that is not worth saving to the United Kingdom but it is a mere drop in the bucket. If you are talking about exhaustion of the British loan, I can give you some figures of a different order of magnitude.

Mr. JONKMAN. Do you not think we should have an independent administrator to carry out this program?

Ambassador DOUGLAS. I agree completely with the bill which is before you, in that it contemplates the setting up of an independent administrator, but it does not contemplate that the administrator will have the authority to allocate that amount of foodstuffs that will be made available for exports and that amount which will be maintained in the United States. It does not contemplate that each of the Secretaries have the power to issue export licenses. Those authorities are now in other agencies of the Government and it does contemplate that insofar as foreign policy is concerned he takes his guidance and direction from the Secretary of State. However, this is an independent administration that is being established and the administration has to be fitted into the established agencies of government, with the authorities which they possess, unless of course it would be the desire of Congress to repose in the administration charged with the responsibility of the European recovery program all the powers that have to do with the internal economy of the United States.

Mr. JONKMAN. After all, does it not require sound business sagacity and management as opposed to good fellow and good neighbor policies?

Ambassador DOUGLAS. Congressman, it requires a man of extraordinary ability, broad business experience, wisdom, prudence, and courage. This has to be done in a businesslike way that will com-

mand the confidence of the Congress and of the people of the United States.

Mr. JONKMAN. Except in rare occasions where a vital foreign policy of the Government might be involved, he should be permitted to go ahead on his own.

Ambassador DOUGLAS. He should be permitted to conduct his operations except insofar as the internal economy of the United States and all of the authorities possessed by other agencies that have to do with it are concerned, and except insofar as questions of foreign policy are concerned.

Mr. JONKMAN. That does not permit the administrator even to program the European needs?

Ambassador DOUGLAS. It is contemplated under the bill that the administrator shall review the requests received from abroad, shall review and determine them.

Mr. JONKMAN. Is his the final determination?

Ambassador DOUGLAS. Yes. It is always subject to the other agencies of Government having to do with the internal economy of the United States and always subject to the foreign policy of the United States.

Mr. JONKMAN. It comes back to the State Department?

Ambassador DOUGLAS. As far as foreign policy is concerned, but I would point out to the Congressman that the Administrator has no authority over the internal economy of the United States and that amount which shall be made available for export. He has to take the allocations made for that purpose by another agency of the Government that is charged with that responsibility.

Mr. JONKMAN. Assuming that is true, we also have to take the advice and instruction of the State Department as to where he puts it, and what country he favors.

Ambassador DOUGLAS. No, he does not, not necessarily. If the Secretary of State felt that a certain act should be taken which was beneficial to the foreign policy he would so inform the administrator. Or the Secretary of State might feel that a certain program contemplated was contrary to the interests of the foreign policy of the United States, and the Secretary would under the language of the act be in a position to intervene and to prevent that act from being taken unless of course the administrator would disagree with the Secretary of State, in which event if he were a strong man and the kind of man who has to be selected to administer this program, he appealed to the President of the United States.

Mr. VORYS. Would the gentleman yield?

Mr. JONKMAN. I will be glad to yield.

Mr. VORYS. I think it would be a splendid thing just as a suggestion if this Administrator had the background for instance, of having been budget director, president of a foreign university, president of a great insurance company, and having had some familiarity with the inception of this plan, and Ambassador to the Court of St. James.

Mr. BLOOM. Are you talking about Ambassador Douglas?

Mr. VORYS. I was speaking purely theoretically about someone who had that particular set of qualifications.

Ambassador DOUGLAS. It is a hypothetical personality unknown to anybody in this room.

Mr. VORYS. Any resemblance to any living person is purely coincidental.

Ambassador DOUGLAS. I am delighted that he is a hypothetical person, because if he was not a hypothetical person he would have some remarks to make in rebuttal.

Mr. JONKMAN. I would have liked to have had this break-down country by country earlier. Perhaps I should defer it until a time when Mr. Thorp again takes the stand but because of your intimate and broad knowledge of European affairs, I would like to question you on it somewhat.

On Monday it was agreed that of the 16 countries, 7 countries at least could be eliminated, as far as grants were concerned. Those seven countries were Ireland, Iceland, Portugal, Switzerland, Turkey, Sweden and France.

Ambassador DOUGLAS. France I think was not one. I was not here, Mr. Congressman, at the time.

Mr. JONKMAN. I did not intend to mention France. I will repeat them: Ireland, Iceland, Portugal, Switzerland, Turkey, Norway, and Sweden.

Anyway, that does not concern you particularly because you say you were not there. Mr. Thorp admitted that he felt they should be eliminated as far as grants are concerned. We then came to the question of Denmark.

Ambassador DOUGLAS. May I ask Mr. Thorp if he would like to say something just on that point?

Mr. THORP. I just would like to say, Mr. Jonkman, I think if we checked the record we would find there was no firm and flat admission, because I do not think one can make an absolute judgment on these matters, but I did state that it was in my judgment a very real possibility.

Mr. JONKMAN. I think with reference to one or two, you said "Probably they should be excluded from any grants."

However, when we came to Denmark I called attention to the fact that Denmark had reached its prewar industrial production—that is for 1938—and also its prewar agricultural production, I believe. I was not so sure about that. The opinion at that time was that Denmark should not be excluded as the other seven had been.

Now I am reliably informed by an official of the United States Government who talked with a high official of the Danish Government last fall in Denmark, and when that Danish official was asked "Well, do you expect to come in under the Marshall program," the answer was "Well, we did not expect to. We are in sound financial condition, our credit is good and we did expect to float a private loan in the United States which we think we can do. However, all the others are coming in and we might as well get our share."

Have you had any knowledge of the conditions in Denmark as to whether Denmark should be favored with grants-in-aid?

Ambassador DOUGLAS. I am sorry I will have to beg off on that question because I do not know about the internal economic and financial position of Denmark.

These country-by-country reports were prepared by technical committees and have just been published. I have not had an opportunity to examine each one of them. The only one that I have taken a hasty look at was the one covering the United Kingdom.

Might I just make this observation: You referred to the fact that the industrial production in the United Kingdom was now above the prewar level.

I presume you were referring to the total index of production, and in that connection it is significant and important to point out that agricultural production in the United Kingdom—and of course agricultural products are not exported—is approximately 30 to 33 percent higher than before the war. When one lifts the agricultural production out of the total index of production in the United Kingdom, one gets a very much smaller index of industrial production than the figures on their face would indicate to be the case.

Mr. JONKMAN. I think my statistics came from the CEEC report, and I think the United Kingdom was about 2 percent above.

Ambassador DOUGLAS. However, not 114 percent which one figure indicates which I have just seen.

Mr. JONKMAN. That is wrong, the 114 percent.

Ambassador DOUGLAS. Insofar as industrial production is concerned.

Mr. JONKMAN. If that supposition is true, do you think you ought to extend aid to those countries under those conditions?

Ambassador DOUGLAS. I think, Mr. Jonkman, to the fullest extent possible, the extension of credit to some countries, and to concerns within countries, should be made either through the private investment channels or by the International Bank which was established for that purpose.

Mr. JONKMAN. Then the answer is "No"?

Ambassador DOUGLAS. My answer is "No."

Mr. JONKMAN. What do you think of the stability of a loan that is made under the first stated condition? It is a matter where we have an invitation here, come one, come all, and while we do not need it, we could float the private loan and we are going to take advantage of it. Do you think it offers a good basis for repayment, and a feeling of obligation to repay?

Ambassador DOUGLAS. I think it is a matter that has to be very carefully and industriously reviewed and screened by whoever is in charge of the administration of this program.

Mr. JONKMAN. Without casting any reflection on any of the 16 countries, our past experience with foreign loans has not been so good. There is one little country who has had a sound concept of its obligations and that is not one of the 16 at the present time.

Ambassador DOUGLAS. That raises a very complicated question. Some defaulted not because they wanted to but because they had no choice.

Mr. JONKMAN. Is it not also true that if you take this plan in its general aspect, these participating countries can be said to have been given a certain consideration for coming in, and might they not at a later date feel that that was sufficient consideration for what they received?

In other words, if these seven countries as I have mentioned are just coming in to help the other countries, and not because we would help them on their own, are they not giving a consideration for whatever they get?

Ambassador DOUGLAS. I am not clear as to whether the 7 countries to which you have referred should be placed in that category, but these 16 participating countries met to do certain things, and even though

some of them did not require credits—some of them can pay, apparently, on the barrelhead and some of them can meet their requirements through the normal investment channels—they are nevertheless a part of this community and as you suggest, as recovery in the other countries proceeds general recovery and stability of the whole area advances.

More than that there have to be certain undertakings of a joint and cooperative nature, such as a hydroelectric development in which several of them—one perhaps can pay on the barrelhead—have an interest in development.

Mr. JONKMAN. What do you know about the three countries, Belgium, Luxemburg, and the Netherlands, as to whether or not we should loan to them at the present time?

Before you answer that will you answer this question: Should they receive grants in aid which are not expected to be repaid?

Ambassador DOUGLAS. I confess I have not examined the internal condition of these individual countries country by country with sufficient care to give an answer to your question which would be a considered one. More than that, in these matters, the question of whether a country should receive a grant or whether it should receive a credit is a matter that must be determined, it seems to me, in the light of the evidence, and all the evidence, and the time the program of that particular country comes to the United States for final and definitive action.

Mr. JONKMAN. I have not discussed the United Kingdom to any great extent or France, but that leaves, with those and those I have already mentioned, Austria, Italy, and Greece. I would have liked to have seen that break-down but is it not true that the bulk of the grants will be to the five members; the United Kingdom, France, Austria, Italy, and Greece?

Ambassador DOUGLAS. To give an ill-considered answer; yes.

Mr. JONKMAN. Of course you would have 20 percent to 40 percent loans, so the bulk will be grants in aid.

Ambassador DOUGLAS. That was the calculation made by the National Advisory Council.

Mr. JONKMAN. What effect do you think that is going to have on these smaller countries? They are going to feel that all they did is receive a loan which had to be repaid while the bulk of the money is given to the larger countries in the nature of grants in aid. What is that going to do to the status of the loan?

Ambassador DOUGLAS. There are some smaller countries in apparently very sound financial condition. I cannot imagine there would be any particular resentment in a smaller country that is on a solid and sound position merely because it did not receive a grant, whereas another country, though it might be larger that was in a dilapidated and tattered state, did receive a grant. Indeed the smaller country might have a very great interest in the recovery of the larger country because the larger country might provide a broader market for the smaller country which it could not enjoy with the larger country remaining in a depressed state.

Mr. JONKMAN. Let me remind you of a local relief experience that we have had right in this country when, for instance, people who had been frugal and had saved and had a home—which they could not eat—were refused relief when that was all they had, while people

who had been spending and who had been wasting received the best of everything.

Do you remember the discontent that was caused by that, and would not it be human nature to have that same thing in Europe if we are going to give loans to some countries and grants to other countries?

Ambassador DOUGLAS. I cannot prophesy, Congressman, how these respective countries may respond. They have all joined the CEEC. They have all entered upon this cooperative undertaking, limited though some may believe it to be, they are all concerned with the recovery and stability of the general area. Their national security, too, rests in large measure upon the restoration of stability.

Mr. JONKMAN. I do not want to get argumentative, but I do not think we have to prophesy, we only have to go by experience and human nature. You know we are talking about calculated risks, but there is a risk in calculations too, that we should not have trouble with if we have past experience to guide us. I think we should look ahead and see where we will be 4 years from now.

There is another question that bothers me, for instance, In those three countries, Austria, Italy, and Greece, has anybody any reason to think that if the present Communist turbulence or interference continues that we will be any further at the end of 4 years with those countries than we are now at the end of 3 years? In other words, that interference there is the sabotage of all effort and discourages all initiative because the people in those countries just do not know where they will be a year from now.

Have we any reasonable expectation in those three countries of establishing the 1938 equilibrium, if they had it then?

Ambassador DOUGLAS. Restoring at least stability in the area, and not necessarily the 1938 level?

Mr. JONKMAN. Yes.

Ambassador DOUGLAS. I will make this observation, Congressman, and it is a considered one that I have no doubt that the interim-aid bill which the Congress passed, and the prospects that the Congress will approve a European recovery program, contributed incalculably to the determined resistance of the French Government against the recent endeavor on the part of the Communists to interfere with the industrial and economic life of France through a series of strikes and thus perhaps to achieve power.

Mr. JONKMAN. I am glad to hear that come from you. You have been on the ground and you know what is going on there.

Ambassador DOUGLAS. I think that is a fair observation to make;

Mr. JONKMAN. I think the American people want some reasonable assurance of the probable success of their efforts.

I have one more question, brought up at that discussion, this morning about the effect of our exports on the domestic price situation. It has been said in the past by the highest authority, for instance, that the high prices are caused by the higher living of the American people, and in the same statement, an attempt has been made to ascribe high prices to our foreign-aid program, but this statement is not borne out by the past. I would like to quote that from this angle: Supposing in our grain reduction we had 1 or 2 percent surplus, there would be no high prices merely because of scarcity, would

there, if we had 1 or 2 percent surplus? To make clear what I ask, let me ask this question:

The moment we ship abroad 5 percent, and we have a shortage of 3 or 4 percent, there would immediately be a scramble, not to be caught in that shortage of 4 percent, or to catch those who have been caught short and sell them goods at increased prices. Would that be true?

Ambassador DOUGLAS. A surplus presupposes that which is consumed and that for which there is no demand. Now that which is consumed, and that for which there is a demand that is satisfied, is contingent on price.

It is very much like a study I saw 14 or 15 years ago upon the capacity to produce in the United States. It was a fine tabulation and calculation but it completely ignored the price at which commodities could be produced, so that the determination of surplus is related to the prices.

Mr. JONKMAN. You do not answer my question. I would like to have an answer to the question now: As long as there is a 1 or 2 percent surplus, we would have no increased prices because of threatened scarcity, except you could speculate that it might be wrong, but assuming that figure, you would not have that.

Ambassador DOUGLAS. Except as a surplus itself, if any, might be an incident of price mechanism.

Mr. JONKMAN. Under that condition if you exported 5 percent of your production in commodities, say wheat, you would immediately have a shortage, would you not, and that would cause a scramble for purchases, and, of course, raise prices; is that not true?

Ambassador DOUGLAS. It might have that effect.

Mr. JONKMAN. Would it not inevitably have that effect?

Ambassador DOUGLAS. It probably would have that effect; yes.

Mr. JONKMAN. Would it not inevitably have that effect?

Ambassador DOUGLAS. If the prices were such that people wanted to buy.

Mr. JONKMAN. I am not an economist, and I do not know much about the grain market—I am glad to say—but I have heard men who understood the grain market say that as much as 100,000 bushels shortage in one year in wheat or corn would have 9 or 10 times the impact such a thing should have in prices merely because there was an estimated shortage. Would you agree to that?

Ambassador DOUGLAS. I should think I would, Congressman, yes.

Mr. JONKMAN. So after all our export program is the fly in the ointment and is a serious impact on high prices, is it not?

Ambassador DOUGLAS. I do not think it is by any manner of means the only factor. There are a whole variety of other factors. There is a tremendous amount of credit being built up or accumulated in the United States largely as a product of the war and other policies.

There are other things that have occurred in the United States which have had their impact upon prices. The recovery program for 1948-49 contemplates a smaller volume of exports than the volume of exports in 1947; a smaller volume of wheat, a smaller volume of almost all commodities. Therefore, under the European recovery program for the 15 months there should be some relief as compared with the preceding year.

Mr. JONKMAN. I think that would be true, but we had high prices last year also and if instead of shipping 400,000,000 bushels of wheat to Europe, you kept them here and had a surplus, what would it do to your \$3 wheat, if you could not dispose of it?

Ambassador DOUGLAS. I would imagine that there would be a complete depression of the market.

Mr. JONKMAN. You would not buy long?

Ambassador DOUGLAS. That is right. I would suggest, Congressman, that possibly Secretary Anderson will testify before this committee. If it is not contemplated that he do so, I refer you to his testimony before the Senate committee yesterday.

Mr. CHIPERFIELD. Mr. Ambassador, Dr. Eaton suggests we stop at 4 o'clock. If you can come back tomorrow afternoon at 2 o'clock we will then have an opportunity to cross-examine you and finish up with the cross-examination. We will hear from Secretary Forrestal, I think, at 10 o'clock.

Ambassador DOUGLAS. Thank you very much, Mr. Chairman.

(Whereupon, at 4:05 p. m., the committee recessed to reconvene at 10 a. m., Thursday, January 15, 1948.)

UNITED STATES FOREIGN POLICY FOR A POSTWAR RECOVERY PROGRAM

THURSDAY, JANUARY 15, 1948

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met at 10 a. m., in the Ways and Means Committee room, New House Office Building, Hon. Charles A. Eaton (chairman) presiding.

Chairman EATON. We will come to order.

Mr. Secretary, we are glad to have you with us this morning.

STATEMENT OF JAMES FORRESTAL, THE SECRETARY OF DEFENSE

Secretary FORRESTAL. Mr. Chairman and members of the Foreign Affairs Committee of the House, the Secretary of State, in supporting before your committee the program of United States assistance known as the European recovery program, said there were three basic questions involved:

Why does Europe need help?

How much help is needed?

How much help should be given?

His answers to those questions were clear, and in their broad aspects, supported the recommendations of the executive branch of the Government as placed before you by the President in his message to the Congress of December 19. What I have to say I consider to be an extension of views already presented, except with this difference: That I am speaking from the somewhat more limited point of view of our military security.

All of you are familiar with, and some of you have seen, the conditions in Europe that make necessary the European recovery program. The instinctive generosity and humane impulses of Americans would ordinarily move us to aid our neighbors in distress. Without taking too much complacent satisfaction in the statement, we are a generous people, and in keeping with that tradition, we have already made vast contributions to the alleviation of distress on the European Continent. There is, however, another and fully as compelling a reason for us to do our utmost to bring about European recovery.

As Secretary of Defense my concern is directed particularly toward the considerations of national security which face us in this particular problem. And so in answering the question which General Marshall posed, "Why does Europe need help?", I shall address myself principally to the factors affecting the security of the United States.

As in most other periods of history, there is a conflict of world politics taking place in Europe today. There is nothing more unusual about this political conflict, viewed in the long light of history, than there is about political differences in our own country, with this one exception: That we are in a world today in which, broadly speaking, there are two great powers, the Union of Soviet Socialist Republics and the United States, and that there is a vacuum in middle and western Europe as a result of the destruction caused by, and visited upon, Hitler's Germany. In most political differences a balance of power is exercised by moderate influence in the form of men or nations who are able to contribute the good offices of compromise and amelioration. Today, however, because of the vacuum in Europe, the nation components of what would otherwise be the balance of power find their position impaired by economic instability, political unrest, and consequent military ineffectiveness.

In these circumstances we are seeking to redress the balance of Europe by helping the western nations to get on their feet. Our purpose in doing this is not to forge an iron ring around any nation or to set up an aggressive military threat to any other nation. Our purpose and our object is totally and exclusively to prevent another war by the creation of the political and economic and social equilibrium which is requisite to the maintenance of peace.

Without our aid it is by no means certain that the western European nations can save themselves from economic collapse and political disintegration. In spite of great difficulties and tremendous handicaps, certain of these nations have already made an extraordinary start toward recovery. I have in mind Belgium, Holland, and Luxemburg. Recently, France and Italy have also given indications of a renaissance of national vitality and national will. Two leaders have risen in the persons of Mr. Schuman of France and Mr. de Gasperi of Italy, who have shown the capacity for the exercise of leadership without any corresponding effort to grab for totalitarian power. And in Great Britain there is substantial evidence that the great resilience and moral fiber which served the nation so well when she stood alone against Hitler are again asserting themselves. Coal production has failed by only a small margin of hitting the goal set for 1947 and while the exchange problem is still a continuing source of concern the British have recognized the fact that work and production are the foundations of an adequate standard of living; in other words, that political science as asserted by Bentham, Ricardo, and Adam Smith still has a validity that Marx assumed was gone forever.

The 16 nations which associated themselves in Paris last summer with the plan for European recovery comprise a great workshop with 270,000,000 inhabitants. Should this workshop be integrated, with all its industrial and military potential, into a coalition of totalitarian states, it is possible that we in time would find ourselves isolated in a hostile world. That situation would, in my opinion, be a threat to the peace of the world, to our economic and political position, and, in fact, to the very existence of the United States.

You are familiar with Hitler's success in the middle and late twenties in exploiting both the economic distress which existed in Germany just after the last war and the inequities which he declared were imposed on Germany by the Versailles Treaty. With every

device of political demagoguery, he beguiled and seduced his people with promises of food, employment, and redress of grievances, and with these he laid the foundation for the political movement embraced in the National Socialist Party of Germany. It was these events which led to the tragedy and destruction of World War II. Today, conditions similar to those in which Hitler's evil doctrines fell on politically susceptible ears, might be recreated, not merely in Germany, but in other countries of Europe. Our hope is to prevent that recurrence by the acceleration of a healthy European recovery, where the processes of trade, of business, and a free exchange of goods, commodities, and individual travel can again give men the foundations of hope.

After World War I, the United States, France, and Great Britain, together with other capitalistic countries of Europe, participated in the restoration of the economic stability of Germany. I am one of those who feel that this restoration of economic stability could have laid the foundations for an ultimate republican regime in Germany. It was aborted by the economic crisis of 1929, accompanied by the abrupt cutting off of external credits to Germany, precipitating a chain of events which led to the rise of Hitler. As in all other countries in times of political and economic difficulty, the moderates and the liberals of Germany fell between the pincers of bolshevism on the one hand and Hitler's Nazis on the other. It is my hope that throughout Europe, what we are proposing to do now will restore hope and courage in this great central bloc of ordinarily decent and peace-loving people in every country.

The result can be, and I believe will be, that these nations, if they recover their true sovereignty and their true positions in the society of western Europe, will reassert those principles of individual freedom and determination to live in a free society, which form a large part of our own inheritance. Central in that pattern are, of course, Great Britain and France. From both of these nations we have drawn great lessons in political wisdom, in spiritual and cultural values. I believe that none of us today can accurately picture the effect on our minds and our hopes for the future if we had to witness the surrender of France to a totalitarian authority or the economic collapse of Britain.

And yet if I did not believe that there was a vigor and a vitality in both nations which are capable of surviving, I would not be supporting the programs which your committee is considering. Despair is a disease which is easily communicated, but we must not forget that what I call the epidemic of hope is an even more powerful motivating force in man. The example of an industrious and hard-working Belgium, Luxemburg, and Holland, which is reflected in the now well known Benelux trade agreements, had repercussions throughout Europe and evoked admiration here. I firmly believe that there are similar reservoirs of energy, resourcefulness, and strength in Europe, which can be stirred to beneficial action by the catalyst of American aid. Europe is a trading and commercial continent. The skill and knowledge of business are still in existence and will be vigorously reasserted if we can recreate the background against which trade can flourish: Namely, stable currencies, the elimination of commercial barriers and the withdrawal of restraints upon free enterprise.

Peace and security are not to be viewed merely in terms of great military power or wealth in the hands of the United States—and I

consider it both illusory and dangerous to make the assumption that military power alone in our possession can give us the guaranty that we should like to have for the future.

France had its Maginot Line, Hitler had his blitzkrieg, Philip II of Spain had great wealth and possessions, and ancient Rome had her legionaries, but none of these gave real security. In each case there were conditions which insured the failure of an apparently impervious formula. In our own case the security of the Nation has to be viewed not merely in the light of our military power, but in the light of restoration of balance throughout the world. I use balance, and not necessarily balance of power, but, for I have reference to a balance of political action, of economic health, and also of course of military strength.

The essential requirements of our own people are of course the first charge against United States resources. However, the conclusions of three special committees—those of Harriman, Krug, and Dr. Nourse—are in agreement that our economy in general and our financial capacity in particular, are able to support the proposed program.

The cost of that program for the reconstruction of Europe will be high. It would be idle to say that it will not mean sacrifice, self-denial, and hard work for all of us; but it is a sound investment in the attainment of world peace. It contributes to insurance against war, and combined with the maintenance of a substantial military power at home, will be far less expensive than standing isolated and alone in an unfriendly world.

It is always dangerous to try to draw exact analogies or parallels between periods of history. In the first place, the construction men place upon history is apt to be at variance from time to time, but it seems to me that the position in which we find ourselves today is not unlike that of Britain after the Napoleonic wars. Britain having spent 20 years and much of her resources in defeating the attempt of Napoleon to conquer Europe, was anxious to withdraw from that continent. She found great difficulty in doing so, however, without exposing Europe and eventually herself to a recurrence of the very great threat of which she had just disposed. So Britain had to stay in order to make an effective contribution to the maintenance of the balance of power in Europe.

In my opinion, however, Britain was neither plotting nor planning for her own advantage; her statesmen were merely wise enough to understand the terrible cost of world-wide conflict and the necessity for localizing those conflicts that did occur.

Britain, through the exercise of her influence, was able to keep relative peace and stability throughout Europe for a century. There were, to be sure, many wars, both in Europe and in other parts of the world—but the conflicts were always kept localized. They did not result in vast injury to, or destruction of, the economic machinery of Europe or the political machinery of society. I think it can be said, therefore, that British policy in the nineteenth century was successful.

Our objective in the present recovery program for Europe is the prevention of war. Neither this program nor our national-defense expenditures are designed as a threat against any nation nor as an effort to restrain any nation or to dominate a group of nations. The policy of the United States, as I see it, is directed to the end that free nations shall be allowed to select their own governments, and

that no one country or political concept shall be permitted by force to conquer the world.

We need to maintain substantial military power, but I would rate the need for the restoration of the European community as equally strong.

Chairman EATON. Mr. Secretary, thank you for your very statesmanlike utterance.

We will now resort to questions.

Up to this session, we have not used the 5-minute rule with the result that a number of our members have had no opportunity to ask questions whatever. Therefore, with the consent of the committee, I think we will adopt the 5-minute rule now and make the rounds on that basis, if agreeable.

First, Mr. Chipperfield.

Mr. CHIPPERFIELD. I have no questions, Mr. Chairman.

Chairman EATON. Mr. Bloom?

Mr. BLOOM. Mr. Secretary, what was the cost, if you know, of the prosecution of the war?

Secretary FORRESTAL. I am always dubious about using figures without having them checked and double-checked but my own recollection is about \$350,000,000,000.

Mr. BLOOM. That is the total cost. However, in listening to your very informative address, it came to my mind that the plan we are trying to adopt here is pointed toward winning the peace; is that right?

Secretary FORRESTAL. That is my impression; yes.

Mr. BLOOM. There is no question about it because if we do not do this or do something, we will never have peace until something definite is done. Talking about costs, I just thought I would like to know if the war went along for 30 days, what would that amount be compared to the amount to be authorized under this legislation?

Secretary FORRESTAL. At the end of the war I believe we canceled approximately \$63,000,000,000 of appropriations in the period of 6 months after the conclusion of hostilities in August of 1945.

The total appropriations, as I recall them, of the Army and the Navy in the peak year were on the order of \$100,000,000,000 or over.

I do not have in my mind the per diem cost but relating that to months it would run 8 to 10 billions of dollars a month.

Mr. BLOOM. If we do not adopt this plan, Mr. Secretary, have you heard of any other kind of a plan that should be adopted to achieve the same objective?

Secretary FORRESTAL. I have heard stated as one possibility the suggestion that we withdraw into our own economic borders, so to speak, and create a military power so great that no one would attack us and no one will start another war because of the existence of that power. I think the fallacy in that is, in the first place the creation of that power would involve the mobilization of such a large part of our economic power as well as our manpower, as to deny ourselves that production which we need ourselves to get back to a normal equilibrium.

Mr. BLOOM. That would not be achieving peace?

Secretary FORRESTAL. No; it is an armed armistice.

Mr. BLOOM. Now, Mr. Secretary, I am going to ask a question that might appear rather foolish, but since there were certain questions asked of Ambassador Douglas yesterday, this might be justified:

There seems to be a certain amount of uncertainty throughout the different branches of the Congress and throughout the country about how this plan is going to operate, who is going to operate it, and who will hold the responsibility at the head of it.

Would you want to say, Mr. Secretary, that if the Administrator were to be named in advance, in case the legislation should go through as planned, would that not rather still the fears of a great many people as to what is going to happen in the different places, or how this is going to be administered; to give the assurance to the Congress and the people of the country that Mr. X is going to be the Administrator of this branch and they can be assured by Mr. X being mentioned. I do not mind mentioning the person. It is Ambassador Douglas himself.

It was mentioned by one of the members of the committee, not by me, if it was known that the Ambassador was to be the Administrator of this plan, whatever plan was adopted, would that not be a token of assurance to the committee and everyone that the plan was going to be conducted in a responsible way?

Secretary FORRESTAL. I think the name of Ambassador Douglas would carry a great weight of confidence and assurance that we would have competence in the administration.

I have not examined with any great precision the impact or the exact method of administration. I believe it must conform to two principles: First it has to be within the framework of our national policy and secondly it must have the assurance of efficient administration. In other words the country must be confident that this will be done on the most wise business basis—I combine the words “wisdom and business” consciously. I do not mean to imply that business is always wise, but here I would think one needs both. One needs the experience and confidence of business people, and one also needs the wisdom and statesmanship which will direct the efforts of business.

Mr. BLOOM. The chairman and I went into executive session here and the chairman answered by just one word, and that was “Yes.”

Thank you very much, Mr. Forrestal.

Chairman EATON. Mr. Mundt, we are under the 5-minute rule.

Mr. MUNDT. My total time so far in these hearings amounts to 3½ minutes, so I am very glad to get 5 minutes.

Chairman EATON. Add one minute and a half to that and go ahead.

Mr. MUNDT. Mr. Secretary, you stressed, of course, as the Secretary of National Defense naturally would, the military side of this argument, and you also placed great emphasis on the economic situation in Europe and its contributions to peace.

I would have been a little better pleased myself had you included in your paper some statement to the effect that we cannot just go over there and buy peace with dollars or produce peace through economic activity. We have an educational job to do over there, I think, too.

We have to consider more than the creature comforts of Europe. We must do something to help direct the thinking and to help provide facts about freedom by some method to the people of Europe.

I wonder whether you agree with me that it is highly important that we have an adequate and comprehensive and consistent publicity program abroad to accompany this vast investment which is contemplated here.

Secretary FORRESTAL. I would be glad to incorporate what you said practically intact in my statement. However I think the gain must be made with two things in mind: Wisdom and a limitation to facts. In other words, whatever we do in terms of expounding the American contributions to Europe and the American system of government and freedom shall be done on a factual and not a propaganda basis. I am sure you have the same feeling in that that I have.

Mr. MUNDT. You pointed out that some 270,000,000 people are involved in what you call the workshop of Europe. About 320,000,000 people are now dominated by totalitarian concepts emanating from Russia. If you add to that the people of Spain and the people of eastern Germany who will naturally have to go along with the political philosophy, you have about 600,000,000 in the potential manpower in Europe which, if it ceases to be divided among different concepts of government and it goes into one totalitarian rule, makes a rather good-sized piece of manpower as against about one-fifth of that many in the United States.

As Defense Secretary I wonder what you think might be the costs of trying to arm this country sufficiently to be secure against a technically equipped group of 600,000,000 people anywhere in the world. Would it not be considerably more than we have to spend under the present condition?

Secretary FORRESTAL. It presents a problem of such proportions as to be almost beyond any precise statement. It would run into such a drain upon our own resources and upon our own economic stability as to—I do not like to make extreme statements, but I think it is not unreasonable to say that it should lead to an economic and political result here which might achieve the ends toward which that philosophy is conceived and directs its efforts.

Mr. MUNDT. We hear so much about economy, in which I think we are all interested, but it certainly seems to me the possibility that there is more economy in pursuing some program along this line than there would be by just trying to brace ourselves against just the possibility of an attack by 600,000,000 people. Do you agree to that?

Secretary FORRESTAL. If you divide the world into a camp in which we are, in the Western Hemisphere, opposed and poised against the forces of the rest of the world, it presents what seems to be an almost impossible position for this country.

Mr. MUNDT. Would you agree with me that in order to do this job most adequately and efficiently as well as economically perhaps we should review the attitude we have shown toward the resources of Germany both from the standpoint of utilizing them to improve the economic tone of Europe generally, and to make sure they are not drained off by people who may be against us?

Secretary FORRESTAL. We must not restore Germany to a position where she can rearm and become a new threat in another 25 years. At the same time it is economic idiocy to assume other than that some production can be allowed to continue and make its contribution to what we are talking about.

Mr. MUNDT. That we should not use German resources to arm any potential enemy?

Secretary FORRESTAL. Yes; and with a concerted policy toward Germany, that result can be secured.

Chairman EATON. Mr. Kee?

Mr. KEE. Mr. Secretary, I regret very much not having been here to hear your previous statement.

This committee is not merely going into the problem of the bill before us but into the broad field of foreign policy.

So far we have devoted most of our time to a discussion of the program contemplated and of the provisions of but one of the measures which we have under consideration. That is the measure that provides for the prosecution of the entire program of European relief, together with the appropriation, that is, the amount we are to appropriate to carry it on, and also other matters connected therewith.

We have, however, one other bill under consideration which does not carry the broad program but only provides a means for the administration of the program set up in the bill above mentioned.

I would like to inquire of you, in view of the fact that this measure affects our foreign policy and our foreign relations whether or not in your opinion it should be administered by an agency entirely independent and divorced from the State Department or whether the administration should be under the responsible direction and control of the State Department.

Secretary FORRESTAL. Are you asking me if I think this Administrator should be an operator outside the State Department or under the control of the State Department?

Mr. KEE. Yes; and also, if outside the State Department, whether or not he should be under the control and direction of the State Department.

Secretary FORRESTAL. Before you came in, Mr. Kee, I said I would try to confine what I had to say to the national security aspects of this question; that I had not given close study to the organizational set-up; that, in general terms, I thought two objectives had to be secured; that whatever is done under this program shall be in line with the national policy of the country which is expressed by the Secretary of State, acting for the President; and that it shall be done on a wise basis, a business basis. No matter what you set up in the form of an organizational chart, you must have a man who is compatible and amiable with, let us say, the Secretary of State, with the result that those two men can work in complete harmony.

I cannot envisage this plan being successful if you start out with a man trying to administer this job, either inside or outside, between whom and the Secretary of State there is not complete mutual confidence and sympathy.

Mr. KEE. Should a provision not be incorporated in the legislation, that in the event of any dispute arising with respect to foreign policy, the decision either of the President or of the Secretary of State should be final upon that subject?

Secretary FORRESTAL. I think it has to be, but there again I would regard it as beginning to fail if a dispute arose that had to be settled in those hard terms. I think that the business aspect of this proposal is of vast proportions. When I say "business," I mean economic commerce and trade. Any attempt by one or the other to usurp authority completely could defeat the end results we are after. We are after the restoration of commerce in the world, and one of the essentials is political stability, and essential to political stability is stability of currencies. It is difficult to separate this job into compartments. It is pretty well interrelated.

Mr. KEE. We are dealing not only with the 16 nations of the world, but it affects our foreign policy with reference to all nations of the world; does it not?

Secretary FORRESTAL. I think it has a bearing on the policy of every nation in the world.

Chairman EATON. The time of the gentleman has expired. Mr. Jonkman?

Mr. JONKMAN. Mr. Secretary, on page 3 of your prepared statement, you say:

In spite of great difficulties and tremendous handicaps, certain of these nations have already made an extraordinary start toward recovery. I have in mind Belgium, Holland, and Luxemburg.

You seem to feel so strongly about that, that on page 6 you repeat it. You say:

The example of an industrious and hard-working Belgium, Luxemburg, and Holland, which is reflected in the now well-known Benelux trade arrangements, had repercussions throughout Europe and evoked admiration here.

Those countries accomplished what they accomplished without any help from the United States; did they not?

Secretary FORRESTAL. I do not think that is true, Mr. Congressman. I would want to check this, but they have had a loan from the United States.

Mr. JONKMAN. That is not from the United States.

Secretary FORRESTAL. To me, it is.

Mr. JONKMAN. I do not think that is consistent if you say that is from the United States. They went to the International Bank and borrowed money on good faith and credit.

Secretary FORRESTAL. I see your point. I say they did not do it without external help.

Mr. JONKMAN. However, it was based, as you say, on industry and hard work. They accomplished that before there was any reference made to the Marshall plan. The Benelux agreement was entirely independent of the Marshall agreement.

Secretary FORRESTAL. I think that is a fair statement.

Mr. JONKMAN. Do you not think that is the foundation upon which we should seek to base economic solidarity as well as military security for these people—that they solve their own problems?

Secretary FORRESTAL. I think we propose to do that, Mr. Jonkman. The reason I tried to emphasize the needs for having this under business administration is exactly that. I think the difference between Belgium, Holland, Luxemburg, and the rest of the countries is quite clear. Belgium, for example, wound up the war without great damage to her industrial machinery and she also wound up the war, as you know, with very substantial gold reserves. That enabled her to put into effect a sound currency by, as you know, the freezing of bank accounts to reduce the amount of buyable currency in the market and thereby reduce the pressure toward inflation. She was able to do that by special and peculiar circumstances.

Holland in turn had resources that had not been destroyed. Her trading powers were still in existence.

Mr. JONKMAN. You are departing now from your prepared statement where you base it on industry and hard work.

Secretary FORRESTAL. I include commerce, trading and barter between people as covered by industry and hard work.

Mr. JONKMAN. We know that Holland and Belgium immediately got busy on their currency situation and is not the currency situation the trouble in a lot of these countries, that they have not brought their currency to a strong basis?

Secretary FORRESTAL. That is true, but again I say Holland and Belgium had special circumstances that enabled them to do it more swiftly than for example Britain did with the tremendous debt she incurred.

Mr. JONKMAN. It is my concern and that of a lot of the American people, whether or not our constantly acting as a wet nurse to these other nations that will not get down to hard work and industry is going to be a basis for contribution to economic solidarity and to military security.

In other words, we have been constantly ahead of some of them with help, so that they begin to rely upon us.

Secretary FORRESTAL. I would not challenge your point of view, but I would suggest that the Italians under their existing Government without the use of the Marshall plan but with, I think, the provocative help of the idea of the Marshall plan or the European recovery program, in the last 6 months made very rapid strides toward the very thing you are talking about. The Italians have gone to work and with a will that has been quite contrary to the aims and hopes of the Communist Party.

I think the same applies to the accomplishments in recent weeks of the Schuman government in France. I think the steps they have taken are precisely the things you are talking about. In other words, the imposition of taxes that are designed to produce a stable currency.

Mr. JONKMAN. That has been done in what country?

Secretary FORRESTAL. In France. I am referring to the five laws which Schuman was able to get through the French Parliament in the last 2 weeks.

Mr. JONKMAN. You see, after all we have been ahead of them each time. Sometimes I think, for instance, after getting through with UNRRA, our residual relief bill was to a large extent based upon fallacies.

Then we were ahead of them with the Marshall plan and came out with the interim aid bill. Now we have this great construction program.

The point I want to make is that Holland and Belgium and Luxemburg, knowing that they had to solve their problems, did solve them.

If we are constantly going to be pouring in money there, obviating or eliminating to a large extent the necessity of their solving their own problem, are they ever going to do it?

Secretary FORRESTAL. I would differ with you on the fundamental thesis, in that I think Holland, Belgium, and Luxemburg were able to solve their problems because of the hope of continuation of the European society.

I think that the manifestation of that courage and belief is a great example for the rest of Europe. I believe that it is the fact that we have given every indication of not leaving Europe immediately that sustains the Italians and the French now to go back to work.

I think without that—and I again dislike extreme statements—but I think you have the seeds of chaos and anarchy which is the ground in which Hitler or someone similar comes into power.

Chairman EATON. The time of the gentleman has expired. Mr. Jarman?

Mr. JARMAN. We all share the great admiration for the three countries you mention. They are doing fine. I wonder if it is an absolutely correct comparison to compare them with England.

How long did Holland and Belgium remain in the last war?

Secretary FORRESTAL. They were supposed to have been exposed to the direct impact of it for a very limited time. I would say from April 1940 to June. I think that was around the date.

Mr. JARMAN. Holland was a neutral in the first war, and Belgium lasted considerably longer during the first war?

Secretary FORRESTAL. That is right.

Mr. JARMAN. Whereas England stood out from beginning to end in both wars, and stood out alone for about a year, I believe, in the second one.

Therefore, for the reasons I believe you mention, I am not sure it is quite a correct comparison between Holland, Belgium, and Luxembourg and Italy, England, France, or any of the other countries.

They were overrun. I am not sure about the assistance rendered them. I believe their being occupied countries caused them to be eligible for UNRRA relief, which was not true for England, or Italy until we amended the law, because Italy was an enemy power.

The only question I had in mind to ask you has been checked on by several of my colleagues. I wish to follow it up a bit. The comparison of the cost of the so-called Marshall plan and the alternative is the question. You spoke of the fact or of the necessity for fortifying this continent. I believe that is the way you referred to it. That is the way I have referred to it in speeches. You spoke of the necessity for manpower which would occur in that event and how it would affect our economic situation.

Secretary FORRESTAL. That is right.

Mr. JARMAN. In addition to that what is the President's budget for national defense, about \$10,000,000,000?

Secretary FORRESTAL. It is \$11,100,000,000.

Mr. JARMAN. In addition to the economic situation, and with the manpower which would necessarily be withdrawn from our productive economy, I am wondering how the Marshall plan would compare in cost with fortifying this continent, setting up a standing army such as none of us ever conceived of in peacetime.

Have you ever thought about that comparison?

Secretary FORRESTAL. I have made some tentative calculations but the sum becomes so fantastic that I stopped the calculation.

One particular item would run to about \$8,000,000,000, if we are to achieve this absolute security that we think of in our minds.

Mr. JARMAN. In my discussions of this matter, I have just been making a rough prediction without any calculations at all. I do not know how nearly correct it is or how far wrong it is but I have expressed the opinion that the alternative—that is, permitting Europe and perhaps the remainder of Asia to fall victim to communism—in other words, for us to stand out against the rest of the world, fortify this continent and maintain a standing army accordingly, would probably cost this country each year what the Marshall plan would cost throughout the 4 or 5 years. In other words, \$17,000,000,000.

Secretary FORRESTAL. I think there is no question about that. During the war I learned to think not so much in dollars as in available resources and manpower, and the subtraction from our present economy of the manpower, materials, and resources needed to create such a military program and give us the absolute security we talk about would immediately force us to accept a much lower standard of life. That is another way of saying what you have said without using dollars.

Mr. JARMAN. I am glad to have my predictions verified by such an able and illustrious authority.

Chairman EATON. Mrs. Bolton?

Mrs. BOLTON. May I approach this from a little different angle? Inasmuch as you are Secretary of Defense, in your study of the defense of this country you have taken into consideration the areas of the world which about upon the U. S. S. R., I assume?

Secretary FORRESTAL. Yes.

Mrs. BOLTON. Those are, of course, Greece, Turkey, Iran, and Afghanistan. That is as far as western Europe is concerned.

The loss of foodstuffs and supplies of various kinds, when the iron curtain dropped upon eastern Europe and Europe was then denied the foodstuffs and so on which she had been accustomed to getting from those areas. What areas had you considered as possible in the supplying of those same necessities to Europe? They cannot all come from the United States.

Secretary FORRESTAL. One area is the Middle East.

Did you refer to economic items and food?

Mrs. BOLTON. Yes.

Secretary FORRESTAL. The whole Middle East is the source of energy fuel for Europe. That is one area. Of course the Far East is the source of many raw materials, both for Europe and ourselves.

I think the trouble with the world is, unfortunately, in one sense so interrelated that it is hard to isolate any part of it and say, "This is the really central strategic point economically or strategically."

Mrs. BOLTON. Have you considered Africa as a very possible source for future food, for instance?

Secretary FORRESTAL. There is no doubt that Africa is one of the great potential sources of the world in terms of tillable land, mineral resources, waterpower, and land space for population.

Mrs. BOLTON. Do you know in the consideration of this whole plan for the recovery of Europe, whether thought has been given to the colonies and possessions of those same western European countries on the continent of Africa?

Secretary FORRESTAL. I cannot respond to that question, Mrs. Bolton. I do not know the answer to that.

Mrs. BOLTON. There seems to be no doubt about the possibility of developing the agricultural productivity of certain Near East areas to supply European food shortages caused by the loss of eastern Europe sources.

What would be the result if the fuel supply of the Near East and Middle East were cut off from Europe?

Secretary FORRESTAL. I think it would have a profound effect on the success of this recovery plan for Europe. I am not speaking now of the United States. The fuel from the Middle East and energy from that source is essential to the entire world, and particularly to Europe.

Mrs. BOLTON. You would be in agreement that the development of the Euphrates Valley, for instance, with its immensely rich soil, could be made of inestimable value in the feeding of western Europe?

Secretary FORRESTAL. I have been informed that that is one of the great possibilities, that the Tigris and Euphrates Valleys are subject to great development.

Mrs. BOLTON. Would it not be of vast significance if other countries did what Syria has done: refused to ratify agreements of the pipe lines?

Secretary FORRESTAL. Indications of that are profoundly serious in my mind.

Mrs. BOLTON. In the matter of the whole frontier—Greece, Iran, Afghanistan—would it seem to you a moment when we might, in renewing our agreements which I believe are due in the spring with such countries as Iran, endeavor to increase the amount of training and help that we gave in the development of the airport at Tehran, and so on; would it seem to you a valuable thing?

Secretary FORRESTAL. That is a little bit outside of my role. It would seem to be the desirable thing.

Mrs. BOLTON. I am speaking now from the defense standpoint of the United States.

Secretary FORRESTAL. You related what you said to the assured continuity of what I call that source of energy fuel both to the United States and Europe. There is no question about that desirability.

Chairman EATON. The time of the lady has expired.

Mr. Mansfield?

Mr. MANSFIELD. Mr. Secretary, in response to a question previously raised as to what the alternative of this plan would be, if this legislation was not accepted by the Congress and put into operation you stated, I believe, that you had heard that we would have to intensify our national defense; and you further stated, if I am correct, that, in your opinion, this would be a disintegrating factor, because we would have to take so many people out of industry, and the end result would be economic dislocation; is that correct?

Secretary FORRESTAL. Yes.

Mr. MANSFIELD. Then I take it from your point of view, the chief consideration as far as this particular measure is concerned, is the re-creating of something approximating normal, world, commercial relationships.

Secretary FORRESTAL. Yes.

Mr. MANSFIELD. What would be your opinion if we put into this legislation strong enough language to make it mandatory that from countries which received loans and grants and which possessed the necessary natural resources, we in return would expect to receive strategic minerals in short supply, or totally lacking in this country, so that in that way we could build up our national stock pile.

Secretary FORRESTAL. In principle I think it would be a desirable thing. I should want the view of the State Department as to whether language which sometimes you think is quite simple and quite harmless might prove too limited, but the principle of that I would subscribe to and I have asked Mr. Arthur Hill, the Chairman of the National Security Resources Board, which is responsible, by the way, to the President and not to me, to take a look at the category of materials which we would find it desirable to import. Whether

to put it in legislation or not, is a matter I would defer to the judgment of the State Department, but that objective is a good'one.

Mr. MANSFIELD. Thank you, Mr. Secretary.

Chairman EATON. Mr. Merrow?

Mr. MERROW. Mr. Secretary, on the bottom of page 2 and the top of page 3, you have stated that today the nations in Europe "find their positions impaired by economic instability, political unrest, and consequent military ineffectiveness."

Now if this plan is put into operation over the next 4 years, how effective are these nations going to be from a military point of view at that time?

Secretary FORRESTAL. I certainly would be very ill-advised to try to make any prediction of the degree of their recovery of military effectiveness, but we know that if the balance of political stability is to be reestablished, there must be some start made.

In the first place, we have to assume that France and Britain retain and improve their military position. That does not mean that they are preparing for war, it simply means the normal return of the elements of sovereignty; in other words, armed force. The degree of it I would not venture to predict.

Mr. MERROW. They would be in a better position economically and politically at the end of 4 years, but if at that time, for instance, Soviet Russia decided she wanted to take the nations of Western Europe by force, do you think they would be able to resist for any period of time?

Secretary FORRESTAL. That would lead me into a field of military speculation that I am not professionally qualified to indulge in.

I do not care to evade your question, but I would like to go back to this personal belief: That the hope of the world is the restoration of equilibrium; that even Hitler hesitated about the disturbance of equilibrium, because any man who has huge power is aware that when he commits himself to aggressive action, the consequences are apt to be beyond his own immediate sphere and beyond his prediction, so that no matter how much power any nation has, even if the totality of force and power against them makes the odds very much in their favor, I think they still weigh carefully before they commit the final act of war.

Mr. MERROW. What disturbs me, Mr. Secretary, is this, that these nations over a period of 4 years will be built up, if we spent this proposed money, and therefore they will be richer prizes for any aggressor.

On page 4 you stated:

Should this workshop be integrated, with all its industrial and military potential, into a coalition of totalitarian states, it is possible that we in time would find ourselves isolated in a hostile world.

It appears to me that if we are not thoroughly and adequately prepared, that after we have built them up economically and politically they could be seized in a very short period of time, and the aggressor would have the military potential that we have built up.

Secretary FORRESTAL. I think that the return of effectiveness of diplomatic influence, of economic strength, of physical security, are all interrelated; and I believe that they march together. I think that the money we put into these countries will not go to create vast armies, but I place great insistence upon the history of Europe which

has been the effort of many men to conquer, and many men have come very close to success, and no one ever has succeeded. There is a tremendous core of capacity for suffering, for life, and for freedom in Europe.

I think what I call the catalyst of our aid can bring that to light.

Mr. MERROW. On page 7 you have spoken about "substantial military power at home" to go along with our proposed plan for rehabilitating these countries.

Do you think that anything short of complete control of the air is "substantial military power" to guarantee the security of this investment?

Secretary FORRESTAL. Well, if you talk about complete control of the air, Mr. Merrow, you would have to localize it a little bit more.

We are secure at the moment, so far as this continent is concerned. We have control of the air.

Mr. MERROW. We have only about 150 long-range bombers that we could put in the air, and that is pretty insignificant, is it not?

Secretary FORRESTAL. Not for the security of this country; the combination of our air forces and the planes in reserve and our naval air are adequate, but we are talking air power in wider terms.

I am in agreement with you, but I wouldn't want to restrict it only to the protection of our own shore line or of our own air space.

The future use of strategic air power may develop in somewhat the way that the use of naval power did in the nineteenth century. You may come to air fleets in being as the ultimate of political and military power. But when you have those air fleets in being, you will also have to have places from which they can depart, and that sets off a long series of discussions which go a little bit beyond and substantially beyond, in fact, the mere possession of airplanes.

Chairman EATON. The time of the gentleman has expired.

Mr. Javits?

Mr. JAVITS. Mr. Secretary, is this role assigned to the Department of Defense in the European recovery program?

Secretary FORRESTAL. There has been no specific assignment, but I would doubt that they have had time to make such a specific assignment to anybody.

Mr. JAVITS. Let us take two questions which I am directly interested in, and a great many other people.

First, the integration of 16-nation security forces. Have there been any discussions of any effort to do that?

Secretary FORRESTAL. No.

Mr. JAVITS. And, second, is it not a fact that the whole amount involved in the recovery program will be materially affected by the amount of money which each nation spends on its security forces?

Secretary FORRESTAL. Well, that is a matter of evolution, I think. It is obvious that the first steps are economic and political.

Mr. JAVITS. Is it not a fact, for example, that the British are cutting down their military establishment, for example, Palestine and Egypt; and is it not a fact also that they are pulling out of Germany to the extent of economic maintenance of that area as a military measure, for reasons of economy?

Secretary FORRESTAL. I think that is true.

Mr. JAVITS. And that that materially affects the amount of efficiency in the budget which this European recovery program purports to take up?

Secretary FORRESTAL. You say that accounts for the deficiency?

Mr. JAVITS. Not the whole deficiency, but it contributes to the budget deficiency or the budget amplitude which is dealt with in this European recovery program.

Secretary FORRESTAL. Certainly it has an effect to the degree that England shrinks its defense. There is that much more available for other purposes.

Mr. JAVITS. And the material effect?

Secretary FORRESTAL. Well, I would like to look at the financial end. My recollection is that Britain is spending about \$2,800,000,000 for defense, but I would think it is material.

Mr. JAVITS. Does it not seem to you, Mr. Secretary, that it would be necessary that our Department of Defense be assigned a definite role in the European recovery program in order to see whether the amount being spent for these security establishments is appropriate or not, and to what extent it may be diminished, or perhaps it needs to be enlarged, or to what extent it needs to be integrated, and also the Secretary well knows the essence of this program is self-help and mutual cooperation; should that not extend to the defense forces as well as to economic matters?

Secretary FORRESTAL. Well, I don't need to point out to you the delicate and rather sensitive area which is involved, which you get into when you get into that question. The essence of our concept of help to Europe is that we do not invade the sovereignty and the sensitive national pride of nations; and I think that our attitude should be one of being willing to help, rather than forcing gratuitous help upon unwilling receivers.

Mr. JAVITS. It is a fact, nevertheless, that the whole economic picture, being materially affected by the course of the defense establishments, we must if we deal with the economics of these countries take an interest in them?

Secretary FORRESTAL. I think I am in agreement with the trend of your questioning.

In the first place, you view the purpose of this proposed legislation as not creating an armament or an armed continent.

The basis is to create a continent that can be free of the need for armaments.

Mr. JAVITS. So that the least we can ask would be that the money that is being appropriated here is not in any way diverted off to security establishments unless we so will it?

Secretary FORRESTAL. Well, I don't want to appear to evade your question, but I wouldn't want to be too explicit. I wouldn't want to write that into the legislation. I would hope that it could be expressed in terms that might not offend.

Mr. JAVITS. Mr. Secretary, in order to avoid writing it into the legislation, would it not be fair for us to require that our Department of Defense have some role in the administration of the European recovery program?

Secretary FORRESTAL. I am not seeking any extension of powers. I have plenty, and I am not one to add to them, but I will be very happy to accept that responsibility if given to me.

Mr. JAVITS. My question was would it not be fair that we should at least seriously consider that point.

Secretary FORRESTAL. To be serious, Mr. Javits, on that, I think that it is desirable, and I am sure that Mr. Marshall's background—I myself would have no misgivings about being able to get effective expression of my views.

Mr. JAVITS. I have one further question on a somewhat related point. The trend of the questioning of one of my colleagues on the Middle East induces me to ask this question: Is it a fact that one of the critical elements in the security of the United States is the integrity and prestige of the United Nations?

Secretary FORRESTAL. In my own opinion they are wrapped up together. However, I think it would be an equal mistake to assume that the United Nations can overnight assume all the responsibilities which we hope it can in the future assume.

Mr. JAVITS. But it is an important factor, a very important factor in our security considerations?

Secretary FORRESTAL. There is no question of that.

Chairman EATON. The time of the gentleman has expired.

Mr. Lodge.

Mr. LODGE. Mr. Secretary, naturally I shall understand it if there is any question which I ask which you prefer not to answer. This whole field is in a rather delicate realm.

I would like to approach the problem from the point of view of the European recovery program as a strategical measure and ask you this question, sir: If we go ahead with this program on the four recommendations made by the Secretary of State, that it be prompt, that it be adequate, that it be efficient, and that it be cooperative, do you feel that the threat of internal force, particularly in France and Italy, can by virtue of this program alone be adequately met?

In other words, instead of discussing the threat of external force as discussed by Mr. Morrow, I would like to have your comment in that connection on the threat of the internal force and specifically within those countries.

If you would rather not answer that, I shall quite understand.

Secretary FORRESTAL. You are referring to a coup, to a political change created by force?

Mr. LODGE. By internal force, rather than by constitutional means.

Secretary FORRESTAL. I think that is always existent in nations, as when I said earlier, where the economic and conditions of life create an anarchy and despair, which are the fertile field for Hitler, that is how Hitler achieved his power, and that is how most other revolutions have put men into total power.

Mr. LODGE. You would not be satisfied, then, that the European recovery program in and of itself would be sufficient to counteract such an attempt?

Secretary FORRESTAL. Well, to be candid about it, I think that if the trends in both Italy and France, for example, toward return of hope and return of constitutional government can be supported by what I call the catalyst of our help, if we can get by this next year in those countries, I would suspect that that would be sufficient.

Mr. LODGE. Well, Mr. Secretary, I have it on fairly reliable authority that Togliatti came to Paris on November 16 or 17 last and informed Duclos that while the Communist forces in Italy were about

equal with the Government forces at that time, and he thought that by March or April they would be in position to outpunch the Government forces and take Italy over by force. Then do you feel that the interim-aid bill, plus the promise of the Marshall plan, would be sufficient to help Italy to withstand that attempt, or do you think that there are other things which could be done in order to protect that vital area from Soviet domination?

Secretary FORRESTAL. Well, I would like to reflect. I think I know what is in your mind. I would like to reflect on that, because everything we do and every political fact today has a relation to every other possible fact, and without getting too obtuse, the manifestation of our continued interest as you know better than I possibly, is a great factor in Europe, and I believe that that manifestation can continue, and again I would defer to your probably superior judgment about that particular country.

I think we have a good chance of coming through, of the existing Government, which is the constitutional government, coming through successfully.

Mr. LODGE. I merely wanted to call attention to the problem.

I also would like to ask you this: I hear that we have been spending American dollars for the purchase of obsolete British planes for use by the Greek Army in Greece, and that at the same time we have been destroying acres of 1945 American planes within Germany on the theory that they are in excess of current needs. Would you care to comment on that, sir?

Secretary FORRESTAL. Well, maybe I should know the answer to that, but I don't, Mr. Lodge, and I will be very glad to explore it and furnish the answer to you.

Mr. LODGE. Thank you, sir.

Mr. JACKSON. Mr. Secretary, I should preface my questions with the same remarks made by Mr. Lodge, that if there are any of them you don't care to answer I shall understand.

Secretary FORRESTAL. I am very glad to have the questions, as a matter of fact.

Mr. JACKSON. Would you mind telling us how many naval personnel we have in Greece at the present time?

Secretary FORRESTAL. I would be speculating. It is a limited number. I think it is between 50 and 100.

Mr. JACKSON. What in general is their mission?

Secretary FORRESTAL. Well, it is almost entirely technical. It is assisting the Greeks, for example, in the technique of minesweeping, in some work on their harbors, in some assistance in the training of personnel. That, as I recall it, is the limit of their activities. But I shall be glad again to check and see if there is anything to extend or to add to those remarks.

(The information requested is as follows:)

NAVAL GROUP, AMERICAN MISSION FOR AID TO GREECE

Engaged in advising and assisting Royal Hellenic Navy in training, logistics, maintenance, and supply under Public Law 75, aid to Greece and Turkey.

Medical and dental personnel care for health and sanitation of entire American mission in addition to assisting Greek Government authorities in matters of health and sanitation:

Rear admiral, line, chief of the Navy group with additional duty as senior Navy member, joint planning group.....	1
Captain, line.....	1
Commanders, line.....	4
Commander, Medical Corps.....	1
Commander, Supply Corps.....	1
Commander, Civil Engineer Corps.....	1
Lieutenant commander, line.....	1
Lieutenant, line.....	1
Lieutenant (junior grade), line.....	1
Lieutenant (junior grade), Medical Corps.....	1
Lieutenant (junior grade), Dental Corps.....	1
Lieutenants (junior grade), Supply Corps.....	2
Lieutenant colonel, U. S. Marines.....	1
Total.....	17

Seamen.....	2
Radiomen.....	5
Pharmacist's mates.....	5
Yeomen.....	4
Storekeepers.....	6
Machinist's mate.....	1
Total enlisted.....	23

NAVY GROUP, JOINT MILITARY ADVISORY AND PLANNING GROUP

A joint group under the Chief of the American Mission for Aid to Greece as members of his staff for planning and in an advisory capacity:

Captain, line.....	1
Commander, line.....	1
Lieutenant colonel, U. S. Marines.....	1
Total officers.....	3

OFFICE OF THE UNITED STATES NAVAL ATTACHÉ, ATHENS, GREECE

Commander, line, naval attaché.....	1
Lieutenant commander, line, assistant naval attaché.....	1
Total officers.....	2
Yeoman.....	1
Storekeeper.....	1
Total enlisted.....	2

Mr. JACKSON. What in your opinion, Mr. Secretary, would be the practical effect of establishment of a beachhead on the Mediterranean in either Greece or Turkey with reference to our national security?

Secretary FORRESTAL. The establishment of a beachhead—you mean by us?

Mr. JACKSON. By any foreign power antagonistic to the United States.

Secretary FORRESTAL. I think that any act of war in the Mediterranean, or in the Middle East, has definite significance for us. In other words, to put it another way, the free transit of commerce and trade through the Mediterranean I consider to be a vital part of our national security.

Mr. JACKSON. Would we resist the establishment of any such beachhead?

Secretary FORRESTAL. I don't think I should respond to that.

Mr. JACKSON. Is Middle East oil essential to our national security at the present time?

Secretary FORRESTAL. Well, it is essential to the world; and as we are a part of the world—as somebody said about oil, oil is a global business, and you can't punch a part of that business in one point without having a repercussion at some other point.

In other words, the whole balance of distribution of oil, which is what we are really talking about in relation to our sources of supply, is a global matter; and I think the recovery of Europe as well as the business of the world, including the United States, but not the United States alone, requires the development of middle-eastern oil reserves to their maximum extent.

Mr. JACKSON. More specifically, Mr. Secretary, I should like to know whether or not our supply lines to the Middle East are essential, and what would be the immediate effect upon this country if we were denied access to that oil. What would our situation then be from the national defense standpoint or from the standpoint of the Defense Establishment?

Secretary FORRESTAL. I think it would be very difficult.

Mr. JACKSON. What personnel do we have in Turkey at the present time, Mr. Secretary?

Secretary FORRESTAL. I have a general recollection of the Navy, but I would have to check on the Army.

Mr. JACKSON. With reference to the Navy?

Secretary FORRESTAL. Well, in Turkey I think it may be 20 or 25 people.

(The following additional information has been submitted by Secretary Forrestal:)

NAVAL GROUP, AMERICAN MISSION FOR AID TO TURKEY

To advise and assist in the rehabilitation and modernization of the Turkish Navy, including rehabilitation of naval shipyards and the instruction of Turkish navy personnel in the operation of United States naval vessels being provided as part of the Turkish aid program under Public Law 75, aid to Greece and Turkey:

Rear admiral, chief of the Navy group, en route Turkey.....	1
Captains, line (1 submarine), both in United States.....	2
Captain, Civil Engineer Corps, in Turkey.....	1
Commanders, line (2 submarine), in United States.....	3
Commander, Medical Corps (submarine), in United States.....	1
Commander, Supply Corps, in Turkey.....	1
Lieutenant commanders, line, 2 in Turkey.....	4
Lieutenant commander, Supply Corps (submarine), in United States.....	1
Lieutenants, line, 5 in United States.....	5
Total officers, of which 4 are in Turkey and 1 is en route.....	19
Boatswain's mate.....	1
Electrical technicians.....	2
Radarmen.....	2
Shipfitter, in Turkey.....	1
Carpenter's mate.....	1
Machinist's mates, 1 in Turkey.....	3
Pharmacist's mate.....	1
Yeomen, 2 en route Turkey.....	6
Storekeepers, 1 in Turkey.....	4
Total enlisted, of which 3 are in Turkey and 2 are en route.....	21

OFFICE OF THE UNITED STATES NAVAL ATTACHÉ, ANKARA, TURKEY

Captain, line, naval attaché.....	1
Lieutenant colonel, U. S. Marines, assistant naval attaché.....	1
Total officers.....	2
Yeoman (enlisted).....	1

NAVAL MEMBERS OF THE UNITED STATES DELEGATION TO THE UNITED NATIONS
SPECIAL BALKAN COMMISSION (NOW AT SALONIKA, GREECE)

Members of the United States delegation of the UN Balkan Commission to observe disturbances on the Greek borders in accordance with a special resolution of the United States:

Commander, line.....	1
Lieutenant colonel, U. S. Marines.....	1
Major, U. S. Marines.....	1
Total officers.....	3

Mr. JACKSON. Their mission is by and large the same?

Secretary FORRESTAL. The same, technical assistance.

Chairman EATON. The time of the gentleman has expired.

Mr. Judd?

Mr. JUDD. I have no questions.

Chairman EATON. Mr. Vorys, will you inquire under the 5-minute rule, and after that it will be a free-for-all.

Mr. VORYS. Mr. Secretary, a brief and informal poll of our committee indicates that you are one of the most satisfactory witnesses that ever appeared before us. Your testimony is always direct and brief and very frank.

Secretary FORRESTAL. I appreciate the observation. Do not build me up too much. I may get fat headed.

Mr. VORYS. I have one sentence in your extremely persuasive and effective and eloquent statement that I want to ask you about.

You say this:

Neither this program nor our national defense expenditures are designed as a threat against any nation nor as an effort to restrain any nation or to dominate a group of nations.

The part I question is this, whether they are an effort to restrain any nation.

Secretary FORRESTAL. That is a good question.

Mr. VORYS. It seems to me that unless this gigantic effort on our part is an effort to restrain any nation committed to aggression and break down the peace, it is utterly unjustified.

Perhaps I am just picking out a little spot, but I wanted to ask you about that.

Secretary FORRESTAL. I think it is a loose use of language. I think your question is well taken.

Mr. VORYS. Our effort is to restrain any nation, is it not, that commits itself to aggression in violation of the principles of the United Nations?

Secretary FORRESTAL. I completely agree with you. As I say, we would be utter hypocrites if we tried to say that having spent vast sums of money and some of our most precious lives to restrain and contain and destroy Mr. Hitler, that we did not propose to follow the same philosophy in the future.

Mr. VORYS. I have one other question. The question has already been raised, but I do not know whether I got your answer. When I was over there this fall, and before and since, I have been perplexed about the possibility that we might be in our economic aid merely building a richer prize for possible aggression.

I wish you would comment a little further on that, while I know you have already commented on it.

Secretary FORRESTAL. I think that there are manifest problems as the Secretary of State has said, in any risk about Europe, but the greatest risk is in inertia. We have that in the risk we ran in 1931 in Manchuria, the risk the British ran when the Italians went into Ethiopia. We have a larger risk now because the scale of the action and the balance of the destruction makes it a larger risk, but in the first place, the amount of effort and of reconstruction and of industrial rehabilitation that would flow into Europe in the first 18 months would, I suspect, by the limitations of transit and manufacture, not be very, very great.

In that 18 months my own hope and belief is that you will see a restoration of Europe to a degree that will give us confidence in the success of our program.

I think we have to examine the shadow of the question that you raised constantly, but all of these things that we have talked about this morning, it seems to me, are interrelated.

The restoration of economy, the partial restoration of military effectiveness, the preservation of the concept of the free sovereignty of nations, they are all marching together in a pattern.

If the pattern should be reversed I think we should have to reexamine the situation.

Mr. VORYS. Is this not part of it, that land forces, mass armies for use in Europe against any possible aggressor must come from the 16 nations that we are now considering, and that one aspect of this is to support the economies that are supporting those armies that might be a first line of defense against a certain type of aggression?

Secretary FORRESTAL. Yes. I think you put it much better than I did. That is the effort first to give confidence and hope to the countries so they will make the effort to get that modicum of military effectiveness, and also to get a restoration of their national pride, of which an effective military force is a component, and all of those are involved. But the impression I did not want to leave is the impression that we were hoping to spend this money to create a great concert of military force. That is, I think, illusory. You cannot depend upon that to provide us with security. The world has to develop as a whole, and not in segments.

Mr. VORYS. I have one other question.

You have mentioned, and Secretary Marshall has mentioned, and Mr. Douglas has mentioned, and I happen to have mentioned in various comments on this that the cost of the opposite policy to that which you are considering might be very high. That is as I see it, we either stay in or pull out.

Secretary FORRESTAL. That is right.

Mr. VORYS. Those are roughly the two alternatives. The pull-out policy would result in an immediate saving of millions, billions of dollars, right in the next fiscal year. We would not spend a dime on recovery, relief, occupation, support of our forces any place outside of the Western Hemisphere.

I have had an idea that that immediate saving would involve a gigantic expense, and I know you have commented on that.

I wondered if it would be possible to get up a not strict budgetary proposal, but some sort of an estimate of the cost of that policy which many sincere Americans feel is a right policy, so that some comparison of the cost in dollars and cents over a 10-year period might be made. It could not be precise.

Secretary FORRESTAL. I think it is worth while trying to do.

Mr. VORYS. I wish you would try it.

Secretary FORRESTAL. I will try to do it, because I am frank to say if this program were not going through, I should feel constrained to come to the Congress and ask for a very substantial increase of our appropriations this year, and by substantial I mean in the order of 25 or 50 percent.

Mr. VORYS. Thank you.

Mr. JUDD. Mr. Secretary, Russia has repeatedly declared in official statements of her high officials that she intends, if possible, to defeat the objectives we have in this plan, namely the economic rehabilitation of free nations in western Europe.

Do you think that it will be more difficult for these countries in western Europe, particularly countries like England, Netherlands, France, which have had great trade in the past with their colonies and with the other areas in Asia, do you think it will be much more difficult for the purposes of this plan to be accomplished if they are unable to restore something like that prewar pattern of trade relations?

Secretary FORRESTAL. I think that is another component of the whole pattern.

Mr. JUDD. Therefore, anything that will enable them to do that, the more speedily they can recover their prewar pattern of trade, the more quickly they can recover in Europe?

Secretary FORRESTAL. That is my opinion.

Mr. JUDD. Do you think that the chaos is spreading in China and Asia, ideological and otherwise, and hindering and will continue to hinder that recovery?

Secretary FORRESTAL. It is bound to.

Mr. JUDD. Well now; then, this becomes the main point. If those countries do not recover, they are in chaos, so they are ineffective or come under the control of the Soviet satellites the way eastern Europe has come under such control.

Do you or do you not think that would enable Russia to be a great deal more vigorous and aggressive in her avowed intention to defeat our plan in Europe and therefore jeopardize it?

Secretary FORRESTAL. If you follow the assumption, as you have said, she has made that clear. I take it from time to time through official sources she has done that, and that that is her effort. Nevertheless; just as we have complex problems in trying to be of help to the world, trying to destroy the world has an equal problem—that is, trying to destroy it everywhere at the same time. So in a sense I think you know, I share the concern implied in your question.

There is a difference in the accessibility, however, between Asia and eastern Europe to the countries which you are talking about, which come into the simple matter of speed of transit, of supply and even of individuals, and I suspect that will create a somewhat more difficult problem, just as it is for us.

Mr. JUDD. My point is, inasmuch as she has announced she intends to defeat this if possible, it is good sense if we can within our resources and without undue scattering or diversion, it is good sense for us to do everything possible to defeat her attempt to defeat us.

Secretary FORRESTAL. In other words, to meet it wherever it is manifest.

Mr. JUDD. Yes, that is it, if she can weaken our strength, she wants to do it. If we can prevent her concentrating all her strength in one area at a time and taking them one by one, which has been the stand of technique of practically all aggressors, a simple decent conception of self-preservation requires us to do it without animosity, but in clearly meeting an avowed threat, is that right?

Secretary FORRESTAL. I agree with your thesis that you cannot divide. You can assign, and I think that is what the Secretary is trying to do, in decrees of priority, but I think for us to throw up our hands in one part of the world and get salvation in another is not a logical procedure.

Mr. JUDD. Yes. The contention made here that we cannot recover unless Europe recovers, but we can also say it will be much more difficult for Europe to recover unless there is recovery in other parts of the world.

Secretary FORRESTAL. One is a function of the other.

Mr. JUDD. But there is a matter of relativity involved.

Secretary FORRESTAL. Yes.

Mr. LODGE. Mr. Chairman, is it in order to ask the Secretary a couple of questions?

Chairman EATON. We are going to recess at 12. That will be in 9 minutes.

Mr. LODGE. Mr. Secretary, to discuss this matter a little further along strategical lines, it would seem to me that roughly you might say that there are four elements involved in the strategical picture. The first would be the economic element, ERP, the second is the cultural-information program, the third is the twilight zone in which we might attempt to meet the threat of internal force, and the fourth of course is the disposition of military forces.

I would like to ask you this: If France and Italy fell because of internal force, would we then, in your opinion, have to evacuate all our forces from Germany, Austria and Trieste?

Secretary FORRESTAL. Well, you are assuming that they fall to a government unfriendly to us?

Mr. LODGE. Yes, sir. I assume they will fall to the same government that many other nations have fallen under.

Secretary FORRESTAL. Of course any time you try to respond to that type of a question, you are faced with a problem because it presents a finality and a categorical series of actions that I do not think will occur in quite that black and white pattern.

I do not believe that any political action in Europe on the part of those countries would force our withdrawal, except at the point of force.

I mean by that, I don't think we would, and my own opinion would be that we should not evacuate because those political events occurred.

Mr. LODGE. Let us assume that the Communists carry out their threat to establish what we call an independent government in the

north of Italy. It would be synchronized with strikes in France. If they achieved that, as a start, that would definitely jeopardize the security of our troops in those areas, would it not?

Secretary FORRESTAL. It would involve a review of the situation at the time. There is no question about that.

Mr. LODGE. Well, sir, what I am leading up to is along the line of questions asked by Mr. Javits. I understand there is no liaison whatsoever between the French and Italian armed forces or between General Marras in Italy and General Revers in France.

Would it seem to you appropriate for the French and Italians who at this time have identical interests, or at least are threatened by the same force, to have some sort of liaison between their armed forces, just as existed during the war?

Secretary FORRESTAL. Well, they are two republican governments. I am speaking with a small "r" now, and they are the government or the kind of government we hope will persist in those countries, and I should think that would be appropriate.

Mr. LODGE. It seems to me that viewing this as a cooperative strategical measure, that it is perhaps as important for the military elements to achieve cooperation among the 16 nations as for the economic elements to achieve cooperation.

Would you agree with that, sir?

Secretary FORRESTAL. As I say, it seems reasonable. It is a little outside of my orbit, however. That is a diplomatic business, but from a practical standpoint it seems to make sense.

Mr. LODGE. Thank you very much.

Mr. MUNDT. May I ask one question? It grows out of something that Mr. Kee raised, when he was discussing the relationship of this program to the State Department.

I have this feeling, Mr. Secretary, that it is highly important in the over-all success of this program and in its continuation if it is going to run across a period of 4 or 5 years that there be brought behind it the largest possible bulk of American public opinion.

I do not feel that there is an administration foreign policy or a Democratic or Republican foreign policy. It should be an American program. I sort of like the idea incorporated in the Herter proposal, which I am sure you have read, which would bring into this picture somehow the best brains of both of the major political parties with some kind of a bipartisan group behind it.

Certain aspects of this program do deal with foreign policy. That is whether we will go into it or whether we do not, whether we adopt this program of raising up our friends abroad or not.

Once that is done it is largely economic, to be administered as I see it and to be directed by people skilled in the science of business, farming, economics, and so forth.

Do you see anything incompatible with the general over-all approach of gearing this program into an American foreign policy and incorporating it in some way with a bipartisan board, or bipartisan group, which will make it increasingly an American program, rather than of any particular President or any particular Secretary of State?

Secretary FORRESTAL. I know in general terms, Mr. Herter's proposal, but, Mr. Mundt, without again trying to avoid your question, I have tried to keep away from the administrative detail of how the plan is carried out.

I will say that I agree with your thesis that to be successful and to have the continuity of affirmative belief in it, to have that confidence back of it, you must have some organization which will give the people the conviction that it is a national and not a partisan enterprise.

Mr. MUNDT. From that it would logically follow that Mr. Wallace to the contrary notwithstanding, we are largely a bipartisan country? Secretary FORRESTAL. Yes.

Mr. MUNDT. And that somehow we should bring behind it, therefore, both of the major parties, feeling that they have something to do in implementing American programs?

Secretary FORRESTAL. Well, for the same reason that I don't construe my own place in Government as being a partisan post.

In other words, I am serving the country and not a party. For the same reason I think it is essential that this enterprise be surrounded with the same character of policy and administration.

Mr. MUNDT. I agree 100 percent.

Mr. KEE. Mr. Chairman, may I ask a question there?

Chairman EATON. Mr. Kee.

Mr. KEE. At the same time, Mr. Secretary, whether we have an independent organization administering this program, or have it administered by Government agencies. In either event, and in the final analysis, the final determination of our foreign policy should not be placed in any independent or even a Government organization beyond the authority of the President of the United States.

Secretary FORRESTAL. Well, no matter how you get the arrangement set forth, I think in response to your question, the actions of any man that runs this project or enterprise must conform to the patterns of national policy, as expressed by the Secretary of State. Whether you, directly under him, or parallel with him, regulate those matters, I haven't gone into that and I haven't tried to form a judgment, but the principle you would enunciate is sound. I don't see that that is inconsistent necessarily with what Mr. Mundt proposes.

Mr. JUDD. I have one question.

Not only is this important from the standpoint of mobilizing public opinion here at the moment, but do you agree, Mr. Secretary, that it is even more important from the psychology of the people over there who at this particular juncture at the beginning of 1948 conceivably are wondering, "Well, if we are going into this thing now and a Republican administration in toto is returned to power in November, might it not be over then?" and therefore discourage an all-out effort on their part because they think it would not be continuing and would not be a predictable or dependable program?

Secretary FORRESTAL. Confidence in that continuity is as essential, almost, as the substance of your proposed bill.

Mr. KEE. That is right.

Chairman EATON. Mr. Secretary, I would like to make it absolutely clear, in view of the question just asked by Mr. Judd, that if the Government becomes totally Republican, it will not be so discouraging after all.

Thank you.

Secretary FORRESTAL. It will remain American.

Chairman EATON. Thank you very much for your very constructive testimony and we all wish you well.

We will recess until 2 p. m., when Ambassador Douglas will return. (Thereupon, at 12 o'clock noon the committee recessed until 2 p. m.)

AFTERNOON SESSION

The committee reconvened at 2 p. m., at the expiration of the recess.

Chairman EATON. The committee will be in order.

The first to question the Ambassador will be Mrs. Bolton.

**FURTHER STATEMENT OF LEWIS W. DOUGLAS, UNITED STATES
AMBASSADOR TO THE UNITED KINGDOM**

Mrs. BOLTON. Mr. Ambassador, I should like to pursue this tremendous subject of America's policy in the field of world recovery from a somewhat different angle from that of my colleagues.

Important as it is that we study the figures submitted by the Government and those received from other sources, basic as they undoubtedly are, this committee has approached the problem under a resolution read into the record the other day by Mr. Javits, which stresses the responsibilities of considering these matters upon a general policy basis, with the European problem as the first study. Our capacities are limited, and we cannot meet every need. Therefore we must determine upon what basis we shall act. Because our resources are limited, it becomes necessary that we find ways to give as little material aid as can be made to answer the fundamental necessities required to help these countries to rebuild themselves.

Many suggestions have been made pointing to the possible joining together of these nations of western Europe in order to strengthen themselves in their recovery program. Many feel that a union of some sort is essential to the winning of the "cold war." One needs to remember that it took us some years to find a common way, so that we should recognize that any form of federation in Europe cannot be consummated overnight.

What I want to ask, Mr. Ambassador, is whether during the weeks of your close association with the delegates of the 16 nations in Paris you found any inclination toward union.

Ambassador DOUGLAS. I feel quite strongly, Mrs. Bolton, that practically all of the governments represented at the Paris Conference are particularly keen to establish in western Europe and among themselves, a much more integrated-coordinated economic system than any which that part of Europe has historically enjoyed.

Mrs. BOLTON. That would, of course, lead toward a closer and closer union than it would possibly have politically?

Ambassador DOUGLAS. Yes.

Mrs. BOLTON. If we in our dealings with them are not careful in the bilateral agreements that we draw up—if we are not careful to keep as much similarity in those agreements as it is possible to do, may we not separate them again? They have come together, the 16 nations, and decided that these are their problems and that this is the way they wish to present them. Are we in danger of pulling them apart again with a bilateral agreement?

Ambassador DOUGLAS. I think it would depend, Mrs. Bolton, upon the type of commitment which would be made by any individual country; the kind of commitment in relation to the particular position of that country.

Let us take the matter of strategic raw materials. For example, some of them possess resources, either within their dependent areas, or within the area for which they have jurisdiction within the continent of Europe. Some of them do not. So it seems to me it would be perfectly appropriate to have a variation of commitments among the respective countries on that account.

Mrs. BOLTON. There would, however, be a thread of similarity?

Ambassador DOUGLAS. There would be, in the multilateral agreements that each country has made with the other, a complete similarity.

Mrs. BOLTON. A question has been raised as to whether it would be possible for them to set up a group of their own like an executive committee through which we would deal, instead of each country coming forward separately. Would there be any practical value to that?

Ambassador DOUGLAS. One of the jobs of the 16 participating countries is to have a continuing organization, provided there is a reasonable assurance that external support is forthcoming. This continuing organization would review the progress made by each country, the extent to which the undertakings were being honored, and in addition would engage in joint cooperative efforts to reach the objectives to which they are pledged. So that the undertaking which these countries have made includes the establishment of an organization which perhaps would not conform completely in its functions to that which you have in mind, but which would approach it.

Mrs. BOLTON. Do we sit on that group?

Ambassador DOUGLAS. It is contemplated that the United States would have a representative sitting with that group.

Mrs. BOLTON. The Communist group has expressed itself violently opposed to this closer association of the countries of western Europe. That would seem to indicate that such a closer association would be a very real problem to them and therefore, from our point of view, it becomes an even more necessary part of the program.

Ambassador DOUGLAS. We are a part of the community of nations that goes to make up what we call western civilization, and the closer the relationships and the closer these participating countries approach unity, the more homogeneous, the more solid and the firmer will be that general part of the world, comprising the countries which have on the whole so many elements of commonality.

Mrs. BOLTON. In the development of the program has there been any study made of the amount of development that could be given a little boost in the countries in Africa that are directly dependent toward their so-called mother countries?

Ambassador DOUGLAS. Some of the countries which have colonial dependencies have given a great deal of study to the development of natural resources within their dependent areas and therefore of course to the extent to which those dependent areas can supply us with needed raw materials and themselves with needed raw materials.

Mrs. BOLTON. Some of the questions we have all been asking relative to stock-piling strategic materials is associated very closely with the colonies and the dependencies. French Africa, for instance, and the Netherlands in Africa, are fabulously rich in many of the materials that are needed by us.

England of course is developing her dependencies there with that in view.

Have you any knowledge of the extent to which France and the Netherlands are moving in that area of development?

Ambassador DOUGLAS. I have no specific knowledge now, Mrs. Bolton. I know at least two of the countries that have overseas dependencies are doing so.

Mrs. BOLTON. Would it be possible to suggest that in the loans which we make, we be repaid by the products of certain mines that will be developed in the future? This would imply a trained-personnel responsibility when the moment comes for their development to contribute not only the machinery but also the know-how.

Ambassador DOUGLAS. One piece of legislation which the committee is considering authorizes the Administrator to extend support for the purpose of exploration and development of raw materials.

The legislation provides that loans may be repaid by delivery to the United States of certain specified strategic raw materials valued according to prevailing market prices as of a certain date. It also provides for the facilitation of the sale to the United States of strategic raw materials. As we discussed the matter yesterday, those countries that have very, very real difficulties in their balance of payments would not find any relief in their balance of payments if they were required to deliver to us, not in liquidation of the loan, the raw materials.

Mrs. BOLTON. In the matter of the United Kingdom and its trade relation to its dominions, who is going to determine the dollars that go to these dominions?

Ambassador DOUGLAS. I did not hear the first part of your question.

Mrs. BOLTON. The United Kingdom has certain trade arrangements with its own dominions. As I understand it, certain dollars go to those dominions.

Ambassador DOUGLAS. The bill does not contemplate, Mrs. Bolton, that there should be an extension of support to any of the members of the commonwealth.

Mrs. BOLTON. However, England could take some of her funds and so use them?

Ambassador DOUGLAS. It is not so contemplated. She can take her own reserves but not support from the United States. She may do as she chooses with her own resources, but she may not use the support extended by the United States.

I have been reminded by my assistant that, of course, if the administrator is authorized to purchase off-shore—that is, to purchase materials that are in short supply in the United States in other parts of the world—some dollars would on that account flow to Canada, for example, for the purchase of wheat. That is relieving the pressure on our own internal market and providing dollars for Canada. However, that would be a commercial transaction and not an extension of direct support.

Mrs. BOLTON. Mr. Ambassador, a concurrent resolution has been introduced and sent to this committee to the effect that the 16 countries should take positive action relative to the development of their own production, the reestablishment of their currencies, and so forth.

Would it be your feeling that there might be wisdom in including in any bill drafted as a result of these hearings, some such insistence?

Ambassador DOUGLAS. Actually the United States Government would make bilateral contracts with each one of the participating countries. The bilateral contracts would include not only the undertakings to which you have referred, as between the 16 participating countries, but such additional undertakings and commitments as the United States Government might require.

The contract would then become a contract between governments; that is, it would have the sanction of our government and it would have the sanction of the other government party to the contract.

Mrs. BOLTON. This would be completely included and perhaps more conclusively done in a bilateral agreement than any insertion in the legislation.

Ambassador DOUGLAS. One of the pieces of legislation which you have before you contemplates much of what you have in mind. For example, section 10 (B) (1) cites these contract agreements which shall be made and provides that they shall include provisions for a number of different undertakings to which each one of the countries entering into a bilateral agreement with us must agree.

This particular piece of legislation which the committee is considering does not include what is the intention; namely, to make reference or to require the reaffirmation by each country of the multilateral commitments that they made.

Some of the things in section 10 are repetitious of the multilateral agreements made by these countries in Paris.

Mrs. BOLTON. In the matter of the success of the whole program is it upon this group that you were describing a few minutes ago, that the duty revolves of checking constantly to make sure that progress is being made?

Ambassador DOUGLAS. One of the functions of the continuing organization would be to examine and review the extent to which the undertakings are being complied with.

In each country, there would also be a very careful analysis of, and examination of the performance of that country.

Mrs. BOLTON. Does it appear to you that that is an adequate set-up?

Ambassador DOUGLAS. Well, Mrs. Bolton, men do jobs. The quality of the job is a function of the quality of the man who does the job. This set-up, if it is manned by men of experience and competency, I think is adequate. No set-up with men of incompetency is adequate.

Mrs. BOLTON. I wanted to avoid this, but you forced me into it. It is then of extreme importance that the method of administration that is set up under this bill be such that it will attract only the best?

Ambassador DOUGLAS. If they are available.

Mrs. BOLTON. And what did you mean by availability?

Ambassador DOUGLAS. It is difficult, as Mrs. Bolton knows, to enlist in Government service anywhere men of the type of experience and competency that is so often necessary for adequate skillful performance of a public duty.

Mrs. BOLTON. Is it partly due to the fact that during the war, companies released their men for war service for long periods, or is it the habit we have in this Republic of ours to indict a lot of men who have done a pretty good job, when the job is over?

Ambassador DOUGLAS. I think it is a combination of a variety of things, Mrs. Bolton. A great many men have served in the war and

they have made sacrifices. They feel that their obligations to their families interfere with their making additional sacrifices.

Some of them, I suppose, have the feeling that Government service is a sort of a thankless job at best, and there is the question of course of the compensation which the Government can pay. There are a variety of things of that sort that enter into personal decisions.

Mrs. BOLTON. Fundamentally, we must be exceedingly careful that we set up an administrative practice that will permit those in the top positions, certainly, to really function.

Ambassador DOUGLAS. Yes, that is very important.

Mrs. BOLTON. To your mind, that should channel through the State Department, in the top brackets?

Ambassador DOUGLAS. No, I do not think so, Mrs. Bolton. I do not think the State Department should be responsible for or engaged in or related to the wide variety of business transactions which the administration of the European recovery program will be involved in continually.

I do think that the administration of the European recovery program should be in conformity with and in concert with the foreign policy of the United States. I think, too, the administration of the European recovery program must necessarily abide by certain decisions, the responsibility for the making of which is now vested in a number of different Government agencies, because that responsibility affects our own internal economy.

Mrs. BOLTON. You would be reluctant, however, to have us present a divided front?

Ambassador DOUGLAS. I think it would be a mistake both on this side, Mrs. Bolton, and abroad. I think it would cause confusion here at home and I think it might cause untold confusion in other countries. We have had some experiences within, of course, the last 7 or 8 years: for example, the Board of Economic Warfare and the Foreign Economic Administration.

I can assure you that in a great many instances the lack of clear definition of jurisdiction and of authority has caused incalculable trouble for our own Government.

Mrs. BOLTON. We have asked a good many times for a definition of "foreign policy." Where does that stop and where does business begin?

Is it not going to be necessary to have a better definition of those two fields?

Ambassador DOUGLAS. I think it would be highly desirable to have a more clear definition of where one begins and the other ends, and if there is any difference as to where one does begin and the other one ends, a court of appeals should make decisions as to where the limitations of one would be found and where the limitations of the other would be located and found.

Mrs. BOLTON. I am sure you are familiar with both bills before us, 4840 and the so-called Herter bill?

Ambassador DOUGLAS. Yes.

Mrs. BOLTON. Do you feel there might be a way of compromising the two, in order to have the business ability of the country represented, and also to have the people of the country represented through Members of Congress?

Does it seem an insuperable thing to you to contemplate a compromise measure?

Ambassador DOUGLAS. I think, Mrs. Bolton, there are certain provisions of the Herter bill which might confuse the function of the legislative body with the function of the executive body, though I am confident that a proper and wise administrator, whatever his title may be, could make arrangements so that the Congress was adequately and fully informed of what was transpiring.

Mrs. BOLTON. Would you consider at all such a set-up as is now functioning in the Atomic Energy Committee as a way of keeping Congress very vitally informed—not necessarily exactly the same pattern, but something of that nature, and have the congressional group not in the sphere of administration but in the area of something greater than top echelon?

Ambassador DOUGLAS. Mrs. Bolton, I am sorry to say I have not examined the legislation establishing the Atomic Energy Commission with sufficient care. Indeed, I have never read it.

Mrs. BOLTON. Would you mind doing it, and then perhaps sometime you can whisper in my ear what your feeling of it is, as one who used to be among us.

Ambassador DOUGLAS. Certainly.

Mr. CHIPERFIELD (presiding). Mr. Kee?

Mr. KEE. Mr. Ambassador, I am very glad Mrs. Bolton brought up the question of the administration of this legislation. I think as a matter of fact that is one of the most important parts of the legislation. We can resolve our difficulties as to whether or not we are going into this program at all, and again we can settle our difficulties over an authorization of a certain amount of money to effectuate the purposes of the program, although I might remark that this committee has found by experience that we might work for weeks and days, sweat blood and shed tears, wrack our hearts, souls and brains over fixing a definite minimum we are going to recommend be appropriated, and then along comes the gentleman with the meat ax and an inspiration, and all of our work goes out the window. We have had that experience frequently, so I think we can do something perhaps more worth while, by discussing a subject that we can really determine without inviting the operation of the meat ax.

I would like to discuss the administration of the program for just a moment. I presume you have studied the Herter bill to some extent?

Ambassador DOUGLAS. I have, sir.

Mr. KEE. I note in section 11, paragraph (b) of the Herter bill where it makes the chairman of the board of directors of the foreign reconstruction authority ex officio executive director of the council, and provides that his duties will include the responsibility of formulating "for consideration of the council" proposed programs of United States aid to such countries and proposed policies in connection therewith. As I understand it, he formulates the policies in connection with the aid, some of which no doubt will affect our entire foreign policy, or our policy with reference to different countries, and as to that particular function the Herter bill does not provide that he consult anybody; and although he may present his views and his policies to the council, they only have authority under the bill to act in an advisory capacity.

What is your thought about the provision of the Herter bill I have just outlined?

Ambassador DOUGLAS. I think the general provision of the Herter bill, in addition to the one you have just referred to, permits the administration of the European recovery program to be almost completely divorced not only from obligation to the foreign policy of the United States but from various functions exercised by other departments of the Government which are related to our own internal economic position.

Mr. KEE. Is it not your idea that that provision of the bill is, if not unconstitutional, certainly approaching it?

Ambassador DOUGLAS. Mr. Kee, I am not a lawyer, and I would hesitate to express an opinion as to the constitutionality of the provisions of this legislation.

Mr. KEE. I was interested very much the other day in a Washington Post editorial. The writer discussed that section of the bill, as well as other sections, and announced the opinion that, to the extent of that section, it was unconstitutional.

I noted a day or two ago that Mr. Herter sent a communication to the Post which was published, and in which he endeavored to point out that that section of the bill was not unconstitutional, that it was not taking away the powers given to the President by the Constitution, and arguing at great length upon his position.

The Washington Post then said:

Mr. Herter refers to the proposed foreign aid council including the Secretaries of State, Treasury, National Defense, Agriculture, and Commerce which would consult with the President on the recovery programs to be set up abroad. But this council could give advice only. The real power "to determine, prescribe and conclude the arrangements" under which the program would operate would be given to the bipartisan board of the "independent agency." As a practical matter, the President can control foreign policy only through his Secretary of State, who under the Herter bill would appear to be little more than a cipher in the determination of policy in this most vital aspect of foreign relations. If, therefore, the Herter bill escapes the charge of unconstitutionality by recognizing the power of the President to direct our foreign relations, it impales itself on the other horn of the dilemma by providing an unworkable means of achieving its aim.

What is your view with reference to the question of whether or not so far as the section mentioned is concerned, the bill is either unconstitutional or does provide a workable set-up?

Ambassador DOUGLAS. As I say, I am not a lawyer and would hesitate to express an opinion as to the constitutionality of the provisions of the Herter bill.

From the administrative aspects of the Herter bill, as I have indicated, I think it first of all divorces the administration of the European recovery program to too great an extent from the foreign policy of the United States on the one hand, and from the functions and responsibilities vested in other agencies of the Government, the Department of Commerce, the Department of Agriculture, and the National Advisory Council for example, which are charged with responsibilities having to do with our own internal economic estate.

Mr. KEE. Is it not your view, Mr. Ambassador, that whatever agency is set up here, whether this program is administered, or the bill provides for its administration under the control and direction of the Secretary of State by independent departments of the Government now existing, or whether the administration is placed in the hands of an independent agency, either one, there should be a plain provision in the law that all questions arising in the adminis-

tration of this act which affect in any way the foreign policy of this country should be submitted to and resolved by the President of the United States, speaking through the Secretary of State.

Ambassador DOUGLAS. I think that applies not only to the Secretary of State but I think it applies equally to other departments of Government. I am not quite clear as to whether in respect to all departments of Government there is to be a clear provision of the bill but the legislation should provide for a clear definition of the lines of authority.

Mr. BLOOM. Would the gentleman yield there?

Mr. KEE. Certainly.

Mr. BLOOM. Mr. Ambassador, is it not a fact that the Supreme Court in its decisions irrespective of the Constitution, has laid down the rights, the powers of the United States on foreign affairs, and it has been broader than anything in this legislation here. That policy is established by the decision of the Supreme Court. Not only does the Constitution set it out, but the legality or illegality of any of those provisions as regard the rights in the policy of foreign affairs is laid specifically with the President of the United States.

Ambassador DOUGLAS. I am informed that is the case.

Mr. BLOOM. There is no question about it.

Mr. JONKMAN. Will the gentleman yield to me?

Mr. KEE. I yield.

Mr. JONKMAN. Was that before we had the residual relief and interim aid, or the Marshall plan or anything we had in recent years?

Mr. BLOOM. It would not make any difference, Mr. Jonkman, the decision is there and the power of the President of the United States in international or foreign affairs is the only power. He is the only person who has the right, irrespective of what other departments or different branches of the Government come in. With foreign affairs the Supreme Court has held that the President of the United States is supreme in that field and there is no question about it.

Mr. JONKMAN. There is just one distinction I want to make. Is the question whether or not this distribution of goods and moneys is going to be foreign policy, or a business operation apart from foreign policy which, of course, on certain occasions there might be some relation.

Mr. KEE. It is not foreign policy, if the gentleman will pardon me, but the method of distribution and the questions arising in connection with it may have an effect on our foreign relations very harmful to the United States. It may seriously affect the foreign policy of our Government.

Now if you will pardon me, I will proceed for a moment longer, and conclude.

I think, Mr. Ambassador; that we all understand where the decisions with reference to foreign policy in this country are to be made, but what I want to make clear is that we want to avoid as far as possible in this bill any confliotions with provisions of the Constitution and we do not want to fail to insert in this legislation all precautions we possibly can to prevent foreign policies being made by either the Director or the Administrator or anyone else connected with the administration of the act other than those vested with constitutional authority to do so.

That is my view of it. I thank you very much.

Ambassador DOUGLAS. That is my view.

Mr. CHIPERFIELD. I believe Mr. Mundt has not had an opportunity to cross-examine yet.

Mr. MUNDT. Mr. Chairman and Mr. Ambassador, I do not care to go into the matters of the administrative set-up in any program of this kind in any great detail, although that is certainly a very important part of the bill. I would not quarrel with Mr. Kee or any other Member of Congress over the fact that under our Constitution the matters of foreign policy per se are handled by the President through the State Department. However, once that has been determined, as it will be, when this legislation is adopted, if it is adopted, and our foreign policy has been made clear, as an effort to brace up the friendly countries of Europe who feel as we do about matters of economic politics, and to resist the aggression and totalitarianism abroad, then we come to this administrative set-up and administrative problem. It is there where I depart from those who say that the administration of a bipartisan foreign policy should be strictly a one-partisan administration. That does not just make sense to me.

I do not believe that all the economic brains, administrative brains, or agricultural brains in the country are segregated in either political party, and I think that this program has enough magnitude and enough significance so if we go into it at all we want to go into it so that we can emerge victoriously, whereupon we must call upon the resources of America regardless of politics, so for that reason it seems to me it just makes good sense some place in legislation of this type to recruit the capacity of America regardless of party, and some kind of bipartisan arrangement, working through some independent administrative agency, which will implement the foreign policy of the United States as determined upon by the President and the State Department and as authorized by Congress, but which will implement it from the standpoint of its maximum strength.

If it develops that the country has more confidence in an independent agency of Government as an administrative agency I see no conflict between that and the success of a program of this scope and I wondered if you think it has some inevitable conflict which means that you either have to do it all through an established institution of Government or not at all.

Ambassador DOUGLAS. I could not agree more heartily or enthusiastically with your observation that the foreign policy of the United States should be a bipartisan matter.

Mr. MUNDT. In fact, as well as in name.

Ambassador DOUGLAS. When I say bipartisan, I mean that it takes on the form and shape and continuity. One thing we have learned, I hope, is that foreign policy must be something which can be projected forward and is not subject to the whims and vacillations of changing personalities and even parties.

Mr. MUNDT. As your predecessor on the stand said this morning, it would be ruinous if you were to get the idea or America either that anything we agree upon in the nature of foreign policy in this Congress is subject to an entire upset, next November, if America decides it should have another party in control of the Government.

When we finally have hammered out a decision it should be one, it seems to me, that will continue through the designated time, regardless of which party wins the election next November.

Ambassador DOUGLAS. I agree.

Mr. MUNDT. That should not be an issue, not so much from our standpoint, perhaps, as that of the European fellow who is trying to make his plan and tie his program to the American kite. He wants to know what that kite is going to do and whether that kite is going to be flying next December in that direction.

Ambassador DOUGLAS. I agree.

Mr. MUNDT. I asked you the other day a question which you said you would like to have some time to consider. I asked the question on Tuesday. I wonder if you would answer it?

Ambassador DOUGLAS. Yes; I will.

I have given consideration to the question which you asked. It was, as I recollect, whether guaranties contemplated under the act could be extended for the purposes you had in mind.

Mr. MUNDT. Yes; or economic enterprises involving immediate information.

Ambassador DOUGLAS. Yes.

The guaranties can be made under the provisions of the legislation which you are considering, or one of the pieces of legislation, for the purpose of furthering the fundamental ends of the act itself.

Now the purposes of the act are to restore economic and political stability in western Europe. I doubt very much whether the purposes which you have in mind fall within the definition of the fundamental purposes of the legislation. I am not saying that what the Congressman had in mind may not be a very worthy thing, but I doubt that the guaranties contemplated or intended under the provisions of the act should be extended for purposes which you had in mind in this legislation and under the administration of this legislation.

Mr. MUNDT. I am very happy to have your analysis of that, because I am one of those stubborn fellows who believes that it should be included in the act and that consequently either the purposes of the act should be amended or else it should be spelled out some place in the legislation so that whatever agency does administer it will find, if desirable, that it can extend those guaranties for those purposes.

Frankly, I am a little bit disappointed in reading the purposes of the act, as far as that goes.

I think the big purpose of this act is to preserve peace, which finds no place at all in the enunciated purposes of the act, as written down "1," "2," and "3."

I know a lot of Americans who are disappointed in that.

After all, there is a pure economic thing that might be demonstrated—that we could build better buildings, for instance, for rehabilitation of the Navajo Indians, to meet the purpose of the act, but that goes far beyond the rather materialistic and short-sighted purpose set up by whoever wrote this bill.

I would like to see the purposes of the act include the preservation of peace, certainly giving guaranties to me of information working in the direction of securing the peace, and it would then become a legitimate enterprise.

Mr. CHIPERFIELD. Will the gentleman yield?

Ambassador DOUGLAS. You would like to have the establishment of peace and preservation of freedom included?

Mr. MUNDT. Yes; that is correct. I would like to see that listed as a fourth purpose instead of putting in the preamble and then promptly forgetting it.

I yield.

Mr. CHIPERFIELD. I am wondering if you could not, by bipartisan agreement, set up an arrangement so that you could use local funds of these various countries, as suggested by Mr. Mundt. I say "bipartisan." Possibly I should have said "bilateral."

Ambassador DOUGLAS. I think, Congressman, it is not at all impossible to provide arrangements for the use of the local currency counterpart of dollar grants for that purpose.

Mr. CHIPERFIELD. Thank you very much, Mr. Mundt. You may proceed.

Mr. MUNDT. Getting back to this point, which I do not like to belabor so much, except for the fact that we are engaging in a \$6,800,000,000 program which, in my opinion, is directed altogether too much to the stomachs and the creature comforts of Europe and not enough to those basic ideas which are essential if peace is to be observed, I take it that you would see no objection to including in the purposes of this act some way the clear-cut statement that one of the big objectives is to defend the national interest of the United States, or our national defense, or the permanent peace, or something of that nature which would broaden its scope enough to include some such program as I have in mind.

Ambassador DOUGLAS. Section 2 (a) of the act refers to the attainment of the objectives of the United Nations, and the Charter of the United Nations refers to the preservation of peace and other things which we have mentioned.

By implication the present language of the act does embrace and contemplate the purposes which you have properly in mind.

Mr. MUNDT. I think it is there by implication; but when we gear it into the scope of activity of the United Nations, we have to decide whether it is before or after a possible veto of some measure.

I think we should not be ashamed at all of the fact we are engaging in this, because of our interest in peace. It is not purely a commercial proposition with us.

Ambassador DOUGLAS. No. This is essentially an undertaking to establish the peace and to preserve the freedom and to protect the integrity of the community of nations of which we are a part.

Mr. MUNDT. Commercially it will be a good investment if it secures the peace, and a bad investment if war eventuates, is that not right?

Ambassador DOUGLAS. Yes, sir. Well, it might still have been a good investment.

Mr. MUNDT. Not nearly as good certainly as if it gets the peace.

Ambassador DOUGLAS. It would be a perfect investment if it preserved the peace. It would, I think, still be a good investment, even though unhappily the world might again be plunged into a devastating war.

Mr. MUNDT. I do not want to draw you too far into a discussion of the genesis of the difficulties which we face, but some thought should be given to that, and to me primarily we are in trouble, because one ideology in the world, communism, per se, has an international organism through which it functions and through which it brings to

bear upon a certain problem the resources and the activities of people in a number of countries.

On our side of the contest in upholding freedom, at the moment, we have no such international working organism, because the United Nations, which is set up to do that, is subject to a veto block and because we have no international party of freedom or Americanism or liberty or private enterprise—call it what you will. So it becomes increasingly important to me that in this program and in working through these 16 countries with whom we are cooperating, there flows a stream of educational publicity and information which helps to bring about a common effort in dealing which will help to resist the unity of effort on the part of the people who come to that proposition. Do you agree with that?

Ambassador DOUGLAS. Yes.

Mr. MUNDT. Now, I notice in this legislation there is left out some of the measures we incorporated in Public Law 389 to bring that about. For example, in paragraph 5 (c) of Public Law 389, Congress wrote in—

to give full and continuous publicity by all available media, including press and radio, within such country so as to inform the ultimate consumer as to the purpose, source, character, and amounts of commodities made available under the authorities of this Act—

and section 7 in toto of Public Law 389 deals with the same subject of labeling such materielistic aid as coming from the United States, which is susceptible to labeling.

None of that is found in H. R. 4840, as proposed. What do you have in mind in lieu thereof, as an educational program to become part and parcel of this economic program, so that in aiding these 16 countries we not only help to correct bodily ailments but mental attitudes as well?

Ambassador DOUGLAS. This recovery program is aimed at recovery, not relief.

Mr. MUNDT. In my opinion, so was the international interim aid program. It was aid as well as recovery.

Ambassador DOUGLAS. The number of commodities necessarily covered or included in a recovery program is very much broader and larger than the number of commodities included in a relief program.

Mr. MUNDT. I am not holding a brief for labeling commodities under this act. I want to know what you will put in in lieu thereof.

Ambassador DOUGLAS. It is the hope, as I understand it, that the legislation to which the Congressman's name is attached would become the law; and it would become, as a result, a very powerful supplementary of the foreign policy of the United States.

Mr. MUNDT. In that connection, in view of the fact that 15 of the 16 countries—in fact, all of them, excluding Luxemburg—maintain state-owned radio systems, would you see any reason why there should not be included in the return flow of considerations which the United States is to receive, some free time over those radio stations for use in connection with this information program which we hope the Senate is going to approve tomorrow afternoon?

Ambassador DOUGLAS. Well, I should hope that there would be time over the radio stations.

Mr. MUNDT. Would that not be a legitimate request? It looks that way to me, and if it is wrong, I want to know why because we are contributing into this joint effort \$6,800,000,000 or a fractional

part thereof and one thing that they can throw into the pool which costs them nothing is some free radio time on the Government stations.

To me it looks so plausible and logical. I want to know from a diplomat what he thinks about that.

Ambassador DOUGLAS. Well, I would be very glad indeed to discuss that matter with you and tell you what is already being contemplated, at least in respect of one country of which I have knowledge on precisely that point.

Mr. BLOOM. Will the gentleman yield?

Mr. MUNDT. There is not anything in black and white in support of that proposal?

Ambassador DOUGLAS. It is a delicate question, Congressman, to discuss publicly.

Mr. MUNDT. I do not want to press for it.

Ambassador DOUGLAS. For reasons which I am sure you will understand.

Mr. MUNDT. I yield to Mr. Bloom. He wants to say something at this point.

Mr. BLOOM. I will ask you and the Ambassador at the same time, is it your intention, Mr. Mundt, to put a clause like that in the act to make it a law, that this must be confirmed and approved by the different parliaments and the different legislatures of the 16 different participating countries, or would you suggest that it be in the arrangement made to these people, or to put it in in fact and make it law?

Mr. MUNDT. It would be either way, if you talk about these bilateral contracts, just so it gets done, and I want to be sure it is done. The intent of Congress should be written in there somewhere.

Mr. BLOOM. But if you put it in the arrangement between the different countries that participate, where it is a loan, you would not want it in the act. You would not want it in the arrangement either. They are paying what they get, but if you put it in the act itself, they must accept that through their parliaments and that is where the objection has been, as you know, by certain people, by making it a law that they are compelled to do this thing and accept it through their parliaments. Their parliaments would not accept it. But in the arrangement it would be just as strong and still would not be as obnoxious as if you had it in the act.

Ambassador DOUGLAS. I think this is true, and I am sure the Congressman will agree with me that there prevails throughout parts of the world a misunderstanding of the intentions of the United States; that our aspirations are being distorted in the minds of men. One reads about them almost very day in the press. This volume of misrepresentation that comes flying out of the eastern part of Europe is included.

We all know that a lie repeated often enough soon is accepted as the truth. How countries like our own, which appreciate the truth by objective standards can compete with others who measure truth by wholly false standards, can engage successfully in that sort of verbal warfare, is a very perplexing question. But the Congressman's fundamental view that an appropriate dissemination of the truth is an essential arm of foreign policy is an accepted fact as far as I am concerned. I think it is true as far as Secretary Marshall is concerned.

Mr. MUNDT. Getting down to the question which Mr. Bloom raises as to whether it should be written out per se as a specific quid pro quo

in this act, or be negotiated by bilateral or unilateral contracts, I have in mind that some place in these eight so-called conditions precedent there should be a ninth condition precedent which at least conveys the idea in general terms that one thing we consider essential as a condition precedent is some kind of cooperation to help get the truth, not only about America, but about this program of aid, because coming out of Belgrade from the Cominform today and every day they are going to get contortions and lies, beamed to these countries.

Somebody has to straighten them out, and the least we can expect in return for our financial assistance it would seem to me is a cooperative understanding which as a very minor part could be free use of such radio time as we need.

It possibly need not be put in the bill, but there should be some recognition of it, it seems to me, instead of an utter and eloquent vacuum which is here now.

Ambassador DOUGLAS. I would like very much to discuss that suggestion with you.

Mr. MUNDT. Thank you. That is enough for that point.

Now would you be able to give us any figures as to what was decided at these conferences among the 16 nations as to the contribution which each is to make for the benefit of all? I do not know as my question is clear. Our gross contribution, if the State Department has its way, is \$6,800,000,000. That is not a net contribution. That is gross. From that we get part back in strategic materials, and so forth.

Is there similarly some place a figure to show what gross contribution Denmark is throwing in, what Sweden is throwing in, what if anything France is throwing in? They may be deficient in 99 of the 100 products, which countries need, but they may have one of which they have a surplus.

Are there any such figures available?

Ambassador DOUGLAS. There are figures available, Congressman, which show the deficiencies, and the balance of payments among those countries which might give a reflection.

It might be a reflection of the amount of export.

Mr. MUNDT. I have seen the deficiencies. I wonder if there are similar figures on the surpluses or contributions? As I understand this is a mutual, self-help program. In other words, to take a hypothetical case, suppose Denmark is long on a hundred thousand tons of butter, and is willing to throw that into the hopper and make that available to these 16 countries. Is that included in there some place?

Ambassador DOUGLAS. Some of the countries have surpluses expressed in terms of their trade balances and others have deficiencies among themselves.

It is contemplated that those deficiencies and surpluses will be cleared through a clearing arrangement, so to that extent those that have surpluses are extending support to those that have deficiencies.

What I have just said refers of course to their respective surpluses, and deficiencies, expressed in terms of their merchandise balances or the balance of trade between each country.

Mr. MUNDT. That is the theory, as I understand it. That is the theory as I have had it explained and as I have explained it in talks which I have given.

I wonder if there are tables any place which would start out on this basis? These 16 countries require \$100,000,000 worth of fuel. Of

the \$100,000,000 worth of fuel, \$80,000,000 comes from the United States of America, \$10,000,000 comes from Great Britain, \$5,000,000 comes from Norway, and so much from some place else, and on each of the items in regard to the countries that could be available so we could find out specifically in terms of quantities and products which countries are contributing to the general over-all needs of all.

I would like for each country, if we could get it, the picture as a whole, specifically what we are trying to do in the United States.

We take this \$6,800,000,000, and we say so much will be for this kind of products, so much for fuel, so much more for fertilizer.

Well, now, there are other needs, I presume, for fertilizer which we are not supplying. Somebody else is going to supply them. Who is going to supply them and to what extent?

Ambassador DOUGLAS. There is a list of commodities, a limited list, which will be exported from one country to another. For example, Britain by 1952 estimates she will be able to export I think it is 36,000,000 tons to the Continent of Europe, and there is an item of coal from western Germany and from France.

Mr. MUNDT. That is the type of thing I have in mind.

Ambassador DOUGLAS. There is timber from the Scandinavian countries. There are a number of items of that sort. I don't think it is possible to give a complete analysis because there are literally so many. We have made available to the committee information covering 28 selected commodities. It would be impossible to provide a list for all of the commodities because I presume there are something like 2,000 commodities which are necessary for the operation of an integrated industrial system.

Mr. MUNDT. You do have it, I take it, for the major commodities?

Ambassador DOUGLAS. On the selected commodities of about 28.

Mr. MUNDT. Is timber one of those major commodities?

Ambassador DOUGLAS. Yes, sir.

Mr. MUNDT. As to timber which the Scandinavian countries will supply for the neighbors to the south and to England, in this working agreement which was arrived at, in each of the countries of the 16, did they agree to the same kind of formula we are following? We send the materials and you make them available. We transfer. If they can pay cash readily, we accept the cash. If it is a matter of a loan, we accept the loan. If they have some strategic materials, we accept them. If they have nothing, we extend them on credit.

Do each of those countries agree similarly with all of their neighbors to make extensions on credit or do each of the other countries insist on getting their pound of flesh in one form or another?

Ambassador DOUGLAS. No. It would take the form of a commercial transaction for these countries have been devastated by the war. They have very few resources, most of them, which they can call their own which they can extend, and the great requirement of all the countries is dollars and not local currency.

Mr. MUNDT. Could not Norway transfer timber to England on a credit basis under that sort of arrangement? We are under an arrangement whereby it looks to me we are underwriting all the balance of payments anyhow. It would seem to me they would not have to insist on a strictly commercial transaction.

Ambassador DOUGLAS. Actually many of the commercial transactions are extended on credit or will be extended on credit, and that, of course, is basic and fundamental to the clearing arrangements.

Mr. MUNDT. Then to the purpose of getting the truth out before us, this mutual self-help program is arranged on the basis that it is a commercial transaction as far as the 16 countries are involved among themselves, and a program of hopeful generosity as far as we are concerned in dealing with Europe?

Ambassador DOUGLAS. The difficulty with this area is that it is shy of dollars.

Mr. MUNDT. I do not completely understand this international monetary business, but I do not see how dollars are involved in transactions among themselves.

Ambassador DOUGLAS. In one country there is a deficiency of one kind of currency and in another country there is a surplus of that kind of currency, and they have agreed to a clearing arrangement through which the deficiencies and surpluses will be cleared out. But that helps them of course as among themselves. It doesn't help them in respect of purchases from the United States or the Western Hemisphere.

Mr. MUNDT. I understand that perfectly and that is why we have to pay this extension of credit for loans. But thinking in terms of those people alone, I want to intensify and step up and accelerate mutual self-help that they give each other, not thinking about our part, but that which they give each other.

Ambassador DOUGLAS. They do that through this clearing arrangement. It involves the extension of credit.

Mr. MUNDT. Is that a continuing clearing house arrangement which is set up specifically as a result of the Paris Conference?

Ambassador DOUGLAS. Yes, sir.

Mr. MUNDT. And that is to continue?

Ambassador DOUGLAS. Yes, sir.

Mr. MUNDT. And it applies just to those 16 participating countries?

Ambassador DOUGLAS. Yes, sir. Now as I said the other day, I don't think the Congressman was here, not all of these 16 countries are yet members of that particular clearing arrangement, but a good many are.

I can give you the list of those that are parties to that clearing arrangement.

Mr. MUNDT. That is helpful.

(The information is as follows:)

On November 18, 1947, an agreement for multilateral clearing was signed by Belgium-Luxembourg, France, Italy, and the Netherlands. Denmark, Norway, Sweden, the United Kingdom, and Austria have signified their intention of joining this arrangement as occasional members.

Ambassador DOUGLAS. That arose definitely out of and as a result of the Paris Conference.

Mr. MUNDT. That is definitely a step in the direction of what I was trying to lead to.

Thank you very much, Mr. Ambassador.

That is all, Mr. Chairman.

Mr. CHIPERFIELD. Mr. Bloom

Mr. BLOOM. Mr. Ambassador, returning to the questions of the other members of the committee, supposing you should write into this act a section or provision whereby that one provision should be declared invalid by the Supreme Court, and that is, the right of the President of the United States through the Secretary of State to have

complete control over the foreign affairs and foreign relations of the other countries.

If that provision should be declared invalid by the Supreme Court, which I take it will be held invalid, then your whole act would fall.

Mr. LODGE. Will the gentleman yield?

Mr. BLOOM. I will be glad to.

Mr. LODGE. If the gentleman will turn to section 15 of the bill he will see that the whole act will not fall.

Mr. BLOOM. But if the gentleman will allow the Ambassador to answer that question.

Mr. LODGE. I thought you yielded to me.

Mr. BLOOM. Of course I yielded, and I will answer you. You are saying what I am saying. That is, if this one provision in the act should be declared invalid, then there would not be any organization at all. Then what is going to happen to the balance? The balance of your act would not be effective.

That would go on, but the handle and the operation of the act is destroyed completely so that you have no act at all. All of the other parts of the sections of the act would have no alteration, but the fact is when you destroy your administration of the act, then there is nothing left and the Supreme Court has already held that in the case of the *United States v. Curtiss-Wright*, and that decision was made in 1936.

I have just sent to the Supreme Court to try to get a little analysis of what the decision was but I think I know what the decision was. Therefore, Mr. Ambassador, and Mr. Lodge, you would not have any act because you have taken away the handle. It could not become operative. You would not have any organization to operate the act.

Mr. LODGE. I was trying to make the point that the entire act would not be automatically out.

Mr. BLOOM. I agree with you. The entire act would continue on, but what is the use of the act? You have no administration. You have just taken the handle away. It does not become operative at all. Do you wish to answer that question, Mr. Ambassador?

Ambassador DOUGLAS. As I understand your question it was this: That if the Supreme Court should declare the basic administrative provisions of the so-called Herter legislation to be unconstitutional—

Mr. BLOOM. Or of any other.

Ambassador DOUGLAS. Or any other piece of legislation, then there would be no administration of the act and the purposes of the act would not be carried out.

Mr. BLOOM. That is right. That is the question I am asking.

I am not a lawyer and I understand the Ambassador is not a lawyer, so you and I can decide this case very easily.

Ambassador DOUGLAS. I presume under the hypothetical circumstances which you have put forward that the result of your indicated hypothesis would necessarily follow.

Mr. BLOOM. Yes. So therefore with that thought in mind, is it not necessary for us to be very careful and not write anything into the act that would destroy the act itself? If any citizen could apply to the Supreme Court to hold this act invalid, the Supreme Court under former decisions would have to do so. That is my contention. I think you agree?

Ambassador DOUGLAS. I think it would.

Mr. BLOOM. Mr. Ambassador, yesterday I believe the question was asked if Rumania and Great Britain would want to make an agreement whereby Rumania would send wheat into England and England would sell coal to Rumania; would that be possible according to the procedure of things over there now?

Ambassador DOUGLAS. Yes; but that is a hypothetical question and my reply was that that would be an appropriate thing to do.

Actually it is very unlikely that Rumania would be importing coal from the United Kingdom. She would derive her coal from some nearer source.

Mr. BLOOM. Would that be possible at the present time or under the agreement between satellite countries in western Europe?

Ambassador DOUGLAS. I don't know that any existing agreements would interfere with that sort of transaction, but the natural economic forces would interfere with it because Rumania would doubtless derive her coal from a source nearer than the United Kingdom.

Mr. BLOOM. Would you say that that same thing would apply to the coal mines in Poland and any of the participating countries?

Ambassador DOUGLAS. Well, it is contemplated Poland will ship into western Europe between 23 and 24 million tons of coal during the year 1949, so that there will be as between Poland and western Europe a certain amount of trade.

Mr. BLOOM. I think I asked you the other day whether that provision as regards the shipment of coal from Poland to western Europe was not conditioned on the loan to be given by someone for the development and so forth of the coal mines in Silesia?

Ambassador DOUGLAS. No. I think not, Congressman. In 1947 it was estimated, as I recollect, the total exports of coal from Poland would approximate 18,000,000 tons, of which, according to my recollection, about 7 million tons went into western Europe.

Mr. BLOOM. Yes.

Ambassador DOUGLAS. Poland is increasing its production of coal.

Mr. BLOOM. At that time was there not a promise made by a government that there would be a loan of around \$60,000,000 and there was \$50,000,000 withheld from Poland?

Ambassador DOUGLAS. If there was, I am not informed about it.

Mr. BLOOM. I think if my recollection is correct we were to make a loan to Poland of \$60,000,000. We gave them \$10,000,000, and then we stopped further payments of that.

Ambassador DOUGLAS. Mr. Thorp tells me there has never been any promise from this Government. Poland, according to my information, has been seeking a loan from the International Bank.

Mr. BLOOM. No; I am not talking about the International Bank because that would be outside of this country. We did stop payment on the loan we promised to make to Poland.

Ambassador DOUGLAS. I am told we made an Export-Import Bank loan of about 40 millions to Poland some 2 years ago for the purpose of purchasing coal-mining equipment, freight cars, machinery, and so forth. Almost \$11 millions were utilized.

Mr. BLOOM. The balance of it was never given.

Ambassador DOUGLAS. That is right.

Mr. BLOOM. Mr. Ambassador, I would like to ask you this question: When you advance payments for raw materials to any of the participating countries, for raw materials, and when the raw material is

fabricated and made into goods and those goods are sold, are we repaid for the raw material, and just for the raw material, that we give to these different countries, or are they permitted to sell the goods or whatever it may be, a pair of shoes or clothing, and they take all of the return for the sale of these goods and do they pay us for the raw materials that we give to them?

Ambassador DOUGLAS. If the support takes the form of a loan, and the loan is used for the purchase of raw materials, then we would be repaid in the amount of the loan out of such proceeds and income as the debtor country might derive. It is just as in any commercial transaction.

Mr. BLOOM. Yes, but there are certain countries that you give raw materials to, but you do not give the materials through a loan. Is that right?

Ambassador DOUGLAS. That is right, in the case of a grant.

Mr. BLOOM. Well, that is a grant. Now you give your raw materials. Are we repaid for the raw materials when the merchandise is made and sold and they get payment for our raw material, besides their costs of manufacturing?

Ambassador DOUGLAS. In the case of the grants there would be no repayment. In the case of the loan, there would be a repayment to the full amount of the loan.

Mr. MUNDT. Would the gentleman yield?

Mr. BLOOM. Delighted.

Mr. MUNDT. In the case of the grant is it not true that the country makes the payments in its local currency? At the time you get this monetary ledgerdemon where they make the payment in local currency which they cannot spend and we cannot spend and it stays there in frozen form?

Ambassador DOUGLAS. Yes. There is a local currency in the case of a grant. There is a local currency counterpart equal to the shipside cost at the point of delivery, and that local currency under the terms of one of the pieces of legislation, which is before this committee, would be placed in a special account.

Mr. MUNDT. Nobody could spend that local currency?

Ambassador DOUGLAS. Nobody can spend that, and it cannot get back into the monetary stream of a country except upon mutual agreement.

Mr. BLOOM. But the local currency is spent within that country?

Ambassador DOUGLAS. No, sir.

Mr. BLOOM. It is spent outside?

Ambassador DOUGLAS. No; it is not spent at all. It is placed in a special account.

Mr. BLOOM. You mean deposit is made in the bank?

Ambassador DOUGLAS. In the Central Bank of the local country.

Mr. BLOOM. That is the credit of the participating country and the United States?

Ambassador DOUGLAS. It is placed in a special account in the Central Bank of the recipient country.

Mr. BLOOM. Only the participating country?

Ambassador DOUGLAS. Of the recipient country, and there the local currency remains until it is withdrawn for some purpose, agreed to by both countries.

Mr. MUNDT. But then it has to be spent in the local country?

Ambassador DOUGLAS. Even then it has to be expended in the local country, or one of its dependent territories.

Mr. JONKMAN. Will the gentleman yield?

Mr. BLOOM. Yes.

Mr. JONKMAN. Is there anything to prevent the receiving country from printing an equal amount of currency to put it in circulation?

Ambassador DOUGLAS. Except the financial commitment they make to bring their budgets into balance.

Mr. BLOOM. Does that same procedure apply?

Ambassador DOUGLAS. The important thing is to withdraw this amount of local currency from the monetary stream so as to avoid additional inflationary pressure.

If a local recipient country continues to have to borrow for some period of time, it is better that it be an open transaction than it be a concealed transaction through the use of the local currency equivalent of any grant which the United States might make.

Mr. JONKMAN. It does, except there is an implied promise they would not print additional currency without something behind it. It is merely an implied promise.

Ambassador DOUGLAS. It is an express promise, Congressman. The question of fulfilling the promise is another matter.

Mr. JONKMAN. Is it like the promise in the Atlantic Charter?

Ambassador DOUGLAS. No. I think it is a firmer promise than the Atlantic Charter.

Mr. JONKMAN. That is all; thank you.

Mr. CHIPERFIELD. Mr. Bloom has yielded to me for a question.

When these local currencies are put in a special fund, is this special fund in the name of both countries or in the case of the recipient countries, or how is that handled?

Ambassador DOUGLAS. As to the title of the account, I cannot answer. But it would be in the name of the recipient country. The recipient country agrees that there shall be no withdrawal or use of that currency except upon mutual agreement.

Mr. CHIPERFIELD. There have been discussions as to whether that should not be in joint account, not only to the account of the beneficiary country but to the United States.

Ambassador DOUGLAS. As I indicated the other day this matter of local currency is a very perplexing one.

The magnitude of the local currency counterparts in certain countries, depending upon percentage of loans or grants, can be tremendous. In one country, for example, under a certain set of hypotheses, as to what percentage of the support would be extended in extent of grants, what in the form of loans the amount in the special fund would be four times the deposits, other than governmental, in the central bank, and would be greater than the total currency in circulation.

That gives one an idea of the magnitude of the fund, even during a period of 15 months, under those hypotheses and therefore of the extraordinary power over the financial system of a country, which the fund might exercise.

Mr. CHIPERFIELD. Would not the fact that you have the special funds be deflationary in character and help to stabilize their country?

Ambassador DOUGLAS. The withdrawal of the funds from the monetary stream is in the deflationary category.

Mr. CHIPERFIELD. Thank you very much.

Mr. MUNDT. Mr. Bloom, do you yield?

Mr. BLOOM. I believe I do.

Mr. MUNDT. I think Mr. Bloom has raised a very interesting point, and that is the possibility of reducing the net cost of this program to the United States without materially hindering the recipient countries by working out the arrangement, if I understood his suggestion, so that the actual costs of the raw materials come back to the United States and the recipient country would retain its profits that are made in the processing and distribution of them.

Now under this arrangement of a special account with a very slight amendment in the bill, or written into the bilateral contracts that would be provided, some sort of wording to the effect that "However, this joint agreement is understood to be mandatory from the standpoint of reimbursing the United States in terms of local currency for the cost of the raw materials."

We in turn then use those local currencies to pay our cost of the diplomatic missions, the Voice of America programs, and other things, and I wonder if that would not be a way in which we could reduce our over-all cost and not injure the other countries?

What would you think about that?

Ambassador DOUGLAS. That is one of the purposes which might be mutually agreed upon by the respective countries; that is to say, the use of the local currencies, among other things, for the purpose of defraying the cost of local administration of the European recovery program, and for other purposes.

Mr. MUNDT. But if we wanted to write it in the bill, we could do that?

Ambassador DOUGLAS. Well, it goes to a question of balance of payments in terms of dollars, which is, of course, the essential monetary problem. That is the external monetary problem of these participating countries.

Mr. MUNDT. May I ask this question for information? It is directed to a man who may be a somewhat reluctant and unwilling candidate for the job of administrator of the act. I would like to know whether you think it is contemplated we are going to try to get that kind of agreement, wherever possible, in our bilateral contracts?

Ambassador DOUGLAS. It is contemplated insofar as the cost of administering the program with the local currency is concerned.

Mr. MUNDT. I mean the theory that Mr. Bloom worked out, the return for the costs of raw materials being made to us in local currencies for our use in paying not only the administrative costs of this act, but our general diplomatic mission costs, information service costs, and so forth.

Ambassador DOUGLAS. As I understand it, that has not been contemplated to that extent; for the purpose of defraying costs of administering the European recovery program within a country, yes; but for the purpose of defraying other expenditures within the country; no. It has not so far been contemplated.

Mrs. BOLTON. Would there be a danger in that?

Ambassador DOUGLAS. The local currency problem is a very perplexing one, and it gives us tremendous power.

If we are repaid in the value of the raw material in the local currency, that fund in certain countries would reach tremendous proportions

As a consequence they finally got their debt paid back to the Government. They repaid the raw material and the foundation stock stayed where it was.

I think the policy in your line of reasoning, Mr. Ambassador, is that you assume the whole economic process stops after one transaction, but it does not because the foreign government retains that \$2,000,000 worth of raw materials with which the shoes are made.

They again make a \$3,000,000 profit, and then they pay that back to us.

They again make it a third time, and over and over again. They retain that \$2,000,000 foundation stock, and go back to the Indian analogy which we gave them. They do not pay that back.

Mr. BLOOM. No; but they ask for the raw material. They could undersell us on anything they want to manufacture over there. We give them the raw material.

Well, I am glad you agree with me. I am in sympathy with what Mr. Mundt wants to do with reference to the idea of letting the people of the participating countries understand where this help is coming from, and it reminded me, Mr. Ambassador, of a case of my own, and that was when I was a little boy in San Francisco.

I started to go to school 70 years ago.

My folks were not able to buy the books, so the school board contributed these books to the pupil. But in the book there was a stamp that said, "This book is loaned to the scholar because the scholar's parents were not able to buy the book."

I was a little boy then. I read that and I threw the book on the floor and I walked out of the school and I never went back since, because to me it was a repulsive thing to think that I had to advertise the poverty of my folks.

Now, I think it is wrong if anyone should suggest putting into the legislation that the United States Government is doing so and so and so and contributing to the success of the prosperity of these countries.

They contribute to the help of these countries and to the aid of these countries to the rehabilitation, or whatever you want to call it. I object to putting that into legislation so that their parliament must accept it. It would be letting their people know that we are doing this for one purpose: We are doing it as much for ourselves as we are doing it for them, and maybe more.

Mr. Mundt said that to have peace, we must first secure peace.

We have no peace in the world today. If we can secure the peace of the world by this piece of legislation, then we can have permanent peace throughout the world.

I think it is wrong to ask the other legislatures or the other parliaments of the participating countries to take our legislation and say, "This is what you have got to agree to," and their people would naturally resent it.

Mr. MUNDT. Will the gentleman yield?

Mr. CHIPERFIELD. Dr. Judd has to take a train. I wonder if we could have a few minutes of cross-examination and then return to you?

Mr. BLOOM. Go ahead. Whatever you say is very enlightening.

Mr. JUDD. Mr. Ambassador, again and again in this testimony it has been stated by every witness that the key factor will be the caliber of the people who administer it.

I have grave doubts that under the set-up proposed here it will be possible to get the kind of top-flight administrator that is necessary

because as I see that diagram, he would not be directly under the President. He would be a sort of assistant secretary to each of the various Cabinet officers involved. If you look at section 7 on page 10, second paragraph:

That the Administrator can utilize the services and facilities of any department, agency, or establishment of the Government as he shall direct with the consent of the head of such department, agency, or establishment.

Now, of course, that means that he is subject to the will of the head of every department or agency or establishment of the Government. If you get a stubborn man at the head of one of those, he could force it clear back to his own removal, could he not, by showing that he had the legal authority to block any action on the part of this Administrator?

Ambassador DOUGLAS. What section are you referring to?

Mr. JUDD. Page 10, paragraph 2.

Ambassador DOUGLAS. Subsection (b), section 7?

Mr. JUDD. It begins on line 10, page 10. The part I am concerned about are lines 12 and 13 [reading]:

with the consent of the head of such department, agency, or establishment.

I think it ought to be as we had it in the other acts not as the head of any agency but as the President directs. Then you have a proper chain of command.

Ambassador DOUGLAS. I am sorry I can't identify the language to which you refer.

Mr. JUDD. Page 10, line 10.

Ambassador DOUGLAS (reading):

By utilizing the services—

and so forth?

Mr. JUDD (reading):

By utilizing the services or facilities of any department, agency, or establishment of the Government as he—

that is the Administrator—

shall direct with the consent of the head of such department, agency, or establishment.

That makes him subordinate to the head of every department, agency or establishment from which he might want to get something or which he might want to do business with, does it not?

Ambassador DOUGLAS. I think not, sir. If the Congressman will refer to page 9 (b), the language reads as follows [reading]:

The Administrator may provide—

It does not say he shall provide. It says:

He may provide for the performance of any of the functions described in subsection (a) of this section, one, by utilizing the services.

Mr. JUDD. That is correct.

Ambassador DOUGLAS. And if that sort of an arrangement is not satisfactory to him, he may then make arrangements for the services which have to be rendered by establishing his own.

Mr. JUDD. You mean then that if the head of the Department of Agriculture refuses to cooperate the Administration may set up a rival department of agriculture?

Ambassador DOUGLAS. Well, one is caught on the horns of a dilemma. Either one directs him to do it in the first instance, or one makes it permissible for him to avoid doing it in the other.

Mr. JUDD. I do not think it need be limited to the two horns. For example, in the three, or at least two of the bills we have passed in the last year, we have avoided that kind of thing by saying, for example in section 3 of Public Law 389 "The President."

We do not say "The Administrator."

We say "The President, acting through such departments, agencies, or independent establishments of the Government as he shall direct," whether the head of the agency consents or not.

This bill puts the Administrator under the head of every agency, as a sort of Assistant Secretary.

I do not think you can get top-flight men to come into such a set-up where they have the responsibility for the success of the program, but they do not have the authority.

Ambassador DOUGLAS. I don't think that follows, sir. I think permission is given to him to use any department or agency of the Government, to discharge the responsibilities of his office, but I think it is not required of him that he shall do so.

Mr. JUDD. No, but it is impossible for him to achieve the things that you want to have him achieve unless he has that authority, or unless the chain of command comes from the President, as we have it in these other acts, 84 and 389.

In them we said, "He shall use such other agencies," or, "He may use such other agencies as the President shall direct."

It seems to me that is the way that it has to be.

Ambassador DOUGLAS. Well, the Administrator is appointed by the President upon the confirmation by the Senate. The Administrator's jurisdiction is defined by the legislation which the Congress enacts and he operates under the President of the United States.

He may in the exercise of his authority use any agency or department of the Government which is necessary to discharge his responsibilities.

If the head of that department resists, then he may be forced to establish his own agency to do it.

I understand that the Herter bill contains almost identical language.

Mr. KEE. Will the gentleman yield?

Mr. JUDD. Just a moment, please, until I finish this. Then I will be glad to yield to you, because I think I am working along the same line you have, that the chain of command ought to come from the President and not the various secretaries.

For example, over on page 13 of the bill, beginning on line 10: [reading]

The Administrator in the exercise of any authority conferred under section 7 of this act may procure, 1, commodities owned by any department, agency, or establishment of the Government, if the owning agency determines that such commodities are available for such procurement.

There again the head of that agency may come in and say, "No matter what you say the law says I can block this," and the only thing the President could do would be to remove the head of that agency; whereas we wrote a bill here and passed it just before Christmas in which it says, dealing with the same problem, [reading]

Any commodity heretofore or hereafter acquired by any agency of the Government under any price-support program shall to the extent that such commodity is determined by the President to be appropriate for such purpose and in excess of domestic requirements, be utilized * * *."

determined by the President, not by the head of the CCC or some other agency.

It keeps the command where it ought to be, in the President, and does not make the Administrator Assistant Secretary to each of the Cabinet officers.

Mr. MUNDT. Will the gentleman yield?

Mr. JUDD. Yes.

Mr. MUNDT. I think if you will look on page 3 you will find that the Administrator does have that power under this set-up.

On line 16 it says the Administration shall be headed by an Administrator for Economic Cooperation, and it continues—

as hereinafter referred to as the Administrator, appointed by the President, with the advice and consent of the Senate,

and it concludes—

except as otherwise provided in this Act.

The other says, "hereby vested in the Administrator."

That does not limit the Administrator. No. That gives the right to these departmental heads to refuse to cooperate in the program. .

It is obtaining for them the authority they now have, giving them the responsibility with the authority you are talking about.

Mr. JUDD. You are not retaining for them, but putting into their hands authority under law for them to block any action by anybody in the Government, short of the President himself, by removing them from office.

In the other bills I am talking about, we carefully avoided that by saying each time—

as the President shall direct.

Now I yield to Judge Kee.

Mr. KEE. I want to call your attention to the fact that on page 9 of the Herter bill as to the same provision:

authorized to use facilities, services of any personnel or department or agency of the Government, with the consent of the head of the department.

You use the same language. I agree with you that this does not give him any power at all.

Mr. JUDD. That is correct. You would not get a high-grade person unless he is willing to sacrifice himself. The kind of people we want we cannot get. I do not care whether in the Herter bill, or here, it is bad administration. It puts the Administrator right in the middle of the interagency fights and without any authority whatsoever.

Mr. MUNDT. The alternative would be to make it more powerful?

Mr. JUDD. No. Under the President, not under the heads of the agencies is where the man should be placed. It should be the same as in the other bills we have passed. "The President shall direct," not "The head of the agency shall block."

Now take, for example, over on page 6, in section 6. It seems to me that there again much of the personnel provided for will have two bosses. [Reading]

For the purpose of performing functions under this Act outside of the United States, the Secretary of State may appoint or assign certain persons—

and then down below, in line 25 it says:

and by regulations prescribed by him the Secretary of State—
and so forth.

That is, the Secretary of State is the one who appoints these persons to work with the Administrator and they work under regulations prescribed by him.

Ambassador DOUGLAS. I think, Congressman, you were not here when yesterday morning I referred to these sections and to the reasons for vesting the appointing power in the Secretary of State.

Moreover, it was explained then that the recruiting of the personnel serving overseas, except for the recruiting that may be undertaken within the very, very small group of Foreign Service inactive officers and Foreign Service officers, would be undertaken by the Administrator.

It is the intention that he shall nominate to the Secretary of State and that the Secretary of State shall do the appointing.

The reason for the vesting of the power to appoint in the Secretary of State was that this overseas personnel, should, we believe, be in the Foreign Service Reserve.

First, because their emoluments are higher, unless Congress, of course, waives certain very express provisions of existing law in regard to employment, and secondly because they will as members of the Foreign Service Reserve have a status or title.

For example, in the United Kingdom, it is contemplated that the overseas person in charge of ECA would have the title of Minister. That title provides the person with a status.

Mr. JUDD. I see advantages, but still he would be under two bosses, one the Administrator and one the Secretary of State.

Ambassador DOUGLAS. As presently contemplated he would be a part of the Embassy. He would be perfectly free to communicate to the Administrator in Washington, but a similar communication goes to the Secretary of State.

If the Minister disagreed with the Ambassador, he would be perfectly free to express his views to the Administrator and to the Secretary of State.

The Ambassador would likewise enjoy the same privilege.

There are reasons for not having two separate people representing the United States Government in a foreign country.

One is conversations in the name of the United States Government, with, for example, Prime Ministers, Ministers of State for Foreign Affairs, presidents of boards of trade, Chancellors of the Exchequer.

Mr. JUDD. If the Administrator and Secretary of State were in disagreement, this man would obey the Secretary of State because the latter prescribes the rules and regulations.

Ambassador DOUGLAS. The Administrator can always appeal to the President.

Mr. BLOOM. Now I refuse to yield further.

Mr. Chairman, I would like to have the clerk read the decision that I referred to with reference to the legality of the President of the United States on Foreign Affairs.

Will the clerk kindly read that?

Mr. CRAWFORD (reading):

Opinion of the Supreme Court of the United States in the case of *United States v. Curtiss Wright Corporation*, volume 299, United States Supreme Court decisions, page 304, decision No. 98, October 1936.

Not only as we have shown is the Federal power over external affairs in origin and essential character different from that over internal affairs, but participation in the exercise of the power is significantly limited. In this vast external realm, with its important, complicated, delicate, and manifold problems the President alone has the power to speak or listen as a representative of the Nation. He makes treaties with the advice and consent of the Senate, but he alone negotiates. Into the field of negotiation the Senate cannot intrude, and Congress itself is powerless to invade it.

As Marshall said in his great argument of March 7, 1800, in the House of Representatives "The President is the sole organ of the Nation in its external relations and its sole representative with foreign nations."

Mr. VORYS. It might be well to point out that the Marshall referred to was the late Chief Justice.

Mr. BLOOM. Well, that was 1800.

Now, Mr. Ambassador, in referring to the discussion of the Supreme Court I will contend that if we should write anything into this act that is different from the decisions of the Supreme Court on this one important point, we will be destroying this bill.

We would not have a handle to the legislation, and it will be of no use at all. You might as well have that in mind when you are writing this bill.

That is all I have to say.

Mr. CHIPERFIELD. Dr. Judd?

Mr. JUDD. Will you turn to page 17, Mr. Ambassador?

I am trying to find out what some of this means. I am not a lawyer, either.

Ambassador DOUGLAS. I would like to make this observation about the section to which you have just referred. The language does not quite carry out the intention which I have just stated. There is a confusion between the language and the intention.

Mr. JUDD. Well, I thought there was. I wish you and your experts would submit something to help clarify this because I cannot make out what the individual would do under two bosses if he were trying to follow out his duty.

On page 17, section 10, it reads:

The Secretary of State after consultation with the Administrator is authorized to conclude with individual participating countries or any number of such countries, or with an organization representing any such countries agreements in furtherance of the purposes of this Act.

Now, I understood all along that these agreements were to be bilateral agreements. This apparently includes multilateral agreements. What does it mean in line 11, "With an organization representing any such countries"?

Does that mean representing any number of such countries?

Ambassador DOUGLAS. That is purely permissive language. It is the intention to make bilateral agreements, which among other things will make reference to or contain a reaffirmation of the pledges and undertakings made by the participating countries.

Mr. JUDD. Under this the Secretary of State can enter into agreement with an organization representing 2 or more of the 16 countries, if they constitute or voluntarily organize such an organization?

x Ambassador DOUGLAS. That is the way I would construe the language.

Mr. JUDD. I am glad to get that.

Now, a little while ago Mr. Mundt referred to some of the requirements that we have put in previous legislation as to the agreements between the United States and recipient countries. He mentioned some that were omitted.

There are one or two more omitted that I would like to call attention to. They are in Public Law 389, for example, and I am curious to know why they were omitted here. I assume there is good reason. For example, in Public Law 389, one of the conditions was that—

the country must agree not to export or permit removal from such country while need therefor continues of commodities made available under the authority of this Act, or commodities of similar character produced locally, or imported from outside sources except to the extent agreed upon by the Government of the United States.

I recognize certain conditions where it would be advantageous to us and them for them to reexport part of the commodities or something constructed out of the commodities, but in general it seems to me there is real point in having that condition in there. There is an escape clause whereby it can be done where we believe it advisable.

I will tell you why I feel it ought to be in there. For most of the countries involved in the 16, probably it would not be necessary; but there might be one or two or three of these countries, and there might be other countries with which we later would have agreements on a similar program, where the government, for whatever reason, ought to have a certain amount of close observation—put it that way—to make sure that merchandise was not reexported and channeled elsewhere than we had in mind.

Now, since there is an escape clause in it, why is it not proper to have this item in all of them? Then there is no stigma. In most of them you would not need to apply it. Where you did not need to apply it, you would have the authority. Why should we not have it in this act?

Ambassador DOUGLAS. If I understand the question correctly, I am not certain that there is any serious objection to the right of the United States to prohibit reexport.

Mr. JUDD. They would agree not to reexport except where it is mutually agreed upon.

Ambassador DOUGLAS. There is a fundamental distinction, Congressman, between the legislation we are now considering and the purpose of the legislation.

Mr. JUDD. I realize that.

Ambassador DOUGLAS. The purpose of the previous legislation has been to provide relief. They were just straight relief bills. This legislation is designed to support and encourage recovery and the restoration of stability.

One of the fundamental things most of the participating 16 countries must achieve is a higher level of exports.

Unless they achieve a higher level of exports, then they cannot achieve recovery and stability.

Mr. JUDD. That is right; but not of the commodities that we made available under this act, except in unusual circumstances.

Ambassador DOUGLAS. In some cases it might well be, and perhaps in a good many. There are some 2,000, or a thousand to 2,000, commodities embraced in the recovery program for this great industrial area.

Mr. JUDD. But there may come a time when it is very important to have certain—I would not call them “restraints,” because I do not like that word—but some mutually agreed upon conditions under which the program is to be carried out; and if they are needed in the cases of certain countries, they ought to be in the general legislation.

Then there is no stigma for any country; there is no discrimination, no loss of face, or whatever it may be, and it would be so much easier to administer.

Ambassador DOUGLAS. There is one phase of the matter I would like to consider and discuss with you as to the reservation of a right. This is not a considered judgment. Perhaps the reservation of a right on our part might be a wise thing.

As I understood, Congressman, you were referring to the reexports of the imported commodities in substantially the same form; is that right?

Mr. JUDD. That is right; of commodities made available in accordance with this act or commodities of the same character produced locally or imported from outside.

Mr. VORYS. Will the gentleman yield?

Mr. JUDD. Yes.

Mr. VORYS. The comment has been made that this bill last fall was solely a relief bill. I think it will be found that a little over \$400,000,000 of the entire authorization was programed for food, fuel, and medicine, and the rest was materials to prevent economic retrogression, precisely the same type of materials that will be involved here; so that the provision that the gentleman from Minnesota is referring to applied to nearly half of the supplies to be furnished under the interim aid bill.

Mr. JUDD. And the same sort of aid that is contemplated here.

Mr. VORYS. That is correct.

Ambassador DOUGLAS. I think there would be very few cases in which an identical commodity or a commodity in the form in which it was delivered would be reexported.

I do not want to engage in discussion to any great length, but I think there is a difference between the language to prevent economic retrogression and to support recovery. One is the negative statement, and the other is a positive statement.

Moreover, actually as a practical matter, while the interim program embraces a larger number of commodities than those specifically identified by language, the number of commodities in the interim aid program were relatively few; whereas the number of commodities, though they may not be supplied by the United States resources, embraced in the export-import programs of these countries and which form the basis of the measure of the external support required, ranges somewhere between a thousand and 2,000, for this is a highly intricate industrial community.

Mr. JUDD. That is all the more reason why there ought to be significant restrictions. I hope you will have your experts work on this and help us devise something, if we can, that will give assurance on this point.

Ambassador DOUGLAS. We will be very glad to.

Mr. JUDD. There is another one of the same sort. In other legislation we have had requirements that the governments agree to have representatives of the United States Government observe—and we put in the bill, “advise and report”—on how the program was being carried out; whether it was being carried out in accord with the agreements that had been entered into.

It is conceivable that some country here or there might not carry out its agreements; and it would be bad for that country, bad for the people of the United States, and for the Congress of the United States, the taxpayers, and so forth—to find that there was nothing we could do about it.

Therefore, I think it is advisable to put in language of that sort, but saying that they have to agree that American representatives would be permitted to observe—advise, if you like—but observe and report. There is an escape clause in the very beginning of the whole section.

It says that “the country must agree to these things, where applicable.”

In most of them it would not be applicable, but in some it would be applicable, and it should be in the general legislation.

If it is a blanket requirement, there is no insult. If it is singled out and applied to certain countries and not to others, then it is an insult, and we would not have their cooperation.

Mr. KEE. I think if you look on page 9, section 7, you will find a provision for the report to be made of the operations under this contract from each country, but I do not think the provision is quite broad enough.

Mr. JUDD. That is a report of the President pretty much as to how he administered it?

Mr. KEE. No. In such country transmitting to the United States not less frequently than every calendar quarter after date of agreement of full statement, operating under the agreement, including the report of the funds received under this act.

Mr. VOYTS. Will the gentleman yield again?

Mr. KEE. I do not think that is quite as broad.

Mr. JUDD. I agree with you.

I yield to the gentleman.

Mr. VOYTS. I have been wondering whether the distinction should not be made between the supervision and the control of the grant funds and funds that are loaned.

No such distinction is provided in the draft legislation before us. It has seemed to me that the provisions of the interim aid bill were quite appropriate when we were not expecting repayment in any way, shape, or form. They might be quite inappropriate if we were making a loan of any kind whatsoever, and it would seem to me that a very easy way to handle that might be a reference back to the provisions of the interim aid bill in this legislation to cover such amounts as are covered or as are furnished by way of grants.

Mr. JUDD. That is a good suggestion.

Now, may I ask another question along the same line

On page 9 of the bill, if the Ambassador will look, please, line 22.

This is a thing that has come up in three previous bills, and I would like to have some light on it. It says [reading]:

The Administrator may provide for the performance of any of the functions described in subsection (a) of this section—(1) by making funds available in the form of advances or reimbursements to any participating country, or to any agency or organization representing a participating country.

In each of the three bills we have had previously within a year it has come down in that manner. Each time the Congress has changed it in line with the last bill. [Reading:]

The President may by allocation of funds herein authorized to any such existing departments, agencies, or independent establishments or by establishing in this country credits subject to the control of the President.

I would think that having made that change three times, it would be taken by somebody in the State Department that the Congress was not in favor of turning over funds to any foreign country.

I do not think there are any more reasons in favor of it in this bill than in previous bills.

Why cannot that be handled as we handled the three previous ones, by allocating the funds to the purchasing agencies here or establishing in this country credits for those countries, with the credits under the control of the President?

What objection is there to that?

There must be some, because each time they come back modified.

I asked Mr. Lovett when he was here, and he said he did not see any objection. He thought it was an advantage to have only credits established. Yet the next bill comes in with the same old language—turning over funds. Certainly that is psychologically inadvisable in this country.

Ambassador DOUGLAS. I cannot answer the question.

Mr. JUDD. Would there be objection to our putting in this as we have in these previous bills, that he may carry it out by allocating funds to the agencies, establishments, the departments of our Government or by establishing credits in this country, subject to the control of the President?

Ambassador DOUGLAS. I do not know what the language of the previous legislation is.

Mr. JUDD. That is practically the language I offered in all these other bills.

Ambassador DOUGLAS. What about offshore purchases? That would have to be covered.

Mr. JUDD. They could be handled through credits in the United States, could they not?

Ambassador DOUGLAS. Yes.

Mr. JUDD. That is the way we have done it previously. I would like to know if there is any objection to that; because if that can be accepted without harm, I know it gives a greater sense of assurance to our own people who put up the money.

Ambassador DOUGLAS. Offhand, I would not think there was any objection to it. I do not know the history of the previous legislation.

Mr. JUDD. We do.

Now, on this question of merchant vessels, if our merchant vessels should be transferred by charter to England, for example, would she

be compelled or required to cut down her use of steel for construction of ships by a commensurate amount?

Ambassador DOUGLAS. That question was put to me here yesterday.

Mr. JUDD. You said Cripps had announced they were having to do it because of shortage of steel?

Ambassador DOUGLAS. That is right.

Mr. JUDD. Would it be part of the understanding that if they got extra merchant shipping through charter from us, of our surplus ships, they would agree to reduce their drain on steel for the construction of ships in order to save some of this short-supply commodity steel for other purposes?

Ambassador DOUGLAS. On page 93 of the explanation of the bill the language reads:

While it is recognized that a large proportion of the shipbuilding program projected by the participating countries is concentrated upon types of vessels in short supply, it is believed that some of the energy and materials planned for this program could be used to better advantage for other more urgent construction tasks, if additional tonnage is made available from the United States.

Mr. JUDD. That is our objective, but would it be part of the agreement? It is one thing to say that it is contemplated, expected, what we hope for, but it is very difficult to get legislation through unless it is firmly agreed upon.

Ambassador DOUGLAS. Well, I call your attention to the next sentence, which reads:

Transfer of such additional tonnage to participating countries should be linked insofar as practical with the reduction of building of similar types abroad as a steel conservation measure.

I would assume in the administration of the act, Congressman, that the programming—actually, for each country—actually agreed to by the administrator, regardless of what his title may be or the type of agency over which he might preside, the administrator, in approving the program, would have that in mind.

Mr. JUDD. I am glad to have that in the record, because your statement should help guide him.

Ambassador DOUGLAS. I cannot prejudge the action of the administrator. However, he may.

Mr. JUDD. But to make clear that some of us agree with you perhaps will guide him a little. Perhaps that is a little optimistic.

Yesterday when we had the question of the 16 countries, together with the break-down of amounts for each, you said, and it was understandable, you had not had the opportunity to examine into the internal affairs of each of these individual countries. But we have to approve or disapprove funds for each individual country.

Now you have not done that. Who has done it? Who has reviewed them? I wonder if it would not be possible or advisable to put on the stand some of the men in the State Department who do review these so we can go back and say, not "The State Department said so," but "This person in the State Department says so."

Ambassador DOUGLAS. What we are preparing now, and I think it may throw light upon the problem which you have in mind, is a tabulation of the distribution of the selected commodities and the other imports, by country, and the source from which those commodities will be paid, whether through United States funds or whether in the form of loans from other sources.

I think that may provide the Congressman with the information which he seeks.

Mr. JUDD. We have had an unfortunate experience or two where estimates or requirements were prepared by individual persons, employees, whose names nobody knew and we took it on the say-so of the State Department.

Later it turned out there were some ulterior motives on the part of these persons.

That is pretty hard to defend. If you personally had screened the estimates in a given case I would have confidence in it. I would probably have confidence in someone else if I knew him, but for me to say, "I vote for this because the State Department reviewed it," is not enough.

When we vote for or against specific sums, we want to know who determined the amounts, what sort of background they have, and what their qualifications are. They are the men who do the screening and who present the figures. We have to defend the figures, and how can we until they have been defended to us?

Ambassador DOUGLAS. In a hearing before a committee of another body it was agreed that a list of personnel who made these various commodity studies would be inserted in the record.

Mr. JUDD. A short biography of each, including training and background?

Ambassador DOUGLAS. They did not ask for the curriculum vita of each person but we will try to furnish it. It is quite a task.

These commodity studies were made by interdepartmental committees, on which as I understand it, are representatives from the various interested departments.

It was quite a complex and difficult problem and the committees, as I say, were recruited from representatives of the various departments.

There was a great deal of work done on them.

Mr. JUDD. I know that. You see our difficulty?

Ambassador DOUGLAS. I can insert the names. We can put them in the record at the moment. We can put the list in the record now.

Mr. JUDD. I think it ought to be done.

Ambassador DOUGLAS. We do not have the curriculum vita of each one.

Mr. JUDD. I think it makes a good deal of difference. It does not have to be in detail. You can defend a provision a great deal better if you have some idea of the background of the man who presented it, and presumably have weeded out the unworthy and kept in the worthy.

I wish that could be done, if there is no objection.

(The information is as follows:)

ORGANIZATION OF THE EXECUTIVE BRANCH AND PERSONNEL RESPONSIBLE FOR DEVELOPMENT OF THE PROGRAM OF UNITED STATES ASSISTANCE TO EUROPEAN RECOVERY

Organization of the Executive Branch of the United States Government for Preparation of the Program of the United States Assistance to European Recovery

Details of organization

The report of the Committee for European Economic Cooperation was transmitted to the Secretary of State on September 22, 1947. During the summer of 1947 the executive branch had undertaken a comprehensive examination of the

availability of United States resources and problems of foreign aid. Primary responsibility for organizing the preparation of the ERP for presentation to Congress was undertaken by the Secretary of State under the President. The work, however, was so complex and touched so many aspects of both the American as well as the European economic situation that nearly all departments of the executive branch were involved.

The work of analyzing the European economic situation, of appraising the CEEC report, and of developing the present proposals with regard to United States support to a European recovery program was undertaken by the executive branch under the general leadership of Under Secretaries of State Robert A. Lovett and William L. Clayton, and Ambassador Lewis W. Douglas. Mr. Clayton spent much of the summer in Europe and during this time conferred informally in Paris, together with Ambassadors Caffery and Douglas, with representatives of the participating countries in the Committee for European Economic Cooperation. After Mr. Clayton's return to the United States, he aided in the direction of work under way in Washington until his resignation as Under Secretary of State for Economic Affairs.

In Washington Mr. Lovett participated actively in organizing the work of analysis and screening of the CEEC program and the formulation of the program of United States assistance recommended by the executive branch. The first study of the problem of European recovery and the approach to its solution was undertaken by the policy planning staff of the Department of State, under the direction of Mr. George Kennan. With the report of the policy planning staff as a basic document, the standing top level executive branch policy committees on international financial and economic matters were brought into the picture. The National Advisory Council on International Monetary and Financial Problems (the NAC, see appendix), under the chairmanship of Secretary of the Treasury Mr. Snyder, was asked to examine the financial problems involved and to develop the policies to be applied in their solution. The Executive Committee for Economic Foreign Policy (see appendix), under the chairmanship first of Under Secretary Mr. Clayton, and subsequently of Mr. Willard L. Thorp, Assistant Secretary, was asked to develop the economic and trade policies involved.

In order that the manifold other elements in the task could be handled by the best experts available in the Government and to assure that the interests of all appropriate agencies of the Government concerned with particular domestic or foreign aspects of the program were taken into account, an interdepartmental Advisory Steering Committee was formed. Mr. Lovett was chairman of the committee, and his special assistant, Col. C. H. Bonesteel, of the Department of State, was vice chairman and executive secretary (see appendix). This committee directed the work of analysis and appraisal of the CEEC report and the formulation of the detailed program for United States support of European recovery. The committee was made up of top-level technical representatives from each of the interested departments and agencies of the executive branch. These included the Departments of Agriculture, Army, Commerce, Interior, Labor, Navy, and Treasury and the Board of Governors of the Federal Reserve. Observers from the Bureau of the Budget and White House offices also attended most meetings, and other agencies were represented on some occasions.

Under the Advisory Steering Committee an organization was built up which pooled the appropriate experts from each interested area of Government into functional working teams. The Steering Committee appointed a Correlation Committee, under the chairmanship of Colonel Bonesteel and consisting of four members representing the Departments of State, Treasury, and Commerce. This committee acted as the executive group of the Advisory Steering Committee. An Objectives Committee, with Mr. George Kennan, of the Department of State, as chairman, was established to review the broad aspects of the program as it developed. Seven major areas of functional responsibility were established. These areas and the persons with primary responsibility for each area were as follows: Economic policy, Mr. Thomas Blaisdell, Department of Commerce; financial policy, Mr. Frank Southard, Treasury Department; organization and administration, Mr. Lincoln Gordon, Department of State; legislative drafting, Mr. Ernest Gross, Department of State; functional and commodity analysis, Mr. Paul H. Nitze, Department of State; labor and manpower, Mr. Philip Kaiser, Department of Labor; and country analysis, Mr. Henry Labouisse, Department of State.

A major task of the Government groups working on the recovery program was to interrogate European representatives from the Committee of European Economic Cooperation who came to Washington to assist in the explanation and further

clarification of the Paris report. These conversations lasted for several weeks and permitted both the policy formulating groups and the technical analysis groups to determine in further detail the intent of the CEEC and to examine the detailed justifications of the requirements submitted by the European countries. During the technical conversations with the Europeans, the staff members, and in some cases principals of the President's Committee on Foreign Aid (the Harriman committee), participated, and there was full and free discussion of European requirements and potential United States assistance. Staff members of certain of the interested committees of the Congress also observed, and to some extent participated in, these conversations with the representatives of the CEEC.

In the course of the conversations with representatives of the CEEC many requests were made of them to furnish additional detailed information to enable the United States working groups to make better judgments in connection with their work.

After completion of conversations with the representatives of the CEEC, the work in formulating a United States program of assistance proceeded. The methods and sources used in developing the proposed United States program of assistance are explained below.

METHODS AND SOURCES OF ESTIMATES FOR COST OF EUROPEAN RECOVERY PROGRAM

Selected commodities

The first step taken by the executive branch of the Government in preparing estimates of the cost of the European economic recovery program was to study intensively certain commodities to be imported by the participating countries from the Western Hemisphere. The choice of the particular commodities studied in this fashion was dictated primarily by the fact that the Committee on European Economic Cooperation established technical subcommittees which prepared detailed reports on requirements and production in the fields of food and agriculture, energy, iron and steel, and transport (timber was later added to the list) because of the central importance of these commodities to European recovery. These commodities are referred to by the CEEC report as "Technical Committee goods." The list of "selected commodities" for which detailed estimates were prepared by the executive branch corresponds closely to the list of Technical Committee goods, for two main reasons: The goods are those of primary importance to European recovery and the most important supply problems will be encountered by the United States with respect to them. Cotton and trucks, both important items of United States exports, were added to the list. Petroleum equipment was not treated as a selected item, since it was impossible to obtain in the time available a detailed statement of the American company requirements.

(a) *Requirements.*—In the selected commodities, careful studies were first made of requirements to assure that, apart from supply considerations, the program would not be based on unwarranted levels of consumption. The standard used was the minimum required for genuine recovery, not that of a relief program.

In food, requirements included calories needed by the urban worker both to sustain life and to provide sufficient energy to enable him to work effectively. Extra allowances for special classes of consumers—miners, heavy workers, children, pregnant and nursing mothers, etc.—were taken into account. In addition to calories, attention was paid to the minimum basic needs for protein and fats and oils. And finally, the historic differences between standards of living among the countries of Europe, as well as the practical limitations on increasing consumption standards, rapidly were taken into account. As indicated below, availabilities, especially at the start of the program, are far short of the screened requirements.

In items other than food, requirements were derived in part from the physical requirements of reconstruction and in part from the interrelations of production programs. The need for steel, for example, was determined so far as possible in relation to the need for steel for rails, railroad equipment, coal-mining machinery, agricultural equipment, etc., as well as to the reconstruction and housing need. The requirements in coal, coke, freight cars, etc., were determined in turn in relation to the need for steel and other products.

If it was impossible to demonstrate that the country concerned needed a commodity for its economic recovery and could not dispense with it on any reasonable standard of consumption such as is required to maintain a tolerable standard of living for its people, the requirements was regarded as unjustified. Some projects, such as that for a small steel plant in Greece, were considered to be uneconomic and therefore as unjustified. The stated need for certain types of heavy agri-

cultural machinery were disregarded on the ground that European farms were not large enough to accommodate them on an economic scale and European agricultural labor not sufficiently skilled in their use to make it desirable to incur the large capital expenditures required. Requirements which appeared to be reasonable in the light of European needs and capacities in recovery were then regarded as initially justified. To the extent that requirements as set out by the Committee on European Economic Cooperation were not justified and they involved the import of goods, such imports were reduced or eliminated.

(b) *Availabilities.*—Against the initial calculation of requirements as justified it was necessary to set initial estimates of availabilities. The primary figure in an estimate of availabilities was domestic production in each country in Europe. Thereafter, an examination was made to see to what extent deficiencies which remained between domestic production and requirements could be met from surpluses available in the other participating countries themselves. Only finally, after the net deficits of the participating countries as a group were determined, was an examination made of the world supply, including supplies normally exported to the area from eastern Europe, Asia and Africa, the other Western Hemisphere countries, and the United States.

If requirements could not be met from world availabilities (including the supply available for export to the participating countries from the United States, after taking into account other United States commitments or demands for export) showed that the requirements could not be met, a reexamination of requirements was made to ascertain whether these could be readjusted or substitutes found to conform with availabilities without destroying the validity of the recovery program. In food, there was no choice but to cut requirements from the desirable level of food intake to the practical level dictated by supply considerations. In other items, it was frequently possible to adjust requirements so that the greatest possible protection could be given to the recovery program despite the fact that availabilities were insufficient to meet the requirements as initially calculated. Particular attention was given in this connection to providing supplies and equipment needed to remove bottlenecks holding back production in a wider area of the economy. The most important such bottlenecks have been coal, transport, fertilizer, and steel. The tight supply situation led the executive branch to eliminate from the program the imports of scrap steel which the participating countries sought from the United States, and to reduce the level of desired imports of crude and semifinished steel. A smaller amount of finished steel was added in order to prevent lack of steel from crippling the productive effort. Steel is likely to be insufficient in western Europe to enable the participating countries to reconstruct housing and commercial structures on the scale hoped for. But a readjustment of the anticipated uses of steel will make it possible, on the basis of the executive branch estimates, to protect the main steel-consuming industries on which economic recovery depends.

Sources of information

All available sources of information were used by the interdepartmental commodity committees established by the executive branch to examine the justification of requirements and the state of supply availabilities. A major source of information was the CEEC report, including both the general report and the technical reports. The executive branch also had available the individual replies to the questionnaires circulated by the CEEC technical committees and returned by the separate participating countries. In addition, the interdepartmental commodity committees held a series of conversations with technical representatives of the CEEC over a period of several weeks, and in cases where desired information could not be furnished directly by the CEEC representatives, supplementary questionnaires were prepared, circulated to the participating countries, and replies assembled.

Comments were sought by the United States Government on the country replies to the CEEC questionnaires from the United States representatives in the participating countries, and were furnished through the chief of mission by the economic staffs thereof, with assistance from the agricultural, commercial, and labor attachés. In the case of Greece, additional detailed information was obtained from the American Mission in Greece. From Germany, information on points not completely clear from the answers to the CEEC questionnaires furnished by the bizonal area was obtained from the Office of Military Government (U. S.) through the Department of the Army.

In the final preparation of the estimates, economic officers attached to missions of the most important countries involved were brought back from their posts

abroad for consultation with the Department of State and to contribute their knowledge of economic conditions and needs in various of the participating countries directly to the formulation of the program estimates.

In addition to the information furnished through official sources of the CEEC and American organizations abroad, valuable material was obtained from the organizations of the United Nations—in particular from the Statistical Office of the United Nations at Lake Success; from the findings of the Devastated Areas Subcommission for Europe of the Economic and Social Council; from the Economic Commission for Europe; and from the predecessor organizations of the ECE—the European Coal Organization, the European Central Inland Transport Organization, and the Emergency Economic Committee for Europe. In certain cases, special collections of basic material were obtained from United Nations sources—for example, the material accumulated by the Public Utilities Panel of the Emergency Economic Committee for Europe on the electricity network of Europe.

Heavy reliance was placed upon the reports of the committees headed by Secretary of the Interior Krug; Mr. Nourse, Chairman of the Council of Economic Advisers; and Secretary of Commerce Harriman. The Harriman committee enlisted the active participation of competent businessmen and other experts who contributed to the large body of valuable information available in their report.

Further information on requirements and availabilities was obtained from private United States citizens and business firms on one or more aspects of European economic conditions and prospects.

Frequent use was also made of information gathered by the daily press, both American and foreign, to statistical publications of central and commercial banks, private and quasi-public organizations and institutions, and to the official statistics of the countries concerned.

Balance-of-payments estimates

On the basis of the requirements and availabilities thus derived, an estimate of the pattern of trade was developed by the commodity committees. These covered the 28 commodity classifications or groups set forth in the tables on pages 115–118 of the Outline of European Recovery Program (Senate committee print) and dealt with the trade of the 16 participating countries, western Germany, the dependent areas of Belgium, France, the Netherlands, Portugal, and the United Kingdom. Exports and imports were calculated not only between these countries and the United States, but also with Canada, the rest of the Western Hemisphere outside the United States and Canada, the participating countries themselves, and other nonparticipating countries outside the Western Hemisphere. Figures for physical quantities of trade were converted to value equivalents at the prices of July 1, 1947, which date was also used by the CEEC and the Harriman committee as the price basis for their original computations. Following this step, which was performed by the interdepartmental commodity committees in consultation with the country committees, the estimates were turned over to the Balance-of-Payments Committee (National Advisory Staff Committee working group), also organized on an interdepartmental basis, with the assistance of the country committees.

From the work of the commodity committees, the Balance-of-Payments Committee received a series of tabulations for each participating country and each group of dependent areas showing exports and imports of scheduled commodities for the 3 months April to June 1948 and for each four 12-month periods thereafter. On the basis of these figures, the Balance-of-Payments Committee prepared estimates of exports and imports of other commodities, invisible items such as shipping, insurance, remittances, tourist expenditures, interest and dividends, etc. From these estimates, schedules of the over-all balance-of-payments positions of the participating countries and their dependent areas were derived on the basis of July 1, 1947, prices. An adjustment for changes in commodity prices and freight rates was finally applied, as indicated in Outline of European Recovery Program (Senate committee print), pages 93 and following.

The process of deriving the estimate of the cost to the United States in newly appropriated funds from the estimated balance-of-payments deficits of the participating countries and their dependent areas—subtracting what the participating countries are expected to pay in cash, what is estimated will be contributed by other countries in the Western Hemisphere, by loans from the International Bank, expenditures from existing loans of the Export-Import Bank, etc. Further explanation is to be found on pages 102–110 of the committee print of Outline of European Recovery Program.

APPENDIX

LIST OF UNITED STATES PERSONNEL PARTICIPATING IN THE PREPARATION OF THE EUROPEAN RECOVERY PROGRAM

A. ADVISORY STEERING COMMITTEE ON EUROPEAN RECOVERY PROGRAM

Chairman: Robert A. Lovett, Department of State.

Vice Chairman: Willard L. Thorp, Department of State.

Executive secretary: Charles H. Bonesteel, Department of State.

Secretary: Melvin L. Manfull, Department of State.

Members:

Charles Murphy, the White House.

Thomas C. Blaisdell, Jr., Department of Commerce.

Frank A. Southard, Treasury Department.

N. E. Dodd, Department of Agriculture.

James Boyd, Department of the Interior.

Col. R. M. Cheseldine, Department of the Army.

Admiral E. T. Wooldridge, Department of the Navy.

J. Burke Knapp, Federal Reserve.

Phillip M. Kaiser, Department of Labor.

Alternates:

Paul H. Nitze, Department of State.

Lincoln Gordon, Department of State.

Henry Labouisse, Department of State.

Thomas J. Lynch, Treasury Department.

L. M. Pumphrey, Treasury Department.

Jease Gilmer, Department of Agriculture.

Fred D. Northrup, Department of Agriculture.

Capt. Nathan H. Collisson, Department of the Interior.

Lt. Col. Philip Shepley, Department of the Army.

Capt. M. J. Tichenor, Department of the Navy.

Alexander Gerschenkron, Federal Reserve.

Lewis Demblitz, Federal Reserve.

Observer: Charles Murphy, the White House.

B. EXECUTIVE COMMITTEE ON ECONOMIC FOREIGN POLICY

Chairman: Willard L. Thorp, Department of State.

Executive secretary: Eleanor E. Dennison, Department of State.

Members:

Frank A. Southard, Jr., Treasury Department.

Clinton P. Anderson, Department of Agriculture.

Thomas C. Blaisdell, Jr., Department of Commerce.

Phillip Kaiser, Department of Labor.

C. Girard Davidson, Department of the Interior.

Thomas J. Hargrave, Munitions Board, National Military Establishment.

Oscar B. Ryder, United States Tariff Commission.

J. Burke Knapp, Federal Reserve Board.¹

Alternates:

Morris J. Fields, Treasury Department.

Charles Brannan, Department of Agriculture.

Frank Shields, Department of Commerce.

Faith M. Williams, Department of Labor.

Arthur S. Barrows, National Military Establishment.

Lynn R. Edminster, United States Tariff Commission.

C. NATIONAL ADVISORY COUNCIL

Chairman: John W. Snyder, Treasury Department.

Secretary: John W. Gunter, Treasury Department.

Members:

George C. Marshall, Department of State.

W. Averell Harriman, Department of Commerce.

Marriner S. Eccles, Board of Governors, Federal Reserve System.

William McC. Martin, Jr., Export-Import Bank.

¹ Has liaison representation on ECEFP; for European Recovery Program discussions considered full member.

Alternates:

Frank A. Southard, Jr., Treasury Department.
 Willard L. Thorp, Department of State.
 Thomas C. Blaisdell, Jr., Department of Commerce.
 J. Burke Knapp, Federal Reserve System.
 Herbert E. Gaston, Export-Import Bank.

D. POLICY PLANNING STAFF OF THE DEPARTMENT OF STATE

Director: George F. Kennan, Department of State.
Executive secretary: Carlton Savage, Department of State.

Members:

Jacques J. Reinstein, Department of State.
 Joseph E. Johnson, Department of State.
 Ware Adams, Department of State.

Consultant: Edward S. Mason, Harvard University.

E. SUBSTRUCTURE OF THE MAJOR COMMITTEES*(1) Advisory Steering Committee***a. Objectives Subcommittee:**

Chairman: George F. Kennan, Department of State.
Executive secretary: Bromley K. Smith, Department of State.
Members:

Charles H. Bonesteel, Department of State.
 Willard Thorp, Department of State.
 Thomas C. Blaisdell, Jr., Department of Commerce.
 Frank A. Southard, Treasury Department.

Consultants:

Jacques J. Reinstein, Department of State.
 John D. Hickerson, Department of State.
 Samuel Reber, Department of State.
 Loy W. Henderson, Department of State.
 W. Walton Butterworth, Department of State.

b. Correlation Committee:

Chairman: Charles H. Bonesteel, Department of State.
Executive Secretary: Col. Sidney Giffen, Department of the Army.
Secretary: Stanley Phraner, Department of Commerce.

Members:

Paul H. Nitze, Department of State.
 Frank A. Southard, Treasury Department.
 Thomas Blaisdell, Department of Commerce.

Alternates:

Lincoln Gordon, Department of State.
 John M. Cassels, Department of Commerce.

Staff group for Correlation Committee:

Chief: Charles P. Kindleberger, Department of State.

Members:

Harold R. Spiegel, Department of State.
 William T. Phillips, Department of State.
 William H. Bray, Jr., Department of State.
 Wilfred Malenbaum, Department of State.
 Ben T. Moore, Department of State.
 Robert W. Tufts, Department of State.
 Harlan P. Bramble, Department of State.

c. Organization and Administration Committee:

Chairman: Lincoln Gordon, Department of State.
Executive secretary: Herman Pollack, Department of State.
Secretary: John L. Kuhn, Department of State.

Vice chairman: Arthur A. Kimball, Department of State.

Members:

Thomas J. Lynch, Treasury Department.
 Nathan Ostroff, Department of Commerce.
 Thatcher Winslow, Labor Department.
 Dan Wheeler, Department of the Interior.
 J. Burke Knapp, Federal Reserve Board.
 W. Carroll Hunter, Department of Agriculture.
 Lt. Col. John P. Buehler, Department of the Army.

Alternates:

Joseph A. Frank, Department of State.
 Arthur G. Stevens, Department of State.
 Wayne G. Jackson, Department of State.
 Walter S. Surrey, Department of State.
 Joseph B. Friedman, Treasury Department.
 Daniel L. Goldy, Department of the Interior.

d. Legislative Drafting Committee:

Chairman: Ernest A. Gross, Department of State.

Members:

Thomas J. Lynch, Treasury Department.
 Adrian Fisher, Department of Commerce.
 Martin G. White, Department of the Interior.
 W. Carroll Hunter, Department of Agriculture.
 Jeter S. Ray, Department of Labor.
 Maj. Gen. Thomas H. Green, Department of the Army.
 Hudson B. Cox, Department of the Navy.
 George B. Vest, Board of Governors, Federal Reserve System.
 Wade H. Skinner, Maritime Commission.
 Hawthorne Arey, Export-Import Bank of Washington.

Alternates:

Walter S. Surrey, Department of State.
 Michael H. Cardozo, Department of State.
 Robert B. Eicholz, Department of State.
 Joseph B. Friedman, Treasury Department.
 Elting Arnold, Treasury Department.
 Clifford Hynning, Treasury Department.
 Nathan Ostroff, Department of Commerce.
 J. P. Brown, Department of Commerce.
 Felix S. Cohen, Department of the Interior.
 George E. Cooper, Department of Agriculture.
 Edward M. Shulman, Department of Agriculture.
 Kenneth Meiklejohn, Department of Labor.
 Brig. Gen. E. M. Brannon, Department of the Army.
 Col. James F. Hanley, Department of the Army.
 Lt. Col. Ray K. Smathers, Department of the Army.
 Col. W. H. Peters, Jr., Department of the Army.
 Harold B. Gross, Department of the Navy.
 Fred Solomon, Board of Governors, Federal Reserve System.

Functional and Commodity Committee:

Chairman: Paul H. Nitze, Department of State.

Executive secretary: Glenn H. Craig, Department of State.

Secretary: Ronald M. Ayer, Department of State.

Members: Chairman of individual commodity committees on attached lists.

1. Food and Agriculture:

Chairman: Fred Northrup, Department of Agriculture.

Secretary: Murray Thompson, Department of Agriculture.

Members:

W. J. Garvin, Department of the Army.
 Lewis Bassie, Department of Commerce.
 Albert Viton, International Emergency Food Council.
 Francis Linville, Department of State.
 C. K. Lewis, Tariff Commission.

Observer: Robert Oshins, the White House.

Alternates:

J. A. Becker, Department of Agriculture.
 J. T. Cavin, Department of Agriculture.
 Joseph L. Orr, Department of Agriculture.
 F. M. Rhodes, Department of Agriculture.
 L. B. Taylor, Department of Agriculture.
 C. E. Lund, Department of Commerce.

Observers and consultants at conversations with representatives of Technical Committee of CEEC in Washington during October and November 1947:

Karl A. Fox, Harriman committee staff.

John Kerr Rose, House Select Committee on Foreign Aid staff.

2. Fertilizer:

Chairman: William G. Finn, Department of Agriculture.

Secretary: William F. Watkins, Department of Agriculture.

Members:

Kenneth D. Jacob, Department of Agriculture.

C. K. Horner, Department of Commerce.

Henry M. Pauley, Department of State.

Observers and consultants at conversations with representatives of Technical Committee of CEEC in Washington during October and November 1947:

Karl A. Fox, Harriman committee staff.

Maynard Jenkins, Harriman committee consultant (chemical company).

John Kerr Rose, House Select Committee on Foreign Aid staff.

3. Agricultural machinery:

Chairman: William L. Beck, Department of Commerce.

Secretary: Martin R. Cooper, Department of Agriculture.

Members:

Thomas J. Murphy, Department of Commerce.

Karl L. Anderson, Department of State.

Alternates:

A. P. Brodell, Department of Agriculture.

R. B. Gray, Department of Agriculture.

Erling Hole, Department of Agriculture.

Leon B. Taylor, Department of Agriculture.

Arthur W. Turner, Department of Agriculture.

G. J. Rothwell, Department of State.

Observers and consultants at conversations with representatives of Technical Committee of CEEC in Washington during October and November 1947:

Karl A. Fox, Harriman committee staff.

H. H. Hughes, Harriman committee staff.

S. Morris Livingston, Harriman committee staff.

Willard Morrison, Harriman committee consultant, Agricultural Machinery Co.

John Kerr Rose, House Select Committee on Foreign Aid staff.

Francis O. Wilcox, Senate Committee on Foreign Relations staff.

4. Coal:

Chairman: John Havener, Department of Commerce.

Secretary: Louis Lister, Department of State.

Assistant secretary: Fred Sanderson, Department of State.

Members:

C. M. Stull, Department of Commerce.

Thomas Hunter, Department of the Interior.

R. M. Preisman, Office of Coordinator.

Alternates:

Ralph Trisko, Department of Commerce.

Daniel Wheeler, Department of the Interior.

Observers and consultants at conversations with representatives of Technical Committee of CEEC in Washington during October and November 1947:

C. W. de Forest, Harriman committee consultant (now with gas and electric company.)

Richard H. Mote, Harriman committee staff.

Hector Prud'homme, Harriman committee staff.

Theodore Geiger, House Select Committee on Foreign Aid staff.

5. Mining machinery:

Chairman: William L. Beck, Department of Commerce.

Secretary: Everett Wilcox, Department of Commerce.

Members:

William H. Myer, Department of Commerce.

John W. Buch, Department of the Interior.

Karl L. Anderson, Department of State.

Observers and consultants at conversations with representatives of Technical Committee of CEEC in Washington during October and November 1947:

Harold Von Thaden, Department of Commerce.
 Albert M. Keenan, Harriman committee consultants.
 S. Morris Livingston, Harriman committee staff.
 Richard H. Mote, Harriman committee staff.
 H. R. Wheeler, Harriman committee consultant.
 Theodore Geiger, House Select Committee on Foreign Aid staff.

6. Electric power:

Chairman: Thomas Hibben, Department of Commerce.
 Secretary: Wilfred Malenbaum, Department of State.
 Assistant Secretary: M. G. Tiger, Department of State.

Members:

Lt. Col. A. L. Jorgenson, Department of the Army.
 E. Robert de Lucci, Federal Power Commission.
 Arthur Goldschmidt, Department of the Interior.

Alternates:

Howard Wav, Department of Commerce.
 Ellsworth Hand, Federal Power Commission.
 C. E. Bennett, Federal Power Commission.

Observers and consultants at conversations with representatives of Technical Committee of CEEC in Washington during October and November 1947:

Walker L. Cisler, Harriman committee consultant.
 C. W. de Forest, Harriman committee consultant.
 George Hamilton, Harriman committee consultant.
 R. M. Landreth, Harriman committee consultant.
 J. A. H. Torry, Harriman committee consultant.
 V. M. White, Harriman committee consultant.
 Edward Falck, House Select Committee on Foreign Aid Staff.

7. Petroleum:

Chairman: John Loftus, Department of State.
 Secretary: David Longanecker, Department of State.

Members:

Gustav Vogel, Army-Navy Petroleum Board.
 Carl Gibboney, Department of Commerce.
 Max Ball, Department of the Interior.
 Walter Levy, Department of State.

Alternates:

Carroll Fentress, Department of the Interior.
 E. B. Swanson, Department of the Interior.
 R. H. S. Eakens, Department of State.

Observers and consultants at conversations with representatives of Technical Committee of CEEC in Washington during October and November 1947:

John Bauer, Harriman committee consultant.
 Gerald Cogan, Harriman committee consultant.
 A. E. Ernst, Harriman committee consultant.
 Robert Koenig, Harriman committee member.
 Richard Mote, Harriman committee staff.
 Arthur Stewart, Harriman committee consultant.
 John Fry, House Select Committee on Foreign Aid Staff.

8. Iron and Steel:

Chairman: J. Joseph Palmer, Department of Commerce.

 J. Burke Knapp, Board of Governors, Federal Reserve System.
 Hawthorne Arey, Export-Import Bank.
 Walter C. Louchheim, Securities and Exchange Commission.

Liaison: Jerome J. Stenger, Department of State.

Alternates:

Hubert F. Havlik, Department of State.
 Hale T. Shenofield, Department of State.
 Harold R. Spiegel, Department of State.
 Lewis Dembitz, Board of Governors, Federal Reserve System.
 Walter C. Sauer, Export-Import Bank.

Interdepartmental working groups of the staff committee composed of the experts on the particular matter or country are set up as occasion warrants. These groups collect the basic information available to the Government and perform the necessary analysis on the particular problem. The membership of these groups at one time or another would include most of the experts in governmental service working on international financial and economic problems. It appears neither appropriate nor feasible, therefore, to list the membership of such groups.

Mr. JUDD. I have one further question. May I direct this to Mr. Thorp, with your permission?

Ambassador DOUGLAS. Yes.

Mr. JUDD. When Secretary Marshall was before us in November, I asked him about the proposal that he said he was getting ready for submission, dealing with a possible long-term recovery program in China. I asked him if it would be ready for submission before the Council of Foreign Ministers meeting, and he said in the hearings, "I could not answer that right now, sir, I do not think it will be but it will be submitted by the time the Congress reconvenes, or earlier."

I asked, "Reconvenes in January?"

He said, "In the regular session; yes."

We have been in session now 10 days. Could you give us a definite date as to when that is likely to come before us because I think it is very important in estimating the whole European program. It should not come in at the last moment as a tag end, but as a part of the total picture the United States faces.

Mr. THORP. All I can say on that, Mr. Chairman, is we have been very busy at work on the program and had hoped that it already would be before the Congress.

A program has been drafted. It is now being reviewed within the executive branch.

I might also state that I think either today or tomorrow a technical group is arriving from China and we had thought it would be helpful to have some quick discussion with them before we submitted the program, but I think it is a matter of days rather than weeks.

Mr. JUDD. You think it will be this month?

Mr. THORP. Yes. I would feel quite confident that it will be this month.

Mr. JUDD. Can you tell me whether the budget the President submitted the other day for the next fiscal year included the proposed program for China?

Mr. THORP. This program has not been submitted as yet to the Budget Bureau. I think that the Budget Bureau in a miscellaneous item had various possible programs in mind, but I do not think that it was based on specific items.

Mr. JUDD. How much was that miscellaneous item, do you recall?

Mr. THORP. \$440,000,000.

Mr. JUDD. That is to take care of the contingencies. It might conceivably include the program for China, is that right?

Mr. THORP. I think it might well be that part of the program for China and it might have been charged against that. Actually I don't know what the Budget Bureau was including in that.

Mr. JUDD. But we can expect that we will get this program before the end of this month, surely?

Mr. THORP. As a matter of fact our goal has been to get it before you much earlier than that.

Mr. JUDD. I was just getting a progress report.

Mr. THORP. It does have to be cleared through various interested agencies within the administration, and I cannot guarantee the length of time that may take.

As far as the State Department is concerned, I think our basic work is completed with respect to the legislation.

Mr. JUDD. Thank you very much.

Thank you, Mr. Ambassador.

Mr. CHIPERFIELD. There are two more members of the committee who want to cross-examine you. I have consulted with them and they are willing to proceed or stop now, just as suits your convenience.

Ambassador DOUGLAS. Whatever would suit your convenience better. If they would like to continue this afternoon, that would be entirely satisfactory with me. If they prefer to wait, that is all right, too.

Mr. LODGE. I have quite a number of questions, Mr. Chairman. It might take some time.

Mr. CHIPERFIELD. I rather suggest, then, if it is agreeable with Mr. Javits and Mr. Lodge that since we have been in session quite a long time that we might meet again next Tuesday at 10 o'clock. That is the suggestion of Dr. Eaton. At that time they will be given plenty of time to cross-examine. They might be hurried tonight.

Mr. JAVITS. Might I ask a preliminary question so we might be prepared on Tuesday? Will you handle questions respecting the international trade organization or will the State Department produce another witness?

Ambassador DOUGLAS. No. I have enough on my hands as it is.

Mr. CHIPERFIELD. Thank you very much.

We will adjourn until 10 o'clock Tuesday.

(Whereupon, at 4:45 p. m., the committee adjourned, to reconvene at 10 a. m., Tuesday, January 20, 1948.)

UNITED STATES FOREIGN POLICY FOR A POSTWAR RECOVERY PROGRAM

TUESDAY, JANUARY 20, 1948

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C..

The committee met at 10 a. m., Hon. Charles A. Eaton (chairman), presiding.

Chairman EATON. The committee will be in order, and we will proceed. Mr. Ambassador.

STATEMENT OF HON. LEWIS DOUGLAS, UNITED STATES AM- BASSADOR TO GREAT BRITAIN

Mr. DOUGLAS. Mr. Chairman and members of the committee, may I first introduce into the record, if there is no objection, a statement which discloses the compass of the proposed commodities and services from the Western Hemisphere during a period of 15 months, which we are discussing?

This, I would like to emphasize, is purely illustrative. It is no more than illustrative, for a number of different reasons. First, no calculation should prejudice the determinations of the Administrator, whoever he may be, when, as, and if he is appointed and confirmed by the Senate. Secondly, because, by the time the Administrator takes office, there may be a great many changes. I would like to emphasize that this is not and does not represent itself to be a final and definitive calculation.

Chairman EATON. Will you furnish each member of the committee with a copy?

Mr. DOUGLAS. Yes. It shows the possible sources by which these imports will be paid for; that is to say, from the resources of each individual country. It shows the other sources from which the imports might be financed, and it shows the commodities that, as an illustration only, might be financed by newly appropriated United States funds.

Together with that statement, I should like to introduce into the record a summary, or a recapitulation, of the longer document.

Chairman EATON. Without objection, it is so ordered.

(The documents referred to follow:)

EUROPEAN RECOVERY PROGRAM

ILLUSTRATIVE COMPOSITION OF IMPORTS OF COMMODITIES AND SERVICES FROM
WESTERN HEMISPHERE, APRIL 1, 1948, THROUGH JUNE 30, 1949, AND POSSIBLE
SOURCES AND DISTRIBUTION OF FINANCING

The European Cooperation Administration will have to draw up programs of United States assistance to each participating country covering the commodities and services to be purchased in the Western Hemisphere and the manner in

which these purchases will be financed. Each country program will have to be coordinated with the country's total requirements and estimated imports from areas outside the Western Hemisphere and with the amounts of financing available from sources other than new United States funds.

The programs of United States assistance for each country as they may be developed by the Administrator should not now be prejudged. Therefore, an accurate representation of a program for each country, reflecting its aggregate required imports from the Western Hemisphere and the source of funds which will in fact finance each segment of these imports cannot now be made. A continuing process of adjustment will be necessary in order to take account of such factors as the success of the production effort by the participating countries, changes in world availabilities, price movements, supply and financial arrangements with nonparticipating countries, and the decisions of such agencies as the International Bank.

An illustrative program can, however, be drawn up which will be indicative at least of the country-by-country programs as they might be determined by the Administrator after he has considered all of the relevant factors. An example of such a program is set forth in the attached tabulation.

It needs to be emphasized again that the distribution of commodities by countries and sources of funds indicated in the accompanying tables is only an approximation of the program as it would actually be developed by the Administrator. Particular emphasis should be given to the fact that the amounts shown in table 1, column 4, and in the corresponding columns of the individual country tables do not necessarily represent the amount which each country would receive in the form of direct assistance from the United States, nor do they indicate the terms on which such appropriated funds would be advanced. Rather, they indicate the dollar balance required to fill each country's total estimated required import program from the Western Hemisphere (column 1), after deducting the dollars obtained from exports of goods and services (column 2) and after deducting sources of financing other than new United States funds (column 3). This balance of a particular country's dollar needs (shown in column 4) might in some instances be obtained indirectly through another participating country rather than directly from the United States. Various arrangements for indirect financing of this character could be made and might provide a feasible way to assist the participating countries in overcoming some of the obstacles to increased trade among themselves.

For example, bizonal Germany is expected to have a substantial surplus of exports over imports in its trade with some participating countries, and the latter must settle in dollars for a large part of their debit balances with the bizon. In this way the dollar requirements of these participating countries are increased (because they must pay dollars not only for their imports from the Western Hemisphere but also to settle their German accounts). On the other hand, the bizon's need for direct dollar assistance would be correspondingly reduced (because it would receive dollars in addition to those obtained from its exports to the Western Hemisphere shown in column 2). In circumstances like these the Administrator might find it desirable to allocate funds appropriated for European recovery in such a way as to increase the direct assistance in the form of loans or grants to one participating country over the amount of its Western Hemisphere deficit and correspondingly reduce the direct assistance given to another participating country. Alternatively, the Administrator might find it desirable to purchase goods in one country for delivery to another, the transaction being recorded as additional direct assistance to the receiving country. The exporting country's need for direct dollar assistance would be correspondingly reduced. In general, adjustments of this kind would be considered by the Administrator in the light of recommendations by the participating countries as a group acting through their continuing organization. Such adjustments would not increase the total amount of assistance required but would only affect its distribution between countries.

The country tables which are appended present for each participating country an illustrative composition of its imports of goods from the Western Hemisphere and its net dollar payments, if any, for freight and other invisible items, for the period from April 5, 1948, through June 30, 1949. All values are expressed in terms of July 1, 1947, prices as the adjustment for higher prices is covered in the table on page 5. A distribution of the financing of these imports and payments among the following sources of dollar funds is shown:

Column 2: Dollars earned by each country from exports to the Western Hemisphere and net dollar receipts, if any, for shipping and other invisibles. In

the case of Portugal, the amount shown in column 1 includes an expenditure of Portuguese gold and foreign exchange holdings in an amount necessary to offset its deficit on current account.

Column 3: Dollars obtained from such sources as International Bank loans, private investment, existing credits of the Export-Import Bank, and credits extended by participating countries having net dollar earnings on current account to other participating countries. Credits or other assistance by other Western Hemisphere countries are also included in column 3.

Column 4: New United States funds for European recovery and for prevention of disease and unrest in Germany (GARIOA) for which appropriations are being requested. As pointed out above, the amounts in column 4 represent the deficit computed on July 1, 1947, prices with the Western Hemisphere which it is necessary to finance directly or indirectly with new United States funds and do not necessarily represent the direct assistance in the form of grants and loans which will be extended to individual countries. The adjustments for increased prices and savings on shipping mentioned in the table on page 5 will also have to be taken into account on a country-by-country basis.

The table following recapitulates the country tables and presents a possible distribution, by sources, of the financing of the total Western Hemisphere import program:

TABLE 1.—Recapitulation of tables showing illustrative composition of imports of commodities and services from Western Hemisphere and possible sources and distribution of financing, Apr. 1, 1948, to June 30, 1949 (at July 1, 1947 prices)

[In millions of dollars]

	Total imports ¹	Possible sources of financing		
		Dollar earnings ²	Sources other than new United States funds	New United States funds ³
Austria.....	238	39	12	182
Belgium-Luxemburg.....	853	334	196	323
Denmark.....	237	46	28	164
France.....	1,931	399	128	1,434
Greece.....	262	67	9	186
Iceland.....	23	10	13
Ireland.....	192	40	152
Italy.....	1,190	183	108	899
Netherlands.....	1,130	271	180	706
Norway.....	253	163	50	34
Portugal.....	144	144
Sweden.....	499	423	43	33
Switzerland.....	536	536
Turkey.....	69	69
United Kingdom.....	4,311	2,133	418	1,760
Germany:				
Bilzone.....	1,014	100	914
French zone.....	93	13	80
Saar.....	14	3	11
Total.....	12,959	4,941	1,158	* 6,860

¹ Including net dollar payments for freight and other invisibles.

² Including drawings of \$72,000,000 by Portugal on its gold and foreign-exchange resources.

³ This column includes funds being requested by the Department of the Army for prevention of disease and unrest in Germany. A reconciliation with the \$6,800,000,000 being requested for the European recovery program is to be found on p. 8.

Column 1 indicates that the required imports of the participating countries of goods and services from the Western Hemisphere during the 15 months, April 1, 1948, through June 30, 1949, are expected to amount to \$12,959,000,000 (in terms of July 1, 1947, prices). This total, after deducting \$1,146,000,000 of payments for net freight and net other invisibles, equals the total commodity imports of \$11,813,000,000 shown in the summary balance of payments table on page 97 of the committee print of the Outline of a European Recovery Program.

Of this total, it is estimated that the participating countries will finance \$4,941,000,000 from their dollar earnings from exports to the Western Hemi-

sphere and other dollar receipts (and, in the case of Portugal by drawing down gold and foreign-exchange holdings).¹

Sources other than new United States funds are expected to finance, in terms of July 1, 1947, prices, \$1,158,000,000 of the total.² It is proposed that the balance of \$6,860,000,000 be financed by new United States funds appropriated for European recovery and to the Department of the Army for prevention of disease and unrest in Germany (GARIOA). The following table presents a reconciliation of this balance with the authorization of \$6,800,000,000 requested for European recovery:

Goods to be purchased in Western Hemisphere with new United States funds (at July 1, 1947, prices) (column 4 of recapitulation).....	\$6, 860
Adjustments:	
Add adjustment for price increases ¹	\$482
Deduct savings on shipping ²	100
	<hr/> 382
Adjusted cost of commodities and shipping services to be purchased in Western Hemisphere with new United States funds ³	7, 242
Authority to obligate funds for procurement of items to be delivered in subsequent years.....	200
Uncovered deficit of bizonal Germany with nonparticipating countries outside the Western Hemisphere ⁴	200
	<hr/>
Total being requested for European recovery program and by Department of Army for Germany (GARIOA).....	7, 642
Deduct appropriations being requested by Department of Army for prevention of disease and unrest in Germany (GARIOA).....	822
	<hr/>
Total requirement for first 15 months, European recovery program.....	6, 820
Authorization requested for European recovery program (preceding line in rounded amount).....	6, 800

¹ This figure is equivalent to the adjustment for higher prices of \$665,000,000 shown in the summary balance of payments table, page 97 of the Outline, after eliminating that portion of the increase attributable to "Sources other than new United States funds," such as the International Bank, and to Portuguese cash purchase.

² See p. 92 of the Outline. These are savings possible if additional temporary transfers of bulk-cargo carriers are made.

³ This entry and the following entries in the reconciliation are shown in the tables on pages 106 and 109 of the Outline and explained in the accompanying text, pp. 107-109.

⁴ See footnote 2, table 17.

The distribution by sources of financing in the following country tables has been made according to the following principles:

1. Financing which might be forthcoming from sources other than new United States funds has been spread over commodities for the purchase of which it is thought most likely that loans and credits might be granted. Much is assigned to the category "Other imports," which includes heavy and specialized equipment and important industrial raw materials, and additional large sums are allocated to bread and coarse grains, fats and oils, sugar, meat, and coffee, for which other Western Hemisphere countries might extend commodity credits or make other arrangements to assist the participating countries.

2. It is assumed that new United States funds will be used, in the first instance, for "selected" commodities.

3. Dollar earnings of the participating countries are assigned to the remaining Western Hemisphere requirements.

In this connection, it should be pointed out that the category "Other imports" is made up principally of important raw materials and manufactured goods, which in almost all cases are as important to economic recovery as the selected commodities. On many of these commodities studies of requirements and availabilities are being prepared, but a miscellaneous category will always

¹ See The European Recovery Program—Country Studies, Table II A. The sum of total exports to the Western Hemisphere and, where positive, of "Net freight" and "Net other invisibles" is the figure shown in column 2 of the attached country tables.

² International Bank, private investment, existing Export-Import Bank credits, dollar credits by participating countries, and credits or other assistance by other Western Hemisphere countries. These sources are expected to finance \$1,228,000,000 in current prices. This figure is equivalent to the figure of \$1,285,000,000 shown in the committee print of the Outline of European Recovery Program, p. 106, after deducting the item of \$85,000,000 representing purchases on cash basis (here included in column 2) and adding credits of \$28,000,000 by participating countries to participating countries.

be necessary, since trade between advanced industrial countries involves thousands of individual products. Preliminary indications of the values of some of the most important items in the category are given in footnotes to the tables.

It is recognized and, indeed, emphasized that the following tabulation is only illustrative and that the actual pattern determined by the Administrator might vary markedly from the one outlined here. It may, however, be useful in clarifying and delineating the problems which will be encountered in initiating the program and in adjusting it continuously to changing conditions.

TABLE 2.—*Austria—Illustrative composition of imports of commodities and services from Western Hemisphere and possible sources and distribution of financing, Apr. 1, 1948, to June 30, 1949 (at July 1, 1947, prices)*

[In millions of dollars]

Import	Total imports	Possible sources and distribution of financing ^a		
		Austrian dollar earnings	Sources other than new United States funds	New United States funds
Bread grains.....	36.3	36.3
Coarse grains.....	4.4	4.4

¹ Includes (in millions) copper, lead, and zinc, \$18; hides and skins, \$9; seeds, \$22.² In addition to its dollar requirements for imports from the Western Hemisphere, bizonal Germany will have an uncovered dollar deficit of \$200 millions with nonparticipating countries outside the Western Hemisphere. This deficit is made up of the following items (in millions): Wool, \$71; hemp, \$6.5; lead, \$10; coarse grains, \$28.5; cotton, \$16.6; other raw materials, \$26.6; freight, \$26.8.

Mr. DOUGLAS. At the last meeting of the committee, I think on Thursday, Congressman Javits asked whether there would be someone here this morning who would be able to answer certain questions which he might put in regard to the ITO. And, accordingly, Mr. Chairman, may I suggest that Mr. Clayton appear before the committee to answer the questions which Congressman Javits may have in mind, so that it will not be necessary to hold him before the committee throughout the entire session this morning?

Chairman EATON. Is it agreeable to the committee to have Mr. Clayton answer questions of Mr. Javits? All agreed, say "aye." Mr. Clayton, we are delighted to welcome you back.

Mr. William L. Clayton, Adviser to the Secretary of State: Thank you, sir.

Chairman EATON. Mr. Javits, of New York. I will present Mr. Clayton, Mr. Javits. He is now open for engagements with you.

STATEMENT OF HON. WILLIAM L. CLAYTON, ADVISER TO THE SECRETARY OF STATE

Mr. JAVITS. Mr. Clayton, you are the head of our delegation to the Habana United Nations Conference on Trade and Employment; are you not?

Mr. CLAYTON. Yes, sir.

Mr. JAVITS. Do you consider the work being done there as having any effect on our consideration of the European recovery program?

Mr. CLAYTON. Yes. I do, Mr. Javits. I think that the two programs are very complementary and very interdependent and closely related. The purpose of the European recovery program is to assist these countries of western Europe to stand on their feet until they are able to stand alone. And, at the end of that time, in order to continue to stand alone, they must, of course, increase their production greatly, and increase their international trade considerably, as compared with prewar.

It is the purpose of the ITO to bring about among the nations of the world a more liberal international trade policy than has heretofore been pursued, and in doing that, all these countries will be greatly assisted in increasing their production and in increasing their trade and making possible their own economic independence.

Mr. JAVITS. Mr. Clayton, there are certain disquiets with respect to the European recovery program, on which I think you can enlighten us considerably. One of those disquiets is that if we restore the European countries to their 1938 status, we will restore them to what was an uncertain economic life, and that, even if we restore them to their 1938 status, they are bad investments.

Can you tell us what effect the barriers to trade have on the economies of the 16 countries in question, in a general way, as you see it, and how the International Trade Organization will change the situation, assuming it comes into being?

Mr. CLAYTON. Well, obviously, barriers to international trade in the form of excessive tariffs and quotas and other restrictions on the movement of goods between countries, limit the possibility of the countries to reach a high standard of living, and to reach conditions of economic independence. The countries that we are considering in the ERP, the 16 countries of western Europe, are peculiarly in the posi-

tion where international economic relationships should be liberalized, for the reason that those countries had before the war, as this committee knows, about \$2,000,000,000 annually of invisible income, invisible exports, in the form of earnings on banking and insurance, but principally in the form of receipts of dividends and interest on foreign investments. Those foreign investments were almost used up, or disposed of, in order to fight the war, and they no longer pay dividends to the participating countries.

As you know, much of the shipping of these countries was destroyed during the war. Therefore, these countries must either have postwar a lower standard of living than they had before the war, or they must considerably increase their production, not only the production of the things that they consume themselves, like food, coal, and things of that kind, but the production of their industrial products and manufactured goods which they can export to pay for imports, which formerly were paid for by these invisible exports of which I have spoken.

It is estimated, as you know, that those invisible exports before the war paid for about one-fourth of the total imports of these 16 countries.

Now, it is highly desirable that in the years to come, those countries should follow a much more liberal policy in respect of their national economic relationships, their trade policies, their tariffs, their quotas, and all those sorts of things. And, indeed, the rest of the world should do the same, in order to put them in position to get back to their prewar standard of living as soon as possible, which can only be done by greatly increasing their production and distribution of goods as compared with prewar.

Mr. JAVITS. Mr. Chairman, may I invite any member who desires to do so, to join in the discussion?

Chairman EATON. The chairman would like to ask Mr. Clayton one question. Is the ultimate objective of the great institution which you represent here this morning, universal free trade?

Mr. CLAYTON. Well, Mr. Chairman, if we ever have free trade in the world, and probably we will, it is a long time in the future. The way the present world is set up, I do not think any of us would expect that we would have free trade soon.

What we are seeking, Mr. Chairman, is freer trade, not free trade. We are not trying to put the world on a free-trade basis in the foreseeable future. What we are trying to do is to liberalize the rules of international trade, and obtain freer trade, in order that we may have an increase in the production, the distribution, and the consumption of goods around the world, so as to increase the standard of living, raise the standard of living.

Mr. JAVITS. Mr. Clayton, could you give us some specific differences between the barriers to international trade as they stood in 1938, and the situation which you expect will succeed the European recovery program period, if we go through with the ITO?

Mr. CLAYTON. Well, Mr. Javits, that would bring us into a description of the great change that took place in the world trade pattern between the two world wars, as compared with pre-World War I, and, as you all know, that was a radical change.

The countries of the world during World War I learned many bad tricks in international trade. They learned to use quotas. They learned to use embargoes. They learned to discriminate between

nations. They learned so many and indulged in so many practices having to do with a limitation and restriction on the production and the movement of goods in the world that I think that had a great deal to do, certainly, with deepening and widening and prolonging the depression which started in 1930. We ourselves took, as I think we all recognize, our full part in that changed pattern, and contributed a good deal, I think, to what happened.

It is our hope that through the ITO, not immediately, but gradually, we will be able to get the world back to a multilateral form of trade, pretty much on the basis of pre-World War I. And, if we can do that, we think that the world will go forward much quicker in getting back to economic order and stability, and in raising the standard of living around the world, than if it were allowed to proceed on the basis of the pattern that existed between the two world wars.

Indeed, there are only two roads we can take. If we do not go forward with the objectives of the ITO, we are almost certain to go backward to the development of nationalism, such as we saw carried to extreme lengths in the First World War and between the two world wars, and then carried much farther, of course, during the Second World War.

I am not saying those things are not necessary during wartime, and it is true that they are. Nearly everything has to be controlled in a modern war, and it is difficult to turn loose and to get back to liberal methods and liberal terms of international relationships, but that is what we are trying to do in the ITO. I think it is highly important, as I said a moment ago, in connection with the ERP, because what the ERP attempts to do is a short-range program for one part of the world. And, if that program is successful, and those countries are enabled, by their own self-help and mutual help to get back on their feet, they will certainly be greatly helped in that policy, and in that direction, not only to get on their feet, but stay on their feet by the adoption of the policies that we are trying to get adopted in the ITO.

Mr. VORYS. If I may interpose, you mentioned that the ERP is a short-range program. Where do you get that idea? Is that what it is supposed to be?

Mr. CLAYTON. It is supposed to end, as I understand it, in the summer of 1952. I call that short range, and the object is, as I have said, as I understand it, to help these countries help themselves stand on their feet until they are able to stand alone without any special outside assistance.

Mr. VORYS. Are all of the 16 nations which are under consideration in the ERP, members of the ITO?

Mr. CLAYTON. I believe that every one of them is at Havana, yes.

Mr. VORYS. Is ITO a short range, as well as a long range program?

Mr. CLAYTON. Yes. It is a program that is supposed to become effective in many respects as soon as adopted, and to last from this time on out.

Mr. VORYS. What is the quickest time that ITO could go into effect?

Mr. CLAYTON. Of course, it has to be approved by our Congress and the legislatures of the other countries. This would probably take until the end of 1949.

Mr. VORYS. How does the International Bank tie in with this program?

Mr. CLAYTON. It has made some loans. As you know, the United States Government is committed for something over \$3,000,000,000, but not much of that was furnished in cash. And, as I think we all understand, the International Bank has to get its cash with which it operates by selling debentures to the investing public in the United States.

Obviously, under conditions as we see them in Europe today, the investing public, in my opinion, will not buy those debentures in very large amounts at present, under conditions as we see them in Europe. If through the enactment of ERP, a firm economic foundation is placed under Europe, then I think the directors of the International Bank will have courage to go forward with credits for reconstruction and development, as it was intended they should do. And I think also that the investing public in the United States will buy the bonds. But under present conditions I do not believe the bank can operate to any very substantial extent.

Now, answering your question about tying in the ITO with this program, it is automatically tied in. The ITO deals with questions of trade barriers, tariffs, quotas, subsidies. It deals with the question of cartels. It has a very important chapter on cartels, the object of which is to do away with international cartels, which are a form of private restriction on trade between nations. It would obviously not be of much purpose to prevent governmental restrictions on trade, if you are going to allow private people to do it. So they have a very important chapter on cartels.

They have an important chapter on international commodity agreements, or arrangements. And in matters of that kind, the charter is a very comprehensive document, and in many respects the provisions of the charter would come into force immediately upon the charter being adopted and the organization set up and starting to function.

There are chapters on technical matters, on administration of customs laws, and matters of that kind, that would come into effect at once.

There was a trade agreement made between the 23 nations there represented, while they were working on this charter, as the result of which restrictions on trade and impediments to international trade were greatly lowered, or were withdrawn, as, for example, in many cases, discriminations, preferences, and things of that kind.

So that I think I can assure you that the ITO when it is adopted and set up will begin to function immediately in the direction which I have mentioned before. Obviously, it cannot come into full bloom until its member nations reach a condition where they can stand on their own feet economically, and they cannot do that today. That is the reason for ERP. As soon as they are assisted to stand on their own feet alone, without special outside assistance, then the ITO will come into full bloom and operation.

Mr. JAVITS. Mr. Clayton, I would like to revert to the question asked by the chairman, and ask you whether it is not fair to characterize the present status of ITO as follows: That what it seeks to do is to reduce barriers to international trade now, or proximate to now, like quantitative restrictions, preferential arrangements, discriminatory practices, discriminatory treatment of imports as against domestic production; cartels, which you referred to, inter-governmental commodity arrangements, and so forth, leaving intact, however, the struc-

ture of tariffs as a means for trade protection, except for the obligation to negotiate for their progressive reduction. Is that a fair statement, looking at the matter from an over-all viewpoint?

Mr. CLAYTON. Mr. Javits, that is not only a fair statement, but, if I may say so, a very intelligent and brief summary of what the ITO seeks to do.

Mr. JAVITS. So that there is no peril to our tariff system in the ITO?

Mr. CLAYTON. There is no peril. There is not. We have, of course, as we all know, the Trade Agreement Act, under which we operate, and all that the ITO has to say on that subject is that the members are obligated to negotiate for the reduction of tariffs, and the elimination of preferences and discriminations. And, negotiate, as we, of course, all know, means sitting across a table from somebody, and, if you can agree, that you get a quid pro quo for what you give, perhaps you reach an agreement, but that is all the ITO involves in the matter of tariffs, to negotiate for lower tariffs and for the elimination of restrictions.

Mr. JAVITS. Could you give us an idea of the magnitude in which the exports of the western European countries participating in the ERP must be increased before they can be said to be standing on their own feet?

Mr. CLAYTON. I cannot give you that in exact figures, but I do want to emphasize that the production of these countries and their exports must be raised in volume—I am not talking about dollars—but in actual volume, considerably above prewar, for the reason to which I have referred, that they have lost so much of their means of payment of imports because of the destruction of these foreign investments, and so on.

Mr. JAVITS. Is it a fact that these nations cannot stand on their own feet unless they realize a material increase in export volume?

Mr. CLAYTON. That is my judgment. Yes, sir.

Mr. JAVITS. Foreign trade, therefore, is essential to any permanent European recovery?

Mr. CLAYTON. Absolutely. It is much more essential to these particular countries than it is to most other parts of the world, because they are older, and they are more highly industrialized, more highly specialized in their countries, and they have built up on the basis of industrialization, in many cases. Take Belgium, for example, it has the highest density of population of any country in the world, five or six hundred to the square mile. Obviously, they cannot produce their food. They produce almost no raw materials, except coal. They have to import, and they manufacture and export in order to pay for those things.

Mr. JAVITS. It is argued, Mr. Clayton, that if we create conditions of high production in the 16 western European countries, and give them machinery, and give them technical help, that we are creating a Frankenstein which in turn will push us out of the competitive markets of the world. What do you say to that argument?

Mr. CLAYTON. Oh, Mr. Javits, I do not believe that that argument has any merit. We have recognized for a long time in the United States that it is in our interest to see the rest of the world develop as long as it can do so on sound lines. We do not want to see any unsound development. We have assisted, by loans, Latin-American countries in the development of their resources, and other countries, and the history of our foreign trade shows that we have always had

the largest trade with the highly developed countries. That is perfectly natural, because they have a higher standard of living, they have greater buying power, they have greater wants.

Take Canada, for example, the UK, and so on. Our greatest trade in exports has always been to those countries, and it will always be, for the reasons I have named. By helping these countries to get on their feet and increase their production, I think we not only do not hurt ourselves in the markets of the world, we help ourselves in the markets of the world.

Mr. VORYS. Right on that point, as I understand it, it is about a two-billion-dollar increase in dollar requirements for these 16 countries that is involved in this 25-percent loss of invisible exports. That is a rough estimate.

Mr. CLAYTON. That is the figure, roughly, that we have been furnished, and I believe it to be approximately correct.

Mr. VORYS. I mean, roughly speaking.

Mr. CLAYTON. That is right. Yes, sir.

Mr. VORYS. That would mean that the western European countries, just to get on their feet, should be exporting, primarily to the United States, \$2,000,000,000 more in materials than they did before, or should be exporting it some place else, so that \$2,000,000,000 more of imports coming into the United States would create the dollar resources to take up the deficit. That is approximately right, is it not?

Mr. CLAYTON. I do not think it is quite right, Mr. Vorys, because that assumes that all those \$2,000,000,000 of imports into these countries would come from the United States. I do not think that is right. It would come from many other parts of the world. And, also, there is an element there which I think you do not take into account, and that is, in the way you have stated the question, you assume that the standard of living in these countries would immediately, or very soon, be up to prewar, and I do not know, I just do not know, whether that would be the case or not.

It may be that they would have to make this adjustment for this loss of 2 billions of invisible exports by two processes, one, for a few years having the standard in certain respects not quite up to prewar, and, on the other hand, increase of production.

Mr. VORYS. That is true, but, in general, this long-term picture, it seems to me, involves the bringing into the United States of at least \$2,000,000,000 more in imports than we ever had before. I was going to ask you if you could give us some examples of the type of imports that we could bring in in such very large quantities which would be helpful, and not harmful, to our economy, which, of course, is the goal we are seeking.

Mr. CLAYTON. Well, Mr. Vorys, I do not believe it means anything like 2 billions of imports coming into the United States from these particular countries. I do not think so. But, I will say that I do think that we have to contemplate in the future a very substantial increase in imports into the United States, and I think we can do so with value to our standard of life, and to our whole economy.

The wants of our people are increasing all the time. Their buying power is increasing. Their standard of life is rising, and there are any quantity of things that we can import that will contribute to that, that should not materially affect our own producers.

Of course, in that connection, as you know, we are in the position of having to import many more things than we did before the war,

to sustain our own economy, principally metals and minerals, copper, lead, zinc, and all kinds of things, our resources of which we depleted during the war, and which have to come in now in much larger quantities.

Also, I should like to mention in that connection that in the last 10 years, we have had a substantial increase in population, we have had a substantial increase in the needs and desires of our people, a rising standard of life, a greater buying power. And, during that same period, we have increased in the United States our facilities for production of consumer goods comparatively little. We have the market here, we have the demand here, and we can absorb in this country a good deal of consumer goods of one kind and another, without any serious injury to our own producers. In other words, our own producers can continue to have, perhaps, a greater market than they had before the war.

Mr. BLOOM. May I ask a question?

Mr. VORYS. Before we get off of this, I am quite familiar with the general situation as you describe it, but I was wondering if you could give us some more specific examples of the materials we could bring in in quantities of billions of dollars excess in imports over what we ever had before, which would benefit our economy. You mention certain strategic materials, such as minerals, and that is one which I think we all appreciate. I wondered if it would be possible for you to give us a somewhat specific list of such imports.

Mr. CLAYTON. I do not think that I could, Mr. Vorys. There are a variety of things.

Mr. BLOOM. Woolen cloth.

Mr. CLAYTON. Well, we know, Mr. Bloom, that for the last 2½ years since the war ended, we are still unable to get as much as we need, consumers are still unable to get as much as they want.

Mr. BLOOM. That would be manufactured goods. Of course, you are just mentioning raw materials. Of course, Mr. Vorys spoke of manufactured goods. Woolen material would be one.

Mr. CLAYTON. That is right.

Mrs. BOLTON. May I interpose at that point?

Mr. CLAYTON. Textiles of different kinds could be brought in.

Mr. BLOOM. Without any serious damage to our own manufacturers?

Mr. CLAYTON. I think so.

Mrs. BOLTON. Would the gentleman yield?

Mr. BLOOM. I yield to Mrs. Bolton.

Mrs. BOLTON. Do we not have a considerable supply of raw wool stored away?

Mr. CLAYTON. Yes. The Commodity Credit Corporation has a large supply, which they purchased during and just after the war in order to hold prices.

Mrs. BOLTON. Does that not deteriorate if it is kept in the raw form?

Mr. CLAYTON. I do not know, Mrs. Bolton. But we are, of course, consuming wool in this country—the last figure I saw, at the rate of about 900,000,000 pounds a year. It would be very easy to work off that wool and keep it rotating, in order to prevent any deterioration. I do not think that that is a problem.

Mrs. BOLTON. Is anything being done with that? I have been told nothing was done. That is why I asked the question.

Mr. CLAYTON. I am not currently informed on it, because I have not discussed it with the Department of Agriculture, but I understand that was the purpose, and that that was being done during the war, and it is easy to do. I don't believe they would have any difficulty with that. As a matter of fact, under the bill passed by Congress in June, the Department of Agriculture now has, as I remember it—I think I am right in saying that the Department of Agriculture now has full authority to dispose of that wool in the market. So that there is no reason why they cannot work it off.

Mr. BLOOM. May I ask, Mr. Clayton—have you finished, Mrs. Bolton?

Mrs. BOLTON. On that subject. I will wait until later for any more questions I may have.

Mr. BLOOM. Is it not a fact that we cannot expect to keep on selling export goods to these countries without purchasing something from them? It is a question of buying and selling. But if we expect to export to these countries, our goods and not buy goods from them, of course they will not be able to get the dollars to pay.

Mr. CLAYTON. That is right.

Mr. BLOOM. Is it not a matter of business all the way through?

Mr. CLAYTON. That is right. We have three things we can do. One is to lop off the exports, bring them down to the volume of imports. The other is to give away the surplus every year, and then we could buy more goods to take payment for those surplus exports, by taking goods.

Mr. BLOOM. Is it not a further fact that if we do not have an export trade, so as to keep our manufacturing up to the peak load, that the manufactured goods in this country would cost us more, because we would not be manufacturing to peak load?

Mr. CLAYTON. That is right.

Mr. BLOOM. It is the idea of being able to export a certain amount of goods to X country that allows us to manufacture the goods at a price, on account of running to capacity. If we did not do that, and if we only manufactured up to 75 or 80 percent of capacity, then that 75 or 80 percent would cost us more money in this country to manufacture?

Mr. CLAYTON. Yes, sir. it would. And there is certainly that factor in it which you mention, and then there is the other factor that has to do with our raw materials, agricultural products, principal among them being wheat, tobacco and cotton, those three. We export a substantial part of our production of those commodities, and if we had to curtail very substantially those exports, we would have to do something with the surplus, or we would have to make arrangements with the producers to produce less, and divert their energies into other activities.

Mr. BLOOM. Following up Mrs. Bolton's question as to wool, Mrs. Bolton mentioned the stock pile we have here. Was that not imported from other countries, Argentina and other countries, at the time?

Mr. CLAYTON. No, sir. I think that has been disposed of. I think the stock pile, which we bought in largely from Australia, has been sold. What Mrs. Bolton refers to is domestically produced wool, purchased by the Department of Agriculture during and following the war. They now have congressional authority to dispose of it at the market.

Mrs. BOLTON. And I had in mind also, Mr. Secretary, the wool bought from other countries, if we had bought it in the raw stage.

Mr. CLAYTON. That was all disposed of, Mrs. Bolton. I think perhaps the United Kingdom still has considerable wool in storage in the United States, but it belongs to them, and the wool we bought from Australia, which was 300,000,000 pounds, if I remember correctly, has all been sold.

Mr. JAVITS. Mr. Chairman, I have a few other questions.

Chairman EATON. The chairman understands that at our last meeting, it was agreed that Mr. Javits and Mr. Lodge should finish up the questions that they wanted to ask at that meeting. Mr. Javits, how much more have you?

Mr. JAVITS. I have a very few questions, but Mr. Lodge has one. I will be glad to yield to him.

Mr. LODGE. I was going to ask Mr. Clayton this. In answering Mr. Bloom's question, am I correct in understanding you to say that these exports contribute to lower prices in this country?

Mr. CLAYTON. I do not know whether they do to lower prices or not, but they certainly do to lower costs of production, which in turn contributes to lower prices. For example, take agricultural implements. We export in normal times, as you know, 20 to 25 percent of our production of agricultural implements, 20 percent, I think, of trucks and automobiles. Now, obviously, if you can continue that large a volume as against only the domestically sold and distributed goods, if you were confined to that, that would contribute to a lower unit cost of production of those particular things. I think that is what Mr. Bloom meant.

Mr. LODGE. But is it not possible that the producers of such articles in this country would, nevertheless, produce the same amount, in order to keep on satisfying an increasing demand in the United States and that that would contribute to lower prices, on the basic theory of supply and demand?

Mr. CLAYTON. If we lose our exports, Mr. Lodge, you will have less demand in the United States for those things.

Mr. LODGE. I am talking about today, not the long-range future. Would you say that these demands are being more than satisfied in this country as of today? That is the point I am trying to get at.

Mr. CLAYTON. The demand for those two things I have mentioned is certainly not satisfied at present in this country.

Mr. LODGE. That is what I was thinking of.

Mr. CLAYTON. That is certainly true.

Mr. LODGE. In other words, as of today, what Mr. Bloom says would not be true. It would be true in the long-range future.

Mr. BLOOM. Everything Mr. Bloom says is true.

Mr. LODGE. Mr. Bloom can always be sure of one good opinion.

Mr. CLAYTON. As of today, we have very little exports of agricultural implements and automobiles, the two things of which I have spoken, because of the fact of the shortages here in this country. We have had a greater demand for those two things than the manufacturers can supply.

Mr. LODGE. That is what I was trying to get at.

Mr. CLAYTON. In normal times, we would export around 20 percent of the production of each of those things.

Mr. LODGE. I have no quarrel with the principle you have advanced, but as of today, we might as well face the facts, and not pretend that

this is going to be a painless matter. Although as of today, we may be justified in doing these things, are we in fact contributing to lower prices and lower costs in a market which is far from being satisfied?

Mr. CLAYTON. I would think not in those particular cases. However, I think the most serious aspect of what would happen if we lost our exports, or had to reduce them materially, lies in the agricultural field, and that is where you would have to make the most radical adjustment. We produced last year a billion, four hundred million bushels of wheat. The human beings in this country cannot use over half of that, to save their lives, they do not eat over half of that. Of course, we feed a certain amount to animals, which is unfortunate, and you have a lot of wheat you have to export.

Mr. LODGE. Yet the price of wheat goes up.

Mr. CLAYTON. And yet the price of wheat goes up, because there is such an enormous demand over the world for it. The production of wheat in other countries has declined so much that they have to have our wheat.

Mr. LODGE. It is true that this demand from outside this country has had quite an effect on raising the price of wheat for Americans. I do not mean to question the desirability or necessity of it, but I think it is well not to hoodwink people as to what the results will be.

Mr. CLAYTON. I do not want any of us to hoodwink anybody. But, if you suddenly lost all your exports of wheat, you would have deflation to deal with, and not inflation.

Mr. JAVITS. The other side of the medallion is that certain imports into the United States will have a very material impact on the cost of living in the United States, without interfering with our basic economy, will they not?

Mr. CLAYTON. Indeed, yes.

Mr. JAVITS. And would reduce scarcities?

Mr. CLAYTON. Indeed, yes.

Mr. JAVITS. And keep prices down?

Mr. CLAYTON. That is right.

Mr. VORYS. Would the gentlemen permit an interruption?

Mr. JAVITS. Certainly.

Mr. VORYS. I wonder if there is anybody in the Government who can give me a list of increased imports that would obviously be increased to the United States. I had thought that of all the people connected with the Government, you would be the one who could just reel off the answer immediately, that we need so many million or billion pounds of this or that mineral, and so forth. I hope somebody is thinking profoundly on that, because, otherwise, we are building toward a long-term policy where we merely suffer imports. I do not think that is the case. I think there are a lot of things we want to increase in quantity, and I would like to get hold of the list. Can you tell me where I can get such a list?

Mr. CLAYTON. I do not believe it is possible for anyone to give it. It is constantly changing, with changing prices and changing demands, and I do not believe it is possible to furnish such a list. As you know, in our tariff policy, under the Trade Agreements Act, we have an escape clause, which protects any producer in this country who is injured, or is threatened with serious injury by reason of reduction in the tariffs and an extraordinary increase in imports. That is a protective clause that is to protect them in case we should go too far in reducing this protection.

I think all we have to do is to look at the figures and know that with \$15,000,000,000 of exports and five or six billions of imports, that that is a situation that cannot go on very long. You are either going to have to cut way down on exports, or build up your imports, one or the other.

Mr. JAVITS. Mr. Clayton, one of the arguments made against the ERP is that by our efforts to create a leveling of customs barriers within Europe, or even a customs union of the 16 nations, or many of them, we are erecting a closed Europe, in which we will not be able to trade adequately. What effect upon that danger does the ITO have, as you see it?

Mr. CLAYTON. Well, I just cannot see the basis for the argument, Mr. Javits. That assumes it is not in our interest to see other parts of the world make customs unions. I think every intelligent person who will examine into the question is bound to see that it is in our interest.

As a matter of fact, when the union was formed between Belgium, Luxemburg, and the Netherlands, so far as you could tell, it met with almost universal approval in the United States. Everybody thought it was a step in the right direction. I certainly think so.

Why? Just take our own history in the United States. The Constitutional Convention had to decide whether it would have tariffs between our States, as is the case in some countries, or whether we would have free trade between our States. I do not believe anybody would deny that in having made the latter decision, that we made a fundamental decision that contributed perhaps more than any other single thing to the great expansion that took place in the United States, and the development that took place here, and we made a great market here.

Now, you have customs unions which eliminate the barriers of trade between the countries that are involved, and make the same tariffs on the periphery of all other countries. What do you do? You set up a situation there that increases the production and consumption of goods, raises the standard of living in those areas, just as we did in our country, and you make a greater market for other people's goods, because they cannot produce everything they need.

Mr. JAVITS. Is it not a fact that the ITO will protect us against that larger area enforcing new barriers to trade?

Mr. CLAYTON. Indeed yes.

Mr. JAVITS. So it is valuable to us from that point of view?

Mr. CLAYTON. Yes and it is logical. That set-up should not only eliminate the barriers to trade within the areas, but also lower the barriers to trade with the countries outside the areas.

Mr. JAVITS. Mr. Clayton, do you believe there is any necessity for conditioning the ERP upon the nations benefited joining in the International Trade Organization?

Mr. CLAYTON. I am just reacting to that. I have not heard that suggestion before. My reaction is that I would very much dislike to see that done. I would like to see us arrive at agreement in Havana, and set up the ITO on its own merits, without any compulsion on the part of any country, and I believe we are going to be able to do it.

Mr. JAVITS. I might say I join with you in that. One final question sir: Do you consider the solvency of the European recovery program, that is, its hope for success, being materially influenced by the consummation of the International Trade Organization effort?

Mr. CLAYTON. I do indeed. The two things are highly complementary and interdependent, and it is a little difficult for me to conceive how these countries in western Europe could attain economic independence again—that is, could reach it and maintain it—if they did not adopt the liberal principles of international trade which the International Trade Organization is seeking to establish.

Mr. RICHARDS. Mr. Clayton, I was interested in your reference to the ITO seeking to solve the situation brought about on account of preferences. Are you referring to both unilateral preferences and Empire preferences?

Mr. CLAYTON. Well, I am not aware of the creation of unilateral preferences.

Mr. RICHARDS. I meant bilateral preferences.

Mr. CLAYTON. Certainly. That is right. Yes, I am referring to those.

Mr. RICHARDS. You are referring to both?

Mr. CLAYTON. Yes.

Mr. RICHARDS. In that connection, I believe ITO is going to run head-on with ERP.

You take Great Britain, for instance. She is one of the prime movers in this new organization of the 16 nations in Europe. Yet, at the same time, she continues to insist upon certain Empire preferences in trade. If she continues to hold that position the natural result is going to be that some nations in the 16-nation group, in self defense, are going to have to combine among themselves, and the seed of discord is right there in regard to trade.

What do you think about that?

Mr. CLAYTON. The ITO provides that no existing preferences shall be increased or added to. It does not seek immediately, or provide immediately, that all existing preferences shall be abolished. You cannot suddenly reform the world. It has to be done a little at a time, and it recognizes that there are certain preferences in existence which it hopes and believes will be traded out and eliminated, but it provides very clearly that additional preferences, or preference area assistance, shall not be established.

As you know, I am sure, at Geneva in our trade agreement with the United Kingdom, many of the United Kingdom preferences were eliminated and many others were reduced.

We hope, in time—and I do not know how long it will take—but we hope that that whole system will give way to a much more liberal one.

Mr. RICHARDS. It is a long-range objective, just as it is to gradually do away with the customs difficulties.

Mr. CLAYTON. It is a long-range objective; that is right. One of the prime obligations that a member of the ITO takes is that he is to be willing to negotiate with his fellow members for the reduction of tariffs and the elimination of preferences.

Mr. RICHARDS. I fully recognize that Great Britain's economy, for instance, is built up on trade preferences with the dominions. That is what I understand it has been throughout for years. It will take them a long time to get away from that. I see the Ambassador shaking his head.

Ambassador DOUGLAS. It is a fairly recent development.

Mr. CLAYTON. Most of it was adopted at the Ottawa Conference in 1932. The British have always said it was a result of our high-tariff policy in the United States which culminated in the Smoot-Hawley bill in 1930 and which was followed by retaliatory action on the part of over 30 nations in the world in raising their tariffs and putting on embargoes and quotas.

So we tied the international trade situation, in that period, in a pretty tight knot, and the British built a tight Empire of their own by using preferences. But I am optimistic that if we get the ITO and the ERP one of the things we will do will be to further reduce and, in time, eliminate that preference.

Mr. RICHARDS. The British were traditionally free traders?

Mr. CLAYTON. Yes.

Mr. JAVITS. I just want to clarify this: The British have agreed, have they not, to a step-by-step reduction of these preferences?

Mr. CLAYTON. They have agreed to negotiate the matter, Mr. Javits, and they have negotiated at Geneva. We achieved a certain measurable success in getting some of the preferences eliminated and others reduced.

Mr. JAVITS. By the acceptance of the ITO charter the members have accepted the British situation as it is?

Mr. CLAYTON. That is right.

Mr. JAVITS. There will be no situation of coalition. So if it is not going to be increased, and they accept it as it is, they are satisfied with freezing it and going down from there.

Mr. CLAYTON. That is right.

Chairman EATON. Mr. Mansfield.

Mr. MANSFIELD. You brought out the fact that at the present time there is a great preponderance of exports from this country over imports from other countries, and you also stated that if the situation was not clarified the net result in this country would be deflation because these countries which are now importing into the United States are doing so for the purpose of acquiring dollars to buy our goods. Is that correct?

Mr. CLAYTON. Did you say importing into the United States?

Mr. MANSFIELD. Yes.

Mr. CLAYTON. We furnish a market for them and for those particular goods, and, obviously, whatever dollars they get from that are available for payment for our exports.

Mr. MANSFIELD. And is that not one of the reasons why Europe is being unable to rehabilitate itself, from an economic point of view, at the present time, due to the fact that there is an extreme shortage of dollars which they have to conserve but which they would like to spend, if they had more of them, to buy goods in this country?

Mr. CLAYTON. Yes.

Mr. MANSFIELD. It would appear to me that one of the basic elements in the consideration of the European recovery program would be the fact that over the long term we would benefit tremendously, from an economic point of view; and if we don't we will have deflation in this country. We will have surpluses. Nobody will have anything to buy our goods with, and then where will we be?

Mr. CLAYTON. Mr. Mansfield, I think that is exactly right. We cannot, in the United States, be the only prosperous country in the world. We cannot be the only free enterprise country in the world.

If we want to keep free and prosperous we had better have some company.

If we leave these countries of western Europe to shift for themselves and say "We are sorry; we can't help you any more," I think conditions will quickly ensue there which will, in effect, bring about a substantial blackout of that market for our goods and for goods of the rest of the world—for Latin America, for example. If Latin America loses its markets in Western Europe we lose ours in Latin America, and the thing is a change that goes around the circle.

I think that it is highly important that we do what we reasonably can to help these countries to get again to a position where they can stand alone, because if we do not we are going to have to make such radical changes, I am afraid, in our own economy in this country that it would be very difficult for a democratic, free-enterprise system to make.

Mr. MANSFIELD. Would it be safe to assume that if a proposal somewhat along the lines of ERP is not adopted we will see an emphasizing of state-controlled economies in all of Europe?

Mr. CLAYTON. Undoubtedly. And, as I said a moment ago, we cannot expect, in this country, to be the only free-enterprise country in the world if the rest of the world substantially goes on a state-enterprise or state-controlled basis. I think you will see the drift in that direction here very strongly.

Mr. MANSFIELD. Now, coming from an area which is the raw material production area of the United States—and, as such, vitally interested in the tariff question—I would like to make some statements and you can either refute or corroborate them on the basis of three of our outstanding products.

One is wool. Is it not true that in this country the American wool producer, under the most favorable circumstances, cannot produce more than 50 percent of the wool needed for domestic consumption?

Mr. CLAYTON. That is right. It is about 35 or 40 percent, now, of what we are consuming.

Mr. MANSFIELD. And you say the stock piles which we brought in from Australia during the war are gradually diminishing, and, as far as the domestic crop is concerned, the Agriculture Department now has the right to buy and sell it on the market?

Mr. CLAYTON. That is right.

Mr. MANSFIELD. Now, in the matter of minerals, copper is very important out there. We passed a bill last year lifting the excise tax on copper of 4 cents a pound, or \$80 a ton, for a 3-year period. We did that because of the fact that we were suffering from an extreme shortage of copper and other minerals, and we have to have copper for our industrial machinery to function and manufacture the goods which we need.

Mr. CLAYTON. That is correct.

Mr. MANSFIELD. So that takes care of two or three of the main products.

The other one is cattle. There is always a great deal of fear in my country about the effect of the importation of cattle from abroad. But is it not a fact, is it not true that, aside from the feeder cows coming in from Mexico and Canada today, that there is no possibility for cattle coming in from, say, the Argentine because of the Sanitary Embargo Act of 1917?

Mr. CLAYTON. That is correct.

Mr. MANSFIELD. And is it not true, also, that, as far as future competition from Argentina cattle is concerned, the answer to that is the restoration, in part at least, of the European markets which used to take a large part of the Argentine supply and perhaps spread it—have a meat economy throughout Latin America to replace the cereal economy which is in operation throughout that area?

Mr. CLAYTON. I think that is right. Of course, as Europe gets back on its feet it would import, I would think, more beef from Argentina. England, as you know, takes the bulk of her exports now, and as Europe gets back on her feet other countries, I would think, would take a share also.

Mr. MANSFIELD. Those are the historical markets of Argentina.

Mr. CLAYTON. That is correct.

Mr. MANSFIELD. The sooner we get Europe back on its feet, the sooner we will allay any idea—I say “idea”—of a threat from Argentina or that part of the world insofar as our American cattlemen are concerned.

Mr. CLAYTON. I would think it ought to be a very substantial aspect of it.

Mr. MANSFIELD. Thank you, Mr. Clayton.

Mr. LODGE. Mr. Clayton, I was interested in the parallel which you drew between this country and Europe in connection with the free trade areas which existed in America because of the lack of trade barriers between the States.

I assume that you agree that one of the chief factors in that situation is the fact that we have a reasonably stable currency which is uniform all over the country.

Mr. CLAYTON. Oh, yes.

Mr. LODGE. And, therefore, that you would feel perhaps that one of the reasons that the French, for instance, are not selling more to us is because their currency is overvalued and we cannot afford to buy.

Mr. CLAYTON. That is right.

Mr. LODGE. Under those circumstances, I was wondering how you would feel about the position which Great Britain is reported to have taken this morning in the paper as opposing the devaluation of the French franc because of her fears with respect to the devaluation of the pound.

Does not that seem to you to be in contravention to what we are trying to do with the recovery program?

Mr. CLAYTON. I am not informed. I just saw the headlines, Mr. Lodge, of that statement, and I do not know how true it is or just what the particulars are of it.

I think that if the ERP is adopted as we have in mind, that one of the conditions, of course, that will be asked of these countries will be with respect to the measures that they should take to put their financial and monetary houses in order, and restore confidence in their money. That is one of the most important things in connection with the restoration of production in Europe.

Mr. LODGE. But surely if we want to stabilize these currencies and devalue them. It could be said that a great part of the Marshall plan is an attempt to fill in the gap between the legal and the real value of money in Europe. Could it not?

Mr. CLAYTON. One of the principal objects, I would think, of the Marshall plan, is to restore confidence in the moneys of these countries, and they of course would have to take the necessary steps to do that.

I believe they would only be able to take it with our assistance such as is provided in ERP.

Mr. LODGE. Would you agree, sir, that it would diminish the load on the American taxpayers if these currencies were to go closer to their real values?

Mr. CLAYTON. Certainly, if they go closer to their real value it should serve to make more attractive the exports of these countries.

Mr. LODGE. And therefore diminish their dollar needs?

Mr. CLAYTON. That is right.

Mr. LODGE. Therefore would it not be desirable for us to have some agreements with, let's say, the British, that we are interested in diminishing the load on the American taxpayer and adding to the economical effectiveness of ERP, by somehow persuading these countries to devalue their currencies.

Mr. CLAYTON. Well, Mr. Lodge, I am sure that that matter will all be taken care of in the agreements that would be made. The plan, as you know, contemplates a multilateral agreement between these countries and that contemplates a bilateral agreement between the United States and each recipient country, the two to be tied in together, and I am sure that it is contemplated that what you are just now saying should be fully covered in those two agreements.

Mr. LODGE. You would agree that it would be very desirable, in fact, it would be essential, for us and these participating countries to agree on an over-all policy in this connection especially since it constitutes a burden on the American taxpayer?

Mr. CLAYTON. Indeed.

Mr. LODGE. Thank you very much.

I assume in connection with the point which Mr. Vorys brought out with respect to tying in the ERP with ITO that you would feel that until the ITO gets going it would be desirable to implement the purposes of ITO within the framework of the ERP?

Mr. CLAYTON. Yes. I think that is being done or would be done in the condition relating to the lowering of trade barriers and taking other steps to liberalize trade and increase trade between these countries and between them and other parts of the world.

Mr. LODGE. That would necessarily mean attempting to bring about a situation where there would be uniformity in currency exchange value reforms in the tax structures of these participating countries, and also devaluation of currencies?

Mr. CLAYTON. I do not know about uniformity in their tax structures, Mr. Lodge, but certainly one of the most important elements, as of course you know, in any reform relating to money and budgets and that sort of thing, is the tax structure of a country.

Mr. LODGE. That is right.

Mr. CLAYTON. That would certainly be involved in the condition relating to the taking of the necessary measures to put their financial and monetary house in order.

The tax structure would certainly be a large part of that.

Mr. LODGE. Do you feel, sir, that it is desirable that the price-control structure within these various countries be kept intact, or be increased, or be diminished?

Mr. CLAYTON. That is something that I have thought about very little and I think that so far as the contract or agreement with these countries is concerned, that we should be careful not to go into details as to how they are to do things or what particular steps they are to take.

I think it should be phrased in terms of the end result of what is expected to be done, where you are going to arrive, rather than in saying how it has to be done.

Mr. LODGE. Do you think they will do these things without even a suggestion from us?

Mr. CLAYTON. I think, Mr. Lodge, it is going to be highly desirable that when the program gets under way and after these agreements are made, that we have a very competent organization sitting in Europe and working with these countries almost from day to day to be of any assistance to them that we can, with administrative assistance, technical assistance, and follow the performance under the agreement.

Mr. LODGE. Do you think it would be desirable for any of these countries to change their price-control structure?

Mr. CLAYTON. I would not be able to express an opinion on that at the present time.

I am not sufficiently familiar with that. That is something that is pretty hard for us to say in the United States. There is a great deal of difference of opinion on what we should do.

Mr. LODGE. It seems to me that that is a very vital matter on which I personally would like to obtain the views of some member of the Government, because after all, it has a direct bearing on the reciprocal self-help contemplated under this program.

Mr. CLAYTON. Yes.

Mr. LODGE. The reasons will probably be more obvious to you than me.

Mr. CLAYTON. I am sorry, I would not be able to express an opinion on that.

Mr. JONKMAN. Mr. Chairman, I think Mr. Lodge has laid his finger right on the crux of this whole situation, when he spoke about the managed currency.

I would like to see if I can illustrate that. What is the legal exchange rate of the franc in France today?

Mr. CLAYTON. Around 119 francs to the dollar.

Mr. JONKMAN. What is the free-market rate or black-market rate?

Mr. CLAYTON. I have not heard recently. During the summer and early fall when I was there it was around 250.

Mr. JONKMAN. That is at least twice the legal rate, is it not?

Mr. CLAYTON. Yes.

Mr. JONKMAN. Now, if you have a double standard of that kind is it not true that it is going to double the cost of their exports so that the producer will seek a local market over the price of a foreign market? Is that true or is it not true?

Mr. CLAYTON. It is generally true.

Mr. JONKMAN. That is all I wanted to know.

Now, in the second place, they are halving the cost of their imports.

Mr. CLAYTON. I beg your pardon?

Mr. JONKMAN. They are halving the cost of their imports?

Mr. CLAYTON. When they can import, yes. That is cutting in half the cost to the private buyer in France. Imports are purchased at world market prices, usually in dollars.

Mr. JONKMAN. Absolutely.

Mr. CLAYTON. Not to the Government.

Mr. JONKMAN. The only way the Government can stop it is by restriction on imports?

Mr. CLAYTON. That is right. That is the way they do stop it.

Mr. JONKMAN. So the inevitable result of that double standard of currency is to discourage exports and encourage imports.

Mr. CLAYTON. It does not encourage imports because the existence of the double standard forces the Government to take measures to prevent imports and they do that.

Mr. JONKMAN. You are in the free market but in the free market that is the inevitable result.

Mr. CLAYTON. There is no free market in a country like that.

Mr. JONKMAN. But you would have the same results. You are simply trying to get imports and you are not exporting.

Mr. CLAYTON. That is right.

Mr. JONKMAN. If we furnish them the money to buy imports, we are increasing the malady or disease, are we not?

Mr. CLAYTON. I do not think so.

Mr. JONKMAN. Let me ask you this: We say, for instance here, in the bill, "Accordingly it is declared to be the policy of the United States that assistance be given to those countries of Europe participating, not which promise to participate," but "participating in a joint European recovery program based on self-help and mutual cooperation."

You, for instance, objected to making the joining in the ITO a condition precedent to our help. Are we going to make any conditions precedent before we give this money?

Mr. CLAYTON. Of course I am not making the conditions and I do not know, but I would think that the bilateral agreement of which I have spoken, between the United States and these participating or recipient countries should be very precise in stating certain conditions under which the help would be extended.

Mr. JONKMAN. You mean conditions precedent or conditions that they are to work up to sometime?

Mr. CLAYTON. They would have to be of both kinds, because obviously there are many conditions that they cannot perform under before they get the aid, as for example restoration of production of coal and food. They cannot do all that before they get the money.

But they can do it concurrently with receiving the aid.

Mr. JONKMAN. But some countries have done that, have they not?

Mr. CLAYTON. What?

Mr. JONKMAN. Restored their currency at considerable difficulty.

Mr. CLAYTON. Yes. They have. They had an easier situation than some of the countries.

Some of the countries have restored their currency situation.

Mr. LODGE. Italy?

Mr. CLAYTON. Well, Italy has practically abolished the control; practically, and has restored the free market. As I understand it, that is about what has taken place in Italy.

Mr. JONKMAN. The point I am making is, that we can go forever pouring money in there and until they get their house in order as far as currency and price control is concerned, you are not going to get the production that you say they need in order to recover.

Mr. CLAYTON. Mr. Lodge, I could not fully agree with that. The principles of the ITO are the reduction of trade barriers between countries, and elimination of the quotas system in trade between countries, elimination in time of the preferential system, and things of that kind, and those things can be done, I think.

Mr. LODGE. Without those internal changes?

Mr. CLAYTON. Yes. I think they can. They can substantially be done. Of course, I think that an economic federation is highly desirable in Western Europe.

Mr. LODGE. I am glad to hear you say that.

Mr. CLAYTON. I agree fully with that. That is a big order.

Mr. LODGE. I realize that.

Mr. CLAYTON. It takes some time to work it out. You cannot expect that to come quickly. That it will come in time I fully believe. But it will take time to work it out.

Mr. LODGE. We have variations in the tax structures of our several States. I do not believe complete uniformity is necessary.

But certainly in the instance which I gave, an enlargement of the free trade area in that particular commodity would be an impossibility, would it not?

Mr. CLAYTON. It would be, unless the countries worked very closely together in respect of these other matters.

Of course, to have a real customs union you almost have to have a uniform currency. You almost have to have the same system, as you say, of an economic federation which involves the same currency, tax system, and so forth.

To have a real customs union you almost have to have that. We have practically that in the United States.

Mrs. BOLTON. But there are other unions in addition to customs unions, and is there not a very real need for the joining together of the western powers of Europe in order to be any force against the intrusion of the Eastern pressures?

Mr. CLAYTON. That gets into the political field which is out of my general knowledge and experience. But I believe that, too, Mrs. Bolton. But that is something, perhaps, a long time in the future.

Mrs. BOLTON. But Mr. Clayton, the point is that unless they get strength now there would not be any future.

Mr. CLAYTON. Well, I think this on that point—

Mrs. BOLTON. I will put it this way: there may not be any future.

Mr. CLAYTON. I think that the thing that we are all concerned about now is the preservation of the integrity and the independence of these countries, and if we help them get on their feet economically, it is my belief for whatever it may be worth, that they will be able to do that, to preserve their integrity and their independence.

Chairman EATON. Thank you, Mr. Clayton, We are delighted to have you back.

FURTHER STATEMENT OF LEWIS W. DOUGLAS, UNITED STATES AMBASSADOR TO UNITED KINGDOM

Chairman EATON. Now, we will return to our distinguished friend and visitor, the Ambassador. We would like to finish with the Ambassador by 12 o'clock, if it is possible.

Mr. Lodge, you may proceed.

Mr. LODGE. Am I limited to 20 minutes?

Chairman EATON. I think so. Could you contain yourself within that time?

Mr. LODGE. If you request me to limit myself to 20 minutes, I shall do so.

Chairman EATON. Yes. We will ask the Ambassador to use one word instead of 12, if possible.

Mr. JAVITS. I have had no opportunity to question the Ambassador. I am perfectly willing to forego that.

Chairman EATON. I thought you were requesting Mr. Clayton in lieu of Mr. Lodge.

Mr. JAVITS. I will yield to Mr. Lodge.

Chairman EATON. Mr. Lodge.

Mr. LODGE. Mr. Ambassador, since it is obvious that unless every section of the United States is functioning at its highest efficiency the country cannot meet the great demands which are going to be imposed upon us by conditions abroad.

It is important that enough petroleum be set aside to care for our vital needs. I understand the Middle East will not be in mass production prior to 1951 when the program expires, and therefore I should like to ask you this, sir: Will the plan contain agreements providing for repayment to the United States in subsequent years of whatever petroleum is necessary to reimburse us for our outlay between now and then?

Ambassador DOUGLAS. The plan, of course, contemplates a very substantial increase in the production of petroleum products in the Middle East, and in other areas outside of the continental limits of the United States.

I am not quite clear as to what you mean by "repayment."

Mr. LODGE. I mean that since these oil fields will not be in large production, as I understand it, until 1951, in view of our dwindling petroleum supplies and the extremely acute shortage we are now suffering in certain regions, notably in New England, I would like assurance that when this area in the Middle East is in large production we will be reimbursed.

Ambassador DOUGLAS. You mean by making available to us a larger supply of oil from that area?

Mr. LODGE. Yes; because we are spending more than our income. we are spending our capital.

Ambassador DOUGLAS. I understand that.

Mr. LODGE. My question is simply an expression of my concern over our dwindling oil resources and the hope that we can do this job provided these agreements look forward to repayment in kind.

Ambassador DOUGLAS. Certainly, Congressman, it would be contemplated that a larger volume of petroleum products be made available in these areas for the United States, as they came more and more into production.

On that particular point I would like to point out that if any adverse development should occur in western Europe, and the sort of difficulty developed there which some of us have envisaged as possibilities, should the United States fail to come to the support of the western European countries, then that source of supply of petroleum products might very well be cut off from us entirely, so that in order to achieve the very admirable purpose, which you have in mind, we must be assured of fundamental recovery in western Europe.

Mr. LODGE. I think that is a very important point to bring out. I take it, then, that the answer to my question is that these agreements will contain provisions looking toward the situation I have cited.

Ambassador DOUGLAS. The making available of additional petroleum products to the United States.

Mr. LODGE. Now, Mr. Ambassador, the 16 nations, as I understand it, largely ignored western Germany's potential contribution to the Marshall plan. It was drawn up before the break-down of the London conference, when it was still necessary for the western nations to assume that the Allied reparations agreement including the dismantling program would be carried out.

Is that not correct?

Ambassador DOUGLAS. Well, I do not have the figures in front of me on reparations, but no plants in Germany, as I understand it, have been dismantled in addition to the plants contemplated and indicated for dismantling under the agreement of August 1947.

The deliveries under them have been very substantially smaller than the dismantling that has been undertaken.

Mr. LODGE. My point is that since the 16-nation report was made prior to the London conference, it was based on certain assumptions in connection with western Germany and the Allied reparations agreement in particular, which assumptions can be said no longer to prevail because of the intervening circumstances and that by thus reducing the steel products which could be produced in Germany the 16 nations were compelled to make demands for United States steel, which it would be impossible for us to meet without increasing inflation and bottlenecks in vital areas of American production; such as freight cars, automobiles, and farm machinery.

Ambassador DOUGLAS. Well, I think the contributions possible to be made by Germany to European recovery were calculated by bizonal authorities and submitted to the Paris Conference.

Mr. LODGE. But they were calculated on the basis of dismantling?

Ambassador DOUGLAS. They were calculated upon the level of industry to which the commanders-in-chief of the bizonal area in August 1947 had agreed.

That level of industry, as I recollect it, provided for retaining in the bizonal area of Germany enough in steel productive capacity to produce 10,700,000 ingot tons of steel a year.

Mr. LODGE. Was not that based, sir, on the assumption of dismantling in accordance with the Allied reparations agreement?

Ambassador DOUGLAS. No. You see, the original level of industry in Germany contemplated the retention of productive capacity in the amount of some 7,000,000 tons, and the actual production of that retained production capacity of about 5,800,000 ingot tons a year.

Mr. LODGE. In other words, not a full capacity?

Ambassador DOUGLAS. Well, there always is, or very frequently is, a difference between total absolute productive capacity and the actual production.

Now, the new level of industry that was agreed to between the British and United States authorities in August 1947 raised very substantially the amount of productive capacity that would be retained in Germany in order that the production of steel in the western zone might rise to a level of 10,700,000 tons, as compared with the 5,800,000 ingot tons we agreed to in 1946.

Mr. LODGE. Would you say it could rise still higher if the dismantling were to stop as of today?

Ambassador DOUGLAS. Now, I am not thoroughly acquainted with all of the details of dismantling, Congressman. Under certain conditions, of course I assume the production of steel in Germany could be increased.

Whether it would be economic is another question.

Mr. LODGE. I think your point of view on this is particularly important, because of your familiarity with the coal situation: If Europe required less steel from us, we could manufacture more freight cars to permit increased transportation and export of coal to produce more steel in France and Germany. Therefore a moratorium on dismantling plus a slight increase in coal imports might have very beneficial results.

Ambassador DOUGLAS. I doubt very much, Congressman, whether that would be the result within the course of the next several years.

The actual production of steel in western Germany today is running at the rate of somewhere in the vicinity of 3,600,000 tons.

There is then a very great margin between the actual production of steel in western Germany today, and the amount of steel that can be produced under the retained productive facilities.

It would take several years.

Mr. LODGE. Was not that due principally to lack of coal?

Ambassador DOUGLAS. It was due to a variety of things—lack of coal among other things, the dilapidated state of their plants, disruption of transportation, and a variety of factors of that order.

So that even if, to assume an exaggerated situation, if the productive facilities were retained in Germany to the extent of, let us say, 17,000,000 tons of steel, it would not affect in any way the production of steel within Germany during the course of the next 15 months, the course of the next 24 months, the course of the next 36 months.

Mr. LODGE. You mean that even if we allowed them to do it they could not do it?

Ambassador DOUGLAS. It could not be done. The Paris report indicates that even if the productive capacity in Germany to be retained were very much higher than that contemplated in the new level of industry, no effect would be felt upon the demand for steel from the United States.

Mr. LODGE. It would be on paper and would not be accurate?

Ambassador DOUGLAS. That is right.

Mr. LODGE. Would it be proper for me to ask you if you could furnish this committee with a written statement to the effect that if the dismantling were to cease completely it would not relieve the demand on United States steel, in order that we may have that in the record?

Ambassador DOUGLAS. Yes, sir.

(The information referred to is as follows:)

RELATION BETWEEN SELECTIVE DISMANTLING OF A PART OF THE STEEL CAPACITY IN THE BIZONAL AREA OF GERMANY AND POSSIBLE INCREASED STEEL PRODUCTION

The cessation of the dismantling of that part of the steel capacity scheduled for removal from the bizonal area of Germany would not provide a basis for a significant increase in steel output during the period of the European recovery

program. The basic problem of raising steel production in the bizonal area from the present level of 3.6 million tons a year to a level of approximately 10 million tons in the 1951-52 fiscal year concerns the effective utilization of retained capacity of about 12 million ingot tons. The provision of larger quantities of coal in the area, however, would not in itself be sufficient at this time to induce a significant increase in production.

The problems of reactivating the steel industry in the bizonal area involve determined and carefully coordinated actions to break a long succession of bottlenecks which will arise as steel output gradually increases. In the final analysis the problem of increasing steel production in the bizonal area is intimately related to the larger and more complex tasks of restoring a balanced and orderly expansion of industrial activity throughout all the important sectors of the economy of that area.

In recent months the provision of metallurgical coke to the steel plants in the bizonal area has not been a factor limiting production, although coke shortages might again reappear when steel output reaches a higher level, or, of course, if coal production in the Ruhr should decline from present levels. At this time inadequate transport impedes the movement of available supplies of coal and coke from the mine pitheads to the steel mills. Other factors which will probably retard the rate of expansion of bizonal steel production are electric power supplies, housing, adequacy of food supplies for the steel workers, provision of other incentives to reward increased labor productivity, effectiveness of management, the maintenance of a steady flow of scrap, iron ore and alloying materials to the steel mills, and the availability of replacement parts and materials for the repair of equipment.

In view of the many factors involved in the expansion of steel production together with the fact that they ramify throughout the economy which the bizonal steel industry serves and on which it is based, the problem of raising steel production to the target levels cannot be solved by adopting a single expedient such as the provision of larger quantities of coal.

Progress is being made toward the realization of steel production targets in the bizonal area. It is probable, moreover, that steel production in the bizonal area can be raised this year to levels above those forecast in the CEEC report for 1948. If the present favorable trends in bizonal steel production can be maintained, output might reach a level of about 5 million ingot tons. Achievement of this production goal, however, would not diminish the requirements of the participating countries for steel from the United States. It is anticipated that the economy of the bizonal area will utilize the full amount of steel which might be realized from production in excess of target estimates.

Since the economy of the bizonal area will not be capable in the next 4 years of supporting and maintaining steel production in excess of 10 million tons a year, consideration should be given to the ability of other countries to utilize the steel capacity scheduled for dismantling and removal from the bizonal area. The estimates of the executive branch regarding steel production in the participating countries are based on the assumption that a part of the steel capacity scheduled for removal from the bizonal area will in fact be utilized and that the removed capacity will contribute toward the achievement of the steel production targets of the participating countries. It is to be expected therefore that the steel requirements of the participating countries from the United States will be increased if the dismantling of German steel plants scheduled for removal were terminated, and also the steel making equipment requirements of the participating countries from the United States will be increased.

Mr. LODGE. As I understand it, coal is \$10 per ton and steel \$100 a ton f. o. b.; and if we could diminish the demand on United States steel by exporting a little coal and stop the dismantling, we would be reducing the over-all cost of the ERP program over a 4-year period by a very substantial figure.

Ambassador DOUGLAS. I will be very glad to furnish you a detailed or complete statement confirming what I have said this morning.

Mr. LODGE. Thank you very much, sir.

Now I would like to ask you this: Is one of the main hopes of the FRP that as Europe produces surplus capital goods through the surplus of British coal, or by any other means and by a concatenation of other circumstances we can reasonably expect that the agricultural

surpluses in eastern Europe will come and get those capital goods, iron curtain or no iron curtain?

Ambassador DOUGLAS. The calculations that were made at the Paris Conference and those that have been made here presuppose a restoration of reasonably normal trade relations between eastern Europe and western Europe during the period of which we are speaking.

I think it is an objective, certainly, which is admirable.

Mr. LODGE. In other words, the reason there is not much trade now is not so much the iron curtain as it is the lack of agricultural surpluses in eastern Europe and the lack of capital surpluses in western Europe?

Ambassador DOUGLAS. Well, it may be a combination of both, sir, at the moment.

Mr. LODGE. But do you have faith that the sheer trade momentum to be set up by surpluses in both those areas will to some extent break down the iron curtain and contribute to the recovery of Europe?

Ambassador DOUGLAS. I think I indicated if the western European countries recover stability in their productive capacity that the draw of certain of the eastern countries to western countries, will be irresistible.

Mr. LODGE. I think that is very important. Mr. Ambassador, one of the interesting things you stated to us was that the population of Europe had increased by 20,000,000.

Ambassador DOUGLAS. Yes.

Mr. LODGE. That is the western and eastern Europe?

Ambassador DOUGLAS. No. That increase in population occurred only in the 16 western countries, plus western Germany.

Mr. LODGE. In the 16 western countries. Well, now, does this program look forward to attempting to find some solution for the overpopulation of Europe, such as attempting to induce people in areas that are particularly overpopulated to move elsewhere and try to precipitate a situation where some relief can be found for that particular distress?

Ambassador DOUGLAS. There are two respects in which the ERP would operate to relieve the distribution of population. In the first place, the 16 European countries committed themselves progressively to remove barriers to the movement of people.

In the second place, the European countries have independent territories overseas.

They do contemplate development within those colonial possessions, with the result that insofar as this particular group of countries is concerned there would be a draw from the colonial areas upon the population of these 16 countries.

Mr. LODGE. Am I to understand, with respect to the first part of your answer, which is very interesting to me, that under the terms of that part of your answer the surplus population in Italy,* for instance, would be allowed freely to move to France, where there is a lack of manpower?

Ambassador DOUGLAS. That is right, sir; and the French and the Italians are now—if they have not already concluded—discussing an agreement.

Mr. LODGE. That could create a very healthy situation.

Ambassador DOUGLAS. Yes.

Mr. LODGE. For both countries?

Ambassador DOUGLAS. For the entire area.

Mr. LODGE. Would that also apply to Turkey, for instance, where I believe the population is only about 18,000,000 people, and Turkey is definitely an underpopulated rather than an overpopulated country?

Ambassador DOUGLAS. Turkey is a participating country, and they participate therefore in the undertakings.

Mr. LODGE. Now, Mr. Ambassador, I return to this question of strategic materials.

One of the main thoughts I get from you is that your objection to strengthening that clause is that then these countries will not be able to export these strategic materials for additional dollars, and that seems to me to presuppose that if we do not get strategic materials in sufficient quantities under this program, we will therefore spend additional sums getting them on our own.

Do you believe that to be the case?

Ambassador DOUGLAS. Well, the calculations of the exports for which these countries will receive dollars was based upon their exporting strategic raw materials to the United States.

Mr. LODGE. I was talking about the long-term future, sir.

Ambassador DOUGLAS. Yes. You mean after the 4½ years, or whatever the period may be?

Mr. LODGE. Yes; when we may no longer have this acute situation.

Ambassador DOUGLAS. Your question is, I take it, whether they should commit themselves to repay us, x years in advance, with strategic raw materials for which we pay nothing; was that the question?

Mr. LODGE. I would not say we paid nothing, since we have been asked to appropriate \$6,800,000,000.

Ambassador DOUGLAS. Then I am sorry; I am not quite clear.

Mr. LODGE. My point is that it seemed to me that your objection both to the handing over of strategic materials in the immediate future and to the long-term handling of strategic materials was based on the assumption that if they were not handed over as a quid pro quo under this program, we would nevertheless buy them, thereby adding to the dollars these countries would hold; it does not seem to me that it necessarily follows that we would be in a position to purchase all of the strategic materials we might need unless we get them under this program, on a long-term basis.

Ambassador DOUGLAS. Oh, well, the program does not contemplate that at the expiration of 4½ years conditions in regard to strategic materials, would terminate. Indeed, it is expressly provided that the agreements in regard to the undertakings in regard to strategic materials will continue for such term as may be agreed upon in the bilateral arrangements which this country makes with the participating countries, and those agreements may stand for a period of 20 or 25 years.

Mr. LODGE. In that case we will be paying for those strategic materials only what we are paying under the program, and not additional sums.

Ambassador DOUGLAS. We will pay whatever the prevailing price might be. It would depend upon the terms of the contract.

Mr. LODGE. In other words, you would agree that we could accept delivery of strategic materials in the long-term future in reimbursement for what we make available under this program?

Ambassador DOUGLAS. I think that is a question that no one can now answer, Congressman

Mr. LODGE. Suppose it was provided?

Ambassador DOUGLAS. Nobody can now foresee what the ability of any one of these countries may be to forego dollar earnings 7, 8, 9, or 10 years from now.

Mr. LODGE. Suppose it were provided that if there were a dollar deficit they would be allowed to sell these strategic materials; and if not, then we would get them by way of a quid pro quo for part of what we have turned over under the Marshall plan.

Ambassador DOUGLAS. Let me make this point clear in this discussion we are having: We are not presumably referring to the repayment, by delivery to us of strategic materials, of any loan to be made. We are referring now only to the grant.

Mr. LODGE. Of course, in that sense it would constitute a loan, since there would be repayment. But I think I understand what you mean.

Ambassador DOUGLAS. You see, there is very express provision for the extension of loans to be repaid in terms of strategic raw materials.

Mr. LODGE. Yes. I think this would be a loan in that sense, Mr. Ambassador. After all, it would be repayment, and if we prefer to obtain repayment in strategic materials rather than in dollars, that, after all, is all right.

Ambassador DOUGLAS. Express provision is made for an arrangement of that kind.

Mr. LODGE. The question is whether enough provision was made and as whether the contemplated amount is sufficient or whether we could not raise that figure a bit.

Ambassador DOUGLAS. Perhaps you can, Congressman. I do not believe that anybody can foresee the future with sufficient clarity to make any categorical statement on that particular subject.

Mr. LODGE. I didn't believe that there should be a categorical provision. I thought it should be a provision which would depend upon certain circumstances which would be outlined in any agreement that was made with any interested countries so that we would not be defeating the purposes of the plan. We would be perhaps helping the plan and also helping to fill serious shortages which we suffer from.

Ambassador DOUGLAS. It might conceivably be done. I am not giving you a satisfactory answer, I know, but I repeat that it is my honest belief that one cannot now foresee what the situation may be in each one of the 16 countries.

Mr. LODGE. You would not want to alter section 5, on page 18, where it simply states that these countries shall facilitate the sale? You do not want to make that clause any stronger than it now is?

Ambassador DOUGLAS. I would be very doubtful about the wisdom of doing it, Congressman. I think it might be done, and your purpose might be achieved, by increasing the amount of loans that could be repaid in terms of strategic raw materials; but I should be reluctant to state that that could wisely and prudently be done in our own interests.

Mr. LODGE. However, if the clause was so written that it would not operate against our interests, don't you believe that it might safely be done?

Ambassador DOUGLAS. Well, our interests, Congressman, as you are so well aware, are vitally concerned with the restoration of stability in this area and the maintenance of that stability.

. Mr. LODGE. I agree with that 100 percent.

Ambassador DOUGLAS. To the extent to which we exact a condition which increases the risks implicit in the venture, to the same extent we may be damaging our own long-term national interests.

Mr. LODGE. How do you believe that increases the risk?

Ambassador DOUGLAS. If we exact a condition which drains them of dollars to a greater extent than they would otherwise be drained of dollars—

Mr. LODGE. I do not assume that they are draining vitally needed dollars. No, Mr. Ambassador, I do not see how it would be draining necessary dollars, if it were based on a long-term future, when we make the assumption that if there is a dollar deficit they can sell the strategic materials, and if there is not, then we get them by way of a quid pro quo. I do not see how that would drain them of necessary dollars on a long-term basis.

Ambassador DOUGLAS. Well, it might not.

Mr. LODGE. I would contemplate such a clause. I have not yet completed my thinking on this, but I wanted to get the benefit of your view because it would seem to me that that clause is a very weak clause in respect to strategic materials in which we are of such great need.

Ambassador DOUGLAS. Well, of course, this particular clause was written precisely for the purpose of requiring the appropriate participating countries—and I say “appropriate” because I mean by that those who have overseas possessions or have, within the areas in which they have jurisdiction, the strategic raw materials or the possibility of developing such raw materials—that clause was inserted for the purpose of doing just what it says: facilitating the sale to us of raw materials that are strategic, on which these countries rely for dollars.

Mr. LODGE. That would be a sale which would have nothing to do with the program, particularly. I mean, they agreed to facilitate it; is that not right?

Ambassador DOUGLAS. Yes. Of course there are doubtless better words. Each person has his own vocabulary. I do not know what better words to use.

You know the provisions in the act and the intentions in respect of the administration of the act in regard to the development of the strategic raw materials and the purchase by us. You know that some of the local currency counterpart may be used for the purpose of exploration for and development of strategic raw materials. Loans may be extended which may be repaid, if not in dollars in some other way, including, among the other ways, strategic raw materials. But, in addition to those measures, there is the provision that they must facilitate the sale of strategic raw materials.

Mr. LODGE. You are satisfied, then, Mr. Ambassador, that the act contains everything that it can reasonably contain with respect to strategic materials?

Ambassador DOUGLAS. Without looking too far into the future.

Chairman EATON. The time of the gentleman has expired.

Ambassador DOUGLAS. There were a number of questions you raised this morning.

Chairman EATON. I wonder if the Ambassador would not submit a brief to us covering this very important, controversial question of

strategic materials? I have been listening with what little intelligence I have and I cannot find out yet why we put billions of dollars over there and cannot get some of their strategic materials back, when we need them, in payment of our investment.

If you can clear that up you will perform a miracle.

(The information is as follows:)

EUROPEAN RECOVERY PROGRAM COMMITTEE STATEMENT ON STRATEGIC MATERIALS

The primary consideration in connection with obtaining strategic materials is an increase in their production, since production at current levels is generally not adequate to meet existing needs. It is the considered judgment of the executive branch that the method of obtaining strategic materials proposed in connection with European recovery program legislation is more likely to result in our obtaining a larger quantity of such materials than alternative plans which have been suggested.

Under the proposed legislation it is contemplated that, (1) part of the funds appropriated may be used by the Administrator of ECA to finance development of increased sources of supply (sec. 8 (c) (2) technical information and assistance may be provided to aid in increasing production (sec. 7 (a) (3)), (3) under the bilateral agreements with participating countries, local currency proceeds may be used to foster exploration development for production (sec. 10 (b) (5)), and (4) the bilateral agreements will provide for the recipient countries' facilitating the sale to us in quantities, on terms, and for time periods to be agreed, of strategic materials beyond their requirements for domestic use and commercial export (sec. 10 (b) (5)). The time period may extend for a considerable number of years.

Furthermore the legislation authorizes the Administrator under certain circumstances to require the repayment of loans under the program in the form of delivery of strategic materials. Ordinarily, however, it is contemplated that such materials will be purchased by us with dollars separately appropriated. It is believed that the incentive furnished by our purchasing such materials for dollars will result in a greater production and a larger procurement by us than would be the case if the countries were required to furnish such materials without dollar payment as a condition of our assistance. Moreover, this procedure will permit the transactions to be handled directly with private producers and distributors rather than confining them to Government channels.

For the reasons stated above the Munitions Board representative on the Inter-departmental Subcommittee which prepared the policy recommendations on strategic materials summarized in the Outline of the European Recovery Program strongly favored the proposal in the form presented to the Congress.

The ultimate monetary cost to us should be approximately the same regardless of whether we pay for such commodities in the future or whether we require the countries to furnish them to us without dollar payment. This may be explained as follows:

It is contemplated in any case that assistance under the European recovery program should be in the form of loans rather than grants up to the estimated capacity of each participating country to repay without jeopardizing the objective of sustained economic stability. In calculating the capacity of a country to repay, its receipts from future exports of all types including strategic materials which might be sold to us, would be taken into consideration. If we require the delivery of strategic materials as a consideration for a "grant" the capacity of the country to repay any loans would correspondingly be diminished. We would to that extent have to reduce the amount of any loan which might otherwise have been made to the country and to increase the amount of our grant. Any "grant" furnished on such terms would in fact become a loan.

It makes little difference to us financially therefore whether (a) we make a smaller percentage of our assistance in the form of loans and a larger percentage in form of grants requiring repayment of part of the grant in strategic materials (the grant thereby in fact becoming a loan), or (b) make a larger percentage of our assistance in the form of loans getting repayment of them normally in dollars (part of which would be supplied by our purchases of strategic materials) or in special cases in the form of strategic materials.

The suggestion that grants might be repaid by delivery of strategic materials by any country which at any time in the future might have a dollar surplus con-

templates the making of contingent loans. It involves for many years a constant scrutiny of the ability of any country to repay. Such loans would decrease the incentive of the European countries to set their financial houses in order and achieve balance in their external accounts. Such loans would add to the uncertainty of private and other lending institutions and thereby tend to postpone the achievement of the objectives of the program. What is more important this procedure might not encourage to the fullest extent the exploration for and development of increased production of strategic material.

In view of the great importance to the United States of increasing its supplies of strategic materials, we believe that the program which has been recommended by the executive branch offers the greatest prospect of obtaining them in the largest quantities.

Ambassador DOUGLAS. Well, I can't walk upon the waters.

Chairman EATON. If you keep on you will be able to walk on most anything.

Ambassador DOUGLAS. There is a matter that I think should be cleared up in the record.

Mr. LODGE. That question I asked of Mr. Clayton—I would be glad if the chairman would permit you to comment on it.

Ambassador DOUGLAS. That is about the report in the newspapers that the British had resisted the French proposal for the devaluation of the franc?

In the first place, the French proposals for the devaluation of the franc were not made public. Devaluation of a currency, particularly in a complex situation like the one in western Europe, can be undertaken in a complicated way but create a whole series of adverse effects upon other countries.

The question is not only the relationship of a particular currency to the dollar. It is a much more complicated one than that. The question also involves the relationship of that particular currency to the cross rates; for example, to the Belgium franc, to the pound sterling, to the lira. And, while I think that no one opposes the devaluation of the franc vis-à-vis the dollar and vis-à-vis the other currencies, the question of how the devaluation shall be undertaken in relation to all the currencies is a very, very complicated one.

Mr. LODGE. I think that is very interesting, and I would like to ask you, there, whether the devaluation effected in Italy by Finance Minister Einaudi did have repercussions because it was not properly synchronized with the devaluation in other countries.

Ambassador DOUGLAS. That proposal in Italy was not submitted to the International Monetary Fund.

Mr. LODGE. Did that have bad effects?

Ambassador DOUGLAS. I cannot answer your question. It was a relatively recent development.

It was a mixture of free rate and fixed rate.

Mr. LODGE. It was devalued down to a certain level, but not completely devalued?

Ambassador DOUGLAS. Yes. There were certain dollars received on account of exports that were blocked and a certain proportion were free.

Even though the Italian action may not have had any adverse effects upon other currencies, one might not be able to have the same view about a proposed devaluation of another currency.

Mr. LODGE. It is a matter of detail?

Ambassador DOUGLAS. Yes.

Mr. LODGE. Would you say that it would be preferable if all the 16 nations were to get together and devalue their currency at the same rate, simultaneously instead of separately, as now?

Ambassador DOUGLAS. Whether that is practically possible, I do not know.

Mr. LODGE. Would that involve the devaluation of the pound sterling?

Ambassador DOUGLAS. I would like to talk to you about that at another time, for reasons that you can understand. I did want to get in the record about the French.

Mr. LODGE. I would like, if I might, to thank the Ambassador for his answers to my questions and for the intelligent, courteous way in which he has conducted himself throughout this gruelling ordeal.

Chairman EATON. Mr. Ambassador, you were asked a question. You have not answered it and you have wandered all over God's half acre.

The question was: Did England object to the devaluation of the franc—yes or no?

Ambassador DOUGLAS. I do not think that was the question.

Chairman EATON. As I understand the English language, that was the question.

Mr. LODGE. I thought the British had objected to it, judging by the papers. I was interested in precipitating a coordination of intentions under the ERP because the witnesses we have had, including yourself, sir, have testified to the fact that the devaluation of currencies is vital, and that, to a considerable extent, the American taxpayer is going to carry the load of the gap between the legal and real value of currencies in Europe.

I simply wanted to make sure that our friends in Britain were going to go along with us on this and it was not a question of going off in different directions.

Ambassador DOUGLAS. I think there is no question of the British going along in principle. I think you have to examine each proposal for devaluation in terms of its details.

Chairman EATON. Before we penetrate further into the fog, the meeting of the Committee will be recessed until 2 o'clock, when Secretary Royall will appear before us.

We want to express our thanks and gratitude for the very remarkable contribution that our friend the Ambassador has made.

I hope he will stay within reach.

Speaking simply as a citizen, and viewing the discussions here as a revelation of civilization, I have personally decided to seek a lodge in some vast wilderness as soon as possible.

Ambassador DOUGLAS. Retaining me?

Chairman EATON. I will ask the members of the committee to remain for just a moment in executive session, which will take just a moment, on a very interesting and personal matter.

(Whereupon, at 12:05 p. m., the committee adjourned until 2 p. m. the same day.)

AFTERNOON SESSION

Chairman EATON. We will proceed.

We have our distinguished Secretary of the Army, Mr. Royall, who will proceed to make his statement.

STATEMENT OF HON. KENNETH C. ROYALL, SECRETARY OF THE ARMY

Secretary ROYALL. Mr. Chairman, I am glad to respond to the request of your committee and to outline the position of the Department of the Army on the ERP, particularly to discuss the relation of the plan to the American and British occupation zones of Germany which are at this time our responsibility.

Last Wednesday and Thursday, in response to a similar request from the Senate Foreign Relations Committee, I stated to that committee rather fully the views of our Department, as well as my personal views, on the same subject.

I would like to file with your committee, if I might, a copy of my statement prepared for the Senate committee, and then make a somewhat shorter initial statement here today.

Chairman EATON. We would like very much to have you do that, sir. (The statement referred to is as follows:)

STATEMENT BY SECRETARY OF THE ARMY KENNETH C. ROYALL BEFORE THE SENATE FOREIGN RELATIONS COMMITTEE

Mr. Chairman, The major responsibility of the Army is the defense of the Nation. When there is economic difficulty, shortage of food and general unrest in the world and an economic and political situation which is unstable, that responsibility becomes acute and the cost to the Nation increases. When the essential elements for economic stability and for peaceful development exist among nations, the Army's immediate responsibility becomes correspondingly lessened. I firmly believe that enlightened cooperative economic endeavor as visualized in the European recovery program can go a long way toward reducing the necessity for large scale national armaments, and that without some such effort the Army and its budget should be immediately and measurably increased.

Germany, occupied by four major powers, two of which are participating nations in the proposed European recovery program, presents a special problem in this cooperative endeavor. The importance of Germany was clearly emphasized by Secretary Marshall in an address delivered in Chicago on November 18, in which he said: "The problem of restoring the European community inevitably raises in acute form the problem of Germany. The restoration of Europe involves the restoration of Germany. Without a revival of German production there can be no revival of Europe's economy. But we must be very careful to see that a revived Germany could not again threaten the European community."

For more than 2½ years the Army has been responsible for the occupation and government of one zone of Germany and for the prevention of disease and unrest in that zone. During this period the economic rehabilitation of Germany has become increasingly important both because it will contribute to the political stability of Germany and also because it offers the only reasonable opportunity of relieving the United States of the financial burden of food and other necessities.

The extension of economic aid to other countries of western Europe economy is of particular interest to the Department of the Army because of the relation of German economy to that of the rest of Europe.

Conversely we recognize that the rehabilitation of Europe would be difficult to achieve without increased German production of coal, steel, and other items.

For many years prior to World War II, Germany was the industrial hub of the European economy. Around her the industry and trade of European states were geared. And the physical and moral collapse of Germany during and after World War II created an industrial vacuum within the European Continent which helped render the entire economic machine inoperative.

The report of the Committee of European Economic Cooperation prepared as a result of the Paris conference of 16 European nations last summer, states that the German "economy has been, in the past, and by the nature of things will remain, closely tied up with the economic system of other European countries * * *. Other western European countries cannot be prosperous as long as the economy of the western zone is paralyzed, and a substantial increase of output there will be required if Europe is to become independent of outside support."

To date German recovery has lagged so far behind that of the other countries of Europe as to retard the whole effort for European recovery. One important—perhaps the most important—factor has been the food situation.

For the last half a century Germany as a whole has had a substantial food deficit. This condition is now accentuated in the United States and United Kingdom zones of occupation by the fact that the part of Germany allotted to Russia and placed under Polish administration comprised 25 percent of prewar Germany's food-producing areas. Other factors are the loss of large numbers of the producing age groups and an increased population in the western zone of about 6,000,000 people, many of which are nonproducers.

The German situation differs in many respects from that of the 16 countries which participated in the Paris Conference. It is an occupied country, under control of four powers that have not been—and are not now—in agreement as to the basic principles under the Potsdam Agreement to be applied in the administration of the country. The Soviets have prevented economic and political unity with the western zones and in their zones they have imposed a radically different and highly centralized organization of the economy with all basic industries under public or direct Soviet ownership.

The main fact about the German economy at present is that it is not yet quite a going concern. In addition to the lack of food there is a coal shortage, an inadequate transportation system and insufficient supply of raw materials. The discrepancy between the volume of currency and the quantity of available goods is so great that purchasing power and the incentive of money earnings are extremely low.

The economy of the merged United States and United Kingdom zones, is characterized by a low level of production but, on the other hand, a surprisingly high level of employment. Total employment is less than 10 percent below the prewar level and unemployment is less than 5 percent of the registered labor force.

Yet industrial production in November 1947 in the bizonal area as a whole was estimated roughly at 44 percent of the 1936 level, with the index standing at 56 in the United States zone and 40 in the industrially more important United Kingdom zone.

This anomalous situation is largely accounted for by high rates of absenteeism and low productivity per man-hour. Plants often carry a full working force on their pay rolls in order to keep the labor force intact and to permit the workers to qualify for supplementary rations.

This over-all decline in hours and effectiveness of work is due to several factors, including: the larger proportion of older men in the work force, a smaller proportion of skilled labor, and inadequate and varying nourishment. Other contributing factors are the interruptions—as well as the industrial inefficiency—arising from under maintenance of plant equipment, shortages, and uneven flows of raw materials and transportation and fuel difficulties.

The food and housing shortages are the greatest factors. These shortages have led employees to supplement their inadequate rations by black-market purchases from farmers and this in turn has resulted not only in absenteeism but in widespread labor unrest.

In the matter of housing, the war damage, especially in the larger western cities and towns, is well known to members of this committee.

Next to the shortage of food, the lack of coal has been the most serious obstacle to recovery. Daily production of hard coal in the Ruhr, which was around 400,000 metric tons in 1936, has risen from a low of less than 100,000 tons at the time of surrender to a high of 234,398 tons per day on November 29, 1947. Coal production has varied up and down as food availability varied during this postwar period. The coal consumption situation is greatly aggravated by the current, seriously reduced efficiency of coal utilization.

Finally, industrial production has suffered seriously from the lack of a completely satisfactory currency, which means a lack of normal economic incentives. The reichsmark has, it is true, retained most of its value for the purchase of rationed items, especially food, and for such other items as rents, services, and transportation. On the other hand, the value of the reichsmark for the purchase of nonrationed products has been greatly impaired, and there is general uncertainty with respect to its future value. Under the circumstances, the normal incentives to labor to increase its take-home pay and to management to produce for profit are far too weak to provide a basis for sustained effort on the part of either labor or management.

But for bomb damage the war would have left bizonal Germany in most industries with a potentially operable industrial plant greater than that of 1936.

However, there was great bomb damage to industrial plants—a large part of which are still unrepaired, and some equipment has deteriorated further since VE-day.

The railway system suffered much heavier war damage than industry in general. The most immediate essential repairs to right-of-way have been made. Nevertheless, the general disorganization and the existence of zonal boundaries have caused an increase in the average length of haul and in the turn-around time of railroad cars. Furthermore, the condition of the rolling stock has deteriorated in spite of a well developed repair program.

Industrial construction in Germany has been negligible since VE-day. It has been confined to essential repairs to transport and a minimum of repair and maintenance of plants.

The volume of currency and bank deposits in Germany has been estimated at more than six times the prewar level. This expansion in the face of greatly reduced supplies of goods, seriously threatens the stability of the price and wage structure. And no foreign exchange rate for the mark has been or can soon be established. Instead, exports are priced at world-market prices in dollars.

Although within Germany there is formal compliance with the official prices, which are substantially identical with the 1936 and wartime prices, inflationary pressures continue. Official prices and wages have risen only moderately, but money has to a considerable extent lost its functions as the medium of exchange and store of value. Owners and producers of goods and services increasingly exchange them only for other goods rather than for money.

This affects labor and agriculture as well as industry. Workers are apt to stay on the job only long enough to earn money needed to purchase their authorized rations at legal prices because money has negligible value for other purchases. The remainder of their time is often spent in scouring the countryside for additional goods obtained in exchange for personal belongings or for labor services. This tempts the farmers to hold grain from collection, to feed it to livestock, or to barter it outside official channels of distribution. Only increased production together with financial reform to reduce the amount of money in circulation can remedy this situation.

These, in brief, are the difficulties and complexities with which the German economy has been and is faced. Both the Military Governor of Germany, General Clay, and the Department of the Army—and formerly the War Department—have exerted every effort to meet and remedy this situation. I share the general admiration for General Clay and for the splendid work that he and his staff have done under most unfavorable circumstances. I will outline to you some of the steps that have been taken.

The pooling of the economic activities of the British and American zones was an organizational step in the interest of improving the general economy. This bizonal economy merger was effective on January 1, 1947, and has, we believe, resulted in considerable progress. This arrangement has been continued into 1948 under an agreement signed last month, and the fact that a large part of the British contribution for relief funds has been necessarily eliminated does not affect the administrative arrangement, although it gives to the United States greater financial and economic control.

The United States-United Kingdom bizonal organization includes the Bipartite Board. The German bizonal agencies, established by United States-United Kingdom proclamation, include an Economic Council which has been given broad powers to direct the economic reconstruction of the combined area, subject to the approval of the United States-United Kingdom Bipartite Board.

The American and British Military Governors are currently discussing with bizonal German leaders proposals to double the size of the economic council to make it more representative and to establish a second economic body with two direct representatives from each of the eight land governments.

At the beginning of the occupation the foreign exchange and trade of the United States and United Kingdom zones were conducted entirely by and for the account of the occupation authorities. Since that time there has been a progressive relaxation of trade controls to prepare for the reestablishment of private trade. Foreign trade operations have been partially decentralized and returned to German hands, to the extent considered compatible with the requirement to maintain full supervision and control over German imports and exports financed by the United States and United Kingdom Governments.

In the first 9 months of 1947, the combined United States and British zones imports consisted of approximately 95 percent category A goods, financed by England and ourselves and mainly consisting of foodstuffs, fertilizer, and petroleum. Only about 5 percent were category B goods, including various consumer goods and raw materials, which were principally financed by proceeds of exports.

For the reasons previously stated, imports of foodstuffs are greater in volume and in value than before the war. Coal exports are about one-third of prewar in terms of volume, but the average of all other exports is estimated as 5 percent of their prewar levels. The exportation of finished industrial goods, which before the war formed the backbone of German foreign trade, has hardly been resumed.

Under the new bizonal agreement it is estimated that the 1948 United States relief expenditures in Germany will be in the vicinity of \$700,000,000; an increase of about \$300,000,000 due to the British dollar shortage. The United Kingdom undertook to provide a contribution in value of some 8½ million pounds (approximately 34 million) in 1947. They also undertook to provide goods and services in 1948 from sterling area sources valued at 17½ million pounds sterling (approximately 70 to 87 million dollars).

The agreement does not relate to expenditures by either Government for the maintenance of forces of occupation and control staffs in Germany. Those remain the responsibility of each Government.

In an effort to demilitarize Germany and also to provide reparations for the Allies, a program for dismantling certain German plants began shortly after occupation. The reparations program for removal of capital equipment was decided upon in the Potsdam agreement on August 2, 1945.

In March 1946 a level of industry was established. This level was based upon treating Germany as a single economic unit, but Russia failed to agree to those terms of the Potsdam agreement. In August, 1947, a new and higher level of industry was fixed which resulted in greater productive capacity in the critical industries such as metals, machinery, and chemicals. There was a corresponding decrease in the plants available for reparations.

Prior to the establishment of the new levels, shipment had been made of a few plants obviously excess to any normal German peacetime requirements plus some general-purpose equipment from war plants. In the case of war plants, I want to emphasize that only the general-purpose equipment has been made available. No entire war plants have been allocated to any nation, and the special-purpose war machinery has been destroyed.

Under the original quadripartite allocation of plants from all zones, 75 percent was to go to the western nations and 25 percent to the U. S. S. R. and Poland. But, when it became apparent in 1946 that Russia was preventing economic unification of Germany, deliveries of new plants—nonwar plants—to the Soviet Union were stopped pending further developments. The only shipments, therefore, now going to the U. S. S. R. are the tag ends of early allocations consisting principally of machinery.

It should be made clear that, because of shortage of fuel, transportation, raw materials and inefficient labor, the plants now declared excess could probably not be placed in operation in Germany within the next 4 or 5 years, even with aid from the recovery program.

If left in place, and unused this equipment will deteriorate and lose its value. At the same time much of it is needed and desired by the western nations who participate in the inter-Allied reparations program and to whom it has been promised. They can use it where Germany cannot, and its use by them can help economic recovery and reduce the demands on the United States for dollar aid.

It is evident that if possible financial reform should be carried out on a German-wide basis. Negotiations have been in progress for some time in an effort to reach quadripartite agreement on a currency and financial reform for Germany as a whole. The major problems to be solved in such a program have to do with the printing of the currency, the terms on which the old currency will be withdrawn and new issued, price adjustments, organization, and similar questions.

Faced with the possible failure of currency negotiations on a quadripartite basis, the problem of alternative action is being studied. Numerous technical and policy problems are bound to face any program for currency reform—particularly for bizonal or trizonal. But, the basic economic fact is simple. The gap between supply of money and supply of goods must be closed if incentives to work and produce are to be restored.

I have tried to make clear the present situation and the existing obstacles to economic rehabilitation in Germany. The present low levels of production constitute a drag not only upon German recovery but also upon the recovery of the rest of Europe. I am convinced that no plan for economic aid to Europe can be a success unless it fully comprehends such assistance to Germany as will permit that country not only to help herself but also to be of assistance to the other participants in that aid program.

The relationship of bizonal Germany to the European recovery program rests upon a reasonable restoration of the prewar German trade pattern with recogni-

tion of and opportunity for a greater freedom of intercountry exchange of goods and services by reduction of trade barriers and exchange of local currencies.

German economic improvement—and the raw materials and incentive goods needed therefor—have heretofore come almost entirely from the limited German exports. Food has been sent to Germany, but there has been no contribution to building up German industry—no “pump priming.” So the progress has been slow, much slower than in other nations. To attain full economic recovery Germany needs more outside help than any country of western Europe.

In anticipation of a possible European recovery program, the bizonal military government officials first prepared a 4-year economic recovery program based upon an immediate rise in total imports and a change in their composition. The program was an attempt to get away from the present relief program, the disease and unrest formula on which Army appropriations have been based, and to present a reasonable economic rehabilitation effort. It was proposed on the theory that our taxpayers are entitled to relief from the German economic burdens as rapidly as possible.

This program, if accepted in total, would have necessitated large appropriations in the early years, and would have required a priority for special type imports of items in critical world supply. These demands would doubtless have subjected this country to criticism that we were attempting to rehabilitate Germany ahead of the recovery of our World War allies.

The requirements of bizonal Germany had, of course, to be fitted into the 16-nation European economic recovery program. Our original estimates had to be reduced. For the world availabilities of supply did not permit the allocation to bizonal Germany of the total of the estimated requirements. In many cases, too, the sources of imports had to be changed, because Germany is expected under the new program to receive considerably more of her requirements from other European countries than the bizonal authorities had considered possible under their previous plans.

After figures and requirements for the bizonal area had been screened and a reasonably accurate total obtained, it was decided that the Army would request appropriations for that portion of the total German requirements which represents the Army's responsibility under the disease and unrest formula, the so-called GARIOA funds (government and relief in occupied areas). This leaves only the German rehabilitation requirements in the European recovery budget.

This plan recognizes those Army responsibilities which existed prior to the development of the European recovery program, and at the same time provides the necessary flexibility for the operation of the purely rehabilitation phases of the new program. This will permit the recovery activities for bizonal Germany to be handled in relation to those of the other European countries.

Germany will become a partner in the European recovery program. The military government authorities will receive and handle the recovery funds or commodities allocated to it as well as the relief funds, and the administration of the German recovery funds will be subject to a general supervision by the Recovery Administration similar to that in other European nations—although less supervision would doubtless be required because the American Government will already be largely controlling the economic program in Germany.

The administration of the European recovery program in Germany should be relatively simple. United States military government authorities, in consultation with those of Britain and with German economic agencies, will prepare and submit the bizonal requirements to the Department of the Army until that Department is relieved of occupation responsibility. When the United States military government receives its allocation of recovery funds, it will then carry out instructions it receives through the Department of the Army in connection with the importation of raw materials, their manufacture and distribution, and other related matters.

The military government authorities will, like any other European country, designate a representative of bizonal Germany on the continuing European recovery organization. In the United States, the Department of the Army will represent bizonal Germany in its contact with the Recovery Administrator. It will receive the German recovery requirements, assist in screening them, and then present them to—and defend them before—the Administrator.

Of course, when the State Department assumes the responsibility for civil and economic administration in the occupied area of Germany, the Army will be relieved of the above duties. But even then the Army's military staff here and in Germany will be available to assist the Administrator in other phases of his work, particularly where it can be of service as a procurement and shipping agency for supplies.

While Germany will be a partner in the European program, it must not be assumed that, because of her prewar economic strength in Europe, she will be able to lead the way out of Europe's present difficulties. The war left German industry too prostrate, and after more than two postwar years of bare existence her people are too weak to become such leaders.

The current level of industrial production is too low and the obstacles of inadequate power, transportation, and raw materials and low labor productivity are too great to be immediately overcome. The Army believes, however, that bizonal Germany is ready to respond if given assistance.

The successful execution of the entire program, of course, depends on many assumptions. One assumption is a substantial increase in labor productivity by 1952, as a result of the improved standard of living and the morale of the German worker. Another is that requisite financial and administrative reforms will be vigorously pursued and that policies providing an incentive to exports will be adopted and implemented.

Much will depend on the efforts of the German people themselves. The effect on production of the feeling of hopelessness of the German population has been profound. It is reasonable to expect that the recovery program by holding out the prospect of relieving the existing physical misery and of permitting the German people to stand once more on their own feet, will act as a far-reaching psychological incentive for labor, management and the German administration.

The recovery of German foreign trade is, of course, closely linked to the success of the European recovery program as a whole. Germany must be able to turn to the other European countries as a market for her growing production and as a source of her imports. An increase in the production and purchasing power of these countries is, therefore, vital to Germany, just as German recovery is vital to the rest of Europe.

Under favorable conditions, the trade deficit of Germany should be reduced to a manageable figure by 1952. While some deficit may still be evident at that time, Germany's economic prospects may well have improved to such an extent that private capital will again be attracted to Germany and assist measurably in balancing Germany's international accounts.

In my opinion the United States is now faced with three alternatives with respect to Germany:

1. The most drastic course would be to stop all economic assistance and withdraw our limited armed forces and military government personnel from the occupation of Germany. This course, seems to me unthinkable and absolutely counter to our national objectives.

2. Continue the present program of sustaining the German people on the basis of prevention of disease and unrest, and let Germany's meager exports gradually build up the country's rehabilitation. This approach presages a long, difficult struggle to raise the economic levels, and would require continuing very substantial annual relief appropriations. This course will be hard on the American taxpayers.

3. Provide financial assistance to western Germany, as a participant with the 16 other European nations as proposed by this cooperative endeavor, in an attempt to raise her economic level towards self-support in the shortest possible time. This is the alternative that I most earnestly recommend.

While no one can say with certainty what the results of the proposed recovery program will be, I am convinced that without adequate economic assistance to the nations of western Europe, including western Germany, we may well expect at least political aggression by totalitarian nations with ideas diametrically opposed to those of a free democracy.

Germany has become the focal point of the two divergent economic and political ideologies of the postwar period. Our interest lies in encouraging Germany and the other nations of Europe to have systems of free, competitive enterprise which recognizes the dignity of the individual—and to show them that such systems point the way to prosperity and peace.

The European cooperative recovery program now before you, I believe, is the blueprint for an enduring structure. I therefore strongly recommend approval of the program proposed by the President and so sincerely presented for your consideration by Secretary Marshall and the others who have preceded me.

Secretary ROYALL. All of us, I am sure, feel that the United States Government must do everything within its reasonable power to preserve peace for our country.

Under the uncertain conditions which prevail in the world today we must preserve an adequate national defense, which will convince any potential enemy that an attack on us would be unsuccessful, and that the disruption of the peace of the world on the part of any nation would be an unwise step.

We must continue our support of the UN with diligence and with fairness and in the most critical overseas areas we must seek to prevent the fundamental causes of war, hunger, cold, economic dislocation, national unrest and instability, and discouragement.

These are three separate efforts for peace, and all three of them in my opinion and the opinion of my Department, can be and should be pursued simultaneously.

While I believe that today strong military preparedness is the most effective of the three, I also recognize that it is at the same time the most expensive in dollars and in men and the national effort.

I assure you that as for myself, the time cannot come too soon when the strength of the UN or the improvement in world conditions can justify a radical reduction in the military men and matériel needed for national security.

I believe that the ERP is a definite step in that direction, and the plan has a reasonable chance of accomplishing its end.

The Army, together with the rest of the National Military Establishment, can properly give weight to the probability of some successful plan to reestablish the European economy.

It therefore can recognize and has already recognized that expenditures for recovery purposes justify lower expenditures for national defense than would be required if there were no effort for the European recovery.

The occupation of conquered countries has up to this time been the responsibility of the Department of the Army.

Among the most cogent reasons for such occupation are the prevention of unrest and disorder and the building of free and self-supporting states.

These two purposes, particularly as applied to Germany, closely parallel the purposes of the ERP as applied to Europe.

So our Department feels keenly the need of the broader program, and also realizes the necessity of closely integrating the rebuilding and reestablishment of Germany, with the rebuilding and reestablishment of the economy of western Europe as a whole.

Unless in this entire area of western Europe, including Germany, there can be an economy which is sound enough to preserve and rebuild the nations devastated by war, it is almost certain, it seems to me, that these nations will be an easy prey to political aggression of our totalitarian neighbors, aggression which must inevitably, in my opinion, threaten the peace of the world.

In Germany, the Army's task has been complicated by a factor which does not arise in the other countries of western Europe.

With the end of World War II, the people of our country, and that undoubtedly includes all of us here today, were determined that Germany would never again have the military ability to bring a world war on as she did twice in a decade, and three times in two decades.

Therefore, certain of her heavy industries had to be destroyed, and their rebuilding prevented.

It has been necessary to reconcile this destructive process with the obvious fact that for Germany to survive, her general industrial level must be raised, that the nation cannot be self-supporting, either as an agricultural nation or a nation of small shopkeepers, or artists.

Historically, Germany as a whole does not have sufficient native food for her own support. And this situation has been greatly aggravated since VE-day by the fact that the area ceded to Russia and the territory placed under Polish administration has taken away 25 percent of Germany's prewar food-producing areas and has done so at a time when the population of the United States and United Kingdom zones has been increased by 8,000,000 people.

It was increased by infiltration from other zones and otherwise. So the present population of the American and British zones is now a total of about 41,000,000.

These facts, and the resulting fact of our country pouring hundreds of millions of dollars each year into Germany for relief purposes, have emphasized the necessity of rebuilding German production as soon as possible, and expanding German exports with a view both to making the United States and United Kingdom zones self-supporting, and capable of preserving a free and democratic form of government, as determined against the spread of totalitarianism and also with a view to enabling those countries to pay their way as soon as possible and relieve us of the financial burden of relief funds.

The situation in Germany under which these purposes have to be accomplished has been complicated by a number of factors.

One of the principal factors is the division of the country into four zones of occupation—four zones with a political and economic concept in one of the zones differing radically from that of the other zones, and with the serious interference to the free flow of finished goods or raw materials between these zones as well as interference with the free flow of communications and personnel.

When it became apparent that the four occupying powers could not agree upon treating Germany as one economic unit, and that was sufficiently clear to General Clay and to the Department of the Army and the War Department, we offered economic integration of our zones.

Great Britain accepted and an economic merger was effected between the British and American zones on January 1, 1947.

That was over a year ago. Now, as of January 1 this year, the British dollar shortage made it necessary to amend this agreement by transferring to the United States the major part of the costs for food, fertilizer and fuel and other relief necessities, while at the same time increasing the United States authority over economic and financial matters.

The estimated 1948 cost to the United States for relief in Germany, relief expenditures, will be about \$700,000,000 for the calendar year as compared with an equivalent of from \$70,000,000 to \$87,000,000 to be contributed by Britain, that differential depending upon how much sterling they can reasonably spend and goods they can buy with sterling for relief.

They will furnish \$70,000,000 as a minimum, and \$87,000,000 as a maximum.

Of course, that is relief expenditures. Britain will support their occupation forces and their military government staff, the cost of which they estimate in excess of \$300,000,000.

Through necessity, our zones of Germany, the British and American zones, have up to this time been operated almost entirely on the limited theory of what we call disease and unrest.

We have had to spend hundreds of millions of dollars to import food and the bare exigencies of existence, and even after this importation, the German minimum ration for the normal consumer has averaged well below the 1,550-calorie theoretical ration, and has been lower than the minimum ration of any other European nation.

As I said recently, in making a talk, 1,550 calories is not much more than a good North Carolina breakfast.

While food is of course an absolute prerequisite for the ability to work, and therefore a prerequisite for production, yet such production also requires raw materials and the rehabilitation of plants and the repair and restoration of transportation facilities and other material aids.

No direct help along these lines has been given to Germany in American funds.

Since that has been the case and because of the terrific war damage that occurred there, as many of you gentlemen have seen, the progress toward recovery in Germany has been slow.

That is economic recovery. We have just given them the food. We have not contributed anything to the upbuilding of their industry and they have moved slowly.

The average production in neighboring nations has reached 90 percent of prewar and some of them have gone up above 100 percent; such production in Germany stands at only about 44 percent of the basic figure which is taken as 1936.

One of the important contributing factors, in addition to those I have already named for this condition, is lack of confidence in the value of money in Germany.

That lessens the incentive of both labor and management, and also of farmers to produce the maximum.

Labor and agriculture further suffer because workers leave their work to trade personal possessions for food. This in turn causes the farmer to withhold his produce from the legal markets so that he can barter it for labor or other articles.

After all, while we tend to think in terms of a nation as a whole, we are dealing in the last analysis with individuals and the incentive to produce of the particular individual is an important factor in any sort of recovery.

Another phase of our occupation problem is that of reparation. There has been a lot of talk about it in conjunction with the plan to demilitarize Germany; it was also initially provided and in the Potsdam agreement, that Germany should pay for some part of the damage she had done to other nations by giving up to them plants and equipment which were determined by the four powers to be in excess of her peacetime needs.

Eighteen nations were promised, in an agreement signed in Paris in 1946, that they would receive 75 percent of such industrial reparations from the western zone.

Under the Potsdam agreement Russia was to receive 25 percent of the plants and equipment, partly for compensation and partly as an exchange, rather than pure reparation.

To fix this level above which plants would be dismantled and paid in reparations, what was called a level of industry was set in March

1946. The excess at that time was estimated on the basis that Germany would be treated as an economic unit. Since Russia was to receive for herself 25 percent of the excess from the three western zones, 10 percent without repayment and 15 percent for which she would pay principally in raw materials, and from which she was to satisfy all Polish claims, she was allocated in 1945 as advance delivery, that was the term used for it, a few obviously excess plants and later some items of general purpose equipment from war plants.

Let me make it clear that the special purpose or war machinery from those plants were destroyed and not delivered to anybody.

In May 1946 when it became increasingly and finally clearly apparent that Russia would not treat Germany as an economic unit, General Clay announced that he would make no further deliveries to Russia of additional plants unless and until the Soviet Union accepted her full responsibilities under the Potsdam agreement.

Accordingly, the only shipments now going from the United States zone to Russia are the remnants or tag ends of one industrial plant, most of which had previously been delivered, and some general-purpose machinery from two war plants which would not have been retained in Germany under any circumstances because they were to be destroyed.

With the continued failure of Russia to agree to economic unity, and with the necessity for general industrial recovery in Germany becoming more and more apparent, the United States and United Kingdom military governors recommended that the level of industry fixed in 1946 for the merged zones be increased, and the number of industrial plants available for reparations be reduced.

One of the first acts I took as then Secretary of War, in August 1947 was to fix the new bizonal level of industry, and to approve the recommendations that had been made from the governors there, with the concurrence of the other necessary government departments.

It was agreed in August 1947 and announced that the plants to be dismantled were to be reduced to 682, leaving therefore a greater productive capacity in the critical industries of metals, machinery, and chemicals. Under the first level established 1,218 plants were listed by name and location but some 600 or slightly more were to be listed when definite selections had been made. These additional were not named before the new level was determined. The new list of 682, therefore, is about one-third of the original estimate.

Of these 682 plants, 186 are in the American zone, and 486 are in the British zone.

It is not believed—and I think this is a factor that sometimes is not fully recognized—it is not believed that the dismantling of these plants would adversely affect the German industrial recovery.

The reason is that the remaining plants will require all the fuel and raw materials that are likely to be available now or in the reasonably near future.

Because of the shortage of fuels and raw materials and labor, and transportation, these reparation plants could not be effectively utilized for Germany, in our opinion, within 4 or 5 years under any circumstances.

During this time the plants would depreciate, deteriorate, be subject to sabotage and theft, and would lose much of their value.

In the meantime allied nations of the West—and I am speaking now of nations in the West principally—are asking for these plants

which we have agreed to give them to use in increasing their own production.

In spite of the many adverse factors in Germany—I do not want to paint too blue a picture—some progress is being made.

The current 44 percent production of the 1936 level compares with a low of 20 percent at the beginning of the occupation period. It is a little over double.

Coal production, an essential for industrial recovery, has increased from a low of something less than 100,000 tons per day to a high of 285,000 tons.

Steel is about 25 percent of the prewar level; lumber is above the prewar level; transportation systems have been partially rehabilitated and a large number of cars repaired.

In the question of financial reform, there has been an earnest effort to effect that on a quadripartite basis.

Germany has had a single currency. It is all-important to us that every effort be made to do that in the new currency.

Now, alternative action is being studied, for the gap between the supply of money and the supply of goods must be closed if incentive to work is to be restored.

The joining of the two zones has resulted in a more efficient operation of the economic activities with more and more responsibility being given to the Germans who are encouraged and required to work for their own salvation.

Foreign trade has been decentralized and returned to Germans under Allied supervision, and these steps have produced some results.

Much more remains to bring Germany up to even the current level of Europe, and the European recovery program, as far as Germany is concerned, contemplates exactly the kind of assistance that Germany requires in order to speed her economic recovery.

But German recovery is not only important to Germany. The other nations of Europe need German industry and exports for their own rehabilitation and progress. Historically it was the central and principal industrial nation of Europe.

Their economies were to a considerable extent built around German production.

The 16 European nations who would participate in the proposed recovery program stated in their Paris meeting, and I will quote:

The German economy has been in the past and by the nature of things will remain closely tied up with the economic system of other European countries.

A substantial increase of output there will be required if Europe is to become independent of outside support.

Secretary Marshall in his recent Chicago speech stated that without a revival of German production there can be no revival of Europe's economy. But at the same time he also warned against any revival which would be a threat to peace by permitting Germany to become such a threat.

There is one means of assuring against Germany becoming such a threat. You will recall that the United States has suggested to European nations for their consideration a joint treaty to extend for as long as 45 years, to prevent Germany from again becoming an aggressor nation.

Since the Army still has the responsibility for the military and nonmilitary phases of the operation, we are at this time asking appropriations, as in the past, for the sums required for disease and unrest.

That is purely a relief fund. We are again asking for that in our budget. Included in the European recovery budget would be the additional funds needed for German economic rehabilitation.

This additional amount is estimated at around \$318,000,000 for 15 months, as a part of the recovery program.

This system, asking for the relief money and recovery budget, including the recovery money, would permit the rehabilitation activities for bizonal Germany to be handled by the military government authorities.

We handle both funds. The recovery money would be handled in relation to those of the other European countries.

We would handle the funds; if commodities were furnished in lieu of funds, as the plan would permit, we would handle those; but we would handle the rehabilitation part of the funds under the general supervision of the recovery administration, somewhat like other countries would handle it under that supervision.

In America the Department of the Army would represent the bizonal authorities, to receive the requests from Germany, and would defend those requests before the Recovery Administrator.

I am speaking of the Army handling that. You have seen an announcement that the State Department is going to take over occupation. We have been urging them for several years to take over the nonmilitary phases of occupation, which is principally what we are talking about.

They would take it over on June 30 or July 1. The State Department would relieve the Army for the responsibility of the nonmilitary activities in Germany. We hope the date will be the date named.

The Army's facilities in Germany will again be available to assist the Administrator wherever it can be of service. We would keep our troops there in the purely military form even if the State Department took over the occupation functions.

The problems confronting the United States today in relation to Germany must be approached realistically. We have three courses that we can follow, as I see it.

We will ask ourselves, "Should we withdraw all our forces from Germany and thereby abandon all our objectives of occupation?" The second question is, "Shall we continue to send into the bizonal area hundreds of millions of dollars for maintenance of law and order, and only for that, with hope indefinitely deferred to a German economy sufficiently rehabilitated to relieve us of the occupation costs; or shall we expend aid for recovery to Germany and to those European nations who have volunteered to cooperate with us to accomplish the rehabilitation of the European economy as a whole, as a foundation for peace and prosperity throughout the world."

In my judgment, the third alternative is to be desired above the others.

I feel confident that if followed it will extend its influence far beyond the borders of the participating nations; that it will eventually substitute, at least in part, the defensive armament, and that it will offer a prospect for lasting peace.

That concludes my statement, Mr. Chairman.

Chairman EATON. We have had a question based upon newspaper reports today that a strike in the Ruhr mines is imminent. How would our military authorities handle such a strike?

Secretary ROYALL. That happens to be in the British zone, but the military authorities would, of course, take all steps—all feasible steps—to prevent disorders.

Chairman EATON. How about preventing the absence of workers from work?

Secretary ROYALL. I think we would not go as far as enforced work or conscription, but we would make every effort, as we have had to do sporadically before, to render assistance under any justified situations, try to remove the causes, one of which is usually lack of food, which leads to the strike, and provide incentives for work, if they are justified, and negotiate with the workers for their return to work.

As I say, that is the British zone. But the situation would be handled, I think, substantially the same way in either zone.

The great difficulty there, of course, is the lack of incentive, as well as lack of food.

A man gets paid in currency which he can really use for the purpose of purchasing rationed articles.

When he gets an amount, with the maximum he can buy, his money is of very little value.

Chairman EATON. Are they interested in restoring the country?

Secretary ROYALL. I think a great many Germans are. But, as would be true even in America, you are dealing there with individuals who vary in their patriotism and in their understanding of the situation, and many of them look at it purely from a selfish, personal interest: "How much am I myself going to get out of it?"

We cannot hope to avoid that sort of personal approach in a great many cases.

Chairman EATON. The method furnished by Mr. Hitler and certain autocratic forces was a bayonet.

Secretary ROYALL. That is right, sir.

Chairman EATON. Are we going to furnish a little pious observation on the theory of the work because of that contrition, or what are we going to do? Most people do not know anything apparently but brute force.

Secretary ROYALL. I am sure some do not. We hope they are growing out of that attitude. Certainly we cannot afford to have slave labor in Germany.

Chairman EATON. Mr. Lodge.

Mr. LODGE. Would you yield there for a question?

Chairman EATON. Yes.

Mr. LODGE. I was interested, Mr. Secretary, in your statement that you thought it perhaps was the lack of incentive goods.

I was wondering whether this protocol might not have something to do with the strikes and whether there might not be a concerted attempt on the part of the Cominform to bring about economic disruption, and in that case how much good will it do for us to provide the incentive?

Secretary ROYALL. I am sorry I am not quite up to date enough to answer how far the Communists' inspiration has been responsible for this strike. General Clay will be here tomorrow night and that is one of the important matters we will discuss with him.

I have seen conflicting newspaper reports. Some say it is Communist-inspired entirely and some say it is partially Communist-inspired, and some say it is merely lack of food and incentive.

I do not think I am in position to give you that opinion.

General Clay will, of course, give us his diagnosis of the situation. My guess would be, and it is purely a guess, that all of those elements may in part enter into it, because communism and Communist agitators, faced with a condition of unrest, may possibly capitalize on it.

There are some Communists in the Ruhr.

Chairman EATON. The thing I would like to know, if I could, is whether the German people in our zones, for instance, have as an incentive the desire to rebuild a whole nation and make it a part again of the world.

Secretary ROYALL. I think a very substantial part of them do.

Chairman EATON. What are they doing about it?

Secretary ROYALL. Well, it varies. Some of them are working very hard. Some of them are producing the maximum they can. And some of them are loafing on the job.

Chairman EATON. I was wondering if we were not substituting the eleemosynary motive for patriotism. We are locating the incentive from the brain and the conscience to the alimentary canal.

Secretary ROYALL. Well, sir, I suppose we are running a slight risk on substituting aid for necessity but I think we have got to take that risk with our eyes open. The alternative is the starving or semistarving nation, and that would certainly create more unrest and more danger to us and to the world than it would maybe in some individual instances to err on the side of generosity. You cannot draw a straight line, I do not think, either way.

Chairman EATON. I cannot find myself deeply moved with sympathy or anxiety for these people who have wrecked the world. Let them go to work and help rehabilitate, without being waited on by a wet nurse all the time and fed like a lot of stalled cattle. Let them take their own medicine now a little.

Secretary ROYALL. Well, sir, I have great sympathy with your feeling that Germany or the German people deserve almost any fate that should come to them. But I do not think we have to place this on grounds of humanitarianism entirely—or at all, if you do not wish to. The truth is that a semistarving Germany would be a menace to our own security. Of course, we do have some obligations under international law to look after occupied countries. But I base the principal reason on the fact that we do not want chaos in Germany.

Chairman EATON. Mr. Kee.

Mr. KEE. I have no questions.

Chairman EATON. Mr. Vorys.

Mr. VORYS. Mr. Secretary, I am reading question 11 from a resolution of inquiry directed to the Secretary of Defense, among others, and no doubt you would be speaking for him. This resolution was directed on December 18. I am reading question 11:

Has the Government of the United States taken appropriate steps to delay temporarily the further dismantling of plants in western Germany so as to permit further study by the appropriate committees of Congress in order to determine whether such transfers are prejudicial to any general recovery program for western Europe?

Secretary ROYALL. No, sir; we have not stopped the dismantling of plants. We are continuing the dismantling down to the level of industry which was prescribed in August 1947. As I stated a few moments ago, it is the opinion of the military government authorities

in Europe—and we see no reason to differ with that opinion, and they have approved it—that the plants which we are dismantling down to this level will not be usable in Germany for a period of 5 years. That is our best estimate. And that, therefore, their dismantling does not either affect the present or the immediate prospects of Germany to recover and rehabilitate, nor to those prospects of the reasonably near future. We have done this: We have stopped the delivery to Russia and to Poland of any additional plants, except a small percentage of one plant, most of which has already been delivered, and some general-purpose machinery from two war plants which had to be destroyed anyhow to prevent Germany's war-making powers from being feasible in the future.

Incidentally, I have not seen these questions, but I think I can answer some of them anyhow.

Mr. VORYS. As you see, the questions arose because the committees of Congress and individual Members of Congress in studying the thing did not agree with the conclusions that you just stated, as to the dismantling of these plants. Going back to your text here:

It is not believed that the dismantling of these plants will adversely affect German industrial recovery, since the remaining plant will require all available coal and raw material—

there was considerable evidence that the further dismantling of these plants would adversely affect German industrial recovery, and a number of us were informed in Germany by both German and American officials that the dismantling was not merely to furnish plants to Russia, not merely as a matter of reparations, not merely to remove Germany's war potential, but to reduce Germany's competitive peace potential, and in view of the fact that since the dismantling order was made, 13 of the 18 nations have been directly or indirectly involved in the Marshall plan, three are now Soviet satellites, and two, India and Egypt, account for only 3.10 percent of the proposed reparations, it seemed to the House of Representatives that dismantling might be held up until they could get a little more information about it.

Secretary ROYALL. Yes. I realize that that was a question about which there could be and was some difference of opinion. At the hearings, principally, I believe, at the appropriation hearings, this question was raised and we did not at that time say that we would suspend the dismantling, but after the hearings we considered whether we should. Of course, if we were going by strict rules of administration, we had to make a decision to the best of our ability, but we respected the opinions expressed in Congress, and, therefore, on the 24th of December I addressed a letter to this committee, to the House Appropriations Committee, and the corresponding committees of the Senate, in which we stated that we were not stopping the dismantling. I did that because I did not want anybody to be under the impression from the discussion that we thought it advisable to do so. This letter was marked "Confidential," but I see no reason now, in view of the wide discussion that has been had in the press since that time, that it be any further confidential.

Chairman EATON. Did it not appear in the newspapers the next day?

Secretary ROYALL. I did not give it to the newspapers. I do not know who would be responsible. It was written by one person and sent to four. There are five possibilities. I will eliminate one of them

personally. I do not know whether it is in the paper or not. I would like to put this in the record, and strike out the confidential classification, if I might.

We said substantially in this letter what we said before and what I said today. General Clay thought it unwise not to dismantle these plants. We do not think they are necessary for German production, and as for the countries who are sharing or designated for sharing in the recovery plan approved by Congress, as you say, 13 countries are included in our reparations agreement.

At least a substantial number of these countries are taking the position that that machinery in those plants, since it would be useful to them in their recovery programs, if that is a fact, it would tend to speed recovery in those countries.

Now, certainly there is no economic way in moving an operating plant from one place to another, and the recipient does not get the value that the plant in place would have. But if the plant in place cannot be used for a considerable period of time, then, the chances are that there is not an over-all economic waste, but an economic value to the recipient. That fact, in addition to the fact that these were promised to these nations, has led General Clay to continue the dismantling.

(The letter referred to is as follows:)

DECEMBER 24, 1947.

HON. CHARLES A. EATON,
*Chairman, Committee on Foreign Affairs,
House of Representatives.*

DEAR MR. EATON: In view of the discussion concerning the dismantling of German plants for reparations, we wish to advise you of the present status of this problem.

General Clay has just cabled us that in order to carry out the program announced to the Landerrat at its meeting on the 4th of November of completing the dismantling of reparations plants in the American zone by next spring and so to dispose of this troublesome problem once and for all, he had given instructions last month to the reparations section to proceed as quickly as possible with the dismantling of all the reparations plants on the new list.

The Inter-Allied Reparations Agency in Brussels has been provided lists of the plants and has been invited to send in inspection teams of representatives of interested nations to view the equipment even before allocation by the Allied Control Council.

This program is now under way and General Clay states that he would consider it extremely unwise to defer dismantling in the American Zone during the proposed congressional hearings and investigation as it would become a serious political problem, particularly if dismantlings were subsequently carried out. I assume that by the political problem he means unrest and dissatisfaction which would arise in Germany, although his cable does not specifically so state.

You are doubtless familiar with the press release given out by the State Department a few days ago, which read as follows: "The State Department confirmed that it is seeking adequate arrangements with the British regarding any further shipment of dismantled plants to the East. The Secretary of State had a preliminary talk on this subject with Mr. Bevin before leaving London."

We have discussed this matter with representatives of the State Department who have advised us that they are considering this whole question in the light of the present circumstances.

While the dismantling program announced to the Landerrat early in November was a matter of public record and appeared in the press at the time, I would ask that this letter be considered as confidential in view of the policy questions now under consideration by the State Department.

Sincerely yours,

KENNETH C. ROYALL,
Secretary of the Army.

Mr. VORYS. Mr. Secretary, this series of questions I called to your attention was not from any committee but was a resolution of inquiry passed by the House of Representatives over a month ago, and the House has had no answers to the questions and since they are very important in our consideration of the recovery program, I was hoping that we might get some answers to them.

Secretary ROYALL. I think I can answer a good many of them, but whether they are answered today or not, the information will be in soon. Both the State and Army have been working together on answers to these.

Mr. VORYS. I do not intend to go through the list of the questions, but I was particularly interested in the last one, which is in some ways the \$64 question. You have now answered that, showing that there is apparently no intention to delay temporarily the dismantling so that the appropriate committees of Congress may study it.

Let me call this to your attention: This recovery program is a cooperative one, and cooperation is a two-way street that works not only between the Congress and the administrative agencies both ways, but between the nations which may be the recipients of billions of dollars of American commodities. I must confess my great disappointment if it has already been found out that it is impossible to hold this up until we can get a look at it. Meanwhile we are supposed to speed action on making the money available over there.

Secretary ROYALL. I agree with your general sentiments entirely but I want to say this, sir: That this matter of stopping reparations, as you may or may not know, was proposed in connection with the appropriation bill in December, and was stricken from the bill during its progress through Congress, and there has been no formal action by Congress on the matter, that being the only indication. There has been no formal action by resolution or otherwise, except by inquiry. I mean there has been no formal action requesting that this be done or directing this be done. The only action that would be definitive that was taken, if that is definitive, is that it was proposed to Congress the provision that it not be done and that was stricken out.

Mr. VORYS. Let me remind you that a resolution of inquiry by the House is about the most formal and peremptory action that the House can take, and the answer to such an inquiry is supposed, under our rules, to come through in a short time. Therefore, you are in error if you think there has been no formal action on this matter taken by the House.

Secretary ROYALL. I did not mean that, sir, if I left that impression. I said there had been no formal action requesting us to stop dismantling, and there has been none as far as I know. Now, I do not personally know just why there has been so much delay, and I think it has been a pretty long time, with this exception: Some of this information perhaps had to come from the theater, and the other factor is that this is a matter of policy as to dismantling which has to be determined by, primarily, the State Department, but in practice jointly by the Department of the Army and the State Department, and determined after the full facts are obtained. I suppose that is the explanation for the fact that the two departments have not yet answered this inquiry.

I agree entirely that it should be answered promptly, and if it has been unduly delayed, that it should not have been unduly delayed.

But I repeat that there has been no action by Congress directing or requesting the Department of the Army or the State Department to stop dismantling these plants. If such action were taken, I assure you it would certainly carry great weight and might well be entirely determinative of the course we would follow.

Mr. VORYS. I wonder if you could give us a break-down of the \$822,000,000, as to how much of it is for military occupation and how much of it is for military government? I found out over in Germany that by "military government," they did not mean military government, they meant just the opposite. One official said, "It is not very military and not much government." I think that was exaggeration, but certainly, as far as the military is concerned, it is a civilian government. How much of it is for civil affairs?

Secretary ROYALL. Well, first let me say I think it is pretty military over there. I have watched those boys and I think they are pretty good. I think they are remarkably military, considering all the circumstances. And I further think that General Clay has done an exceptionally fine job in government of Germany under very difficult circumstances.

Mr. VORYS. Understand, I do, too. I am not raising any criticism, but on this terminology, when you say "military government," you do not mean military government.

All I wanted to know is what part is military occupation for security troops, I forget the initials they headed that up with, but they had it at Frankfurt, and what is the civilian end of it?

Secretary ROYALL. The \$882,000,000 includes none of the military expenses. It is solely what is called category A items, which are principally food, fuel, and fertilizer. That is all that is included in that.

Mr. VORYS. What is the expense of the military?

Secretary ROYALL. That is for a 15-month period, as you know.

Mr. VORYS. Yes. What is the expense for the military occupation, and by "military" in this question I mean military.

Secretary ROYALL. I would say, sir, that that question I do not think can be dogmatically answered because it includes the pay of troops, supply of troops, housing, their dependents' allotments, their quarters, and the personnel in the United States that is engaged in their supply and management, and there has never been any absolute break-down.

Mr. VORYS. That was what I want to get.

Secretary ROYALL. To give you our best estimate, I must qualify by saying it cannot be with exactness, but it is our estimate that occupation is roughly responsible for \$2,000,000,000 of the Army's \$2,900,000,000 expenditures. That of that \$2,000,000,000, approximately one-half, or \$1,000,000,000, would have to be spent on those troops wherever they were located, and that, therefore, the net cost of operation for military in all areas, which would include Germany, Japan, and Korea, would be a billion dollars for the extra cost of being over there, the organization, civil personnel and other personnel that would not otherwise be required, and for supply lines, and so forth.

Now, that billion dollars must be divided between Japan and Korea, on the one hand, and Germany, on the other.

I would say the German part of it would be a little less than one-half perhaps. That, again, is an estimate. They have more troops in Japan and Korea jointly than Germany, but that is offset to some extent by the fact that we have a more complicated situation in Germany than in Japan and Korea. I would say roughly one-half. The best you can say—and this is purely an approximation—is that military and occupation and the governmental functions we perform in Germany, exclusive of the relief funds, is something under a half billion dollars.

Mr. VORYS. Then, to find out what the total costs of our activities in Germany would be, you would add, for instance, \$822,000,000 and let us say \$400,000,000?

Secretary ROYALL. Let us say \$450,000,000 if we have to guess.

Mr. VORYS. All right, \$450,000,000. Then, there was an uncovered deficit of \$200,000,000 that was presented to us. Where would that come in?

Secretary ROYALL. You would be duplicating if you put that in. The \$822,000,000 is for a 15-month period.

Mr. VORYS. Yes.

Secretary ROYALL. There is something around \$700,000,000 for a year, and if you add the \$450,000,000, it would be \$1,150,000,000. That is for relief and occupation and military functions over there on an annual basis.

That does not include the recovery part of the program, which would be under the plan you are now considering, which is about \$320,000,000 for a 15-month period, or about \$250,000,000 for a 12-month period.

Now, the deficit is part of that. This is an inclusive figure for everything.

Mr. VORYS. I always get mixed up on this deficit. Is that a deficit in the \$822,000,000, or in the Marshall plan figures?

Secretary ROYALL. Which deficit are you talking about?

Mr. VORYS. The so-called uncovered deficit.

Secretary ROYALL. That is part of the \$322,000,000. That is in the Marshall plan.

Mr. VORYS. Part of the \$322,000,000?

Secretary ROYALL. Yes. Which is the 15-month period. If you just throw the deficit out, which would be, as I said, a duplication of figures, you have, for a 1-year period, the best we can estimate, \$700,000,000, plus \$450,000,000 plus \$250,000,000, which makes about \$1,400,000,000 for all purposes in Germany for a 12-month period if the European recovery program is adopted.

Mr. VORYS. Thank you.

Chairman EATON. Mr. Richards.

Mr. RICHARDS. Mr. Secretary, you mentioned about the British zone and American zone being brought together in one economic unit. As I understand it, the French zone is still operating separately. Would it be in your opinion any economic advantage for the French zone to be incorporated with these three now? That is, economically?

Secretary ROYALL. It depends on the terms under which that is done. It could have certain advantages. It would, of course, have additional administrative difficulties. It always would, when you have three people to do it instead of two. That is a matter which is receiving and will receive active consideration.

Mr. RICHARDS. Some have taken the position that it would be better to let the French Zone remain connected with the French economic set-up because it would work advantageously to both, as is. I did not know whether it would save the United States money or not to bring the French Zone in with the other two zones.

Secretary ROYALL. There have been conflicting opinions on it. I think the dogmatic answer is difficult. The matter has been considered to see if arrangements can be made on a sufficiently fair basis under our terms of what is right to make it advantageous to both the French and ourselves. I do not believe I can be any more specific in that because the matter is now under consideration. On balance, we are committed to try to get that done on a fair basis.

Mr. RICHARDS. You mentioned that the United States Government had taken over certain financial obligations in the merger of the American Zone with the British Zone.

Secretary ROYALL. Yes. Well, we originally had a 50-50 agreement with the British on the relief supplies. They notified us during the fall that on account of the dollar shortage, and the dollar is the only thing that will buy much outside of some of the British areas, on account of the dollar shortage they would be unable to continue that 50-50 agreement, and that they might be unable to continue any participation either during the year 1948 or for part of the remaining period of 1947, whereupon we arranged a series of meetings with the British over here in which the matter was fully discussed. The State Department and the Department of the Army, General Draper representing the Department of the Army, made the best agreement we could make. The Treasury Department was also in on the conferences. Under that new agreement, for the year 1948, Britain will contribute to the relief funds, as I said in my manuscript, somewhere between 70 and 80 million dollars. We will contribute the \$700,000,000, which I previously mentioned. In other words, it will be 8 or 10 to 1.

In compensation for that, in a way, or recognition, it would be better to say, the authority on economic and financial matters is in somewhat the same proportion as the contribution which gives us, in effect, control over the economic and financial dealings in Germany.

Chairman EATON. That is, both zones?

Secretary ROYALL. Yes, sir. We have some qualifications. We would be glad to furnish you a copy of the agreement. That, in general, is an accurate statement.

Mr. RICHARDS. In addition to that, we have also taken over some of the military responsibility?

Secretary ROYALL. No, sir, we have taken over none of that and none of the responsibility for the actual governmental operations. England is still paying its people and we are paying ours.

Mr. RICHARDS. Has the British military force been reduced in the British Zone?

Secretary ROYALL. It has been reduced in both zones. As a matter of fact, the British have considerably more civilian personnel over there than we do.

Mr. LODGE. Will the gentleman yield?

Mr. RICHARDS. Yes.

Mr. LODGE. Since we have this 10 to 1 authority in both zones, Mr. Secretary, do we propose to do anything to stop the dismantling of

plants in the British Zone and sending those plants to Russia, as I understand is now being done?

Secretary ROYALL. This agreement does not specifically give us any authority over the reparations program, and we have not any right today to tell the English to stop delivering plants to Russia. That matter will be discussed and is being discussed with the British. I would prefer not to say anything more about that, if I might. I understand your problem. We understand it thoroughly.

Mr. RICHARDS. In the final analysis, Mr. Secretary, to what extent is the United States able to make decisions when it comes to the administration of the British Zone?

Secretary ROYALL. Political administration at the present time, we have no authority in. It is in the export and the economic side and the financial side.

Chairman EATON. Where it requires American money, in other words?

Secretary ROYALL. That is the best way to put it, where American money is actually involved.

Now, as you have seen from the press, there has been some discussion and some form of action—I will have to leave it that way—as to the political unity of the two zones. But that has not become entirely finalized at this time.

Mr. RICHARDS. Let me go back to the question that our chairman brought up just now about the German people working. Now, Germany is a conquered country. No peace treaty has been signed with Germany. Germany is occupied by our forces, or at least certain parts of Germany are occupied by our forces. We are obligated under international law to see that the German people do not starve. And we are fulfilling that obligation as we always have. But the German people are obligated to work. Now, I know of no obligation on our part by treaty or international law or anything else not to compel the German people to work to get their daily bread. I think they should be made to work at the point of a bayonet, provided we provide them with food to work. Why is it not the policy of the United States to make them work?

Secretary ROYALL. No, we do not make that policy, and maybe I do not have to state my view, but I would like to state my view.

Chairman EATON. Yes.

Secretary ROYALL. I do not think that the American Government wants to make anybody work at the point of a bayonet, after actual hostilities are over.

Mr. RICHARDS. Even though they are the conquered enemy and we are feeding them?

Secretary ROYALL. Well, we might accomplish the same result by prescribing certain conditions to their being fed, and there might be other things we could do. I am sure that General Clay thinks that feasible, and I am not sure that anything has been suggested, but I would not, under any circumstances, myself, feel we should make them work at the point of a bayonet. We might exert other forms of compulsion by withholding food.

As a matter of fact, the principal interest in Germany from my standpoint is to prevent Germany from becoming a disorganized or totally disorganized country seething with unrest and starvation and disease, which would be a prey to any sort of ideology. I think if

that should happen that it would be prejudicial to the interests of the United States.

Mr. RICHARDS. But if that is not going to come about, there are two things that must come about, one is that the German people must be fed and the other is that the German people must work.

Secretary ROYALL. I agree with both of those objectives. You deal with an individual, though, and you cannot generalize too greatly. Just as in any nation there are citizens whom no one can compel to look at a matter other than selfishly. I think this is repetition.

We have got to have, short of force with a bayonet, incentive for them to work. A great many individuals will work only from the standpoint of force.

Chairman EATON. You would not preclude the United States from acting selfishly on that basis?

Secretary ROYALL. I certainly would not. That is right. I would not preclude it. I agree with you.

Mrs. BOLTON. You just commented that eating might be an incentive, that if one did not work, one did not eat. That has been on the docket of a good many nations for a good many thousands of years, has it not?

Secretary ROYALL. Yes.

Mr. RICHARDS. Some people want to eat and not work.

Mrs. BOLTON. Are we not doing a great deal of that in our country?

Mr. RICHARDS. We are not under military government and we are not a conquered enemy. That is the difference.

I have one other question.

You mentioned as one of the alternatives, if we do not go ahead and feed these people and help to restore the economy of Europe, to get out. What do you think would happen if we took our military forces out of Germany today?

Secretary ROYALL. If we took our military forces out of Germany and stopped our relief expenditures to them, my own guess is that they would go communistic promptly.

Mr. RICHARDS. If we keep our military forces in Germany and appropriate money to keep them there and do not do something to restore the economy of Europe behind those forces, what do you think will happen?

Secretary ROYALL. Unless the European nations can have a stable and self-supporting economy they too, would—in varying degrees, of course—be most susceptible to the same fate that I outlined in Germany.

Mr. RICHARDS. So, in the final analysis, it is: Get in there and spend more money or get out entirely with your armed forces.

Secretary ROYALL. I think this: I think there are three courses. Either get out or let it run along like it is now, which is not improving much. We are just spending more and more. Or you can put some more money in to build up the recovery and hope that in a reasonably short time we can make the nation self-supporting.

Within the 4- or 5-year portion of this plan we can make the nations self-supporting.

Mr. RICHARDS. And, whatever course we follow, we had better keep our powder dry at home?

Secretary ROYALL. I think we should.

Chairman EATON. And plenty of it?

Secretary ROYALL. I think we should.

Chairman EATON. Mr. Mundt.

Mr. MUNDT. Mr. Secretary, this committee is considering not only this particular legislation but the whole world picture, from the standpoint of what Congress and the country can do to facilitate peace.

Up to now we have had a very fine galaxy of distinguished visitors, including the gentleman I am addressing, and one of the features of the whole testimony has been that the effort is behind one particular approach to the world problem: And that is the expenditure of American money and American materials in an effort to win or buy or secure peace and security abroad.

I think we are going to have to do something along that line. I do not think we are ever going to get the job done however if we simply go out hunting with a single-barreled shotgun with one shell, no matter how expensive or how far we reach.

I am gratified by a statement you made on page 2:

I assure you that as for myself the time cannot come too soon when the strength of the United Nations or the improvement in world conditions can justify a radical reduction in the military men and material needed for our national security.

I want to address myself to the first part of that, to the strengthening of the UN, which, I think, must be done.

It must be done by American leadership, and I think it should be done concurrently with this program, if not ahead of it.

I wonder if you would dilate on that aspect of the question a little bit?

Secretary ROYALL. I think it ought to be concurrent. We have to do two or three things at the same time. We have to push the UN with every iota of our leadership and make it successful, and we have to rehabilitate the European Continent to the extent that we are capable of doing. And we have got to keep an armed force that will convince the rest of the world that we can take care of ourselves.

Now, those are three large orders, and we are faced with the situation that of course we know that there is a dollar limit beyond which this country cannot go. Everybody has to realize that. We have to weigh these things.

The UN costs the least of the three. And I think that our conduct in the UN, while it is not at all within my jurisdiction, has been remarkably fine.

The difficulty that has been met is the recalcitrance of one nation and that of its satellites. I think, in view of the difficulty of that situation, that to hold the UN organization together and to accomplish even the limited things that it has accomplished is well worth while. And I think the greatest mistake—perhaps as great a mistake as we could make—would be to either lose faith or confidence in the UN or diminish our efforts to make it succeed.

Mr. MUNDT. I agree 100 percent.

Now, having met this road block which you have so aptly described it seems mandatory to us to do something about removing it. Now do not let the fact that you are Secretary of the Army deter you from talking about the UN because everything is getting balled up these days.

The Army is busy mining coal over in Germany and the State Department wants to become the economic administrator of a program which some people think should be done by financial people.

The Department of Commerce is over telling Congress how to write a tax law, and Congress is supposed to be an authority on spending the people's money to feed the people abroad. We are all balled up.

Secretary ROYALL. Please get back to the money and let us run the military side.

Mr. MUNDT. That is the trouble with the hearings up to now. We have been getting an overdose of evidence on one aspect of a program which we must meet with a concerted front.

You have come out very hopefully with a recognition of the UN segment of that. I want to congratulate you for that and urge that you bring supporters from the citadel down here to talk to us in those terms. It is not enough to say that we are going to spend X billions of dollars and then hope, after a while, that we are going to face up to the fact that the UN is not functioning to help freedom because some recalcitrant nation has got us blocked. We have got to do something about that. I am happy to hear you say it should be done concurrently and not in the sweet afterwhile.

Secretary ROYALL. That is right.

Mr. MUNDT. Now, to get back to your bailiwick, on page 6 you speak about the excess plants. Who determines whether a plant is excess? The British, the Russians, the French, the Americans, or one of the four, with one able to veto the decision?

Secretary ROYALL. This particular determination was made in August 1947, the last level of the instrument, and was determined by the British and Americans for their two zones after a careful study and expert advice as to what the probable needs of German industry were at the present and over the reasonably near future. And they identified specifically those plants which by name and description could be removed and dismantled without an adverse effect upon the German economy.

Mr. MUNDT. When you refer to "general-purpose equipment" being taken out of war plants for shipment to Russia and say "this special-purpose war machinery from these plants was destroyed," can you be sure, sir, that the general-purpose equipment removed from the plants in Germany and transplanted in some other country cannot also become a war potential?

Secretary ROYALL. No, sir. If we expanded the term "war potential" to its ultimate meaning, as we know so well in our country, and we were going to destroy every plant with a war potential, we would have destroyed almost everything they had in Germany.

It is a question of degree, and we have to draw what we consider a reasonable line between those plants that are so plainly and clearly and readily adaptable to war that we should not permit them—like aircraft plants, for instance and the other plants not so adaptable to war. But there is a question of degree there, and in everything that is dismantled and moved out of Germany—or almost everything—and it is hard to think of something that would not contribute, possibly, to war.

Mr. MUNDT. I remember one day on the floor of the House when most of the members of the committee took the opportunity to disassociate themselves with my good friend from Columbus, Ohio, and I would like to associate myself with him this afternoon on the point that he makes on the dismantling of plants.

Now, going to page 7 of your testimony:

It is not believed that the dismantling of these plants will adversely affect German industrial recovery.

I join him in his skepticism about that, but I would like to pursue that a little further to know what happens to the material when the plant has been dismantled. What happens to the dynamos and machine tools?

Secretary ROYALL. They are supposed to be paid in reparations. Seventy-five percent of them go to the western nations as a whole, generally, while some are not western. Equipment is included. And 25 percent goes to Russia, and Poland.

Mr. MUNDT. Is that 25 percent still being shipped behind the iron curtain?

Secretary ROYALL. The only thing we are shipping from the American zone now is the small remnants of one plant, most of which we had already sent, and the general purpose tools from two war plants. Those are items we had marked for advance reparations and which were definitely agreed to be delivered, and we are just completing the small end of a job.

From the British zone, as I said a moment ago, I think the probability is—and maybe we know that—but I think the probability is that they are continuing to make shipments.

That matter, as I said a moment ago, is under discussion.

Mr. MUNDT. I do not know what the War Department feels, but I know that a lot of members feel—and most of us who were abroad last summer feel—that it is a doubtful maneuver for securing the peace if we dismantle the war potential of a defeated enemy and use it to increase the war potential of a possible enemy in the future, whoever it is.

Secretary ROYALL. Well, sir, I am not going to say no to you.

Mr. MUNDT. That is adequate.

Could you translate your figures on page 7, when you talk about coal, into the same category when you talk about steel? You say you have restored steel to about 25 percent of the prewar level and you have restored coal to 285,000 tons.

What percentage of the prewar coal production is represented by 285,000 tons?

Secretary ROYALL. I will have to get that for you.

Mr. MUNDT. Then we can have some basis for comparison.

Secretary ROYALL. If I gave you the figures, strike it out because I really do not know. They tell me that it is between 60 and 70 percent of the prewar.

Mr. MUNDT. There is that much—60 to 70 percent?

Secretary ROYALL. That is about right.

(Secretary Royall has since verified this figure of 70 percent.)

Mr. MUNDT. I have one other question which I am sure you cannot answer today, unless one of these gentlemen have the answer. It is something I want for another purpose.

I observed in Austria and in Germany a very extensive and enlarged and rather successful information program being administered under the direction of General Clay in the War Department. I wish you would supply information on the record in answer to a question we asked there and failed to get: How much, this year, are you spend-

ing for purposes of dissemination of American information in Germany and how much in your information service in Austria?

Secretary ROYALL. We will get that for you. We do not handle it in Austria any more.

Mr. MUNDT. It has been turned over to the State Department?

Secretary ROYALL. I have been told we did not have it in Austria. I will have to check that, too. There are certain functions we handle in Austria, but not nearly as wide as Germany. We will give you those figures.

Mr. MUNDT. Thank you.

(The information is as follows:)

In the fiscal year 1948 the reorientation and reeducation program appropriations were as follows: Germany, \$3,944,437; Austria, \$1,000,520.

Of these amounts, the following is specifically for public information and reorientation: Germany, \$2,222,394; Austria, \$788,135.

The figures include costs only of contractual services, purchase of supplies and materials, interchange of persons and rental of facilities.

The estimates for fiscal year 1949 are still confidential and will be released when presented to the appropriate congressional committees. However, the program is considered essential and funds are designed to support an accelerated information program necessary to expose and counter the all-out communistic propaganda campaign directed against United States foreign policy. This program is not a phase of the one conducted by the State Department, which does not administer this type of activity within the occupied areas, except to use available installations for the beaming of radio broadcasts to European nations to the east of Germany.

Mr. JARMAN. Mr. Secretary, I was very much pleased to hear your expression of confidence in the UN. On the day the San Francisco conference commenced, and, I believe, on the day the UN first met, I expressed the opinion on the floor—and I have expressed it repeatedly at other times—that with the progress of science—and that was before the atomic bomb—since all intelligent people must know that civilization cannot survive another war, that the leadership of the world would finally do whatever is necessary to prevent another war and that the UN would be the instrument through which that would occur.

Regardless of the gloomy outlook from time to time since then, I still believe that and I am glad to hear you are in agreement with that opinion.

I believe the UN will succeed.

Mr. RICHARDS. Will the gentleman yield right there just for an observation?

Mr. JARMAN. Yes.

Mr. RICHARDS. From the crack made by my friend from South Dakota one would come to the conclusion that the idea of the League of Nations and the UN was born in the Republican Party.

Mr. JARMAN. I am mighty glad that the United States is participating in the UN and not sitting on the side lines. I have always believed that had we participated in the League of Nations we might have at least largely contributed towards avoiding this last war.

Mr. MUNDT. Would the gentleman yield so that I can reply to my friend from South Carolina so that we can keep this discussion strictly bipartisan?

One would conclude, by the way the UN was fumbling along and missing the bus, that it was administered exclusively by New Dealers.

Mr. JARMAN. Now, I want to get back to this business which the chairman brought up and my friend Mr. Richards pursued.

As I recall, it was initiated with some such statement as "It is a matter of them working or us paying dollars," or something to that effect.

Mr. Secretary, take the American and British zones combined—are they self-sustaining, from a food standpoint?

Secretary ROYALL. Oh, no. Nowhere near it.

Mr. JARMAN. Is there much prospect of food flowing into that zone from neighboring countries?

Secretary ROYALL. Not until we have exports to buy it with and exports in Germany to pay for it. Even then there can't come enough from neighboring countries.

Mr. JARMAN. That is, over and above the demand from the neighboring countries?

Secretary ROYALL. That is right.

Mr. JARMAN. In other words, it would take dollars to get food in there?

Secretary ROYALL. That is right; dollars or something which is worth dollars.

Mr. JARMAN. And since there is no food available anywhere around without dollars, what difference, after all, does it really make, as far as whether the German people will starve or not, and as far as the dollar situation is concerned, how much they work?

Secretary ROYALL. Well, it does make a difference whether they work.

Mr. JARMAN. I am talking about in relation to American dollars. Of course it makes a difference. We want them to work. But where would they get the food with the proceeds of their labor?

Secretary ROYALL. Well, of course maybe I am not following you, but we are feeding the Germans because they have not the food in Germany and they have not the dollars or exportable commodities to buy it with. The sooner Germany does have exportable surpluses that they can send to other countries, then the sooner we will be relieved, in part or in whole, of our financial responsibility of feeding them.

They cannot reach the productive capacity to have exports unless they work. Furthermore, their working is important because the more they raise on the farms in Germany, the less we will have to supply them. So the work of the German people is a really material factor and an important factor. We want to do everything we can to get them to work, short of actual force.

Mr. JARMAN. I thoroughly agree with that, but I cannot understand why no food is available except in the United States. And they do not produce to export to the United States, so I do not see that how much they work makes any difference.

Secretary ROYALL. You can buy it from some place else. They sell coal, for example, for dollars or equivalent of dollars. They have some exportable steel. They have some exportable cotton goods, and there are a number of other items which they can use, eventually, to pay for their food.

At present they are not doing it because they are using that money to build up their economy, and the more they build it up the sooner we will reach the end of the road.

Mr. JARMAN. Could they sell coal right now for dollars, no matter how much they had?

Secretary ROYALL. Well, they can sell coal to France.

Mr. JARMAN. For dollars?

Secretary ROYALL. For dollars; yes. There is something they could sell and get dollars for. They could realize on their exports. All that they have they could realize on.

They do get a little food from adjoining countries, but it is not enough to support them.

Mr. JARMAN. I would like the clerk, Mr. Chairman, or somebody else, to read the resolution passed by the House—that paragraph of it which was referred to a while ago. It was paragraph 11, I believe.

Mr. CRAWFORD (reading):

Has the Government of the United States taken appropriate steps to delay temporarily the further dismantling of plants in western Germany so as to permit further study by the appropriate Committees of Congress in order to determine whether such transfers are prejudicial to any general recovery program for western Europe?

Mr. JARMAN. I thoroughly agree with you, Mr. Secretary, that that merely asked a question and issued no directive to your Department.

Secretary ROYALL. Yes.

Mr. JARMAN. Now, as to that question of dismantling of these plants, did you say the British and Americans decided which would be dismantled?

Secretary ROYALL. Well, the British and Americans decided in August 1947, in fixing the level of industry—which meant the plants that would be left—that they would fix those that would be taken away. You understand that these questions of dismantling of plants are not matters solely decided by the Department of the Army. These matters are decided jointly by the State and Army Departments, with the foreign policy aspects of it and the diplomatic aspects of it controlled naturally by the State Department, and properly so. But we are very cooperative, and we are working on all these matters jointly. There is the best of spirits between us.

Mr. JARMAN. That was my next question. The decision rests jointly with the State Department and with, I suppose, the commander in chief of the Army on the ground? Is that right?

Secretary ROYALL. Of course, we get the opinion of General Clay but the Department of the Army with the State Department here in Washington make the ultimate decision on these matters. It is the Department of State, after consultation with us, that makes the decision.

Mr. JARMAN. I imagine both the State Department and you pay a good deal of attention to your senior representative on the ground.

Secretary ROYALL. We do. Both of us have the greatest confidence in the ability of General Clay, and his recommendations carry the greatest of weight and are almost always followed.

Mr. JARMAN. How long has he been there?

Secretary ROYALL. May I volunteer an addition to the answer?

Mr. JARMAN. Yes.

Secretary ROYALL. Here is what General Clay says about these plants that are marked for reparations over and above the level of industry:

It is my sincere conviction that we have left to western Germany all of the industrial capacity it can use. Of course, cases can be made for specific plants, and we are prepared to consider recommendations from the Germans for transfers

and other placements to save specific plants when it can be shown that such plants are essential to German industry.

Mr. JARMAN. He has been there about how long?

Secretary ROYALL. He has been there something like over 2½— it will be nearly 3 years in April.

Mr. JARMAN. My recollection is that Ambassador Murphy has been there approximately the same time.

Secretary ROYALL. He came a little before General Clay.

Mr. JARMAN. I thoroughly share your confidence in General Clay, and I entertain similar confidence in Ambassador Murphy. Furthermore, I believe they are very responsible officers of this Government.

I was in Berlin a couple of days in 1945 and a couple of days last year. Some of my colleagues, no doubt, stayed longer. But even those who stayed 4 or 5 days, or a week, are not in my opinion quite as competent as General Clay or Ambassador Murphy to know which of these plants should be dismantled, and, for my part, I give them credit for being good American officers.

Now, getting back to this legislation more directly, as Secretary of the Army what do you think would be the result in your immediate Department in the Army? First, I will say the immediate result of the failure of passage of this legislation?

Secretary ROYALL. As related to Germany, which is really what I should confine myself to in that opinion, if we did not furnish any relief in recovery funds for Germany we would proceed as we have been, slowly rebuilding German industry. If we did not get recovery funds we would move along like we have, providing relief funds with German economic recovery and moving very slowly and therefore the period of time within which we would have to continue relief, unless we would have them starve, would be considerably extended.

If we would get money to stimulate industrial recovery we would shorten the period of time within which the present expenditures of money for relief must be made.

Mr. JARMAN. That is very pertinent and confirms my opinion that a parsimonious attitude in this program would probably in the final analysis prove quite expensive. However, what I had in mind more directly was the defense of this country. You expressed the opinion that Germany would shortly, if we pulled out, fall victim to communism.

Secretary ROYALL. I do not think there is any serious doubt about that.

Mr. JARMAN. I not only thoroughly agree with that, but I think that is equally true of the rest of western Europe in a short while and the rest of Asia. Should that happen by failure of passage of this legislation and the course of other events, what would be our situation from a defense standpoint? Would there not be a great change in the necessity for your organization?

Secretary ROYALL. It would at least move the political frontier from eastern Europe to the eastern coast of the United States or somewhere in the Atlantic Ocean.

Mr. JARMAN. Under those conditions, would not your set-up—the Army side of it—have to be a great deal more expensive than it is now?

Secretary ROYALL. I am sure that that is true for an adequate defense.

Mr. JARMAN. That is all, Mr. Chairman.

Chairman EATON. Mrs. Bolton?

Mrs. BOLTON. I do not want to pursue my questions very far into Germany as I think we have had quite a good deal on the matter of Germany this afternoon. But I do want to ask you to put in the record whether in making the decision as to the war plants that would be dismantled, it was done on the basis of what Germany herself could consume or on the basis of Germany is playing a part in the rehabilitation of Europe.

Secretary ROYALL. It was on the basis of what Germany could produce.

Mrs. BOLTON. For herself?

Secretary ROYALL. No, not that—what she could produce for herself and export.

Mrs. BOLTON. I would like very much to ask something that will perhaps seem a little more general. You have had, first in your capacity in the War Department and in the Army, a chance to study the general situation in your organization as to its defense against any possible aggression from the East. I assume that is right.

Secretary ROYALL. Well, I have some knowledge of what the possibilities would be; yes.

Mrs. BOLTON. Is it your feeling, as a result of those studies, that western Europe is an important factor in the defense of America?

Secretary ROYALL. I think the strength of western Europe is important first as a deterrent to political aggression from the outside, and when the nations are sufficiently strengthened to become self-supporting in every way they would, of course, be in a better position to resist anyone who should resort to military measures, if anyone should resort to them.

Mrs. BOLTON. That being the case—that you have become convinced that there is a need of western Europe in the general protection of western civilization against the aggression of the nation which set up the Cominform—would it not appear, then, that the U. S. S. R. is finding that the reestablishment of strength in western Europe is very definitely a force against her aggression?

Secretary ROYALL. I would say that the reestablishment of sound and self-supporting governments in the European countries would certainly slow down, and possibly and probably prevent, political aggression by communism or any system of totalitarianism.

Mrs. BOLTON. Only political?

Secretary ROYALL. I say eventually, as the nations become stronger, their military protection would also increase. Of course, I am not indicating, by that, that I think that there is any immediate prospect of anything other than political aggression in Europe. I do not mean to indicate that I think there is immediate prospect of military aggression in Europe.

Mrs. BOLTON. You do not give credit then to what we hear—that the directives issued from Moscow now in such countries as France are military directives?

Secretary ROYALL. I have seen a lot of rumors in the papers, but my own opinion—and it can be nothing but an opinion—is that there is no imminence of military aggression into western Europe from any source.

Mrs. BOLTON. In the matter of the strengthening of western Europe, do you feel that there would be an increase of strength if the

countries of western Europe joined together as much as possible economically and quite definitely in a self-preservation method?

Secretary ROYALL. Certainly. Anything that would tend to increase the freer flow of goods, a more cohesive economy of western Europe would, in my opinion, tend to improve their condition of stability. I am getting a little beyond the field in which I feel that I am competent, but I can express an opinion.

Mrs. BOLTON. May I ask a little further afield, perhaps, Mr. Secretary: On the other hand, in your present capacity, you would of course have to take all phases of European strength and weaknesses into consideration.

Secretary ROYALL. That is right.

Mrs. BOLTON. You may not want to answer this question because there is always a hush-hush attitude connected with any suggestion of Spain.

With Spain in her very strategic position, as far as the Mediterranean is concerned, would you have anything to say as to the benefits that might be derived if Spain were included in the general union of western Europe, inasmuch as she was responsible for the lives of some, I think, 4,000 of our aviators, whom she not only did not intern but whom she sent back to their jobs, and so on? Would you feel that it would be profitable to the future of western Europe to have Spain included in whatever categories were developed?

Secretary ROYALL. The Spanish question is so far out of my field and has so many ramifications that I do not care to discuss it, if you don't mind.

Chairman EATON. Mr. Mansfield.

Mr. MANSFIELD. Mr. Secretary, I believe you were asked in the Senate by the Senate Foreign Relations Committee what would be the alternative if the Marshall proposal did not pass.

I am not certain in my own mind what your answer was. But as I recall it, you felt that you would have to ask for universal military training at once and increase our armed forces at home; is that correct?

Secretary ROYALL. Whether or not the ERP passes, we need universal military training to adequately defend this Nation.

The idea that we can send machines and not men to fight a war does not appeal to me.

We have had scientific research and development for many years. We had more men in this past war than we have ever had in a war or probably any two wars in history, and if we want to fight the war in our own backyard over here in America, we can get along with fewer men.

But if you want to carry the war, if it comes, and fight it in the other man's country, which is what I want to do, we have got to have bases.

We have to man those bases. We have to hold those bases in the face of an enemy, and we have to transport the men to hold them and supply them and we have got to have people to supply them.

So nothing that I said before the Senate indicated that there were any circumstances in sight, in the immediate future, that would dispense with the necessity of universal military training.

What I did say was this: I said if we did not have, and I am not seeking to quote it, but I will tell you the substance of it, if we did

not have a recovery program in Europe, and if it seemed to me there would be disorder and unrest in those countries, dissension, discouragement, that I was sure that if that happened we would need a larger defense force than we would otherwise need.

In response to a question from one of the Senators, he asked me how we would get a larger defense force in view of the fact that the services were unable today by voluntary recruitment to recruit up to the strength they desired, I told him we would seek to make enlistments more attractive. He said, "If that should fail, if you were not able to do that, then what is the alternative? Is the only alternative to resort to selective service?"

I said, "Yes, the only two ways to get the necessary men are those voluntary recruiting or selective service; that is not universal military training."

There is all the difference in the world. I did not mean to intimate we did not need universal military service under any circumstances because I think we do.

Mr. MANSFIELD. Do you think that this country is capable of appropriating the money to carry out this program over the next 4-year period, and at the same time appropriate enough money for universal military training?

Secretary ROYALL. I think so, yes. There again the judgment of Congress must be conclusive, and your economic and financial advisers would be consulted. The information that comes to me is that we could do that and should do it.

Mr. MANSFIELD. Mr. Secretary, at the present time we are still using paper currency in Germany.

It seems to me that there was some sort of an investigation carried on not so many months ago which indicated that in the Russian sector they had plates which we had furnished to them and with which they were turning out currency which was being distributed in our zone. Was that correct?

Secretary ROYALL. That testimony was given and before I knew or had any responsibility for military government. I say that only because it explains my lack of knowledge; I do not think the matter was handled improperly.

I think it was a circumstance that could not have been avoided and I do not think anybody was to blame.

I have investigated those facts since I did come in as Secretary and as I recall them they are: In the early stages of occupation there was a great deal of Russian currency printed. The Russian soldiers were paid in it. They bought from American soldiers principally, sometimes from the people who had bought from American soldiers; large amounts of personal property; watches, and things of that kind.

That money therefore got into the American zone and created an extra supply of money over and above that which we had put into the zones.

The principal beneficiary of that was the American soldier who sold his watch, or other property, because he could take that money and redeem it and a lot of these boys who started home after the war, made something out of that.

It was a violation of regulations, but it is pretty tempting, I suppose, for a young fellow, if he has a watch when he can get a thousand dollars for it. A lot of them did get it. That was the principal cause for

that. The second step was where an American had sold to somebody else and he sold to the Russians.

I believe it is a fact that that surplus is being gradually liquidated by purchases locally and other means. It was testified to by, I believe Assistant Secretary Petersen at that time, that it was expected there would be no financial loss to the United States forces.

Mr. MANSFIELD. But until that counterfeit money—because I think that is what it should be called—is liquidated, the Government of the United States stands the loss?

Secretary ROYALL. It will stand to lose if that is not liquidated through the German economy or some other means. It was not counterfeit. It was money from the Russian zone that came into ours principally.

Mr. MANSFIELD. But the German people in the long run are the ones who are going to have to pay for what the Russians gained in this exchange with the American soldiers?

Secretary ROYALL. If they ever pay that currency out they will. There is a great area of doubt to the extent they will pay their currency out.

Mr. MANSFIELD. Have we changed our currency since that time?

Secretary ROYALL. We have not changed it out of the German currency. But we have put in a military currency, sort of a scrip, in our zone, which is used by American personnel and it has obviated that difficulty for the future.

Mr. MANSFIELD. Am I correct in assuming, then, that the money which the Russians counterfeited or made was not military currency, but German marks?

Secretary ROYALL. It was Allied occupation currency, but in the form of marks, as distinguished from our military scrip that they issue.

Mr. MANSFIELD. I wonder if it would not be possible, and I certainly do not speak from a provincial point of view, to substitute hard money, say silver, for the paper money in our different zones because there would be very little possibility of duplication and if they did duplicate dollars as good as silver dollars no one would be the loser.

Secretary ROYALL. This currency problem is an immensely complicated one. As I said in my prepared statement, the matter is now receiving very careful study. It has received very careful study. I believe it would be unwise and I do not know that I am fully qualified to discuss all the features of a currency reform on currency exchange. The Treasury Department and the State Department and Department of the Army are all studying the matter.

It would be preferable, as I said, if we could have a currency throughout all the zones of Germany, even though there was an economic and political division, because the people are used to it.

It would facilitate trade. That could be done with soundness and controls in a responsible manner. That is preferable.

We have been trying to do that because that would be better for Germany.

Now, we are working on studying an alternative method and I believe that is about all I had better say about it now.

Mr. MANSFIELD. I think, Mr. Secretary, it might be a good idea to give some consideration to the use of silver.

Secretary ROYALL. I will be glad to transmit to the people who know more about the technical details than I do, the suggestion you made. I think it occurs to me offhand that that might present some difficulty.

From my very limited knowledge of the national currency situation, I do know that hard money has had a tendency to disappear in the zone and leave the country without sufficient currency to operate on.

I do not know whether that would be true here or not. I know that was true throughout the Middle East at one time.

Mr. MANSFIELD. It does retain its value though, and I think that is important in eastern Europe. I did not mean to imply—and I want to state for the record that you did not have anything to do with this currency.

Secretary ROYALL. I do not believe I could do any better. I think the people that handled it did a very good job under a difficult situation. You see, in those cases we were four strong allies, that had just defeated the great German Nation. It is right hard now to reconstruct your mind back to that period, in view of the changes that have occurred.

Mr. MANSFIELD. In the paper yesterday or today appeared a statement to the effect that the Russians had upped the price of the oil they were taking out of the fields at Zistendorf in Austria and selling at twice the price we were selling our oil for in that country. Do you know anything about that?

Secretary ROYALL. I do not. I have not even seen that in the paper. But I would be glad to look into it and give you any facts you would find on it.

(The information is as follows:)

The New York Times of January 19, 1948, carried a story to the effect that Russia had doubled the price of oil she supplied Austria "from fields in the Soviet occupation zone." No mention was made of Dusseldorf and since that city is not in a Russian occupation zone, it is assumed that it is in error to refer to that location.

Under date of January 21, 1948, a cable was received by the State Department from the United States Ambassador in Vienna which confirmed the news report and indicated that the Austrian Government was opposing the price increase.

On January 22, another cable to the State Department advised that the Austrian Government would probably have to accept the price rise since it had no other source of petroleum products; appeal, however, would be made to the Allied Council. This latter fact was reported in news dispatches from Austria on January 23.

On January 23 it was further reported by cable that Austria had again protested to the Soviet military government and when faced with practically an ultimatum, had announced to the public that it had been forced to accept price increase. However, that same day the Soviet dramatically announced that there would be no price increase.

On January 27, the State Department received a cable stating that the Russians had been using the Tass news agency to explain the reversal of position. The argument advanced was that while negotiations with the Austrian Government were proceeding, the latter suddenly announced the price increase, thus confronting the Soviet with a fait accompli. United States officials stated that the Tass statement was completely at variance with facts and indicate, as confirmed in a New York Herald Tribune dispatch from Vienna dated January 23, that strong resistance by the Austrian Government, backed by United States authorities, caused Russians to decide that the move was not a good political weapon.

Mr. MANSFIELD. I would appreciate that.

You mentioned the fact that General Clay was due in tomorrow night. Do you know if Col. Lawrence Wilkinson will be with him?

Secretary ROYALL. I do not know whether he will come or not. The notice we have received did not name anybody but Ambassador Murphy. That does not necessarily mean that others will not be with him. Mr. Wilkinson was over here during December when he testified on our deficiency appropriation, and I do not know whether he will return now or not.

Mr. MANSFIELD. The reason I asked, Mr. Secretary, was because of the fact that he also testified before this committee on dismantling the plants.

I thought he would have up-to-date information on it.

Secretary ROYALL. I am sure General Clay will have up-to-date information on it.

Mr. MANSFIELD. It was brought up by one of my colleagues that it might be a good idea to make the Germans work through the use of bayonets. We know, of course, the industrial unrest in Germany at the present time is primarily in the Ruhr area and we know, furthermore, that it is impossible to mine coal with bayonets.

I think that the only thing we can do is, as you have already suggested, and I am in full-hearted accord with what you have to say that we will have to offer incentives to the Germans.

We will have to give them some hope. The next thing they will do will not only be to help themselves and take the burden off us, but will help in the rehabilitation of western Europe because so many people are dependent on the German economy.

Secretary ROYALL. I agree entirely.

I have used the figures 320,000,000 and 318,000,000, as the figure that would be spent over a period of 15 months in Germany for the recovery part of the program.

Please understand that figure is not frozen. There have been discussions back and forth of amounts ranging from somewhat below that up to as high as 340,000,000 or 350,000,000, and even up to 400,000,000.

That was the latest figure that we had. I have had some suggestion since then that maybe it might be raised. That depends on the relative needs of the country. They are supposed to be left flexible. I am sure the committee understood that when I stated it.

Chairman EATON. Are you through, Mr. Mansfield?

Mr. MANSFIELD. Yes.

Chairman EATON. Mr. Javits.

Mr. JAVITS. I will just take a very few minutes. Mr. Secretary, can western Germany stand alone as an economic unit in your opinion?

Secretary ROYALL. Stand alone?

Mr. JAVITS. Yes. Will we always have to pour money into it or can it somehow support itself, in your opinion?

Secretary ROYALL. I think with fair progress and recovery and some assistance it can stand alone and pay its way with its own exports.

Mr. JAVITS. They will always have a food deficiency and a very material one?

Secretary ROYALL. Yes.

Mr. JAVITS. You believe it can be made up by the increased industrial production?

Secretary ROYALL. I do, sir.

Mr. JAVITS. Now, the Secretary of State, according to your statement, said that we must be careful, in rebuilding Germany, to avoid a future—and I quote his words—"threat to the peace."

Now, in your calculations as to what would constitute a threat to the peace on the part of an industrially rebuilt Germany, do you think of Germany alone or have you calculated Germany in combination, let us say, with another power or powers, say the Soviet Union?

Secretary ROYALL. Well, of course these calculations were made and these decisions were made as to the war-making machinery to be eliminated when we were considering Germany alone as a threat. It is impossible to be either dogmatic or entirely inflexible in the matter of when a nation should be a threat.

Anything that you let Germany manufacture may contribute to a war potential, but we must let them manufacture something because they cannot support themselves as shopkeepers and farmers.

Furthermore, the potential in the war-making ability of any country would be enhanced by an alliance with any other country of any strength.

We have looked at it from the standpoint of Germany alone as a threat.

Mr. JAVITS. Does the Secretary feel that it would be advisable also to consider in one's calculations Germany in combination with another power or powers as a threat?

Secretary ROYALL. Well, I do not know what useful purpose would be served by that analysis because if we assume that Germany and the Soviet would join up and some other nations would join them, our condition in Europe would be pretty bad.

I think that looking at the danger of a war threat you would probably still have to have the hope that we are going to save at least western Germany from communism.

Mr. JAVITS. The Secretary has stated that we face a very difficult situation, of course, in leaving any industrial potential in a former enemy country.

Is it not a fact, therefore, that what we can do to keep western Germany from being a threat to the peace, is largely a political question?

Secretary ROYALL. I do not know how broadly you use the term "political" but you cannot have political stability without a stable economy. You cannot have it long.

Mr. JAVITS. What I mean is that in order to avoid western Germany being a threat to the peace, is it not a fact that we have to have some political solution for western Germany?

Secretary ROYALL. Eventually we do.

Mr. JAVITS. We have to have some solution.

Secretary ROYALL. Certainly.

Mr. JAVITS. There are alternatives in that solution; either Germany can be united and operate under the guaranty of a 40-year treaty such as Secretary Byrnes proposed, or of four-power guaranties, or Germany can somehow or other adhere to the other western European nations?

Secretary ROYALL. That is correct. There are a number of alternatives you can follow.

Mr. JAVITS. But a political solution is to be essential if we are to prevent Germany from becoming an aggressor?

Secretary ROYALL. One solution is a bizonal Germany as a separate nation, and one is to continue to strive, as we are continuing to strive still, for some chance of a reunited Germany.

And someone suggested today that maybe a trizonal arrangement would work. There are a lot of variations which you cannot give an answer to now.

Mr. JAVITS. The question now is one of rehabilitating German industry so that it is not a threat to the peace.

Secretary ROYALL. Yes; it is some threat. Any development of any kind is some threat to the peace.

Mr. JAVITS. It is a question of the degree of rehabilitation, first and second, the degree of rehabilitation with respect to the territory under consideration?

Secretary ROYALL. That is right.

Mr. JAVITS. Do I get the intimation of your testimony to lead to this, that under the circumstances in view of the conclusions upon which we both agree, for the present you have to sit it out in western Germany because you are nowhere near a political solution and you have not yet determined the degree of economic rehabilitation as it fits into the ERP and which minimizes the threat to the peace. Is that not a fact?

Secretary ROYALL. I do not think you have to sit it out in the sense that you do not want to have the economy rapidly improved.

As soon as the economy is rapidly improved, then is the time that we could have a political solution. I do not think we have to wait until we get the political solution before we improve the economy. They must work side by side.

As a matter of fact, we will never have a satisfactory political solution in Germany without a stable and self-supporting nation.

Mr. JAVITS. Mr. Secretary, I use the term "sit it out" in the term we have to stay there.

We have to supervise the job.

Secretary ROYALL. That is right. I see no basis even to make an estimate as to how long the occupation would have to last.

Mr. JAVITS. Therefore, as we work up to this degree we have to maintain our position and implement that by trying to bring back the economy so far as we reasonably can and as it fits into the economy of the other western European nations and always bearing in mind the degree, so that it is not a real threat to the peace.

Secretary ROYALL. That is right, sir. I made a talk the other day, I believe it was in Denver, in which I said that the industrial rehabilitation of Germany on the one hand, and the prevention of rearmament in Germany on the other, present continuing dilemmas in which practical decisions have to be made and the line has to be drawn.

Nobody can ever be sure whether they have gone a little too far one way or the other on the line. Those two considerations must be balanced.

Mr. JAVITS. And it is dilemma which we cannot resolve except with a political solution?

Secretary ROYALL. We must have a political solution. We must do that sometimes with trial and error on this.

Chairman EATON. Mr. Lodge. Last but not least.

Mr. LODGE. Mr. Secretary, with respect to the question of dismantling and aside from the lack of sufficient fuel or raw materials,

would you say that we have the right to end the dismantling, regardless of past agreements?

Secretary ROYALL. I do not know. I doubt seriously that we could in good faith and consistent with our agreements stop all dismantling, as far as the 75 percent is concerned, that goes principally to the western nations.

Mr. LODGE. Well now, dismantling was for the purpose of upholding the reparations program, and it was dependent upon the economic unification of Germany.

That was the context of the agreement?

Secretary ROYALL. That is right.

Mr. LODGE. That most certainly has not been accomplished?

Secretary ROYALL. That is right.

Mr. LODGE. I have heard this theory advanced before by eminent members of the administration, and is it your theory, that even if one party to a contract commits substantial breaches of it we are nevertheless bound. Would that be your theory?

Secretary ROYALL. I do not subscribe to that theory. However, the western nations who are the beneficiaries in large part of the 75 percent have not breached anything.

Mr. LODGE. Russia has breached in not allowing an economic unification of Germany which was made a part of the reparations agreement?

Secretary ROYALL. We have suspended deliveries to Russia with minor exceptions.

Mr. LODGE. In other words, the agreement would be principally with Great Britain and France?

Secretary ROYALL. Well, the 18 countries that get 75 percent of it.

Mr. LODGE. These countries being interested in the economic recovery program would doubtless also be interested in helping us to achieve that objective, if it were pointed out to them that the conversion recovery of western Germany was an important part of that program. So it would seem to me that you could not base the continuing dismantling on any question of past agreements.

Secretary ROYALL. I am not certain about that. I think a good argument might well be made that these 18 countries have a right to our carrying out the reparations agreement. I do not base my position on that, certainly not entirely, because I think the possibility of utilization by Germany and the benefit for the recovery program are the most important elements.

If General Clay is right, and I have no reason to doubt it, these plants would be of no value to Germany within 5 years.

Mr. LODGE. I have the highest regard for General Clay; I happen to know him and I think he is a very distinguished soldier, but as I understood you, the argument is based largely on two points: First, that there would be inadequate labor to run these plants, and, second, that there would be inadequate coal.

Secretary ROYALL. Inadequate transportation, inadequate raw materials.

Mr. LODGE. Let us take the first two first: As far as labor is concerned, Ambassador Douglas showed us today that part of the ERP would be a free movement of people across frontiers.

Now, there are places in Europe where there is an excess of population, where there are large numbers of unemployed—in Italy, for

instance—so that the population and labor problem would therefore be solved by the program itself.

Now, on the question of coal, surely it would be more advantageous to us and cheaper to ship coal to western Germany than to ship steel under the Marshall plan, would it not?

Why would it not be a good idea, then, to stop the dismantling at least of a large part of these plants, the steel mills, for instance, steel rolling mills, in view of the great lack of steel? We cannot produce enough for demand, and we have an excess amount of coal. Why should we not ship some coal to assist these French and German steel plants to function, and thereby save ourselves the shipment of a great deal of steel and use that steel to manufacture freight cars to carry the coal in this country where it is intended to be shipped?

Secretary ROYALL. You see, we are continually examining the industrial capacity of the dismantling, equivalent to what that industrial capacity was in 1936, approximately, not in every commodity, but over-all. There is not quite that much in steel. But over-all, we are returning the equivalent of their prewar industrial capacity.

Mr. LODGE. That does not quite answer my question.

Secretary ROYALL. No; but the point is this: To pick out a single factor or even one or two factors, General Clay's judgment is that under favorable conditions it will be at least 4 or 5 years before German labor, German raw materials, German transportation, German plant rehabilitation of the damaged plants and repairs, and the other factors will be able to raise the productive level of Germany above its prewar level. It is now 44 percent of it. It has 56 percent more to run.

Mr. LODGE. Is that not due in large measure to lack of an adequate supply of labor, to lack of coal, and to lack of adequate incentives?

Secretary ROYALL. Well, it is due to all those factors, but assuming a favorable solution of those, the judgment of General Clay is that still it will be at least 4 or 5 years before we can reach the prewar level. In the case of steel, to give you a good illustration, today they are producing about 3,000,000 tons annually of steel in Germany. This level of industry that we have prescribed is the stuff that will be left after dismantling, and 10½ million tons is authorized. Therefore, we can increase the present steel capacity by 200 and more percent or threefold or more under our present plan without utilizing any of the plants that are being dismantled. It is his opinion that within a 4- or 5-year period we cannot increase under even favorable conditions steel production in Germany more than threefold.

Mr. LODGE. Nevertheless there is a shortage of steel.

Secretary ROYALL. Yes; there is.

Mr. LODGE. I would like to point out to you that the Herter committee, with which you are perhaps familiar, made certain recommendations. I would like to ask you if you will be so kind as to give me your comment on the recommendations. The Herter committee recommended, among other things, (a) added production of German ingot steel.

Secretary ROYALL. We urge that, too. But taking the steel as a whole we have produced only 3 million. We want to raise it to 10½.

Mr. LODGE. There are steel plants marked in it by zone earmarked for dismantling. The steel-producing plants are 5 in the United

States zone, 49 in the British zone, and the steel-rolling mills are 31 in the British zone.

If you agree with that recommendation, would you also agree that these plants that I have mentioned should be dismantled?

Secretary ROYALL. Yes, sir. I have not got in mind the figures of those that would be dismantled, but those that are marked for dismantling still leaves enough to increase the steel production threefold.

Mr. LODGE. It also increases the drain on the United States steel.

Secretary ROYALL. Well, it would if Germany were capable of increasing its steel production more than threefold. But it does not increase it.

Mr. LODGE. You say General Clay has taken into consideration the possibility of getting more coal into Germany from us, and the possibility of getting additional labor into Germany.

Secretary ROYALL. I do not think he has taken into consideration getting additional labor and I do not know whether he has specifically considered importing coal from this country. But there are a lot of limiting factors. I do not know how much labor you could get.

Mr. LODGE. You have a tremendous excess of labor from many parts of Europe. As the Ambassador told us, the population has increased in western Europe by 20,000,000 in the 16 countries.

Secretary ROYALL. I suppose part of that surplus will disappear if the economic recovery in the different countries moves forward.

Mr. LODGE. That might be one way.

The second recommendation of the Herter committee was—

Some diversion of European semifinished steel from presently planned use to increase sheet production in idle or underutilized German sheet or strip mills.

Would you agree to that?

Secretary ROYALL. I do not know enough technically about that to know, sir. It sounds reasonable, and I think that could be done under the dismantling plan.

Mr. LODGE. Would it be possible to have an answer on that?

Secretary ROYALL. I do not know if we have anybody here on that. We would be glad to furnish it.

(The information referred to is as follows:)

Under the bizonal level of industry a total production of 10.7 million ingot tons of steel per annum was agreed upon. This is almost twice as much as under the old level of 5.8 million tons per year for all Potsdam Germany. In order to obtain this production an actual steel production capacity of almost 13,000,000 tons has been retained in the bizonal area.

Production in the bizonal area at the present time is running at about $3\frac{1}{4}$ to 4 million tons per year or at approximately one-third of the permitted production. It has also been estimated that about one-third of the retained sheet and strip mills are being utilized at the present time.

One of the bottlenecks that would be difficult to overcome in carrying out a diversion program would be in the transportation field. All available transportation is now being utilized for taking care of the essential requirements of the German economy, such as transport requirements for steel mills, power and gas works, fertilizer, food, lumber, etc., and while top priority has been given to the locomotive and car repair program it will be the end of the year before any appreciable improvement can be expected. Therefore, semi-finished steel diversion should not take place until the transport situation can be improved.

Labor and the housing of labor is another bottleneck and another problem that must be considered carefully before a change or diversion can be made effectively and in the interest of the European economy. It must be recognized that housing in the Ruhr area and in other industrial centers is at a premium. With the exception of miners housing little attempt has been made to improve the present housing situation due to the dire need for the same materials in essential industries.

Also, during the period subsequent to the capitulation there has been no appreciable increase in the supply of skilled labor. Efforts are being made to train skilled labor to meet the anticipated increase in production. In this connection female labor is being encouraged and an effort made to integrate it into the industrial organization wherever practicable.

In conclusion, therefore, it is our considered opinion that under existing conditions, no useful purpose would be accomplished by diverting semi-finished steel from other European countries to the idle or under-utilized German sheet and strip mills.

Mr. LODGE. The third recommendation is—

Suspension of all plants to dismantle or otherwise render inoperable such utilities until it is known that they will be unable to relieve the pinch in sheet and strip.

Would you agree to that?

Secretary ROYALL. I would think that might be correct in general. I think you have to weigh that against other production.

Mr. LODGE. Then, to what extent, if you think that correct?

Secretary ROYALL. I am not sure whether that would require a change in dismantling, because naturally if you paramount one particular item of production, you might have to reduce others, which could move ahead more economically, so I would not want to express an opinion as to any particular industry with my lack of technical knowledge.

Mr. LODGE. Could we have an answer on that?

Secretary ROYALL. Yes; we can. I think we will have to get these answers from General Clay probably.

(The information referred to is as follows:)

The bizonal level of industry as established was designed as a balanced industrial effort. It provides for a level of industry that was designed to leave those plants required for internal needs and to make the best contribution to Europe as a whole. We are advised that ample facilities will still be available for this purpose within the retained level and, therefore, there would not seem to be any necessity to suspend dismantling. In arriving at this level for the bizonal area it was realized that in the other two zones of Germany it was probable that much capital equipment was being removed and that conceivable, in some industries, the level was approaching the level of industry agreed upon quadripartitely in March 1946. This situation, therefore, was taken into consideration as well as questions involving export of finished products, the unusual repair and maintenance requirements for the industrial recovery and the problem of meeting a minimum standard of living for Germany.

Mr. LODGE. Then (d)—

Stoppage of any reduction in German capacity for pipe production and instead supplying adequate amounts of large tube rounds and wide plates for the pipe mills proper.

In that connection, I would like to call your attention to the fact that—

Among the doomed pipe-producing plants are some of the most modern and most efficient units in Europe; that is, four large units of Mannesmann, in Gelsenkirchen, Duisberg, Dusseldorf, and Witten. These plants are specially equipped for the welding of large-diameter pipe.

That was given top priority by the Herter committee as essential to eliminate the delivery of essential oil and gas in the United States as well as to provide Europe with critical oil products from the Middle East. I can hardly point out what a vital matter that is. We are threatened with a serious oil shortage not only now but in the long-term future. Offhand it seems very hard to understand that we

should be demolishing this plant. I wonder if you would comment on that.

Secretary ROYALL. I can only say, sir, I am sure the report of the Herter committee has been sent to General Clay. We will be glad to get you an answer to any of those questions, but unfortunately information on those must come from General Clay. I do not think anyone here is familiar with them. The Under Secretary is directly responsible for military government. I do not think he would know the detailed answers to those.

Mr. LODGE. I should like to get answers on an authoritative basis.

Secretary ROYALL. Yes.

(The information referred to is as follows:)

We are advised that during the past summer American interests were in Germany for the express purpose of investigating the manufacture of pipe. It is understood that production facilities in the capacity of these plants were not sufficient to warrant considering this industry supplying the needs of the Middle East. From an over-all balanced industry point of view it is not considered that the removal of these plants will have a serious effect on the German economy. It is interesting to note also in this connection that in the case of the Mannesmann plants while 4 units are being taken there are two of this firm's plants being retained at Huchingen and Grossenbaum located in the British zone. All of this type of industry scheduled for removal is located within the British zone and if it can be shown that a shift in the type of plant left in Germany would materially assist a European recovery program we would not anticipate any difficulty getting the British to exchange plants now on the list for others of a less critical type.

Mr. LODGE. I would like to touch on the question of nitrogen. I need hardly point out the vast importance of nitrogen. Under average weather conditions, it is my understanding that 1 ton of nitrogen produces 600 bushels of additional grain crop. Therefore 500,000 tons of nitrogen production in Germany lost in the consequence of dismantling and red tape in each of the years of 1946 and 1947 correspond to an approximate loss of 300,000,000 bushels a year in western Europe's food production, which, incidentally, is three times the amount the American consumer was called upon to save in the Luckman food-conservation program.

Secretary ROYALL. I understand we are not dismantling any plants that produce fertilizer.

Mr. LODGE. In the French zone, sir? In the French zone I am informed that the dismantling of Europe's largest nitrogen-producing plant is contemplated.

Secretary ROYALL. We did not do that.

Mr. LODGE. You do not believe that under the European recovery program we should make recommendations to the French with respect to the dismantling of a plant which could relieve the shortage of wheat in the world?

Secretary ROYALL. No. I would think, based on our experience in Germany, that everything in the world should be done to foster the production of fertilizer. We have done that in the American and British zone.

Mr. LODGE. Do you think it would be appropriate to look into this matter with the appropriate authorities in order to find out if something could not be done?

Secretary ROYALL. I would think someone should look into that, yes; not the Army, but I think it should be looked into. I do not know the facts about it.

Mr. LODGE. Both the Herter and Harriman reports stress the importance of nitrogen and that coal and industrial equipment shipments for nitrogen industrial use should be given high priority. That is why I think that we cannot simply say, "This thing is happening in the French zone; we will not do anything about it. We are going to have to ship wheat into France." I strongly believe that we should; but if what we are after is kind of an economic federation, if what we are after is reciprocity among these nations—and General Marshall has said that is essential to the success of his plan—we cannot very well take such a formal view as that, it seems to me.

Secretary ROYALL. Of course, that is beyond my field; but I would not suggest that that view be taken. We have even gone up to Austria to get fertilizer plants restored. We think we must produce as much fertilizer as possible. I do not know anything about that plant, sir.

Mr. LODGE. Would it be possible to have something on that?

Secretary ROYALL. We will get that information from some source. (The information referred to is as follows:)

The above comment referred not only to the broad problem of fertilizer requirements in western Germany, but also to the specific statement made earlier by Mr. Lodge that "in the French zone the dismantling of Europe's largest nitrogen-producing plant took place."

In the first place, no nitrogen fertilizer plant has been dismantled in the United States or United Kingdom zones of Germany, nor is it intended that any will be dismantled.

In regard to the French zone, the Department of the Army has been advised by General Clay's office in reply to a direct question that on January 30, 1948, "the French today categorically repeat denial of any removals" from their zone. This, of course, is a denial of the removal of the plant "at Oppau" which has so frequently been mentioned. OMGUS further stated, "We repeat that no nitrogen fertilizer capacity has been removed from western Germany."

This Department has been informed that the French Embassy has made inquiries of the French Government on this point because of the frequency of the statement that the large "plant at Oppau" has been dismantled.

In considering the fertilizer production capacity in Germany in relation to the European recovery program, the capacity of the Oppau plant was included as available for use. However, information received from OMGUS is to the effect that one part of the plant cannot be repaired and placed in operation in less than 6 months, while another section will require 18 months to repair and place in operation.

Mr. DRAPER. I would say that for a period of 2 years we made every possible effort to get ammonia water, which is the basis of fertilizer, from the French zone, made special allocations of coal, and did get some, but it has never worked out to a large degree.

Mr. LODGE. It does not seem to me it would be advantageous to the French to destroy a nitrogen plant.

Mr. DRAPER. I would agree with you and would be glad to give attention to it. I would also say that we have made every effort over the period of the 2 years, sometimes more and sometimes less, to give a very high priority in the allocation of coal to the nitrogen plant for just that purpose.

Mr. LODGE. I am very glad to hear that.

Mr. DRAPER. That has had more success in the recent months when the coal shortage was terrific.

Mr. LODGE. Thank you very much.

Mr. DRAPER. I could add one other thought, which is not conclusive at all, on your other question about the rolled products and the pipe. So far as the rolled products go, my own experience, which is now 6 months old, and also the comment that we got back when this question was being considered sometime ago from the theater, was that there was sufficient rolling capacity to take care of any volume of ingot that was being rolled that could be expected. However, we will go into the matter further.

Mr. LODGE. Does that apply to pipe?

Mr. DRAPER. I believe there is very little pipe capacity in our own zone. It is largely in the British zone. I do not have that before me. But we were stressing pipe to the extent possible and were not in a position 6 months ago, or maybe 9 months ago, when I last got into the pipe question over there, of producing anything like the amount of pipe that either we needed or that seemed to be possible under the steel and coal allocations. That does not fully answer your question.

Mr. LODGE. It would be better than nothing. I also would like to point out this view that, according to the information I have, the value of a plant after dismantling is roughly 8 percent of the value of the plant prior to dismantling. Therefore, it would seem to me that it might be discrete to postpone it until the matter can be fully explored because, after all, we take great care of our investments and we should take an equal amount of care in our divestments. The total value of these plants had been estimated, as I understand it, to be one billion dollars, which even today seems like a lot of money.

Mr. DRAPER. I am sure you are not speaking of the American zone because the remaining plants in the American zone are comparatively small both in number and in average size and do not approximate that.

Mr. LODGE. Of course, the European recovery program is not confined to the American zone.

Mr. DRAPER. Yes.

Mr. VORYS. As I understand it, under the January 1 new bizonal agreement, we furnish about 10 to 1.

Secretary ROYALL. Eight to ten to one.

Mr. VORYS. Eight to ten to one of the dollar needs of the two zones. That is about correct, is it not?

Secretary ROYALL. That is correct. That is for relief funds.

Mr. VORYS. But the relief funds are category A, and so forth. That is all for the civilian economy of Germany.

Secretary ROYALL. That is right. There is civilian feeding, too.

Mr. VORYS. Do I understand you correctly that we have reserved no voice at all as to what the British do with the plants in their zones so that we have no right under the new agreement even to raise the question of dismantling?

Secretary ROYALL. No. We can raise the question, but not control it.

Mr. VORYS. In other matters, we have a new degree of authority or of management somewhat approximating our contribution. That is true, is it not?

Secretary ROYALL. That is right. You see we agreed on this level of industry last August, with the British, on the basis that that would restore or enable us to restore German industrial production from an over-all standpoint of approximately its 1936 level. General Clay

thinks that that is a sound decision. Now, the difference between us and the British in the question is not in dismantling. We have continued to dismantle, but the difference is in the delivery to Russia, if it is a difference. That is now under discussion with them. That is by the State Department. That is a matter we do not handle. The State Department is discussing that with them. Of course, I do not want to get into a lot of details on this, but some supplies do come in from the Russian zone.

Mr. LODGE. Mr. Secretary, in that connection, and in connection with the Herter committee recommendations, I understand from certain sources that—

According to reports from German papers, the doomed rolling mills represent 55 percent of the total capacity for strip and tinplate and as much as 65 percent of the capacity for medium and heavier sheet. There can be no doubt that the dismantling of these factories will defeat the constructive proposals of the Herter committee to increase sheet production in idle or under-utilized German sheet or strip mills. It will, therefore, create an unnecessarily inflationary impact on the Marshall plan on the American economy by aggravating and prolonging our scarcity of steel products.

I would like in addition to have those figures verified as to whether that is true, and, if not, if those figures are not right, if the correct percentages could be submitted to the committee.

Mr. MANSFIELD. Will the gentleman yield?

Secretary ROYALL. That will be done.

(The information referred to is as follows:)

Comparative list of plants available for reparations under old and new level of industry by category of industry in each of the three western zones of occupation:

	United States zone	United Kingdom zone	French zone	Total
Number of plants listed for reparations under new level of industry established August 1947				
War plants.....	104	196	33	335
Ferrous metals.....	5	87	2	94
Nonferrous metals.....	5	6	10	21
Chemicals.....	18	24	26	68

Unspecified.....	142	271	322	
Total.....	478	1,152	322	1,952

¹ Consolidated figure for mechanical and electrical engineering.

² This is a consolidated figure of plants listed under aircraft and armament under the old level of industry.

³ British computation gives a consolidated figure for ferrous and nonferrous industries.

⁴ No category break-down available.

Mr. MANSFIELD. Mr. Secretary, do I understand you correctly when I say that you estimate the cost of American occupation of our zone at roughly \$1,000,000 a year?

Secretary ROYALL. Well, no. I estimate that the occupation costs, exclusive of relief feeding, exclusive of any contribution under the European recovery program—I say it is hard to estimate—is about \$450,000,000. The relief program is about \$700,000,000. The European recovery program would involve a 12-month expenditure in Germany of approximately \$250,000,000.

Mr. MANSFIELD. Exclusive of the European recovery program, and taking in the cost of occupation and the relief program, it would be roughly \$1,150,000,000?

Secretary ROYALL. Yes.

Mr. MANSFIELD. Now, if there is no European recovery program, are we to assume that in the next 4-year period, which is the life of this plan, if it goes through, that it will cost you roughly \$1,000,000,000 a year to take care of the occupation and the relief costs of Germany?

Secretary ROYALL. We think that will gradually come down, but very gradually.

Mr. MANSFIELD. I am saying a billion dollars a year.

Secretary ROYALL. I do not know whether it will overreach that.

Mr. MANSFIELD. Then, it is safe to assume that \$4,000,000,000 will go into Germany during the next 4 years?

Secretary ROYALL. No, the European recovery program will bring a more rapid recovery.

Mr. MANSFIELD. Without the European recovery program?

Secretary ROYALL. I think that is a pretty good estimate.

Mr. MANSFIELD. The point is that under this \$17,000,000,000 proposal, the total is done away with, but no matter what the total is, you say that \$4,000,000,000 approximately would have to go into our occupation costs from Germany, anyway, so that would knock down the total from, let us say, \$15,000,000,000 down to \$11,000,000,000 for the rest of Europe?

Secretary ROYALL. I do not think that is quite right. You see even if you have the European recovery program, there will be some contribution to Germany, and, therefore, the duplication should be eliminated, and you cannot say that we would have to spend the four billion under that. In other words, under the recovery program, you would have to spend something. I have not figured it out. Without the recovery program, on your figures, we would spend \$4,000,000,000. The saving is only part of the four billion.

Mr. JAVITS. Will the gentleman yield to me?

Mr. LODGE. If I can go beyond 5 o'clock.

Chairman EATON. I hope you do not go beyond 5 o'clock.

Mr. JAVITS. Would you include in the information you are going to give Mr. Lodge an analysis of what it means to take these plants and rebuild them in one of the countries getting reparations and the economic effect of that as counterbalancing the economic deduction from Germany?

Secretary ROYALL. I am not sure how accurate that would be.

Mr. JAVITS. They are not being destroyed, they are being rebuilt.

Chairman EATON. Do you want to go on beyond 5 o'clock?

Mr. LODGE. I am afraid my questions will take longer than that.

Chairman EATON. Then, I will have to ask Mr. Vorys to take the chair. I would like to announce that we will meet tomorrow at 10

o'clock with Secretary Snyder and at 2 o'clock in the afternoon in this room.

Before I go, I want to thank the distinguished Secretary for a very, very competent and exhaustive statement.

Secretary ROYALL. Thank you, Mr. Chairman. I want to thank the committee before you leave for their very intelligent and courteous treatment.

Chairman EATON. We have a very intelligent committee and we are just anxious to find some way to lay a foundation for the toughest job that has ever faced us.

Secretary ROYALL. It is a very tough job.

Chairman EATON. Mr. Vorys is the chairman now.

Mr. LODGE. Mr. Secretary, to leave this question of dismantling, I heard a rumor that we have purchased some rather obsolete British planes and given them to the Greek Government under the Greco-Turkish bill, whereas we had acres of 1945 undamaged planes lying wing to wing and nose to tail in Nuremburg and other places in the heads of which we had placed charges of dynamite and exploded them. I wonder if you would care to comment on that.

Secretary ROYALL. I did not hear the rumor. I do know that shortly after the war, there was destruction of some planes, but I do not know much about it because I did not have anything to do with it at that time. I know some planes were destroyed.

Mr. LODGE. Would it be possible to get the information?

Secretary ROYALL. I can get you the information.

(The information referred to is as follows:)

British Spitfire aircraft are being purchased for the Government of Greece using American dollars appropriated by Congress for aid to Greece. Informal information received from the RAF delegation at Athens indicates that the total cost, delivered, for 20 Spitfire planes with accessories and 1-year supply of spares amounts to \$281,335. Negotiations with the British for the purchase of the aircraft are being handled by the Department of the Army. At this writing none of the aircraft have yet been delivered.

The decision to utilize Spitfires was based on several considerations. For one thing, the Greek Air Force already had Spitfires obtained from the British and the additional aircraft were to supplement those already in use. Secondly, the introduction of a different type of aircraft into the Greek Air Force would complicate problems of supply, maintenance, and training. Thirdly, the British were willing to sell Spitfires plus a year's supply of maintenance parts for a fraction of the original purchase price. The United States could furnish a comparable fighter (P-51) but only at a higher cost, and spares could not be furnished for the most part without procurement.

With reference to the destruction of United States planes in Germany, it is true that aircraft were destroyed by use of demolition charges.

At the end of the war we had a vast quantity of aircraft surplus to foreseeable peacetime requirements and the maintenance or storage of all of these surplus aircraft, a great number of which were B-17 bombers, was neither feasible nor desirable.

The cost of preparing aircraft for storage is appreciable, and storage life is not indefinite. The number of aircraft which could be economically and practically stored was carefully calculated on the basis of foreseeable requirements and available funds, and only the newer and improved types were marked for storage. With certain exceptions, the types of aircraft destroyed were obsolescent, and storage of these could be accomplished only at the expense of development of improved types.

The surplus aircraft could not be economically returned to the United States for disposal, neither funds nor manpower were available at the time for orderly salvage, and it was essential that the aircraft be made unfit for use as combat aircraft. The only recourse was the action taken—sufficient demolition to render them inoperable and unrepairable.

Mr. LODGE. As a matter of fact, I asked the Secretary of National Defense this question. He had no aides when he appeared before us, and I know that he has a lot of other things to think about. I was wondering if it would be possible to get some information on that. It does seem that it would be better to give the Greeks 1945 American planes instead of demolishing them as in excess of current needs.

Secretary ROYALL. I have never heard of any demolition of planes after the Greek program came along. I never heard that. I would be very surprised if any planes had been demolished since the Greek program.

Mr. LODGE. If we could have the information on that I would appreciate it.

Secretary ROYALL. I will not say it is not true. Of course, we demolished war equipment in a number of places immediately after the war.

Mrs. BOLTON. The ATC does not have any spare parts.

Secretary ROYALL. These planes were not transport planes. They would not have done any good on ATC spare parts.

Mrs. BOLTON. Some of them were fighter planes.

Secretary ROYALL. If we had kept all the fighter planes and all the bombing planes and all the other planes we had at the end of the war, we would have spent billions of dollars keeping them.

Mr. LODGE. However, I think you will agree with me that we can be certain of two things: that push-button warfare is not here today, and, secondly, that it will be with us some day, and since it is not with us today, we might keep some obsolete planes until it is with us.

Secretary ROYALL. I do not know, sir. I would say there is no doubt about the fact that the Army and the Air Force, and I imagine the Navy, I am sure the Navy, has had to abandon equipment for which they had neither the men nor the money even to guard.

Mr. LODGE. Of course, the Navy has been able to mothball a lot of it.

Secretary ROYALL. I also know that the hysterical demand for return of men from overseas caused an enormous financial loss in the abandonment of items that should have been saved.

Mr. LODGE. That is right.

Mr. Secretary, in your opinion even with the European recovery program, should we have an Air Force composed of less than 70 air groups?

Secretary ROYALL. I have no opinion on that. I am not qualified to give you an answer.

Mr. LODGE. I would be glad if I could have an answer on that.

Secretary ROYALL. I do not know that I can become qualified to give you an answer on that. It is not in my scope of duties, and I think the answer should probably come from someone else.

Mr. LODGE. All right, sir.

Now, Mr. Baruch is reported in the papers to have testified that it would be a good idea to have some military alliances with all the 16 participating nations. How do you feel about that, Mr. Secretary?

Secretary ROYALL. Well, I have not given any consideration to it and I have not read Mr. Baruch's statement. I believe in the UN.

Mr. LODGE. But this program is not being done through the UN. This program is not being implemented through the UN.

Secretary ROYALL. I would not want to take any step that is inconsistent with either the theory or announced principles of the UN.

Mr. LODGE. May I suggest, that under article 51, it would not be inconsistent.

Secretary ROYALL. It could and could not. It depends on what it does and what the scope of the alliance is. I am not an authority on the UN, but I am sure that the purposes and the extent of the alliance and what it involves in obligation is a consideration of that. I did not mean to say that some form of alliance could not be had.

Mr. LODGE. I will put the question differently. I assume—and I realize I am treading on delicate ground here, and I shall quite understand if you refuse to answer—but there is no question that the military establishments of the several countries constitute a burden on these countries, a necessary burden; but a burden. Now, to the same extent that a quasi economic federation will diminish the economic burdens, to the same extent, it seems to me, a sort of military alliance would diminish the military burden and thereby diminish the necessities of these countries under their military programs. In other words, if you were to look at the map of western Europe, strategically, and I take it that you agree with me that this measure is at least to a considerable extent a strategical measure, you would be bound to consider the disposition of forces over that part of the world, and if you considered it as an entity rather than as a conglomeration of nations, it might result not only in a much more strategical disposition of these forces, but in considerable savings to the American taxpayer. Would you care to comment on that approach to the problem?

Secretary ROYALL. I do not believe I would, largely because of the fact that the question of alliances and agreements with other nations is primarily the scope of the State Department, and I, of course, realize that the military aspects are considerations. There are so many other considerations that I believe it would be unwise for me to discuss it.

Mr. LODGE. I quite understand that. However, I would like to get your assurance that your Department is doing a lot of heavy thinking on that problem.

Secretary ROYALL. Well, we have considered every possible military aspect of it, I think.

Mr. LODGE. Would you care to comment on this, Mr. Secretary: It is my understanding—and I gained this understanding from conversations with the highest military authorities in France and Italy—that there is absolutely no liaison at all, at this time, between the French and Italian armed forces.

Does that seem to you to be realistic, or does that seem to you to be proper at this particular juncture in human affairs?

Secretary ROYALL. Well, I do not know enough about the facts on that. I do not believe I know enough about the facts and considerations—to comment on that.

I have seen some items in the press about it, but I do not care to comment. If I get into the discussion of alliances and agreements and covenants and treaties, not only in which we are involved but in which other nations are involved, I am way beyond my jurisdiction, and you know the poor old defense forces are accused of trying to run the country. I do not want to add any additional evidence.

Mr. LODGE. May I say as to that, Mr. Secretary, that I am in the position of having to consider those matters because, insofar as the

ERP is a strategical measure, it is but one aspect of strategy, as doubtless you realize. We have other aspects. At the moment we have the interim-aid bill. We have the cultural and information program and we have the disposition of forces as they may affect our position throughout the world.

Therefore, naturally, in thinking of this as a strategical measure I think of it as a component part of the larger picture and not simply as piece-meal legislation. Accordingly I am attempting to document myself as much as possible on the full picture and the full implications of the picture.

Secretary ROYALL. It is not military strategy but a strategy in the broader sense, I am sure. That involves a lot of things, in which the military certainly cannot speak alone, and probably should not prejudice any other department by their discussion.

Mr. LODGE. It is my belief, Mr. Secretary, that the immediate threat is not war but internal force, particularly in France and Italy. I believe that the anti-American and anti-freedom campaign by the Communists has gone out of the realm of attempts to capture governments by constitutional means and into the second stage, which is the attempt to capture them by internal force—the third stage being war.

Do you believe that the ERP, if it is passed, as General Marshall requested it, promptly, adequately and effectively and cooperatively, will be sufficient to protect the governments of France and Italy from seizure by internal force?

Secretary ROYALL. From the information that I have, which involves statements of General Marshall and others, I am inclined to think that that is the more probable result. I do not think any one can say dogmatically or with certainty exactly what the ERP will produce. I think all we can do is to give our best judgment, with the full realization that no one can really know completely.

It is the same thing with the UN. It is the same thing, to some extent, with the defense establishment. Absolute security is a non-existent thing, with certainty. A combination of absolute security and certainty is not existent. Everything is dependent upon so many imponderables and uncertainties in the future that we cannot tell. But my best judgment is that, first, the only real chance of preventing just what you say is a danger—and which may well be a danger—is to rehabilitate the economic life of the European countries.

My second point is that my best judgment is that it will have that effect.

Mr. LODGE. Well, Mr. Secretary, insofar as it militates against that danger, it is because it diminishes the popularity of communism by alleviating starvation and misery; is that not right?

Secretary ROYALL. I do not think you can put it solely on popularity. It also would tend to decrease starvation, disease, and unrest, discouragement, which are the breeding grounds for any radical change of thought. I do not think the term "popularity" is quite inclusive.

Mr. LODGE. Let us say that it would tend, in mitigating those circumstances, to diminish the spread of the disease of communism among the people.

Secretary ROYALL. I think it would; yes.

Mr. LODGE. Well, I would like to point out to you, there, that in Poland there are only 3 percent Communists. There are 30 percent in France. There are fewer Communists in the eastern European countries behind the "iron curtain" than there are, percentage-wise, in the western European countries outside the "iron curtain." And from that I would deduce that combating the spread of the disease is not enough because of the Communists' resort to internal force when constitutional means do not succeed.

Now, my question—and I would like to put it to you again—is: Is there anything in the administration's thinking about the problem of making the fractional effort that would be required to assist these western European countries to meet the threat of internal force until the European recovery program can so bolster and strengthen these governments that they no longer need any assistance to meet that threat?

Secretary ROYALL. I do not know exactly what you have in mind. I am sure that we are lending encouragement to the constituted authorities of these countries, and the most encouragement that we can render, it seems to me, is the holding out, at least, of the hope that we may assist their economic condition.

Mr. LODGE. I have in mind, Mr. Secretary, attempts by violence to seize the Government of Italy before this can take hold.

Secretary ROYALL. Yes.

Mr. LODGE. I spent some 3 weeks there this fall, and the Communist forces in Italy are very well armed and very strong. Now, that is a very difficult weapon for us to cope with because we are a legally minded people. But surely we must recognize, as realistic people, that there are attempts, and there are likely to be further attempts, to capture these legally constituted governments by extra-legal means.

Secretary ROYALL. I certainly would not dismiss that as a possibility—that that attempt will be made. But I do not know how; I do not know enough to know how. You have been there more recently than I have, Mr. Lodge, and your judgment on it should be very good.

I do not know how real the danger is of an internal coup by force in those countries. I know it is certainly a possibility.

Mr. LODGE. In Italy it is the most dangerous, and I was anxious to receive assurance that that danger was recognized in the high places in the administration and that something was being done to assist these countries to meet that danger.

Surely if the ERP program has significance we must examine all the strategical elements that are involved in its success.

Secretary ROYALL. I am sure that all the defense departments are constantly alert to the internal as well as the external conditions and all the countries of the world, as far as they can get that information.

Mr. LODGE. Thank you very much, Mr. Secretary.

Mr. VORYS. The committee will stand adjourned until 10 o'clock tomorrow morning.

(Whereupon, at 5:15 p. m., the committee adjourned to 10 a. m., Wednesday, January 21, 1948.)

UNITED STATES FOREIGN POLICY FOR A POSTWAR RECOVERY PROGRAM

WEDNESDAY, JANUARY 21, 1948

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met, pursuant to adjournment, the Honorable Charles A. Eaton (chairman) presiding.

Chairman EATON. The committee will be in order.

We have with us this morning the Secretary of the Treasury, Mr. Snyder.

Mr. Secretary, we are glad to have you with us this morning, and we will be glad to have you proceed in your own way.

Secretary SNYDER. Mr. Chairman, it is a pleasure for me to be before your committee.

I have a prepared statement which I would like to read first.

Chairman EATON. Very well. You may proceed in your own way.

STATEMENT OF HON. JOHN W. SNYDER, SECRETARY OF THE TREASURY

Secretary SNYDER. The President, in his message to the Congress, recommended that 6.8 billion dollars be appropriated to finance the European recovery program for the 15-month period ending June 30, 1949.

The National Advisory Council on International Monetary and Financial Problems has carefully considered all the financial aspects of the program.

The following statement, which was approved by the Council for submission to the committees of the Congress, summarizes the conclusions reached by the Council on the principal financial aspects of the program.

First, as to the over-all figure recommended by the President to be appropriated for the first 15 months, the Council has carefully reviewed the procedures which have been used by the interdepartmental committees of experts in arriving at this figure.

These procedures involved a critical examination of European needs and of availabilities in the United States and in other major supplying areas, and careful estimates of European dollar income and resources. The National Advisory Council believes that this approach is sound and has concluded that the recommended amount is needed to achieve the objectives of the program.

The first matter of detail which I wish to take up is the question of the form in which aid should be extended to Europe. This assistance should be provided as a combination of grants-in-aid and loans.

The criterion for selecting one or the other form should be the capacity of the participating countries to earn, in the years to come, the dollars which would be needed to pay interest and principal.

We must keep in mind that these countries have already incurred an obligation for large annual payments of interest and amortization arising from the dollar loans extended to them over a period of years by the United States Government or the United States private capital market.

We should take care not to insist that these countries contract additional dollar debts which will absorb so much of their dollar earnings as to operate to the disadvantage of future trade and private investment.

If the entire aid for European countries were to be on a loan basis, it would be practically impossible for them to meet the additional annual charges from their earnings of dollars, even after trade and investment return to normal.

The proportion of total aid which can prudently be provided on a loan basis must depend on the estimate of the borrowing country's capacity to repay in dollars and also on the degree of flexibility which can be introduced into the terms of repayment.

The International Bank may be expected to finance part of the capital requirements of the European countries, particularly where they require the financing of permanent additions to their equipment.

It does not seem likely, however, that the bank will be able to carry the whole, or even the major, part of the program, which properly ought to be put on a loan basis.

We propose, therefore, that when the Administrator for Economic Cooperation decides, after consulting the National Advisory Council, that it is desirable to extend aid on a credit basis, he will allocate the funds to the Export-Import Bank of Washington, which will then make the loan as directed and on terms specified by the Administrator in consultation with the National Advisory Council.

This procedure will enable the Administrator to draw upon the broad experience of the Export-Import Bank in the making of foreign loans.

Incidentally, this is one example of the manner in which the National Advisory Council would perform its customary role of coordination of United States foreign financial policy.

I shall be glad to describe this role in greater detail if the members of the committee wish me to do so.

It is also important that the American business enterprises be given opportunity to participate in the recovery program by making new investments abroad, or by expanding existing facilities where the program calls for additional capital equipment.

In this way, they will contribute to the restoration of Europe, while at the same time they will be carrying out their own programs for expansion abroad.

But we must recognize that new investments would be made at a time of great uncertainty and that investors may anticipate encountering difficulty in converting their earnings or their original principal into dollars.

To facilitate private investment, therefore, it will probably be necessary for the Government to guarantee the convertibility into dollars of local currency earned by the investment or available for the repatriation of the original investment.

While we may expect that the participating countries will try to make dollars available, it is possible that they will not have adequate dollars to permit conversion.

The Economic Cooperation Administration should not be expected to guarantee American companies making these investments against normal risks but merely to give them a transfer guaranty.

We propose that not more than 5 percent of the funds appropriated by Congress for the program should be obligated for these guaranties and that the guaranties themselves should not exceed the amount of the original investment and should not be extended more than 10 years from the termination of the 4-year program.

Some people have argued that the participating countries should pay for part of the program by using up their gold and dollar assets in the United States and by liquidating the American investments of their own citizens.

I need not labor the point that the European countries must have some gold and dollar reserves to finance their international trade if they are to return to normal operations after 1952.

It should be kept in mind that the European recovery program is not intended to cover the entire import requirements of these countries.

It would be folly on our part to force the European countries to use up their gold and dollar balances to a point where they would not have adequate funds to operate smoothly through ordinary commercial and financial channels.

By insisting that the participating countries exhaust their gold and dollar balances, we would merely add further instability to their monetary systems.

As a matter of fact, all of the participating countries except Switzerland, Turkey, and Portugal have already reduced their dollar balances to, or below, the amount which would normally be regarded as safe.

When we turn to the possibility of liquidating European investments in the United States, we must also look at the problem in terms of its long-run consequences.

These investments annually earn a dollar income, which will be used to cover part of the cost of the program and which be used in the future to meet part of the cost of imports after the program ends.

Without these investments, the balance-of-payments situation of the participating countries will be worse in the future. I doubt very much that it would be wise policy for the United States to require European countries as a general rule to liquidate the property owned in the United States by their nationals as a condition for receiving aid from this Government.

Even if these countries could liquidate all of the property owned by their citizens in the United States, they could not pay for more than a small part of the program.

We estimate that as of last June 30 the long-term dollar assets held by persons in the participating countries amounted to about 4.9 billion dollars.

Of this amount 1.5 billion dollars consisted of direct investments, and a considerable part of the remainder also consists of holdings which would be difficult to liquidate.

Some of these assets are already pledged for loans, while for many of the countries involved the amounts held here are negligible.

Some of the governments, however, will decide to liquidate some or all of their holdings so as to pay for imports.

In practice, this may be an alternative to borrowing from the United States.

We certainly will not object to the governments using these funds. The question of policy for us to decide is the extent to which we can help these countries in obtaining control of these assets.

In the case of unblocked assets, the only way the European governments can get control of them under present circumstances is through the compliance of their citizens with local laws.

In fact, a considerable portion of the assets formerly blocked in the United States has been unfrozen as a result of such action. While we do not have exact data on unblocked assets, we believe the amount is comparatively small.

A large part of the blocked assets are still blocked because their owners have not obtained from their own governments a certification that there is no enemy interest in their assets, which is required by the United States Treasury before the assets are unblocked.

The National Advisory Council and the executive departments concerned with this matter are giving very careful study to this problem. We hope to reach a final view as to the most satisfactory solution of this problem very shortly.

It will not be possible to obtain all the goods needed for the recovery program in the United States, nor would it be desirable to attempt to do so.

Some commodities are in short supply here, and purchasing abroad would leave more available for our own population and would in many instances reduce the net cost of the program. The needed amounts of food cannot be obtained in the United States.

A large percentage of the requirements of grain, fats and oils, meat, and other agricultural products can be procured only in other countries of the Western Hemisphere.

In this manner we can make it possible for countries in the Western Hemisphere to supply larger amounts of foods and materials to Europe and at the same time maintain essential imports from the United States.

It is the opinion, therefore, of the National Advisory Council that the Economic Cooperation Administrator should be authorized to expend funds for the procurement of supplies for the recovery program outside of the United States.

This would relieve pressure upon goods and services in short supply in the United States and would in some instances have further effect of assisting third countries in maintaining needed imports from the United States.

We definitely would not permit the use of dollars to buy goods abroad where the supplies available in the United States at reasonable prices are adequate for our needs as well as for the requirements of foreign countries.

In any case, all purchases would be made according to an agreed program, and the administering agency would control the use of the funds appropriated by Congress.

In addition to purchases in the Western Hemisphere, there are special instances where it may be in our interest to procure certain essential products in one participating country for delivery to another, making payment in dollars.

For example, we might buy steel or coal in one participating country for delivery to another. The dollars which are received would then

be used by the supplying country to pay for imports from the United States, thus reducing the need for direct expenditures by the United States for aid to the supplying country.

If the recovery program is to be successful, adequate measures for monetary stabilization must be taken promptly and with vigor by the European countries.

At the Paris meeting the 16 participating countries undertook—

to apply any necessary measures leading to the rapid achievement of internal financial, monetary, and economic stability while maintaining in each country a high level of employment.

They have recognized that recovery is not possible as long as inflation continues and unless production is increased.

The measures which should be taken must vary somewhat from country to country, but the general outline is clear.

Budgets should be brought into balance rapidly, so that the necessary expenses of government can be met without increasing the public debt and without increasing direct inflationary pressures.

In most countries modifications in tax structures and control of expenditures will be needed. As determined steps are taken, the trend toward budgetary balances, increased production, and steadying prices will all interact upon one another to facilitate stabilization.

The Administration proposes that each country receiving aid from the United States shall enter into a separate agreement with this Government which will cover the terms on which aid will be given.

The European signatories will undertake to adopt the financial and monetary measures which are necessary to stabilize their currencies and to maintain and establish proper rates of exchange. These agreements will also cover such matters as cooperation with other countries, the proper use of the goods supplied, and the establishment of a separate account for the local currency equivalent to the aid supplied in the form of grants.

Moreover, each country would agree to supply the United States Government with full information about any pertinent aspect of the recovery program and to give a report on the program to its own people, on the basis of the information which the cooperating countries will give us, and also from the reports of our own missions in these countries, we can be informed about the situation, and so be in a position to discuss with the country the measures which it has taken, or ought to take, to contribute to the recovery of Europe and its own stability.

We have a direct interest in assuring that the aid we provide to Europe makes a maximum contribution to the reduction of inflationary pressures and the restoration of stability.

To this end we propose that each participating country will deposit in a special account the local currency equivalent to an agreed rate of exchange, to the dollar cost to this Government of the goods supplied through grants-in-aid.

These accounts should be drawn upon only for constructive, stabilizing purposes. In many instances it will probably be best either to let the accounts remain idle or to authorize the use of this local currency to effect a net reduction in the government's debt.

These accounts, of course, will be available to finance some of our administrative expenses in connection with this program.

There may be instances in which they might also be used for reconstruction or development, or other purposes which would contribute to the increase of production in the country. In the view of the National Advisory Council, such expenditures should be undertaken only in agreement with this Government.

I wish to make it clear that the National Advisory Council, in considering the financial measures which the European countries should take, had very much in mind the necessity of preserving the spirit of free and friendly cooperation between this Government and the European governments.

I am sure this country does not wish to dictate to these friendly countries either the particular measures they should take, or the exact manner in which they should be taken.

The adjustment of some exchange rates may be expected in the course of European recovery.

Inflation in Europe in certain instances has given rise to exchange rates which result in an overvaluation of the currencies in relation to the dollar.

This state of affairs has tended to hinder the exports of such countries and, at the same time, to make imports relatively cheap in terms of local currency.

In some cases countries have resorted to export subsidies, by means of special exchange rates, or have used other measures in conflict with our own long-range international economic program.

The determination of an appropriate exchange rate is a very complex matter, involving the widest range considerations relating to prices, costs, and balances of payments.

The difficulties in settling exchange rates under present conditions are such that, although the rates of some of the participating countries will certainly have to be adjusted, the timing of these adjustments will vary from country to country.

Accordingly it would not be good policy for us to insist upon an across-the-board modification of exchange rates before we extend aid.

The revision of rates of individual countries should instead be considered as a part of a developing program of internal and external stabilization in conjunction with United States assistance.

To ensure that these revisions will be undertaken where necessary, the recipient countries will be asked to agree that when, in the opinion of the United States Government, their exchange rates are imposing an unjustifiable burden on their balances of payments, they will consult with the International Monetary Fund about revision.

Countries which are not members of the fund would be expected to consult directly with the United States Government. The National Advisory Council is making continual studies of the exchange rate problem and is the agency directed by Congress to coordinate policy in this matter.

After progress has been made toward internal stabilization in the European countries by balancing budgets, increasing production, and expanding trade, the time will arrive when it may be appropriate to make stabilization loans which would give greater assurance to the people of the participating countries that the stabilization will be permanent.

There is greater confidence in the stability of money if there is gold or dollars in the hands of the central bank.

At the appropriate point in the program it would be well worth while to give countries this additional assurance by extending a loan to provide monetary reserves.

If the loan is given prematurely, the reserves might be dissipated through balance-of-payments deficits.

A stabilization loan to be effective should come when there is reasonable assurance that the internal situation of the country concerned is satisfactory, and that it will be able to maintain its exchange rate at a stable level for a considerable period of time.

It is not likely that this situation will be reached immediately, but it is possible that in the course of 1948, and probably in 1949, some countries will be in a position to use stabilization loans effectively.

At the appropriate time Congress may then be requested to appropriate additional funds to be used by the United States Stabilization Fund to make these loans.

Finally, I should like to make a brief comment concerning the financing of the program. It would serve no good purpose to ask the European countries to put their own houses in order if we, ourselves, adopted methods which might accentuate inflation in the United States or upset our own economic stability.

It is my firm opinion that we should finance the European recovery program within a balanced budget. I am confident that, so long as we pursue a sound fiscal policy, we shall be able to cover the cost of the European recovery program out of current revenues.

Chairman EATON. Thank you, Mr. Secretary.

We appreciate your very informative statement, and the last statement you made raises a question which I have in mind, as to the impact of this program upon our own economy.

You indicate that in addition to all that is proposed under this measure, there would be further loans made. How is the Treasury? Does it have a bottom to it?

Secretary SNYDER. Those loans would be purely stabilization loans such as we have made, Mr. Chairman, from time to time in the past. It was provided a few years ago that we should have a stabilization fund to help stabilize the relationship between United States and foreign currencies.

That fund is of such nature that the money comes back. It is really a revolving fund, so that when a country has a temporary imbalance, in its balance-of-payments situation, they can borrow some money for their reserve and as soon as the imbalance is made up it is paid back.

Stabilization is a question that would come up. I just mentioned that here because I thought it was important and that it should be given consideration.

It is part of the consideration that we have to give to the matter of getting the European countries stabilized.

Chairman EATON. As the financial agent of the Government is it your view that this great expenditure will not have a serious reaction upon our own economy, and possibly dislocate it?

Secretary SNYDER. From the studies that have been made by the various groups, we have been pretty well assured that we can do it without any serious impact on this country.

The expenditure would certainly be nothing comparable to what might happen to it if we did not make the effort.

Chairman EATON. It would have an effect upon prices here?

Secretary SNYDER. It could have. I do not think that it should necessarily have such an effect, and that is why the provision is suggested for off-shore purposes, so as to keep in mind, if we get short supply articles, and purchases here might force prices up, that we might look for those articles in other countries.

Chairman EATON. Now, we have a great problem of how to handle this tremendous transaction; its organization, and so forth.

Why can we not turn it over to the Secretary of the Treasury to handle?

Secretary SNYDER. Well, I appreciate that suggestion.

Chairman EATON. Are you responsive to that suggestion?

Secretary SNYDER. I think the suggestion made in the proposal is workable, Mr. Chairman. The crux of the whole program is the administrator. We must get able men to handle this program. We have studied the proposed organization very carefully, and we believe it is workable under the direction of an able administrator.

Chairman EATON. Of course, the general impression among us ordinary citizens is that the Treasury Department handles the funds of our country, which we supply, and that it is the most competent to do so of any section of the Government, including the State Department and others.

But you decline to accept that job, do you?

Secretary SNYDER. Well, Mr. Chairman, I think that this is so tied in with our foreign policy that we must have the administrator working very closely with the State Department. We could get off into some pretty difficult areas if we started out with two different Cabinet members operating in the foreign policy field.

Chairman EATON. They might not agree?

Secretary SNYDER. They might reach times when they would not agree on certain matters; while I am quite sure that General Marshall and I would always agree, there might come a time when a disagreement might arise, and we could not risk the development of two separate foreign policies.

We must have one foreign policy, with the financial aspect and the political aspect working hand in hand.

Chairman EATON. All I had in mind was the question that our foreign policy, present and future, will have at the masthead, a dollar mark, is that not right?

Secretary SNYDER. For a while, it will definitely have to, because we are certainly going to be extending aid to these countries, which is dollar-wise aid.

Chairman EATON. Thank you.

Mr. Jarman.

Mr. JARMAN. Mr. Secretary, speaking of the possibility of disagreement of Cabinet officers and of two foreign policies—we tried that, did we not? We tried two foreign policies, or two foreign policies were attempted about 18 months ago, and that did not work so very well, did it?

Secretary SNYDER. Well, I think we need one foreign policy, Mr. Congressman.

Mr. JARMAN. I am thoroughly in agreement with you, Mr. Secretary. Perhaps I should know this, but refresh my memory, Mr. Secretary, as to this National Advisory Council.

Secretary SNYDER. The National Advisory Council is composed of the Secretary of the Treasury as Chairman, and has as its members the Secretary of Commerce, the Secretary of State, the Chairman of the Export-Import Bank, and the Chairman of the Board of Governors of the Federal Reserve System.

Any Government financing, foreign financing, is channeled through that council, and it is that council which instructs our director on the International Monetary Fund and our director on the International Bank, as to his policy. It is determined within this council and they are instructed as to the positions to be taken in matters coming before those two international financial institutions.

It also forms the general lending policy of the Export-Import Bank.

Chairman EATON. Will the gentleman yield?

Mr. JARMAN. Yes, sir.

Chairman EATON. If we effectuate this legislation, would that National Advisory Council still have authority over the Administrator?

Secretary SNYDER. It is provided that the Administrator would perform all of his policies in consultation with the National Advisory Council just as the Export-Import Bank does. Through that council we are able to avoid duplication of effort and to measure what is done in one field as it affects another field and our operations have been very effective to date.

Mr. JARMAN. The National Advisory Council is entirely separate, is it not, from the Harriman committee?

Secretary SNYDER. Entirely.

Mr. JARMAN. I imagine it cooperated with it, perhaps, but it is a separate organization.

Secretary SNYDER. Yes, Mr. Harriman is a member of this council, but the Harriman committee was an entirely different organization, outside of the scope of the National Advisory Council, although we did consult with them from time to time and carefully read their report, when it was made.

Mr. JARMAN. Mr. Secretary, you spoke——

Secretary SNYDER. You know, Mr. Congressman, that the National Advisory Council is established by statute.

Mr. JARMAN. That is the reason I said I should know about it.

Secretary SNYDER. That is all right. You deal with a great many problems, and I was glad to refresh your memory.

Mr. JARMAN. You spoke of the dollar loans extended to these other countries over a period of years by the United States Government or the private capital market.

Do you have any rough estimate of the amount of those loans outstanding?

Secretary SNYDER. We can supply that for you. I do not think we have the figure offhand. You would like to know how many United States Government loans are outstanding in these 16 countries, and how many private loans?

Mr. JARMAN. Yes.

Secretary SNYDER. We will supply that for you.

Mr. JARMAN. I would appreciate that, Mr. Secretary.

(The information referred to is as follows:)

Outstanding indebtedness of ERP countries to U. S. Government and unutilized balances of United States loan and credit commitments as of Sept. 30, 1947¹

[Millions of dollars]

Countries ²	Amount disbursed (outstanding) ³	Unutilized balance ⁴	Total ⁵	Unpaid principal of World War I debt ⁶

¹ Exclusive of cash advances on procurement programs, which are predominantly short-term. All figures with the exception of those for the Export-Import Bank and World War I debts begin with July 1, 1940. The Export-Import Bank figures begin with Feb. 12, 1934. Loans represent cash loans to foreign governments and private entities in foreign countries which result in a debtor-creditor relationship. Credit commitments represent property credits extended in connection with the disposal of surplus property, ships, or other property; the sale or disposition of or the settlement for lend-lease articles and services; the settlement for civilian supplies and relief and rehabilitation items; and commodity credits resulting from commodity advances by the U. S. Government to the military governments for Germany and Japan.

² Includes dependent areas of Belgium, France, Netherlands, Portugal, and United Kingdom.

¹ Par value.

² Not including loans guaranteed by the Export-Import Bank.

³ Approximate net disbursements by commercial banks participating in an Export-Import Bank \$20,000,000 loan, but not at the risk of the Export-Import Bank.

⁴ 3-year revolving credit to the Norges Bank by commercial banks.

Mr. JARMAN. In conclusion, I have no other questions but I want to thank you for your very interesting statement which I have not only listened to with keen interest but which I am going to read very carefully again, because it has a lot of meat in it.

Secretary SNYDER. Thank you.

Chairman EATON. Mr. Jonkman.

Mr. JONKMAN. Mr. Secretary, I also wish to compliment you on your very fine statement. It has a lot of candor in it, which I have been looking for. Along the line mentioned by the chairman as to the difference between a financial agent and a foreign policy agent, do you not feel sometime that this program, running into the billions—in 1 year it calls for \$6,800,000,000, which is about the average of the Federal budget for the 1930's—that we should have more business in this organization?

Secretary SNYDER. I have no doubt but what we should have a good business administration of the program. There is no question about it.

I think we are all agreed on that.

Mr. JONKMAN. Our foreign aid began with UNRRA. I do not know how Mr. Allen is doing over there now, but it has made a rather sorry mess of things in the past.

You will find for instance, one item of waste—a loan, which was \$75,000,000 which was lost, embezzled, or whatever you want to call it. That is a very serious reflection on the whole program.

After the First World War the Treasury Department handled the foreign aid program, did it not? Under the Dawes plan?

Secretary SNYDER. Well, there was a Dawes plan, and of course in connection with it private capital was brought in play to a very considerable extent.

Mr. JONKMAN. Well, public loans went into the program too?

Secretary SNYDER. United States public funds were not involved in the Dawes plan and the Treasury made no European loans after the termination of the World War I loan activities shortly after the end of the war.

Mr. JONKMAN. After we dissipated some seven thousand million dollars in public and private loans and found that it did not get us anywhere, I think the Treasury Department went in there with less than a half billion dollars and in a few years put those countries on their feet?

Secretary SNYDER. I think we should profit by past experience, certainly, and aim at a sound program, and a sound administration.

Mr. JONKMAN. Which do you think preponderates there, the need of a business administration, or a good fellow, good neighbor policy?

Secretary SNYDER. I think they are closely knit. If we are going to do this job, we certainly want to put it on a friendly, cooperative basis, or else we will probably have missed entirely the goal at which we are aiming.

But I still think that helping the participating countries to help themselves will be the best and most effective way. We should see that they exert their efforts along that line, and then supplement their efforts if we can.

Mr. JONKMAN. The point I am making is that if we have a sound business administration, right from the top down, that the correlation that we need for foreign policy could easily be established without any violence being done to our foreign policy.

But our past experience has shown that when the State Department enters into it, handles it, much as I regret to say it, we have not a business administration.

I am going to lead up to that in a moment. One statement you made very candidly, for instance, is the difficulty that we have in this respect. You say on page 3:

By insisting that participating countries exhaust gold or dollar balances we will merely add further instability to their monetary system. As a matter of fact all of the participating countries, except Switzerland, Turkey, Portugal, have already reduced their dollar balances to or below the amount which would normally be regarded as safe.

Do you not think you could add other countries to that, besides those three?

Secretary SNYDER. No, sir; we have looked at that pretty carefully, and from the requirements of the countries it appears to us that their reserves in dollar balances are pretty low for the purpose of carrying on a stabilization or recovery program.

Mr. JONKMAN. For instance, Norway has already floated a private loan at New York, with the New York banks.

Secretary SNYDER. Yes.

Mr. JONKMAN. Does not that show that they are in pretty good condition?

Secretary SNYDER. Well, I would not want to comment on the bank's credit, but Norway has \$77,000,000 in gold. I would not want to comment on the bank's credit. The loan was a small one; I understand about \$12,000,000.

Mr. JONKMAN. The point I am making is this: I realize, of course, that we are changing from a relief program to a recovery program.

There is quite a difference, that is true.

Secretary SNYDER. Yes.

Mr. JONKMAN. But it is also true that under our relief program we have in the residual relief bill six countries—residual-aid bill, six countries; and in the interim-aid bill, three countries; and now we are back to 16 countries.

We are taking on quite a load. It seems to me that about 13 of these countries could do pretty well by themselves if it were not for the other three.

Is the purpose of the recovery program to establish joint action?

Secretary SNYDER. I think that is the aim of it, to get those 16 countries working in a unified program.

I think it is most important that we do that, and it is most heartening to see 16 European countries get together on something, and come up with a program to which they all subscribe, aimed at the recovery of the whole of Europe.

I was pleased to see that we could accomplish that first very forward-looking step.

I think each country's needs have been very carefully studied by this group to which I referred awhile ago, the technicians, who went back into the program—they did not accept just what was said in the presentation to us in the form of the original program, but they re-screened it, they changed some of those allocations of items, and tried to put it on the basis of just what they thought was absolutely necessary.

The whole program, I have satisfied myself, is aimed at trying to bring out the fullest possible self-help, and the part in this bill that is

provided for Congress to supply funds for, is for that extra amount needed to bring the participating countries to a beginning of a recovery and stabilization, and not to establish a better situation than that existing prior to the war, but to bring them to a point approaching that so that they will have an opportunity to move forward in the way of stabilization and economic recovery.

Mr. JONKMAN. Then are we seeking to secure the cooperation of the 13 countries, which I think could perhaps raise themselves by their own efforts, with the Marshall plan, or with loans and grants, in order to get their cooperation for cooperative effort?

Secretary SNYDER. I do not think that entered into it by itself. It might have been given consideration somewhere along the way. But I do not think any country is offered or will be offered aid and assistance under this program unless it needs it over and above what it can do for themselves.

Mr. JONKMAN. Well now, it came to me on very reliable authority that a high official of this Government had talked with a high official of the Danish Government. He said, "You don't intend to come in under the Marshall plan, do you?" The answer was, "Well, we hadn't intended to. We figured we could float a loan with the private banks, but everybody else is coming in so we might as well come in too."

Secretary SNYDER. Well, I do not know anything about that, Mr. Jonkman.

Mr. JONKMAN. Is there room for that spirit?

Secretary SNYDER. I do not think so. Mr. Block, our director on the International Bank, just advised me that Denmark has met with no success in trying to float a loan, although they have tried at considerable length to do so.

Mr. JONKMAN. Is the Committee for European Cooperation doing anything at the time? Have they held any sessions for the carrying out of the program since the Paris Conference?

Secretary SNYDER. Yes; I think they have had some meetings. Mr. Ness of the State Department can answer that question.

Mr. NESS. Since the time of the Paris meeting there has been no reconvening of the Committee for Economic Cooperation as a committee.

However, in the interval since the Paris Conference, subgroups of the committee have been meeting regularly, such, for instance, as those on the problem of payments within Europe. That subgroup has held meetings. But there have been no meetings of the entire committee.

Mr. JONKMAN. From the results we have had from the Marshall speech at Harvard and the Paris Conference, we have had a little more than a get-together of 16 nations who have said "We want \$22,000,000,000," and we have agreed that something should be done.

Secretary SNYDER. I think we have done much more than that. We find that they are actually trying to re-form their governments and are endeavoring to work out plans within their own governments for stabilization and for tightening up on their economic situation. We see marked evidence of that in practically every one of these countries.

So I can see a great deal more than just a request having been sent over here. They are conscientiously and honestly trying to help themselves.

Mr. JONKMAN. You have in mind there, I take it, the efforts on the part of the countries of France and Italy to revise their tax structure and consolidate their governments?

Secretary SNYDER. Yes; and Holland is doing the same thing.

Mr. JONKMAN. But Holland is not doing it on account of the Marshall plan?

Secretary SNYDER. But they are doing it. As long as they are working toward that objective, it does not mean so much to me whether it is on account of the Marshall plan or account of their own idea, because that is the goal we are aiming at, the reestablishment of economic stability.

Mr. JONKMAN. I know, but the administration by which we have before us states expressly that the aid to be extended is to be extended to countries parties—participating in self-help and mutual help. “Participating”—do you not think that after the offer was made, there should be a greater cooperative effort on the part, of those nations, to form, let us say, a customs union, at least?

Secretary SNYDER. I think they probably have got to have some notion about just how we are going to approach this problem.

I do not know of a single country which is not making some effort to measure just what its internal situation is, so that whatever further steps it takes should be in conformity with whatever we set up under this program and it should not go off in one direction, when we might come along and find that it should have gone in another direction, at the time that we start the program rolling.

But I agree with you that they should be continually working for their own salvation.

Mr. JONKMAN. Of course our trouble is, as we say, that we always won a war, and never won a peace. We may not even win this program, merely because of that reason.

Secretary SNYDER. That brings us up to the crux of the thing, which is the agreement we work out with each country. That is going to be the Administrator's responsibility, to sit down with each country, and not take exactly what is said here, but to actually sit down and review conditions as they are at the time he is working out the agreement, and work out the best possible arrangement with that country which will insure that they get to work on their own salvation and their internal recovery.

The Administrator will be charged with watching that program, and unless the countries are moving along, he can always hold up on further advances—if they are laggard about carrying out the terms of the individual agreements which are arranged with each country.

Mr. JONKMAN. All right, but assuming that you make bilateral agreements, are you not missing the boat by not having also a multi-lateral agreement, to create a cooperative action?

Secretary SNYDER. That gets over under the State Department's political angle—how far we want to go in tying matters together. We want to encourage cooperation between nations, but I would be getting out of my field entirely if I got into too much of a discussion along that line.

Mr. JONKMAN. Well, here is a statement of yours, and there are others like it, which I like very much.

It is candid and straightforward. On page 6 of your statement, you say;

The adjustment of some exchange rates may be expected in the course of European recovery. Inflation in Europe in certain instances has given rise to exchange rates which result in an over-valuation of the currencies in relation to the dollar. This state of affairs has tended to hinder the exports of such countries and, at the same time, to make imports relatively cheap in terms of local currency.

That is a fair statement. I had no difficulty in getting that from those who have handled our foreign policies. That just shows the difference between our foreign-policy view and our financial-policy view.

There is no use denying it. For instance, yesterday I called attention to the fact that the legal exchange value of the French franc is 119 to the dollar, while the free-market, or the black-market value, if you want to call it that, is at least twice that amount; perhaps 250 to 300. And I asked: Does not that tend, just as you say there—to retard exports, because the exporter, or the exports are doubled in price? In other words, the exporter who has a piece of lace or a bottle of perfume in France, for which he would get \$5 in the United States, must get \$10 for it. That is true, is it not? He must get just twice as many dollars, as the market rate?

Secretary SNYDER. To get the equivalent number of francs; yes, sir.

Mr. JONKMAN. Yes. So you discourage exports. And I have not any doubt that France has goods which she could export, if the currency situation were so favorable that she could increase her exchange.

On the other hand, by that doubled value, you cut the cost of imports in two, if the rate is 2 to 1. Is that not so?

Secretary SNYDER. I believe you are exactly right, Mr. Congressman, and I want to say that whatever statement I have made is not in conflict with the basic theory of those who have preceded me. It just happens to have fallen even more definitely under the financial end, and that has been left to me.

Mr. JONKMAN. Well, I have to go by what each of you say, and that is for me to judge, whether there is conflict.

Secretary SNYDER. I want to assure you that there is no conflict. I think the greatest problem, in solving all of these exchange matters, is a matter of timing. We must watch that very carefully and then move toward adjustment at the proper time, without upsetting everything.

Mr. JONKMAN. I agree to that. You could not do it in 24 hours, all over the European continent?

Secretary SNYDER. That is right. And one step leads to another.

Mr. JONKMAN. But if we are going to furnish dollars, are we not encouraging that very fault that I just explained?

In other words, we are taking the bottom out of the barrel, and letting them retard their exports and encourage imports, and we are giving them exchange with which to do it.

Secretary SNYDER. That is one of the objectives, to try to bring about a situation so that they can properly make changes in their exchange rates.

But they have to have some hope of assistance, in some direction, or else then they can never stabilize and conditions would grow steadily worse.

One of the whole objectives of the aid we are going to give them is to help them get into a position where they can make those rate adjustments.

Mr. JONKMAN. Have you reasonable assumption, reasonable confidence, to assume that they will accomplish that before they use up the first \$6,800,000,000?

Secretary SNYDER. I think they will make great progress in that direction. I cannot say that they will undertake finally to accomplish it. It is a very complicated situation.

Mr. JONKMAN. The difficulty is this: Take the British loan. They got 3½ billion, and it was not until they found that they were scraping bottom of the barrel on that almost \$4,000,000,000 loan, that the United Kingdom finally woke up and said, "We are getting into a bad situation. We have to cut out some of these imports"—and they cut out movies, tobacco, oil, and things of that sort.

The point I am making, Mr. Secretary, is that by giving these loans we are absolutely encouraging the very thing we seek to eliminate and what sense is there in it?

Secretary SNYDER. On the British loan, up until July, they had maintained themselves well within the estimates which they had furnished in the preparation for the loan.

Up until July—we can furnish you tables to show it—they had stayed pretty well within their estimates.

They ran into some difficulties later, and from then on their real problems started. They had greater demands for convertibility than they anticipated they would get, and there was some real difficulty there.

Also they have had some other troubles of which you are well aware—the weather, the crop situation, and so forth. But I have to be perfectly frank with you—I spent a harrowing month over there, talking to the representatives of every section of Europe, and also to some of the nationals of those countries, and I think we can expect, with the conditions over there as they are, if we do not give friendly aid at this time, that the cost to us will be so great that we will regret it.

Mr. JONKMAN. What sort of analysis have you to indicate that it cannot be done with half the amount?

Secretary SNYDER. This was arrived at with a very careful, studious approach.

If we start to say a billion less or 2 billion less, or a billion more or 2 billion more, it will be a much more arbitrary approach than the one which has already been made, because there has been a tremendous amount of careful study in arriving at those figures.

Mr. JONKMAN. The other day I asked the State Department, I said, "I am still using the CEEC figures."

They call for \$5,900,000,000.

And I checked back on the CEEC figures. They begin with \$452,000,000 for feed or fertilizer, \$340,000,000 for solid fuel, \$520,000,000 for iron and supplies, and so on down the line.

I said, "You arrived at that \$5,900,000,000, as a total, from certain items and I would like to have the items, for each country, to make up that total."

Well, they said they are going to get the information for me, but I assume, Mr. Secretary, that if you arrive at a total, your total would be the amounts needed by each country, so you would have those at your fingertips.

Secretary SNYDER. Just for the record, those CEEC figures were for a 12-month period; those in this program are for 15 months. So there is a difference there.

Mr. JONKMAN. It does not make any material difference.

Secretary SNYDER. It makes a difference between the 5.9 and the comparable Executive branch figure.

Mr. JONKMAN. Naturally.

Secretary SNYDER. I just want to make that clear, that we were talking about a different period of time.

Mr. JONKMAN. On the other hand, it is equally clear, Mr. Secretary, that if I say to you, "Here are 16 countries which together need \$5,900,000,000," I should be able to say what each country needs, because I am assuming that that is my total arrived at by individual items. Is that not so?

Mr. NESS. I understand, Mr. Congressman, that the material which you requested previously was supplied on a commodity-by-country basis.

Mr. JONKMAN. But the point I am making is that apparently it was something that had to be figured out from other figures instead of just saying, "Here is how we arrived at the total."

Secretary SNYDER. I think they had approached the problem on the basis of commodity needs for each country and then arrived at the total commodity needs for the whole program. They had taken the requirements of each country and had arrived at so many bushels of wheat, for instance, against the whole program.

Mr. SOUTHARD. The estimates were made by commodities, in the first instance, and at the same time a break-down by country was made, that is, breaking that total down by countries.

Mr. JONKMAN. Is it not true that you have difficulty in getting analytical figures—and I do not want to be too critical?

Secretary SNYDER. Of course, you have a difficult problem. You do not want to say a country is going to get so much of this and so much of that, because you are going to handicap your Administrator. He wants to go in and find out, through a recheck, that those are actually the needs. The estimate appears in the background as to what will be required, but when you start making too precise an appraisal, by items, you are almost setting a pattern as to exactly what each country will want. You cannot handicap your Administrator if you want him to do a bang-up job for you.

Mr. JONKMAN. Well, I do at least want general figures.

Secretary SNYDER. Well, I think you agree with me that we would not want to set too precise a pattern, because we want our Administrator to do a good job and not to be handicapped.

Mr. JONKMAN. Yes; but take the wheat situation alone. I want to know how much of that \$1,452,000,000 worth goes into the various countries. The interim aid—we found, for instance, that Italy had a great deal more wheat than was estimated in arriving at those figures. And that is a serious error.

Secretary SNYDER. Well, we will get those figures for you.

Mr. JONKMAN. That is all for the present, Mr. Chairman.

(The information referred to is as follows:)

DEPARTMENT OF STATE

(January 20, 1947)

EUROPEAN RECOVERY PROGRAM

ILLUSTRATIVE COMPOSITION OF IMPORTS OF COMMODITIES AND SERVICES FROM WESTERN HEMISPHERE, APRIL 1, 1948, THROUGH JUNE 30, 1949, AND POSSIBLE SOURCES AND DISTRIBUTION OF FINANCING

The European Cooperation Administration will have to draw up programs of United States assistance to each participating country covering the commodities and services to be purchased in the Western Hemisphere and the manner in which these purchases will be financed. Each country program will have to be coordinated with the country's total requirements and estimated imports from areas outside the Western Hemisphere and with the amounts of financing available from sources other than new United States funds.

The programs of United States assistance for each country as they may be developed by the Administrator should not now be prejudged. Therefore, an accurate representation of a program for each country, reflecting its aggregate required imports from the Western Hemisphere and the source of funds which will in fact finance each segment of these imports cannot now be made. A continuing process of adjustment will be necessary in order to take account of such factors as the success of the production effort by the participating countries, changes in world availabilities, price movements, supply and financial arrangements with nonparticipating countries, and the decisions of such agencies as the International Bank.

An illustrative program can, however, be drawn up which will be indicative at least of the country by country programs as they might be determined by the Administrator after he has considered all of the relevant factors. An example of such a program is set forth in the attached tabulation.

It needs to be emphasized again that the distribution of commodities by countries and sources of funds indicated in the accompanying tables is only an approximation of the program as it would actually be developed by the Administrator. Particular emphasis should be given to the fact that the amounts shown in table 1, column 4, and in the corresponding columns of the individual country tables do not necessarily represent the amount which each country would receive in the form of direct assistance from the United States, nor do they indicate the terms on which such appropriated funds would be advanced. Rather, they indicate the dollar balance required to fill each country's total estimated required import program from the Western Hemisphere (column 1), after deducting the dollars obtained from exports of goods and services (column 2) and after deducting sources of financing other than new United States funds (column 3). This balance of a particular country's dollar needs (shown in column 4) might in some instances be obtained indirectly through another participating country rather than directly from the United States. Various arrangements for indirect financing of this character could be made and might provide a feasible way to assist the participating countries in overcoming some of the obstacles to increased trade among themselves.

For example, bizonal Germany is expected to have a substantial surplus of exports over imports in its trade with some participating countries, and the latter must settle in dollars for a large part of their debit balances with the bizone. In this way the dollar requirements of these participating countries are increased (because they must pay dollars not only for their imports from the Western Hemisphere but also to settle their German accounts). On the other hand, the bizone's need for direct dollar assistance would be correspondingly reduced (because it would receive dollars in addition to those obtained from its exports to the Western Hemisphere shown in column 2). In circumstances like these the Administrator might find it desirable to allocate funds appropriated for European recovery in such a way as to increase the direct assistance in the form of loans or grants to one participating country over the amount of its Western Hemisphere deficit and correspondingly reduce the direct assistance given to another participating country. Alternatively, the administrator might find it desirable to purchase goods in one country for delivery to another, the transaction being recorded as additional direct assistance to the receiving country. The exporting country's need for direct dollar assistance would be correspondingly reduced. In

general, adjustments of this kind would be considered by the Administrator in the light of recommendations by the participating countries as a group acting through their continuing organisation. Such adjustments would not increase the total amount of assistance required but would only affect its distribution between countries.

The country tables which are appended present for each participating country an illustrative composition of its imports of goods from the Western Hemisphere and its net dollar payments, if any, for freight and other invisible items, for the period from April 1, 1948, through June 30, 1949. All values are expressed in terms of July 1, 1947, prices as the adjustment for higher prices is covered in the table on page 5. A distribution of the financing of these imports and payments among the following sources of dollar funds is shown:

Column 2. Dollars earned by each country from exports to the Western Hemisphere and net dollar receipts, if any, for shipping and other invisibles. In the case of Portugal, the amount shown in column 1 includes an expenditure of Portuguese gold and foreign exchange holdings in an amount necessary to offset its deficit on current account.

Column 3. Dollars obtained from such sources as International Bank loans, private investment, existing credits of the Export-Import Bank, and credits extended by participating countries having net dollar earnings on current account to other participating countries. Credits or other assistance by other Western Hemisphere countries are also included in column 3.

Column 4. New United States funds for European recovery and for prevention of disease and unrest in Germany (GARIOA) for which appropriations are being requested. As pointed out above, the amounts in column 4 represent the deficit computed on July 1, 1947, prices with the Western Hemisphere which it is necessary to finance directly or indirectly with new United States funds and do not necessarily represent the direct assistance in the form of grants and loans which will be extended to individual countries. The adjustments for increased prices and savings on shipping mentioned in the table on page 5 will also have to be taken into account on a country by country basis.

The table on the following page recapitulates the country tables and presents a possible distribution, by sources, of the financing of the total Western Hemisphere import program.

TABLE 1.—Recapitulation of tables showing illustrative composition of imports of commodities and services from Western Hemisphere and possible sources and distribution of financing: Apr. 1, 1948–June 30, 1949—(at July 1, 1947 prices)

	Total imports ¹	Possible sources of financing		
		Dollar earnings ²	Sources other than new United States funds	New United States funds ³
Austria.....	233	39	12	182
Belgium-Luxemburg.....	853	334	106	323
Denmark.....	237	45	28	164
France.....	1,631	369	128	1,434
Greece.....	262	67	9	186
Iceland.....	23	10	13
Ireland.....	192	40	152
Italy.....	1,160	183	106	869
Netherlands.....	1,136	271	160	705
Norway.....	253	163	56	34
Portugal.....	144	144
Sweden.....	499	423	43	33
Switzerland.....	535	535
Turkey.....	69	69
United Kingdom.....	4,311	2,133	418	1,760
Germany:				
Bisone.....	1,014	100	914
French zone.....	93	13	80
Saar.....	14	3	11
Total.....	12,969	4,941	1,158	6,860

¹ Including net dollar payments for freight and other invisibles.

² Including drawings of \$72 million by Portugal on its gold and foreign exchange resources.

³ This column includes funds being requested by the Department of the Army for prevention of disease and unrest in Germany. A reconciliation with the \$6,800 million being requested for the European recovery program is to be found on p. 5.

Column 1 indicates that the required imports of the participating countries of goods and services from the Western Hemisphere during the 15 months, April 1, 1948, through June 30, 1949, are expected to amount to \$12,959 million (in terms of July 1, 1947, prices). This total, after deducting \$1,146 million of payments for net freight and net other invisibles, equals the total commodity imports of \$11,813 million shown in the summary balance of payments table on page 97 of the committee print of the Outline of a European Recovery Program.

Of this total, it is estimated that the participating countries will finance \$4,941 from their dollar earnings from exports to the Western Hemisphere and other dollar receipts (and, in the case of Portugal by drawing down gold and foreign exchange holdings).¹

Sources other than new United States funds are expected to finance, in terms of July 1, 1947, prices, \$1,158 million of the total.² It is proposed that the balance of \$6,860 million be financed by new United States funds appropriated for European recovery and to the Department of the Army for prevention of disease and unrest in Germany (GARIOA). The following table presents a reconciliation of this balance with the authorization of \$6,800 million requested for European recovery.

Goods to be purchased in Western Hemisphere with new United States funds (at July 1, 1947, prices)—column 4 of recapitulation	\$6, 860
Adjustments:	
Add: Adjustment for price increases ¹	\$482
Deduct: Savings on shipping ²	100
	382
Adjusted cost of commodities and shipping services to be purchased in Western Hemisphere with new United States funds ³	7, 242
Authority to obligate funds for procurement of items to be delivered in subsequent years	200
Uncovered deficit of bizonal Germany with nonparticipating countries outside the Western Hemisphere ⁴	200
Total being requested for European recovery program and by Department of Army for Germany (GARIOA)	7, 642
Deduct: Appropriations being requested by Department of Army for prevention of disease and unrest in Germany (GARIOA)	822
Total requirement for first 15 months, European recovery program ..	6, 820
Authorization requested for European recovery program (preceding line in rounded amount)	6, 800

¹ This figure is equivalent to the adjustment for higher prices of \$365 million shown in the summary balance of payments table, page 97 of the Outline, after eliminating that portion of the increase attributable to "Sources other than new United States funds," such as the International Bank, and to Portuguese cash purchase.

² See page 92 of the Outline. These are savings possible if additional temporary transfers of bulk-cargo carriers are made.

³ This entry and the following entries in the reconciliation are shown in the tables on pages 108 and 109 of the Outline and explained in the accompanying text, pp. 107-109.

⁴ See footnote 2, table 17.

The distribution by sources of financing in the following country tables has been made according to the following principles:

1. Financing which might be forthcoming from sources other than new United States funds has been spread over commodities for the purchase of which it is thought most likely that loans and credits might be granted. Much is assigned to the category "other imports," which includes heavy and specialized equipment and important industrial raw materials, and additional large sums are allocated to bread and coarse grains, fats and oils, sugar, meat, and coffee, for which other Western Hemisphere countries might extend commodity credits or make other arrangements to assist the participating countries.

2. It is assumed that new United States funds will be used, in the first instance, for "selected" commodities.

¹ See The European Recovery Program—Country Studies, table II A. The sum of total exports to the Western Hemisphere and, where positive, of "Net freight" and "Net other invisibles" is the figure shown in column 2 of the attached country tables.

² International Bank, private investment, existing Export-Import Bank credits, dollar credits by participating countries, and credits or other assistance by other Western Hemisphere countries. These sources are expected to finance \$1,228 million in current prices. This figure is equivalent to the figure of \$1,335 million shown in the committee print of the Outline of European Recovery Program, p. 106, after deducting the item of \$85 million representing purchases on cash basis (here included in column 2) and adding credits of \$28 million by participating countries to participating countries.

3. Dollar earnings of the participating countries are assigned to the remaining Western Hemisphere requirements.

In this connection, it should be pointed out that the category "other imports" is made up principally of important raw materials and manufactured goods, which in almost all cases are as important to economic recovery as the selected commodities. On many of these commodities studies of requirements and availabilities are being prepared, but a miscellaneous category will always be necessary since trade between advanced industrial countries involves thousands of individual products. Preliminary indications of the values of some of the most important items in the category are given in footnotes to the tables.

It is recognized and, indeed, emphasized that the following tabulation is only illustrative and that the actual pattern determined by the Administrator might vary markedly from the one outlined here. It may, however, be useful in clarifying and delineating the problems which will be encountered in initiating the program and in adjusting its continuously to changing conditions.

TABLE 2.—*Austria*

ILLUSTRATIVE COMPOSITION OF IMPORTS OF COMMODITIES AND SERVICES FROM WESTERN HEMISPHERE AND POSSIBLE SOURCES AND DISTRIBUTION OF FINANCING: APR. 1, 1948 TO JUNE 30, 1949 (AT JULY 1, 1947 PRICES)

Import	Total imports	Possible sources and distribution of financing		
		Austrian dollar earnings	Sources other than new United States funds	New United States funds
Bread grains.....	36.3			36.3
Coarse grains.....	4.4			4.4
Fats and oils.....	12.5			12.5

Thank you very much, Mr. Secretary.

Chairman EATON. Mr. Secretary, it is very evident that the committee is finding you a real gold mine for information we have been seeking. In fact, you constitute pay dirt. I would like to suggest, to give everybody a chance, that we see if we cannot confine our questions to about 10 minutes each, Mr. Richards.

Mr. RICHARDS. I have no questions at this time, Mr. Chairman.

Chairman EATON. Mr. Vorys.

Mr. VORYS. Mr. Secretary, you have recommended that this aid be in the form of grants and loans. We have had considerable discussion on the proposition that the grants could require ultimate repayment in, for instance, strategic materials. Members of our committee have pointed out that this amounts merely to a restricted type of loan. What I want to know is what is wrong with that?

Secretary SNYDER. In the immediate future, the difficulty would be that in figuring this program, the countries have taken into consideration the production and sale of as much of that material as can

be handled, as part of their own effort. As time goes on, as they get into production, that might be well able to form an important part of the program, beyond this earlier period of aid.

Mr. VORYS. I appreciate that, and you have stated it quite well—that for a 4-year period, or a 5-year period, there is no use loading down these countries which are dollar-short with dollar liabilities that would come due during that period, or with obligations that would cut down their dollar resources.

Secretary SNYDER. Or cut down their supply of equipment, materials, and food for their own consumption, needed to bring them back up to a stable level.

Mr. VORYS. That is right.

Secretary SNYDER. Because if we force them to put these dollars which we are loaning them into something which is not productive toward the reestablishment of their own economy, we would not be aiding them. We have figured all of that—what their capacity to produce those materials will be during the next 3 or 4 years, what they can do under that program—and have tied it into their self-help. The aid we are proposing is over and above that.

Mr. VORYS. Yes.

Secretary SNYDER. As you say, when we go beyond the period of aid, and the countries get stabilized and get into production, then we might give some consideration, in the individual dealings with them, as to what might be feasible in that area.

Mr. VORYS. What I cannot understand is why it would hurt a country to say to it, in substance, this: "We are furnishing you food and a great many other things you need, subject to your repaying us in X strategic material, of which you and I both know that you have excess supplies which have not yet been developed. You do not need to make any payment for 10 years, let us say. But at that time you will have to repay, in strategic materials, on the basis of, let us say, 25 percent of your production." Or some other such percentage. That country has the right to pay in dollars rather than strategic materials, but has no obligation at all except that, at some period in the future, it must repay something that we know perfectly well we are then going to need.

For the life of me I cannot see how that would cripple that country, or cripple the recovery plan.

Secretary SNYDER. I agree with you, and the Administrator will be charged with giving consideration to all those things in making the agreements, and determining what shall be loaned and what shall be grants-in-aid. If he sees an opportunity, over a long-range period, for repayment of a loan, then he can move over into the problem of how the loan could best be repaid. He has to analyze not only the immediate conditions of the country receiving the loan but the future conditions of that country.

Mr. VORYS. Well, the thought was that by having some provision in the law, we might help the Administrator a little by not leaving him quite so much latitude. We have found an inclination on the part of administrators who can make loans or grants, often to make the grants because then they do not have to collect them. If percentage-wise or otherwise we were to say, "Now, so much of this, six-sevenths of it, shall have some provision for ultimate repayment in kind some day," I think we would be helping the Administrator

when these countries come in saying, "We prefer to have a grant rather than a loan."

Secretary SNYDER. Mr. Congressman, you will be interested in page 49 of the background information for the program, which says:

In appropriate circumstances loans made by the United States administering agency might contain a provision specifying that in the event circumstances make the probability of repayment of the loan in dollars at its maturity date doubtful, the participating country may tender or the United States Government may require deliveries of materials expected to be in long-term short supply in the United States.

Mr. VORYS. I am familiar with that suggestion.

Secretary SNYDER. The point of what you are saying is in complete accord with the thinking of the people who are proposing this.

Mr. VORYS. That is all for now.

Chairman EATON. Mr. Courtney.

Mr. COURTNEY. No questions.

Chairman EATON. Mr. Gordon.

Mr. GORDON. Mr. Secretary, I want to thank you for your comprehensive statement. I have only one question. Is there some set rate of interest contemplated under these stabilization loans?

Secretary SNYDER. Will you repeat that question? I am sorry, I did not hear it.

Mr. GORDON. Is there some set rate of interest contemplated on these stabilization loans?

Secretary SNYDER. No; there has been no rate determined at this time. Those long-term stabilization loans are for some time in the future. We are merely mentioning those here because I want to give you the complete thinking, so that if a proposal for stabilization loans should come up at some time and I were to be around, you should not say, "Why did you not tell me that before?" We might consider stabilization loans an appropriate thing later on, as we see those countries stabilized and moving ahead, where just a little extra help of a stabilization loan might be of assistance to them. But it is too early to talk about that now, because it might not happen for 3 or 4 years.

Mr. GORDON. I suppose, too, that the rate of interest would vary as to different countries?

Secretary SNYDER. It has to. Of necessity, it has to.

Mr. GORDON. And the amount of loan also?

Secretary SNYDER. Not only the amount of loan, but the type of rate structure that existed from country to country. If you go into the international loans we have made over a period of years, you will find many rates. There may be a pattern of rates, but there is no precise rate. That is a negotiated matter.

Mr. JARMAN. Will the gentleman yield?

Mr. GORDON. Yes.

Mr. JARMAN. Mr. Secretary, as I understand it, the basis on which it has been decided whether these funds are to be allocated as loans or grants is the opinion of these people who have studied the question as to the ability of the various countries to pay.

Secretary SNYDER. It will be the Administrator who determines that. It will not be a predetermination made now, but it will be the Administrator's duty to determine their ability to pay when he is negotiating the arrangements with the various countries.

Mr. JARMAN. I suppose that explains the leeway in the testimony we have heretofore received, to the effect that the loans would be between 20 and 40 percent of the total.

Secretary SNYDER. There necessarily has to be a spread there.

Mr. JARMAN. The Administrator would decide that?

Secretary SNYDER. Yes; and we do not want to narrow that down, because we want him to make just as many loans as he possibly can, measured against the countries' ability to pay, and we do not want to say today that a certain percentage will be loans and have everybody set that as their goal. We want the Administrator to be charged with doing the best job he can, and making as many loans as he possibly can, measuring against a careful analysis of their ability to pay.

Mr. JARMAN. But it is now contemplated that the loans will be between 20 and 40 percent?

Secretary SNYDER. That figure has been used; yes.

Mr. JARMAN. Now, Mr. Vorys just asked you, if I understood him correctly, about stipulating into this legislation the fact that, in due course, six-sevenths of it be loans, and one-seventh be grants; and, as I understood your reply, you said his thinking coincided with that of those who are proposing this legislation. Did you mean to say that you think it would be desirable for us to tie these countries down to pay six-sevenths of this?

Secretary SNYDER. I did not think I had made any such commitment.

Mr. JARMAN. Maybe I misunderstood one of you.

Secretary SNYDER. No, I do not think I said that. If I did, I certainly want to correct it.

Mr. JARMAN. Perhaps I misunderstood one of you.

Secretary SNYDER. No, we were talking about requiring the countries to pay in materials rather than in dollars, and we were not talking about the percentage or anything of that sort.

Mr. VORYS. I did not understand that you approved of the percentage which I picked out of the air. I would be glad if you did.

Secretary SNYDER. I did not intend to agree, and I did not think I did.

Mr. JARMAN. What would be the danger for us, if instead of six-sevenths, say, 50 percent were fixed; what would be the danger, if, by this legislation, we were to stipulate that England, say, or France, in a 10-year period, were to repay a considerable amount in strategic materials rather than leave it to the coordinator or administrator, what would be the danger of, just as soon as we pull these countries out, us having, by legislation, created a situation whereby they would just fall back into the pond again?

Secretary SNYDER. I do not think it would be the best approach, to tie down any specific percentage that must be made in loans, or grants-in-aid, or any percentage to be repaid in a certain fashion. Having spent my entire life in the banking business, I know that if the board of directors ever tries to make too precise a determination of policy, and spells it out too definitely, they put their officers in a very bad position when they start negotiating. A good broad policy will produce the best results.

Mr. JARMAN. I so thoroughly agree with the Secretary that I just did not want to run any risk of the record being misunderstood.

Secretary SNYDER. Thank you very much.

Mr. VORYS. Mr. Secretary, were you ever on a board of directors that authorized the president of the bank to either lend or give away all the money in the bank?

Secretary SNYDER. That is a new field of banking, Mr. Vorys.

Mr. MUNDT. Mr. Secretary, I want to pursue this for a moment. It seems to me that the criterion which you spell out on the first page of your testimony does not quite represent the process of administration which you have been discussing here with Mr. Vorys and Mr. Jarman, because you list there only two possibilities: grants-in-aid, which are gifts, absolutely, and loans. And the way you describe the word "loan," it is something to be paid back in dollars. The criterion to be used is the ability of the countries in years to come to pay back the dollars. I think you said in the record that there is a third possibility, that an advance of some kind, to be paid back in commodities or in critical materials, after these countries have started to get back on their feet, if that is part of the program.

Secretary SNYDER. That is not inconsistent with what I have said here, because those materials are worth dollars, and if we elect to take those materials instead of the dollars, that is just exactly what we provide here.

Mr. MUNDT. But your implication here is that unless they have the opportunity to convert those raw materials into dollars, which many of them may not be able to do, it is then a grant-in-aid.

Secretary SNYDER. Oh, no.

Mr. MUNDT. Let me read it to you, Secretary Snyder:

The criterion—

Secretary SNYDER. I am quite willing to amend the statement to include that, because that is our intention. Perhaps I oversimplified it. I am considering that if they furnish us materials, those materials have a dollar value, and, therefore, it would be a question of dollars, or so many dollars worth of material. So I simplified it by saying, "their dollar ability to pay."

Mr. MUNDT. Then, it is the purpose of the Government, insofar as you speak for it, to consider this third field?

Secretary SNYDER. It is right in our proposal, on page 49. It is spelled out.

Mr. MUNDT. I know, but, after all, that is your testimony.

Secretary SNYDER. Perhaps I oversimplified it. I was thinking in terms of the dollar ability to pay, which would be material.

Mr. MUNDT. Do you agree with me that there is a fourth category of repayments which they might make, which are repayments in services? For example, France owns the radio station in the name of the Government. We want to conduct radio programs to help the people of Europe realize the motive behind the European recovery program, and to answer the lies the Communists are spreading against us. Would there be anything wrong, as you see it, for them to make certain repayments to us by giving us time on that radio station?

Secretary SNYDER. Those things should all be given consideration in the negotiating of the individual loan.

Mr. MUNDT. Would it not seem to you to be a reasonable way of making some repayment?

Secretary SNYDER. Personally, I think that much of that should be required as part of the program, because it is just as much to their interest to get this program into effect as to ours.

Mr. MUNDT. Very good. I agree with you.

Secretary SNYDER. But again you agree with me that if that service is worth dollars, that it gets back to the dollar ability to pay.

Mr. MUNDT. That is correct. In this case it is not, of course, because they are not selling that to the American advertisers for dollars.

Secretary SNYDER. That is right.

Mr. MUNDT. I agree that if this program is going to work, we have got to put it on the basis that when we start putting coal in the locomotives, that the train does not stop dead in its tracks, that we are going to have to work together with the elimination of customs duties and so forth. Therefore, will you tell me why the administration has discouraged the meeting which was to be held about now in Europe by the British and the French, to begin at this time to work out the cooperative agreements whereby they are going to bring their economies and their customs systems closer together?

Secretary SNYDER. I do not know of any such discouragement. I am not aware of it.

Mr. MUNDT. Yes. I realize that you are not in the State Department. But I think that is a matter of record, or a matter of fact. Do you wish to say something on that, Mr. Ness?

Mr. NESS. No comment.

Mr. MUNDT. No denial?

Mr. NESS. I just do not know.

Mr. MUNDT. I think you will find that to be true, and it is very disappointing to me because I would like to see them get under way with this program at once, insofar as working out this mutuality and cooperation is concerned.

Have you any thought, Mr. Secretary, as to the amount of these stabilization loans which are contemplated later in 1948? Is that going to be a multibillion-dollar proposition, or will that involve just a few million dollars? What do you envision in that connection?

Secretary SNYDER. I could not possibly make an estimate of that, at this long range.

Mr. MUNDT. But you do feel, however, that this \$6,800,000,000 is not a program to cover 15 months, but an installment payment to which we are to make further contributions later on during the year?

Secretary SNYDER. Oh, no; not unless Congress elects to do so by being convinced that it is a proper thing to do.

Mr. MUNDT. That is right.

Secretary SNYDER. That is not part of this particular program, no.

Mr. MUNDT. But if you run up an amber light or caution signal, "Do not expect this \$6,800,000,000 to be enough, because it will not do it——"

Secretary SNYDER. I want to make myself perfectly clear. In looking over our experience in the past, in stabilization of exchange, and maintaining a balance of position with a country, it occurred to us that there might arrive a time when we would deem it advisable and proper to consider such a procedure, and I just wanted to flag it. I do not know whether it will happen or not. It is just something that has been advanced, something that we have thought of.

As the participating countries advance, and we see things moving along in pretty good shape, you folks might, yourselves, say, "It might be a good idea to set up this stabilization fund."

Mr. MUNDT. I appreciate your candor in bringing it up. In your final paragraph you say:

It would serve no good purpose to ask the European countries to put their own houses in order if we, ourselves, adopt methods which might accentuate inflation in the United States * * *.

In all honesty, I think we should be candid with the country, and let them realize that this program, in itself, is accentuating inflation in the United States, because necessarily we put the impact of a great purchasing power upon supplies which are short, which is an inflationary measure. I think we should do something along that line. I do not think we should disguise it as a cloak and as having nothing to do with the high cost of living, because obviously it does.

Secretary SNYDER. Yet this program calls for less exports than we exported last year; is that not true, Mr. Ness?

Mr. NESS. That is true.

Mr. MUNDT. But the exports made last year, together with other factors, certainly have precipitated the inflationary rise in the cost of living?

Mr. NESS. It may have been one of the factors contributing to the rise.

Mr. MUNDT. Well, that is a fact, is it not?

Mr. NESS. Yes, but this program, however, does not tend to do that, because it is dropping back in exports.

Mr. MUNDT. It may not be intensifying it, but it is certainly going to contribute, during this coming year, to increasing or maintaining the high cost of living.

Secretary SNYDER. But it is not adding to the inflationary pressure, that is the point I make.

Mr. MUNDT. It is adding to the vis-à-vis not doing it. It may not be adding to the vis-à-vis of 1947.

Mr. JONKMAN. Will the gentleman yield?

Mr. MUNDT. Yes.

Mr. JONKMAN. It is not making us sicker than we are.

Mr. MUNDT. It might be postponing our convalescence. I think we have to recognize that factor and move into the program, anyhow, but I think we should do it with complete honesty to the American public and say, "This is not only going to cost us taxpayers money, but it is also going to increase the cost of living while it is being done." As an economist, you would not deny that, would you?

Secretary SNYDER. I think it is perfectly obvious that if we are going to put this much of a program through in this country, we are measuring it in terms of much greater stakes.

Mr. MUNDT. That is perfectly right.

Secretary SNYDER. But I do want to say something about this sick country here. I would, first of all, like to stay as sick as we are, producing more than we ever produced in our history, and making greater profits than we ever made.

Mr. MALONEY. We also have more debt than we ever had, have we not, Mr. Secretary?

Secretary SNYDER. Well, we are getting along with it all right.

Chairman EATON. Mr. Mansfield.

Mr. MANSFIELD. Mr. Secretary, insofar as inflation is concerned, it seems to me that Marshall plan or no, unless this Congress takes some action, we are still going to have inflation. That is the nub of the whole thing.

Now, I have a few questions I would like to ask. Do you think this country is capable of undertaking a project of the magnitude envisaged in the Marshall proposal?

Secretary SNYDER. I bottom my opinion on the careful study made by the various groups which approached that problem. I think yes.

Mr. MANSFIELD. Do you think we can carry this proposal, and at the same time appropriate the funds necessary for universal military training?

Secretary SNYDER. I think we have got to measure both this program and universal military training program against a greater problem. It is not purely the economics of it, as apparent today, but it is the long-range economics taking into consideration some alternatives that we have to face.

Mr. MANSFIELD. You indicate, then, I presume, that we could carry both?

Secretary SNYDER. If we are able to maintain our present or nearly our present level of economy, yes.

Mr. MANSFIELD. Do you think it reasonable to assume that we can carry those two proposals, and the tax reduction as contemplated in the Knudson proposal, which I understand will be before the House this month, and which will mean a lessening in revenue to the Treasury of something like 5.8 billion dollars?

Secretary SNYDER. Mr. Congressman, I have stated on a number of occasions that I do not believe that while we are faced with these particular problems as we are today, and with the present economic situation as it is in this country, we should have the lowering of revenues available at this time.

Mr. MANSFIELD. You think these funds are necessary for the carrying out of this particular program, and the reduction in the national debt?

Secretary SNYDER. That is correct.

Mr. MANSFIELD. That is all, Mr. Secretary.

Chairman EATON. Mr. Smith.

Mr. SMITH. Mr. Secretary, do you consider it a condition precedent that we have a balanced budget before this plan is adopted?

Secretary SNYDER. I think we should include any aid in a balanced budget.

Mr. SMITH. In other words, if there is a danger that the budget is not going to be balanced, that we should refrain from embarking on this program.

Secretary SNYDER. Quite the contrary. I think we ought to provide this and then see that we have a balanced budget.

Mr. SMITH. I notice from your remarks on page 5 you stressed the fact that countries, by agreement, will concede that they must stabilize their currency, and their budgets must be balanced, and so forth. Do you have any information that you can offer for the record to show that these countries are willing to do that, aside from your own statement?

Secretary SNYDER. Oh, yes; they proposed it themselves. It was included in the original proposal, the Paris proposal.

Mr. SMITH. Do you feel that——

Secretary SNYDER. I quoted from it in my statement, Mr. Congressman, as to just what they agreed to undertake.

Mr. SMITH. Where is that, please?

Secretary SNYDER. At the top of page 5:

At the Paris meeting the 16 participating countries undertook to apply any necessary measures leading to the rapid achievement of internal financial, monetary, and economic stability while maintaining in each country a high level of employment.

That was all spelled out, the balancing of the budget, and stabilizing of their internal economy. They all agreed to that in the meeting.

Mr. SMITH. Since that meeting, has there been any movement in that direction that you know of?

Secretary SNYDER. In a number of countries; yes, sir.

Mr. SMITH. Which ones?

Secretary SNYDER. Italy, France, several of the other countries where studies are under way, but the most progressive movements have been made in those two countries.

Mr. SMITH. In other words, by these agreements we are going to impose certain conditions?

Secretary SNYDER. Definitely.

Mr. SMITH. There has been some publicity to statements from people in Europe to the effect that if the American plan envisages any demands or any strings, that they are not interested. As a matter of fact, in our trip last fall, an official of one of the governments said, "If you offer us aid, and attach strings to it, we do not want your aid." I think there is a growing feeling, in some of those countries, to the effect that if we restrict this program in any way which does not meet with their approval, they do not want it. Do you have any information to that effect?

Secretary SNYDER. No, sir; I have not, presently.

Mr. MUNDT. I think the record should show that that was not one of these 16 countries.

Mr. SMITH. It was not?

Mr. MUNDT. No.

Mr. SMITH. It was.

Chairman EATON. Mr. Javits.

Mr. JAVITS. Mr. Secretary, on your trip to Europe, did you find that one of the basic things lacking in Europe was confidence by the people in their own governments and their own currencies?

Secretary SNYDER. That was almost universal.

Mr. JAVITS. And do you feel that such confidence would be materially reestablished if there were stable currencies in those countries?

Secretary SNYDER. Definitely.

Mr. JAVITS. Therefore, would you not advise considering very seriously some means by which, as part of this European recovery program, we could help in the stabilization of those currencies more promptly perhaps than is indicated in your memorandum?

Secretary SNYDER. That is a delicate question of timing. To try to spell out in legislation how to do it would be a difficult thing to do. We could provide for the objective, but I doubt if we could say, "This is the pattern that should be followed." I think we would have trouble working that out.

Mr. JAVITS. What would you think, Mr. Secretary, in view of the lack of confidence which we both observed, if part of the aid under

the European recovery program were made available in gold, instead of in paper dollars or credits? We have a good deal of gold at Fort Knox. Why not allow some of this aid in gold?

Secretary SNYDER. That would come under the stabilization matter I talked about. What we are talking about here is getting them in motion.

Mr. JAVITS. But, Mr. Secretary, if the resources of these countries can be materially enhanced by confidence, would it not seem advisable to give serious consideration to allowing them some of the money in a form which would inspire the greatest confidence? To us it should not be impracticable because we have a good deal of the monetary gold in the world now.

Secretary SNYDER. Well, I do not know. It would be all right. I suppose. We would advance these funds in gold?

Mr. JAVITS. Well, in part.

Secretary SNYDER. I do not think that would make any great difference. If it was felt that that would create confidence, whether it was dollars or gold, and if we have any free gold not tied up by obligations, I am quite sure that that would be just another manner of payment.

Mr. JAVITS. Would you say that some serious consideration should be given to that point?

Secretary SNYDER. The main handicap of the suggestion is that we do not intend to make big advance payments. We are going to advance money as the program goes along, watching it to see that it is meeting the needs for which it is set out. So there never would be an occasion where we were going to advance funds that would be of the size to encourage the sort of thing you are talking about—at least in the early stages. It is not the intention to make big advance payments.

Mr. MANSFIELD. Why not make it bimetallic, gold and silver, instead of just gold?

Mr. JAVITS. I might say to the gentleman that I do not accept that amendment.

Mr. Secretary, I notice on page 6 of your statement that you say:

I am sure this country does not wish to dictate to these friendly countries either the particular measures they should take, or the exact manner in which they should be taken.

Does not the Secretary believe that fiscal measures will figure in the bilateral agreements between us and the benefited countries?

Secretary SNYDER. By all means; but by my language there I mean we are not going to tell them: "You have to put on a certain type of taxes," or "You are going to have to set up a certain arrangement toward this end." We will give them the principles, and then we will have to watch as they go along, and if they are not following those principles, that is when we can cut aid off.

Mr. JAVITS. Suppose we are convinced that their actions are uneconomic, can we turn the stream of aid on or off?

Secretary SNYDER. Always.

Mr. JAVITS. Will the Treasury have anything to do with the turning the aid on or off, or is that solely the decision of the Secretary of State? As I read this, it is.

Secretary SNYDER. The NAC is in consultation at all times, and we have found it to be very effective up to date. If you talk to the Export-Import Bank officials, they will tell you there is a very fine

working arrangement between the NAC and the bank, and they welcome the type of consultation we give on the Council as to whether that is proper or this is proper. I am quite sure the Administrator will be delighted to have the advice of the Council in his work.

Mr. JAVITS. Is there any reason why there should not be a disclosure to countries to be benefited under this European recovery program of those of their citizens who have private investments in our country, whether or not they are blocked?

Secretary SNYDER. We are working on that program right now and I hope to have a proposal on this very shortly.

Mr. JAVITS. Do you believe that we must have some mechanism by which American foreign policy should be observed by private investors in the ERP countries in return for the guaranties of convertibility and withdrawal of the foreign exchange involved, which are proposed in the administration's ERP bill?

Secretary SNYDER. There is no question about that.

Chairman EATON. Mr. Secretary, are you conscious of the fact that, in going into this enterprise, the United States of America becomes a European power, along with the other 16 nations?

Secretary SNYDER. Well, we are certainly taking a great interest in European affairs.

Chairman EATON. That evidently has your approval, Mr. Secretary.

Mr. Jonkman will take the chair, as I must go.

Thank you very much for being here, Mr. Secretary.

Mr. JONKMAN. Mr. Lodge.

Mr. LODGE. Mr. Secretary, in the several pieces of legislation which we have had before us over the past year, we have substituted the word "credits" for "funds," in connection with the availability of dollars to other countries, and each time—Dr. Judd brought this up with Ambassador Douglas, I believe—each time that foreign-aid legislation comes before this committee, the word "funds" is put back, and we have to take it out and put in the word "credits."

I wonder if you would care to tell me whether you feel very strongly that we should make actual funds available or whether you have any objection to our substituting the word "credits"?

Secretary SNYDER. Does that cover your grants-in-aid?

Mr. LODGE. It covers everything except for loans, of course.

Secretary SNYDER. I do not quite get the distinction.

Mr. LODGE. All the legislation we have had up to now has been for grants-in-aid. I am referring to the grants-in-aid part of this measure, which is, of course, by far the larger part, as it is now constituted.

Secretary SNYDER. The point I wondered about was, if we say "credits" and then were grants-in-aid, whether we leave the impression with people that they were credits to be repaid. That would be the only question in my mind. I am just wondering whether the general public would understand that we were advancing \$6,800,000,000. in repayable credits.

Mr. LODGE. You would have no objection to making "credits" rather than "funds" available for the grant-in-aid part of this legislation?

Secretary SNYDER. I think that would be more clearly stated. I would have to give careful study to that question.

Mr. LODGE. I would be glad to have your view on that, Mr. Secretary, because this is a matter which crops up in every foreign-aid

bill that we have, and we thought that it was better to have the word "credits" instead of the word "funds."

Secretary SNYDER. Just roughly, I do not see that it makes much difference, when we follow my interpretation of those two words. I am just wondering whether we would be making it clear to the public.

Mr. LODGE. Our object in putting in the word "credits" was to protect the public. We thought we were protecting the public against the use of these funds in a way which would send up prices beyond our control. If we established lines of credit, then, we would have more control over the expenditure of these dollars in the United States, and, therefore, it seemed to us that from the point of view of protection of the public it was better to do that. Now, when it comes to the public's misunderstanding, I suppose that is a matter of public relations, and I notice that your Department has always been very adept at that, so I do not doubt that you can sell that idea along with a lot of others.

Secretary SNYDER. If you desire me to, I will make a very careful study of the use of the two words as applicable to this.

Mr. LODGE. All right, sir. I think that would be very useful.

Now, Mr. Secretary, does it not seem to you that the dollar, rather than gold, is becoming the medium of exchange throughout the world?

Secretary SNYDER. At present, certainly.

Mr. LODGE. Do you anticipate in those circumstances—

Secretary SNYDER. There are some gold movements, but they are principally in terms of dollars.

Mr. LODGE. Do you anticipate that in that connection it might be necessary, at sometime, to prevent the export of dollars or to control the export of dollars, in the same way in which other countries control the exports of the currency of their country? or do you believe there is no danger of having to do that?

Secretary SNYDER. I would hesitate a long time in making any recommendation to block dollars, or anything of that sort. I think, for our world-trade aspirations, we want to bend every effort to keep the dollar free, if we can.

Mr. LODGE. I was tremendously interested in that part of your statement to which Mr. Jonkman referred, on page 6. I think it is an excellent statement. In that connection, I would like to ask you this: Would you agree that a large part of the load on the American taxpayer consequent upon this program is due to the demand made upon us to fill in the gap between the legal and the real value of foreign currency?

Secretary SNYDER. No; I do not quite follow that, Mr. Congressman.

Mr. LODGE. Well, you said that you felt that some of these currencies were overvalued. Obviously, when they are overvalued—and you state that yourself—exports become difficult, and exports are reduced.

Secretary SNYDER. It is a matter of getting their economy to move in such a fashion that that can be corrected.

Mr. LODGE. Therefore, to that extent, we are being asked to fill in the gap between the legal and the real value of their money; is that not so?

Secretary SNYDER. The real ability of the country to meet its need. I would rather put it that way.

Mr. LODGE. In other words, you would say that it is not true that we are being asked to fill in the gap between the legal and real value of their money?

Secretary SNYDER. Not as such. It is the real need of the country.

Mr. LODGE. If that is true, then, what difference does it make whether their currencies are overvalued or not?

Secretary SNYDER. In the long run, it makes a great deal of difference, because what we are doing here is to enable them to reestablish their economy.

Mr. LODGE. You mean it makes no difference now? If the real value of their money was the same as the legal value, it would make no difference to us right now?

Secretary SNYDER. Now, Mr. Congressman, do not try to get me all twisted up.

Mr. LODGE. No. I am trying to understand.

Secretary SNYDER. I just said that there is no desire on our part to make up the difference between the legal value and the real value of their currencies. What we are looking at is the objective and at the ability of those countries to purchase at this time, and we are trying to make up the difference between the real need and the available means of payment. The purpose is to get the countries into a stable area where their currencies can be adjusted to their proper level. You could get into a rather intricate discussion of that, which gets us away from what we are trying to do.

Mr. LODGE. I am afraid I do not understand you any better than you understand me at this point, Mr. Secretary. That doubtless is my fault. It seems to me that since it was desirable to devalue these currencies, that one of the reasons it was desirable was the European recovery program, and since a devaluation of these currencies would contribute to European recovery, therefore, it would also diminish the load on the American taxpayer and, therefore, that it would be important for us to know now to what extent the difference between the legal and real value of these currencies constitutes an additional drain on the American taxpayer by means of this program.

Secretary SNYDER. Well, if we required each country, right at this minute, to revalue its currency, on a dollar basis, we would probably just wreck a great many of them.

Mr. LODGE. I am making no suggestion, sir. You know so much more about this than I do. I am simply asking that question.

Secretary SNYDER. I am not assuming that I do at all. I am just trying to approach it in the fashion that most of us can understand better. If we get to talking about a difference between the legal and real value of a currency, we get to thinking in terms which are completely foreign to our real objective. We are not just trying to go into a country and say, "Here is the real value or dollar value of this currency, and here is the official rate, and, therefore, we are going to make up the difference in the value of that currency." No one would understand what we were trying to do.

Mr. LODGE. I understand that, Mr. Secretary, and I realize that the question of devaluation is a very delicate matter. I do not feel competent myself to comment on how this devaluation should take place. You say it should not be across the board, and I am quite willing to defer to your estimate of that situation. Nevertheless it seems to me pertinent to inquire—and the inquiry is not made in

any spirit of criticism. I would simply like to know to what extent the difference between the legal and the real value of foreign currencies adds to the burden of this program. Just as a matter of estimate.

Mr. SNYDER. That would be a difficult question to try to answer.

Mr. LODGE. The reason I think it is important, Mr. Secretary—

Secretary SNYDER. If you will permit me again to sit down and try to think that one through—

Mr. LODGE. Yes, sir; I do not want to embarrass you in any way.

Secretary SNYDER. I might be able to come up with something. But I do not want to cloud the thinking here, Mr. Congressman, by stating that all we are doing is making up the difference between the actual and legal value of a currency.

Mr. LODGE. I made no such suggestion, Mr. Secretary.

Secretary SNYDER. I know, but you are asking questions, the answers to which might lead to that thinking, and lose sight of the basic purpose we have here.

Mr. LODGE. I can only say that the present preoccupation of many people, including yourself, according to your own excellent statement, the preoccupation of the Herter committee, was in large part with this question of stabilization of currencies, and surely the word "stabilization" has something to do with the difference between the legal and the real value of the currency, has it not? I am not an economist and I would defer to the Secretary of the Treasury on that question.

Secretary SNYDER. There is no question about that. On that we are in full agreement. But when you ask me, Mr. Congressman, if what we are actually doing here is not furnishing the money to make up the difference between the real value and the legal value—

Mr. LODGE. I said if in part that was not what we were doing.

Secretary SNYDER. Will you permit me to sit down and figure that one out?

Mr. LODGE. I would like to have an answer to that question, whether in part this legislation is not intended to fill in that gap. Then we can appreciate the importance of that particular problem. It has occurred to several of us that a customs union, an economic federation of Europe, which some of us believe in, as a worthy objective, cannot be achieved unless you have stabilization of these currencies, and stabilization implies devaluation and some uniformity. Would you agree with that?

Secretary SNYDER. I think that is the objective of stabilization.

Mr. LODGE. Therefore, to that extent, I would be interested in getting your authoritative view on that.

Secretary SNYDER. I will be glad to consider the matter and give you an answer.

(The information requested is as follows:)

The estimates of the executive branch are based on the assumption that exchange rates of the participating countries will not be an obstacle to exports.

Even in those cases where an adjustment of the foreign-exchange rate may be needed, a change in the rate at the present time would not substantially increase the availability of goods for sale in the Western Hemisphere. The scarcity of goods in Europe is such as to restrict the amount available for sale in the Western Hemisphere. In addition the volume and nature of imports in many countries are determined primarily by direct import controls rather than exchange rates. For these reasons, even if European exchange rates did in all cases reflect what we might consider to be the "real" values of the currencies, the European dollar requirements would not be substantially reduced.

However, in instances where the exchange rate maintained by a country receiving European recovery assistance is found to be imposing an unjustifiable burden upon that country's balance of payments the Administrator will require that the country concerned consult with the International Monetary Fund, or with the United States Government in the case of nonmembers of the fund, with respect to revision of its rate of exchange.

Mr. LODGE. Now, Mr. Secretary, with regard to these loans which are to be made by the Export-Import Bank, to what extent will it be necessary to relax the conditions under which the Export-Import Bank now operates, in order to allow it to make these loans?

Secretary SNYDER. This will have no effect on the Export-Import Bank's loan policies. The Administrator, when he decides that a loan should be made, will allocate funds to the Export-Import Bank to make the loans under the terms the Administrator works out in consultation with the NAC.

Mr. LODGE. But those terms will be different from the terms under which the Export-Import Bank is allowed to make loans today?

Secretary SNYDER. They may well be.

Mr. LODGE. In other words, they are not as good loans; from a banking standpoint they have more latitude?

Secretary SNYDER. The loans may or may not. Some of them would approach Export-Import Bank standards. I just would not want to say whether they would or would not.

Mr. LODGE. But they would not be forced to?

Secretary SNYDER. No, they would not.

Mr. LODGE. In other words, the reason for this exception in the bill is because we want to be sure that the Administrator has the power to make loans, even though they do not meet the conditions under which Export-Import Bank loans are made?

Secretary SNYDER. That is correct.

Mr. LODGE. In other words, in some part we can presume that these will not be as good loans?

Secretary SNYDER. I certainly do not want to advocate that we make a lot of loans that we do not think we are going to be able to collect. We might make some weaker loans, but certainly not loans that we do not think will be paid back.

Mr. LODGE. But you see, after all, Mr. Secretary, for us who are asked to give something of a blanket endorsement there, it is just as well that we understand what that blanket endorsement might entail. That is why I am interested in having your opinion as to whether the purpose of this relaxation of conditions is not to enable the Export-Import Bank to make loans which otherwise it would not be allowed to make.

Secretary SNYDER. The Export-Import Bank is only acting as the agent for the Administrator. Therefore, its activities would not affect its loan policy or its operations in any way.

Mr. LODGE. Not with respect to matters outside this legislation?

Secretary SNYDER. That is right.

Mr. LODGE. I am, naturally, talking only about matters within this legislation.

Secretary SNYDER. It is using that established agency to administer the loans rather than create a new agency and having another operating unit, when we already have the bank working. That is the purpose of the proposal.

Mr. LODGE. After all, it would not be necessary to have this legislation in that connection if these countries, which will receive the loans under this legislation, would be able to satisfy the conditions under which the Export-Import Bank operates?

Secretary SNYDER. Well, not entirely, because this is a unified operation, in which the Administrator is dealing in both ways, and he tries to move as much over into the loan area as he possibly can, and still take care of the specific situation by not having two agencies working on the problem. It might accomplish a little more than otherwise. That is the purpose of it.

Mr. LODGE. Yes; but if these loans were able to satisfy Export-Import Bank conditions, then, it would not be necessary to have this legislation at all. These countries could simply go to the Export-Import Bank and insofar as that bank had credits available, they would be able to obtain the loans. It is because the conditions are apt to be less easily met that we have decided to relax these restrictions to some extent; is that not so?

Secretary SNYDER. There are many loans which do not fall within the Export-Import Bank field.

Mr. LODGE. Yes.

Mr. SOUTHARD. We anticipate the possibility that if the Export-Import Bank separately were given the authority to make loans, a situation might arise of a decision by an autonomous agency that a loan was not appropriate. Then, how would the Administrator make a grant? Having a total program, estimated to cost a certain amount, how would you move freely, in view of the circumstances, between making grants and making loans? After all, if there were separate responsibilities, you could well envisage that if the loans were not to be made under the Administrator's funds, the grants would be inadequate.

Mr. LODGE. In other words, that would be inadequate because unless you relaxed these conditions, these items which otherwise would be loans would have to be grants. Is that what you mean?

Secretary SNYDER. It might well be that.

Mr. LODGE. But it would necessarily remain true that they would not be as good loans?

Mr. SOUTHARD. Not necessarily. I think one could apply the most rigorous capacity to pay test, and then if the country did not meet that test, the rest of the assistance to it would be grants. But at least you would have one agency fundamentally responsible for the making of the decision.

Mr. LODGE. And at least you would have a hope of repayment. Is that correct?

Mr. Secretary, will the Export-Import Bank, in this connection, operate largely through the governments of these several countries, or will they operate also through private banks?

Secretary SNYDER. Largely through governments. Perhaps those questions could be better answered by the Export-Import Bank. If they are not, I will attempt to get answers for you.

Mr. LODGE. Very well, sir.

You mentioned the combating of inflation. If you were the Administrator of this program, Mr. Secretary, would you recommend to these countries tactfully, of course, as I am sure you would, that they use the same means of combating inflation as have been advocated

by the President of the United States for combating inflation within the United States?

Secretary SNYDER. I think you would have to approach each country with its own situation.

Mr. LODGE. But would you operate under those principles laid down in connection with anti-inflation measures in this country?

Secretary SNYDER. You would have to take each country's situation into consideration.

Mr. LODGE. You would not be prepared to state whether you would adopt the same principles of combating that inflation?

Secretary SNYDER. We would certainly adopt the principles that were most applicable to the country with which we were dealing, and would not attempt to set up any over-all program for all the countries. Each country would be studied carefully, and in the agreement with that country, the appropriate suggestions and recommendations would be made.

Mr. LODGE. Insofar as the President's anti-inflation program in this country contains—in your opinion well-established economics principles—would you take those principles and attempt to adapt them to each individual country?

Secretary SNYDER. If they were adaptable to the particular country why, that would be proper, yes.

Mr. LODGE. Would you, for instance, be prepared to say whether you believe that price controls, in these countries in Europe, should remain in force, or should be diminished, or augmented?

Secretary SNYDER. It all depends on the local situation.

Mr. LODGE. Have you any views as to any of those local situations with respect to price controls?

Secretary SNYDER. Not at this time.

Mr. LODGE. Is it possible to get the view of the administration with respect to price controls in these various countries?

Secretary SNYDER. I think we would have to study each country, as we approach the agreement with them.

Mr. LODGE. Who in the administration would be willing to give us a view as to what the Administrator should recommend with respect to price controls in these several participating countries?

Secretary SNYDER. I do not know who is equipped to give any such answer at this time.

Are you, Mr. Ness?

Mr. LODGE. Well, I would like to have an answer on that, Mr. Secretary, because as you know better than I, price controls, monetary stabilization, and so on, are all linked up with recovery in one way or another. Of course, views differ as to how they are linked up. But since, after all, I assume that you will agree that this program cannot be considered independently of our domestic economy, therefore, I would like to get the view of the administration as to whether they will be inclined to recommend the same sort of medicines for the domestic economies of these countries as have been recommended by the President with respect to our own domestic economy, bearing in mind, naturally, variations within the various countries. I would like to get an authoritative view from the administration on that. I assume that you agree with me, Mr. Secretary, that insofar as foreign affairs are intimately related to domestic affairs, at this critical juncture, it is well to approach both from a nonpartisan angle.

Secretary SNYDER. I think so.

Mr. LODGE. That was the purpose of my question. You mentioned sound fiscal policy in this country. I do not wish to go into that too deeply, Mr. Secretary. I assume that you feel that the present policy, which has existed for some time, of monetizing the public debt, is sound fiscal policy.

Secretary SNYDER. That what, sir?

Mr. LODGE. That the policy of monetizing the public debt, I assume you feel, is a sound fiscal policy.

Secretary SNYDER. I have established, I think, on a number of occasions my views on the management of the public debt, and the approach we should make, and I am prepared to give you an exhaustive statement which I have prepared on the subject.

Mr. LODGE. I regret that I am ignorant of that, Mr. Secretary.

Now, with respect to taxes: Do you believe that in these countries where inflationary conditions exist, the tax structures should be altered?

Secretary SNYDER. We would certainly have to examine each country.

Mr. LODGE. I would like to get some recommendations as to taxes within these countries, because although I am quite appreciative of the fact that we must be very tactful in dealing with the internal affairs of these countries, nevertheless, since the conduct of these affairs bears so directly on the possibilities of recovery, it is important at least for the Administrator to make tactful suggestions in the beginning, let us say, on these various matters. Therefore, it is important for this committee, it seems to me, to know where the Administrator might possibly stand on such questions as price controls and taxes.

Secretary SNYDER. I think I can state very categorically that the nationals of every one of these countries should be called upon to give their full support and aid in the support of their own country. If it requires adjustment of tax structures, and that sort of thing, then, it will be most appropriate to give very careful consideration to that fact.

Mr. LODGE. You would not suggest a \$40 tax credit as an anti-inflationary measure?

Secretary SNYDER. I do not think it has ever been suggested as that.

Mr. LODGE. The point of these questions, Mr. Secretary, is that it would be very interesting to me to obtain your views particularly, and the views of the administration generally, on what the criteria for internal recovery and reciprocal self-help among the 16 participating nations will be. They will unquestionably look to us for leadership on matters of that kind, in an attempt to expand the free-trade area of Europe, as we have created our free-trade area in this country. It is not my desire to put you in a delicate position, but I would like to know what these criteria for internal recovery will be, and, if it would be convenient for you to submit to us some memorandum on that, including the various items which I have brought out, it will be very helpful to this committee.

Secretary SNYDER. We will attempt to do it.

Mr. LODGE. We are trying to write legislation, and it is a difficult piece of legislation to write.

Secretary SNYDER. I know.

Mr. LODGE. We do not want to handicap the Administrator, but we would like to have some guidance as to what his criteria will be in this connection.

Secretary SNYDER. I frankly want to be just as helpful as I can; and if we can get up something that will be helpful, we will try to do it. (The information requested is as follows:)

While the Administrator will have a real interest in the goals to be laid down by each country for the achievement of internal stability, he will leave to each government the determination of the most effective means possible for the attainment of its objectives. At frequent intervals, the Administrator will consult with the governments of these countries on the relative success achieved in accomplishing the proposed aims.

Obviously, it is impossible at present to foretell what the Administrator will find it necessary to do in each specific case, and, consequently, it would not be wise to express at this time any views which might bind his actions. While all of the ERP countries have suffered from internal price distortions which are inevitable results of a long war, the forms and extent of inflation and the probable effectiveness of alternative remedial measures differ very widely.

Most ERP countries have experienced a large expansion in their money supply as a result of military or reconstruction expenditures which were not covered by taxes or savings. However, the domestic price levels of a number of these countries have not risen in the same proportion; this is mainly due to reasonably effective price and wage controls offsetting the shortages of goods and services. As a result, there have accumulated in such countries large backlogs of more or less involuntary savings. Confronted with this situation, several countries resorted to the partial blocking of liquid assets. This action, reenforced by capital levies, initially served to restore a measure of equilibrium, but most of these countries have continued to suffer from budgetary deficits. Other countries have maintained the effectiveness of their wartime price controls while restoring approximate equilibrium in the public budget. Although these countries have avoided the disruptive effects of open inflation, the impact of "suppressed inflation" arising from a shortage of goods while current and accumulated purchasing power remains high is nonetheless real.

Still other countries have experienced disproportionate price increases that, far from restoring equilibrium between prices and the money supply, have set off a cumulative process of inflation that has been fed by budget deficits, private credit expansion, and the wage-price spiral.

While there is large scope for direct and financial controls to stem inflation and to prevent the dissipation of resources for nonessential purposes, an increase in the flow of goods, stimulated by the ERP, can provide the most effective and lasting assurance of price stability. Such a recovery of production would permit the progressive relaxation and elimination of price controls at an earlier date than would otherwise be possible.

As in the case of prices, the Administrator will expect each country receiving assistance to adopt the tax measures necessary to internal stability but the particular measures will be left to the discretion of the government in each country. In the event that the goal of internal stability is not achieved in a particular country within a reasonable period of time the Administrator will be concerned with the extent to which the tax system in that country is impeding achievement of internal stability.

The willingness of recipient countries to undertake necessary tax reforms is implicit in the statements which the several European governments issued at Paris on the subject of internal financial and economic reforms. The Administrator will, of course, wish to render every possible technical assistance when requested by the European countries in improving the administration of the tax program adopted by the foreign government. Naturally the amount and nature of the technical assistance which will be requested from the Administrator will vary from country to country since there is a wide diversity in the tax structures and the efficiency of the tax systems among the participating countries.

The administration's approach to the problem of European recovery has been based from its very beginning on the fundamental principle that European self-help and cooperation are prerequisites for United States assistance. In reply to questions by Senator Vandenberg, administration witnesses have declared the administration's readiness to accept a clause for insertion into the proposed bill which would specifically tie the continuation of American assistance to a continuation and development of European self-help and cooperation.

In evaluating whether satisfactory progress has been achieved by a European country over a given period the Administrator will have to appraise—

- (1) With respect to self-help, results in—
 - (a) increasing industrial and agricultural output; and
 - (b) achieving and maintaining monetary and financial stability.
- (2) With respect to cooperation, results in—
 - (a) developing intra-European exchange of goods and services; and
 - (b) developing its economy along lines that assist in integrating and unifying the economy of western Europe as a whole.

Such an appraisal will call for the highest kind of political and economic judgment. It will take as its point of departure such objective criteria as industrial and agricultural output, data on the fiscal position of the participating countries, on price developments, on the volume of intra-European trade, etc. But such data may be highly misleading unless they are interpreted in the light of many less definite factors.

Thus, a 10-percent increase in industrial output of a country that received additional coal during the period and whose production was previously held back only by a fuel bottleneck would be a much smaller achievement than a similar increase on the part of a country that has to contend with labor shortages and a series of strikes fomented by political opposition. The importance of taking varying weather conditions into consideration when appraising any progress in agricultural output need hardly be mentioned. The same percentage of public expenditures uncovered by tax receipts would have varying significance depending upon the purpose of the expenditures, the country's current rates of savings and of private investment, and similar factors. A given increase of prices over the period may mean either the tapering off or the start of an inflationary spiral.

With respect to cooperation, the same reduction in the level of tariff protection between two countries is far more significant if they are countries with competitive industries than if they are countries whose economies are largely complementary. Also the achievement of an above-average increase of exports to other participating countries may be far easier for a country that has abandoned an overvalued rate of exchange than for a country that has already been forcing exports through allocations or incentives to exporters.

Even more complex questions arise in trying to appraise the progress of a country in the face of contrasting developments in different fields. There is obviously no mechanical criterion for offsetting the progress achieved in stepping up production against a simultaneous worsening of the inflation or, alternatively the success in stopping inflation against a concomitant reduction in economic activity. Furthermore, many elements which enter importantly into the determination whether satisfactory progress has taken place do not lend themselves to any quantitative determination. This is particularly true with respect to the progress toward greater intra-European cooperation.

It would certainly be convenient to be able to rely on an objective test which would automatically gage the progress made by the participating countries toward the goals of the European recovery program. Unfortunately, no such test is available. Quantitative indexes on production, budgets, prices, trade, etc., have important functions as indicators. But, like laboratory tests in medicine, they do not do away with the necessity of balanced judgment by an experienced diagnostician. This judgment will have to be exercised from time to time, in the light of all the relevant evidence, by the Administrator.

Mr. LONGE. Thank you very much, Mr. Secretary. I am much obliged.

Mr. VORYS. Mr. Secretary, we appreciate your coming here. You have been very helpful, and we thank you for your contribution, which has been very valuable.

Secretary SNYDER. Thank you, Mr. Chairman. I appreciate the courteous approach that each of these gentlemen has had.

Mr. VORYS. We will adjourn until 2 o'clock, at which time we will hear Secretary Harriman.

(Whereupon, at 12:30 p. m., the committee recessed, to reconvene at 2 p. m.)

AFTERNOON SESSION

The CHAIRMAN. The committee will come to order.

We have with us our very distinguished Secretary of Commerce, who will make a statement, and then subject him to the inquisition.

**STATEMENT OF SECRETARY OF COMMERCE W. AVERELL
HARRIMAN**

Secretary HARRIMAN. Thank you, Mr. Chairman.

If I may, I would like to run through some material I have prepared as Secretary of Commerce.

Before doing so, I would like your permission to give a personal view on the program as a whole.

I firmly believe that the recovery program for Europe of the size and nature proposed by the President is an essential step in building a stable peace.

We are proposing to assist the people of western Europe to regain their economic stability, without which political stability cannot be obtained.

It is certainly abundantly clear that there are forces in Europe which wish to take advantage of the economic chaos and hunger to establish a totalitarian dictatorship. I must say that I am completely convinced that that process can be checked by stable economic conditions; and from my experience, I have found the people of Europe are as wedded to their historic freedoms as ever.

At the same time, it is clear that there is economic political warfare publicly declared by those that are under the control of the Kremlin who are attempting to prevent recovery and who maintain the present conditions under which they are hopeful of expanding their influence and power.

In addition, it is also abundantly clear that the overwhelming majority of the people of these countries are struggling to overcome the destruction and disruptions caused by the war and to rebuild their lives under democratic institutions.

With the help that we have given, real progress is being made in spite of the efforts that have been made, both from within and without, to prevent recovery. These countries, including western Germany, number 270,000,000 people who are among the most talented industrial and freedom-loving people in the world.

They are largely the people from whom our traditions and way of life stems.

If western civilization in these areas collapses we shall face world conditions quite different from anything that we have ever before known.

We know that wherever governments are under the control of the people, and wherever the people are free to make the ultimate decisions, the cause of peace is furthered; but historically we find no such assurances in dictatorships.

This program contemplates helping these countries to help themselves and, by working together, to help each other.

The cooperative relationships which the participating countries have undertaken to develop during the recovery period may well lead to permanent relationships and help break down the nationalistic barriers which have caused so much economic difficulty in the past.

I, for one, have no doubt that if we embark on this program with determination it will be successful in the reestablishment of western Europe on a firm foundation so that it can go forward in its traditions of democracy, freedom, and expanding human values.

Not to have such faith is to deny the vitality of the free institutions to which we so firmly adhere.

I believe that this program is one of the most far-reaching undertakings for peace and for human progress ever undertaken by this or any other country. It is noble in concept and at the same time is based on considerations of our own self-interest and, in my opinion, of our own self-preservation.

I would prefer to discuss only the constructive aspects of the program, but I feel that I should also state my judgment as to the effects of the alternative—if we should fail to take this step.

The President last summer appointed a committee of 19 distinguished private citizens to give its judgment on a foreign-aid program. I served as chairman of this committee.

A section of their report deals with the interest of the United States in European recovery. They emphasize our humanitarian and economic interest and then conclude with their views on the strategic and political aspects.

I commend to this committee their full statement on this subject. I will quote, however, only the concluding sentences. This statement was written by the members of the committee and not by myself, but I fully concur in their conclusions:

The domestic consequences are such as no American could easily tolerate: The swift and complete conversion to a military footing which national security would require; the abrupt but necessary change in our relations with the rest of the Western Hemisphere; the immediate and sweeping limitation of our economic and political life, perhaps extending even to our very form of government.

In such prodigious terms is the interest of the United States in European recovery defined. The committee is convinced that a sound program for western European recovery should be formulated and adopted by the United States with the same boldness and determination, and the same confidence in the worthiness of the democratic cause, which characterized our action in World War II.

I want to make it clear that a program of the contemplated magnitude will be costly and will mean sacrifice by the American people. The benefits to be gained, however, far outweigh the immediate sacrifices. As you know, we cannot expect to obtain direct repayment for a substantial part of the aid given. Our returns will be in furthering peace and in world stability, and I believe we will get an indirect return over the years from expanding world trade.

Up to now I have been speaking as an American who has had the opportunity during recent years to observe at first hand developments in Europe. I shall now turn to certain aspects of the problems that are associated with my present responsibilities as Secretary of Commerce.

UNITED STATES ECONOMIC INTEREST IN EUROPE

The area we are concerned with is a great industrial workshop, even now comparable in the world only to our own country. It is also a great world trade center. Its economy in modern times has rested in large measure upon buying raw materials, converting them into manufactured articles through use of its own fuel, skilled labor, and industrial resources, and selling the finished articles in the world market.

Much of its grain, feeds, fats and oils, tobacco, cotton and other fibres, and petroleum have been bought abroad with the proceeds of these sales. To an important extent, also, western Europe's income from sales of manufactured products was augmented by income from tourist, shipping and financial services to the outside world, and from overseas investments.

Its ability to sustain a dense population is dependent upon the existence of world conditions under which it can buy its needed materials, manufacture and sell finished products in volume.

These conditions have not existed since the war. You have heard in detail, in previous testimony, the ways in which they were disrupted by the war and the extent of this disruption.

It is unnecessary for me to repeat those details. Suffice it to say here that western Europe is, under present conditions, unable to produce and trade in the volume necessary to play its prewar role in the flow of world trade, or even to rebuild and expand its productive equipment, employ its population fully and effectively, and support itself.

This indicates the seriousness of the situation for Europe itself. I wish rather to indicate our economic interest in the restoration of Europe to its earlier role in the world's economy.

We clearly have such an interest in the restoration of Europe as a paying market for United States goods. Prewar western Europe bought and paid for United States commodities far in excess of their sales to the United States.

This was part of the great triangular trade in which western Europe sold its goods and services to Latin America, the latter to the United States, and the United States to Europe.

Similarly, part of our exports to western Europe were paid for from the proceeds of its excess exports to the Far East, which, in turn, had an export surplus with the United States.

This is a very general, rough indication of the type of multilateral trade with which we are involved directly and indirectly in Europe.

The war and its aftermath, including the delay in European recovery, has disrupted these multilateral trading relationships and seriously affected the economies of the other trading nations of the world.

With too little production and a resulting low level of exports, Europe has since the war been able, only with difficulty and with much outside assistance, to provide its most pressing import needs.

Contrary to the general impression, and in spite of our financial aid, we sent in 1947 a smaller proportion of our exports to Europe than in 1946 or before the war. And, while our total exports have to date been sustained by an abnormal demand backed up in other areas of the world during the war years, definite signs have appeared of a dollar shortage in other parts of the world as well, foreshadowing an inevitable steep decline in our exports.

It is to our interest, therefore, purely from a business standpoint, that this world network of trade be restored and sustained on a paying basis, not necessarily on the identical lines as prewar Europe's industrial productivity, so that she may be able to sell abroad in payment for what she needs to buy abroad.

To be sure, there will be more competition for certain of our products. There will, however, be bigger and sounder markets in Europe and elsewhere.

I am not suggesting that the United States could not endure the loss of European markets. However, our output of many industrial and agricultural products and that of other countries has been developed on the basis of European participation in international multi-lateral trade. The decline of Europe would require far-reaching readjustments of agricultural and industrial production and distribution in this country and in other areas.

It would also affect our ability to obtain needed imports and, particularly, essential raw materials.

That is not only within Europe but among the dependencies of European nations.

Such readjustments would be costly in terms of employment and standards of living to our people and to the people of other countries. The cost of such a change is, of course, not calculable in dollar terms, or easily related to the cost of the program before you.

It is clear, however, that the cost would be very great in both economic and human terms.

PROGRESS TO DATE

We have already furnished substantial aid to western Europe—nearly \$3,000,000,000 in grants and over \$7,000,000,000 in loans and credits since the end of the war. It is fitting and desirable at this point to inquire into the results achieved thus far.

We find that in 9 out of the 16 countries involved, industrial production is now at or above prewar levels.

I am speaking of the current level, that would not go for the year as a whole.

These are the Netherlands, France, Denmark, Luxemburg, Norway, Sweden, Switzerland, Ireland, and the United Kingdom.

Belgium is below prewar level by about 10 percent; and Italy's production is at about two-thirds of prewar; Germany and Austria, however, are operating at less than half of prewar.

Except for the latter two countries, the average level of industrial production in the other participating countries is now close to prewar.

To be sure, consumption levels are considerably below prewar for large groups of the population, but this is so in large measure because so much of the production has had to go into replacement of what was lost through wartime destruction and deterioration.

Then, too, these countries have been trying to maximize their exports.

At the same time, they have had to take care of an increased population. The hard winter of 1946, the 1947 drought, and the rapid depletion of foreign exchange resources also increased their difficulties most substantially.

The point should also be made, in the light of these facts, that the Europeans are not sitting down on the job. The urban populations have largely a most inadequate diet; in addition, there is a widespread lack of consumer and incentive goods.

It is not easy to work on a half-empty stomach; and it is not encouraging to work for wages that cannot be used fully to satisfy family needs.

Nevertheless, they have worked hard to achieve the substantial progress that has been made.

More than that, it promises well for what can be accomplished with further adequate help. Our assistance thus far has certainly produced results. I believe, therefore, we have a reasonable basis for going ahead.

PROCUREMENT AND SUPPLY FROM OTHER SOURCES

It is important to understand that Europe will have to get many of the materials she needs from countries outside of the United States.

Only about one-third of the things needed by the sixteen countries of western Europe will be obtained from the United States.

The European countries will not be able, at first, to finance all of these so-called offshore purchases with exports of their own products. For the first 15 months of the proposed program, only about two-thirds of the materials to be imported from sources other than the United States can be paid for by exports from Europe.

The other third will have to be paid for either by dollars from the United States or by credits extended to Europe by the supplying countries.

There are several reasons why we should assist European countries to acquire goods from other countries. The strains on our economy will be lessened if other nations can supply part of the materials that are in short supply here. This will also provide the widest possible opportunity for other countries, particularly in the Western Hemisphere, to send to Europe the goods which they have customarily supplied.

South America can supply various food items and fertilizers; Canada can supply some manufactured goods as well as grain. And these Western Hemisphere countries are thus enabled to buy the goods which we have usually sent them.

This triangular trade will have a healthy effect on the internal economy of these other countries and assist in the reestablishment on a firm base of the structure of international trade.

There will also result a broader diversification of purchases in this country over a wider area of our productive capacity which can be more readily sustained and which will be healthier for our economy both now and in the long run.

At the same time, it will be possible through the wise use of the export control powers, which the Congress has recently extended, to protect our economy from undue drains in any particular items.

There is a further aspect of this matter.

Several of the most important supplying countries will be unable to produce sufficient of the materials that Europe needs unless they receive some outside assistance.

In this connection, the Congress has just recently, during the special session, authorized the Commodity Credit Corporation to engage in broad projects "to stimulate and increase the production of foods, agricultural commodities and products thereof, in non-European foreign countries."

This farsighted legislation is bound to make our task easier.

To sum up—other exporting nations are expected to supply to a great extent the needs of western Europe. That will not only lessen the impact of the program on the United States; it will aid tremendously in rebuilding the trade of the world on a sounder base, and at a higher level.

In general, it will help the development of world reconstruction and prosperity.

THE DOMESTIC IMPACT

When we try to determine the effect of European aid on our economy, it is not enough to consider the amount of financial aid we plan to extend. More important than the amount of money involved is the volume of goods we will ship. High prices in this country result from the short supply of goods in relation to heavy demand.

The impact of current and expected exports cannot be appraised without recognizing that imports help to relieve many important commodity shortages.

It is, therefore, the difference between the exports of goods and offsetting imports which is significant.

My figures relate only to export and import of goods. They do not include services.

This export-trade surplus, which was approximately \$10,000,000,000 during the past year, represented about 4 percent of our gross national product. This rate compares to about 5 percent for 1943 and 1944, the peak war years, and is comparable to the postwar years of 1919 and 1920.

While exports have increased from prewar, the volume of our production has also increased, to a level more than half again as high as before the war. This large increase in our production has made it possible to assist in postwar reconstruction abroad, and at the same time to provide impressive increases in our standard of living.

I believe that we have probably passed the export peak, and to the extent that exports contribute to our inflationary problems they will play a lesser role.

Assuming the appropriation of 6.8 billion dollars recommended for the European program is made, our exports will be somewhat less in 1948 than in 1947, and our imports are expected to increase.

In making this statement, account has been taken of all known resources available for the purchase of our products, including remaining credit balances, gold, dollar assets, likely private investment, and funds which may be made available by the International Bank and Monetary Fund.

I do not mean to suggest that our exports of short-supply commodities do not play a part in the current inflationary situation. To ship products abroad for which there is a market here at home calls for sacrifice.

It would, of course, be easier for us to win our battle against inflation if we could use the goods we are exporting to help meet the heavy demands at home.

We must face the fact that the European recovery program will add to our difficulties in trying to control inflation. But we must remember that inflation is caused in large part by many other factors of domestic origin.

In general, therefore, the answer to the question as to the inflationary aspects of the program is that they are real but are not controlling.

We should have to treat with them even in the absence of this program, and in either event the same measures would be necessary and should be used.

SPECIFIC IMPACT, INDUSTRIAL ITEMS

To complete this analysis, the drain on our economy should also be appraised in terms of the particular items involved. I shall touch on the major industrial items, since I understand Secretary Anderson will discuss with you the food and agricultural items; and Secretary Krug, coal and petroleum.

I should then like to refer briefly to the findings of the President's Committee on Foreign Aid, and relate them to the recommendations of the executive branch.

AGRICULTURAL MACHINERY

The CEEC stated import requirement for tractors and other farm machinery, of which the United States would be called on to supply some 85 percent, amounted to \$932,000,000 at July 1, 1947 prices.

Of this total, \$353,000,000, or 38 percent, was required for the first year of the program.

This request was judged to be far in excess of United States capabilities to supply and probably a good deal greater than could be used effectively in the time involved.

The estimate here presented is that the United States would supply \$136,000,000 of farm machinery during the first 15 months and a total of \$545,000,000 during the entire period of the recovery program.

Mr. VORYS. Would you mind an interruption?

Secretary HARRIMAN. Not at all.

Mr. VORYS. I am trying to tie this in to a recapitulation table that we have been handed. On that recapitulation table I find 133.2 million United States funds for agricultural machinery out of a total of imports of 158.7.

I just wondered if you are familiar with this recapitulation or if somebody here is?

Secretary HARRIMAN. My figures indicate that our suggested supply in this program for 15 months is \$136,000,000.

Mr. VORYS. I wondered whether that is the Harriman report recommendation.

Secretary HARRIMAN. I am talking about the executive branch recommendation. This shows \$136,000,000.

Mr. VORYS. I thought we might be coming to a whole string of similar items and we might get the thing geared in together at this time, so that we could follow it.

Secretary HARRIMAN. This shows a couple of million dollars difference only.

Mr. VORYS. Could we find out where this mimeographed sheet comes from? I am informed that Ambassador Douglas brought this in yesterday.

Secretary HARRIMAN. I will check my figures with that. In this case it is only a fractional difference. It is 133 instead of 136.

Mr. VORYS. That caused me to wonder whether these figures you are now giving were the ones you intended.

They are not merely the Harriman report figures?

Secretary HARRIMAN. No. We will touch on them later. I am discussing the executive branch recommendation. It may be a misprint. I will check that.

The necessity of insuring that Europe has available sufficient means of production to maximize food output has been discussed in detailed evidence previously submitted to your committee; and will, I am sure, be emphasized in the course of Secretary Anderson's testimony.

Our particular concern has been the development of an export program which will not endanger the achievement of food production goals in the United States.

Normally, Europe has taken about 5 percent of our farm-machinery production. The program recommended would about double that percentage, but because of our increased production it would still leave more of this equipment for the American farmer than he had in 1946, and at the same time, take care of our other regular customers abroad.

Although many American farmers have had machinery on order for some time, they are in better shape in this respect than prewar.

The volume of farm power, machinery and equipment is calculated to be more than 20 percent higher than prewar. The recommended increase in exports to Europe should not result in any decrease in our food production, but only cause a short deferment in the replacement of some older equipment.

COAL-MINING MACHINERY

The proposed program for the export of coal-mining machinery calls for the shipment of \$82,000,000 worth of this equipment during the first period of the program.

The estimated total for the entire period is approximately \$207,000,000. It will be noted that the program here recommended approximates the level of the CEEC request but it should also be noted that these recommendations involve a redistribution of the exports envisaged in the Paris report.

In particular, the requirements for certain of the participating countries have been revised downward while those for western Germany have been increased.

Exports under this program will involve a wide variety of equipment, the most important items being conveyor belting, hose, wire rope, and some specialized machinery such as cutters and loaders.

The CEEC requirements have been carefully reviewed by American manufacturers and it is their judgment that they can be met. Our productive capacity has increased since the war, and our own accumulated demand has been substantially overtaken.

Fairly accurate forecasting of future demand was possible, because of the large volume of orders now held by our manufacturers for delivery 2 years ahead.

Only conveyor belting offers a major supply problem but this is proposed to be met in great part through alteration of the original specifications to enable United States producers to operate their presses at maximum capacity.

The effect of imports of these items on Europe's production and export potential is great. The shipment of relatively small amounts of these critical items will make possible the rapid completion of programs for repair, modernization and expansion of Europe's coal mines which will in turn progressively reduce and ultimately eliminate the currently high and uneconomical movement of United States coal to Europe.

ELECTRICAL EQUIPMENT

The power program calls for the furnishing of equipment and supplies to the total value of \$345,000,000. It comprises generating equipment, motors, and other types of electrical machinery, apparatus and supplies, and also such items as machine tools, small construction machinery, boilers, valves, and castings.

Of the \$345,000,000, \$70,000,000 is destined for the power generation industry; the remainder will be equipment for use in fertilizer production, mining operations, and other industries.

During the first period, \$95,000,000 is involved, consisting mainly of the smaller items, such as motors and electrical supplies. No large generating equipment, of which we are now extremely short, is contemplated to be supplied until toward the end of the program.

Our annual production of these items now exceeds \$4,000,000,000 and we have usually exported 6 percent of our production.

There is contemplated a relatively large increase over our regular exports to Europe, which is normally self-sufficient in these items, but our total exports to all destinations are not expected to exceed 8 percent of production.

The electric-power program is a vital phase of the general economic rehabilitation of western Europe. The importance of the program to the CEEC countries is shown by their plans for expansion.

The participating countries are undertaking to expand their power industry to an extent requiring the use of \$5,000,000,000 of equipment, of which we propose to supply the aforementioned \$70,000,000, or 1.4 percent.

While our contribution in electrical equipment generally is relatively small, it involves many items of specialized character available at this time only from the United States.

IRON AND STEEL

We propose to supply 3.1 million tons of iron and steel valued at \$290,000,000 during the first 15 months of the program; that is just over half the amount estimated in the Paris Conference report.

Included are 2.1 million tons of finished and about 1 million of crude and semifinished.

During the same period, the participating countries will produce about 35 million tons; our production will be about 80 million tons.

Our contributions will fill a critical need to reconstruct damaged and destroyed plant and transportation facilities and take care of a large volume of essential replacement and maintenance deferred during the war.

That will be particularly important to certain countries.

Imported steel in the next year or two is also essential to the success of many vital production programs in Europe. In the latter years of the program our contribution will be much less.

Mr. VORYS. I hate to interrupt you, but we are going through a detailed thing, and we might as well try to keep track of the items.

If this is Mr. Douglas' summary sheet, every item so far has been different from what you are giving. There is in here \$2,000,000 for scrap iron. I do not know what that is. I think that is the same.

Secretary HARRIMAN. That \$2,000,000 for scrap iron, I think, is the sale of scrap in Austria. It is not coming from the United States. I am dealing with the commodities coming from the United States.

Mr. VORYS. All I wanted to find out was whether yours was correct, and I understand yours was supposed to be the executive branch statement, and so far out of four items there is a difference between your items and those that I have, and understand to be the executive branch items, which total up at the bottom, \$6,860,600,000.

Chairman EATON. Is that 6 billion?

Mr. VORYS. Yes. It is \$6,860,600,000.

Each item you mentioned so far, including agricultural machinery, electrical equipment, mining machinery, and one item that you have given on iron and steel, are each different. I thought you were talking about the same thing as this list.

Secretary HARRIMAN. I am. This is calculated in a different way.

I can explain that. That scrap iron is Austrian and scrap which is to be financed by dollars, but it is not coming from the United States. That is the explanation.

I can take this and reconcile it. I have given general figures. The figures can be reconciled.

Mr. VORYS. This is supposed to be the composition of imports of commodities and services from the Western Hemisphere and possible sources in distribution of financing, April 1, 1948, to June 30, 1949. It is July 1, 1947, prices in millions of dollars.

I thought the way to follow this was in this manner.

Mr. JARMAN. That is the Western Hemisphere?

Mr. VORYS. It is Western Hemisphere. You all have this.

Mr. RICHARDS. I do not have it.

Mr. JARMAN. Are there any South American or Canadian figures in there?

Mr. VORYS. The columns are, "Total imports from the Western Hemisphere," "Possible sources in distribution of financing," "Own resources," "Sources other than United States funds," "United States funds."

I thought that probably the last column would correspond with your figures.

Secretary HARRIMAN. This table includes purchases made in this country as well as in other countries.

I have to reconcile the two, which I will be glad to do. What I am giving you is the totals that are expected to be furnished from the United States proper, whereas this is how they are to be financed.

Mr. VORYS. What you have given so far for agricultural machinery, let us say, of \$136,000,000, is the amount of machinery at July 1, 1947, prices, that is to come from the United States?

Mr. BISSELL. This is a break-down by financing. The figures the Secretary has given refer to physical sources of supply. Take agricultural machinery, for instance. The program provides for \$136,000,000 physically to be shipped from the United States, but this suggested break-down implies a small portion of that would be financed with funds other than recovery-program funds.

None of these estimates will precisely reconcile, except by accident. The total for Western Hemisphere shown on the sheet agrees with the totals for Western Hemisphere by physical source.

Secretary HARRIMAN. I am dealing with the impact on our economy, which is what has to be shipped from this country.

I have explained the program contemplates shipping 2,100,000 tons of finished and 1,000,000 of crude.

The request for scrap has been rejected entirely, because scrap so directly affects our crude-steel production. Similarly, the estimates for crude and semifinished steel have been substantially revised downward, because of their effect on our output of finished steel and because shipments of such products reduce the availability of scrap generated in their further finishing, and thus affect our domestic production.

In making these reductions, account was also taken of the fact that available fabricating facilities and manpower in Europe are considered inadequate fully to utilize the originally requested tonnages.

I should mention at this point that we have just sent a technical mission to Germany to survey the possibilities of exporting scrap to the United States.

In the case of steel-making equipment, also, it was found necessary to scale down the CEEC requests. We propose to furnish such equipment to the extent of \$48,000,000 during the period ending June 30, 1949, as compared with a request of \$100,000,000.

Substantial orders amounting to between \$60,000,000 and \$80,000,000 are already placed in the United States, and much of the equipment which it is proposed to be made available should come out of these orders. The reduced amounts will, nevertheless, make a substantial contribution to the CEEC program for expanding steel-making plants.

Mention should also be made here of the secondary demand on our steel supply involved in the furnishing of products made from steel.

Taking this in account, the exports during the first 15 months are estimated to be 5.5 million tons of ingot equivalent. This represents 5 percent of our ingot production.

Moreover, there should be subtracted therefrom the volume of scrap generated within the steel industry proper and in the fabricating industries involved, which is estimated to be 1½ million tons.

In other words, the actual weight of steel in all forms, including machinery, which will be exported under the program during this period will be about 4,000,000 tons.

FREIGHT CARS AND TRUCKS

While we fully recognized the critical need for rehabilitating rail transport in Europe, the requests of CEEC for freight cars were considerably reduced. The request for 47,000 cars in 1948-49 did not adequately take account of the substantial contribution that could be made by repair of war-damaged equipment and by the reorganization of transport facilities.

In view of these considerations and of the great needs within the United States, we propose to permit exports of only 20,000 cars, all to western Germany, during that period.

Incidentally, I might point out that 20,000 cars built to European specifications are about the weight of 10,000 United States cars.

Provision has also been made for about 65,000 motortrucks during the 15-month period. While the CEEC report assumed that United States parts would be imported and assembled in Europe, it is our

view that Europe will, in part, continue to find it necessary to follow the traditional practice of importing complete units.

The recommended total of 65,000 motortrucks for the first 15 months is not relatively large.

In the first place, normal prewar United States export of motortrucks to these countries averaged 30,000 units yearly. Moreover, 65,000 motortrucks probably will not increase the over-all inventory of motor vehicles in these countries.

In all likelihood, the units supplied by the United States will be used only to replace worn-out units and will, therefore, also not increase petroleum consumption in these countries.

RELATION TO PRESIDENT'S COMMITTEE ON FOREIGN AID

The President, in appointing under my chairmanship a nonpartisan committee of distinguished private citizens to study the problem of foreign aid, emphasized the necessity for an appraisal which would determine the limits within which United States could "safely and wisely" undertake a program of foreign assistance.

While there are certain differences between the conclusions of the President's Committee on Foreign Aid and the program recommended by the executive branch, a comparison of the foregoing analysis with the recommendations of the committee reveals a broad area of agreement in the two sets of estimates.

In setting forth the reasons for an assistance program, the report of the committee stressed the vital importance of European recovery on political and strategic grounds and also pointed out the great importance of the European market to the American economy, both for direct trading with the United States and as a vital element in the restoration of those multilateral trading relationships which are a prime objective of United States economic foreign policy.

The committee estimated that for the first year of the program the United States Treasury should provide 5.75 billion dollars to finance the European deficit, including western Germany. This may be compared with the figure of 5.90 billion dollars for the fiscal year 1949, in the executive branch program.

The committee further estimated that undertaking a program of this magnitude would result in a total volume of United States exports and an export surplus over imports smaller than in recent experience.

Of equal importance, however, with such over-all magnitude is the probable impact of a foreign-aid program on specific commodities required from the United States.

It is significant, therefore, to note that in the cases of those commodities which I have discussed, the program here recommended for the first year of the recovery effort contemplates exports within the range of United States capabilities as estimated by the President's Committee on Foreign aid.

Thus, in the case of agricultural machinery, the administration's program contemplates exports from the United States amounting to 136 million dollars as against the committee's estimated range 75-125 million dollars.

For coal-mining machinery, the figures are 82 million dollars in the executive-branch program as compared with the committee's range of 80-105 million dollars.

In the field of electrical equipment, the administration's recommendation is 95 million dollars as compared with a range of 100 to 125 million dollars.

While the committee estimated the furnishing of a larger proportion of finished steel products, the contemplated total exports of steel-mill products and raw materials amount to 232 million dollars as compared with the committee's range of 175 to 300 million dollars.

The administration's recommendation in the case of steel-mill equipment amounts to 48 million dollars as compared with the committee's range of 50 to 100 million dollars.

Finally, the program for the export of freight cars is identical with the estimates of the committee.

THE ROLE OF THE DEPARTMENT OF COMMERCE

In concluding, I should like to explain briefly the role of the Department of Commerce in relation to this program.

We are at this time administering certain export control, allocation, and priorities functions, the necessity for which would undoubtedly continue with the European recovery program.

I believe that such functions should be performed in an agency of Government other than the one established to administer the ERP.

Decisions in respect to the exercise of these powers are now made on an interdepartmental basis under the supervision of the Secretary of Commerce in the manner prescribed in the Second Decontrol Act.

In that way, the technical counsel and assistance of all agencies concerned are brought to bear on the many difficult and complex problems involved, including the evaluation of our own needs and those of the rest of the world.

It is my feeling that a new organization established to administer the ERP should be authorized to appraise the needs of the European countries, but not to decide what the total amount of our exports of any commodity should be, or what share should go to western Europe.

The new agency would have a vital responsibility but in a limited field.

Its primary assignment in this respect should be rather as the advocate for the participating countries—to initiate, approve, and present their programs—but not to make the final decisions as between their claims, and those of the United States and the rest of the world.

That is the brief statement, sir, that I have prepared for the consideration of the committee.

Chairman EATON. Mr. Secretary, thank you for your very comprehensive statement.

What is your idea of the proper organization for the administration of this great enterprise?

Secretary HARRIMAN. I am a firm believer that it should be in the hands of one administrator, appointed by the President, with the advice and consent of the Senate, and that he should be in charge of the operating responsibilities of this great task.

He must, of course, work under the direction, in regard to foreign policies, of the Secretary of State, which policies, of course, in the last analysis are made by the President.

I am impressed with the fact that he will have to have relationships with other members of the Cabinet and the heads of the other agencies

of the Government, and that he should be in a position to deal with us and should have access to us.

In other words, in vital decisions it will be a matter of how much grain can be made available from the United States, and he must have the full cooperation of the Secretary of Agriculture who is charged with the responsibility of our domestic agriculture, and responsibilities in seeing that our people get enough to eat.

Those relationships were established during the war, and we are now working under them, in spite of the fact that I have the ultimate responsibility for export controls.

We have worked together with the Department of Agriculture and the staff, and the Secretary of Agriculture and I get together and talk on questions of major policy.

There should be an administrator of this program who has the same relationships that a member of the Cabinet has.

He would have to have relationships with the Department of Commerce in the industrial equipment end, with Interior on questions of coal, and certain of the other agencies, such as those providing transportation as required.

He would consult with the Maritime Commission on shipment abroad.

It sounds complicated, and is complicated.

This is a very vital program. I think the administrator should be charged with those operating duties and should have a competent staff here and abroad to make the necessary analyses of the requirements of these countries.

I went through in England much the same type of study that is now required.

I went there early in 1941 and with a small staff we got to know pretty well what the British economic requirements were and how they were operating, the needs for the war, and also the civilian population needs.

We worked very closely with the Supply Ministry in England, the Agricultural and Food Ministries and those relationships are outside of our normal diplomatic relationships.

But anyone abroad must be under the supervision of our Ambassador. We cannot have two representatives, in addition to which many of the decisions are beyond the purview of the particular supply ministers and must go to the Cabinet and must be dealt with by the Prime Minister.

In those respects those men will only work with our Ambassador, who is our senior representative.

Therefore, our Ambassadors in each country will be brought into the recovery program and must cooperate with those who administer the program abroad.

On the over-all policy decisions that will occur, the current day-to-day flow goes through channels of communication of the State Department, and directly to the Administrator here.

It is a great convenience.

Chairman EATON. You would give the Administrator Cabinet rank?

Secretary HARRIMAN. I think that is a detail. I don't know that it is necessary to do so. There are plenty of men in administrative positions that are accepted by the members of the Cabinet as their

equal, and I would certainly accept him as such, and I think all the other members should.

I have never heard of a special agency having Cabinet rank, and I am not suggesting that. I am only speaking about his status within the councils of the Government. After all, he is much the same in certain respects as the Lend-Lease Administrator, Mr. Stettinius, who had access to members of the Cabinet on matters of policy, and I am only trying to indicate the need for the relationship with the other agencies and departments of the Government.

Chairman EATON. You are in full accord with the general purposes of this proposal and the expenditures of these billions for the purpose of recovery in Europe?

Secretary HARRIMAN. It is my judgment that this is the minimum safe amount to undertake this enterprise. I think the enterprise, as I have said, is noble in its concept, but I cannot overemphasize my feeling that it is in our self-interest, and our own preservation.

I believe that the humanitarian interests are to some extent important, but I think in time our economic interests will repay our own investment when we get the money back indirectly in terms of stability of our own economy. I think the very fact of being able to get an increase of the raw materials we need, and a stable supply, will be important. Over-all, I just cannot contemplate a world in which western European civilization has declined and is under aggressive domination. The change in the balance of power would be such that it would have a drastic effect on the rest of the world.

I think we can avoid war. In fact, I am satisfied that we can avoid war, if we recognize this is the time to work and lay foundations for peace. I would have no such confidence if we did not take the step contemplated by this program.

Chairman EATON. This committee has a very difficult and important responsibility to prepare a bill authorizing this expenditure and giving the ground for our faith in it, and also to create an organization for its administration. That is why I was asking you for some light on that particular subject.

This Administrator would have to be two men. He would have to represent in some way, at least, the foreign policy of this Nation, which involves our becoming a European power along with the other 16 countries which would cooperate. On the other hand, he would have to be skillful, even as skillful and able a financial administrator as you are, to handle this situation.

How are you going to reconcile those two great functions in one man?

Secretary HARRIMAN. He must take the lead of the Secretary of State in foreign policies. Most of his activities will be within those policies, and that will require a very detailed knowledge of the economic requirements of these countries and the progress that is being made in recovery and how funds can best be used in each country and in the recovery of Europe as a whole.

Most of his activities will be in the economic field, but they must be considered with our foreign policy. We cannot have, of course, two foreign policies, but having worked in that field I see no basic difficulty in coordinating our economic assistance with our foreign policy.

Chairman EATON. This is the last question I have: Supposing the State Department takes one view of this proposed action and the Department of Commerce takes another view. Which department will prevail?

Secretary HARRIMAN. Well, we have those differences today. For instance, we have a Cabinet Food Committee, of which Mr. Anderson is the chairman, and Secretary Marshall and I are members of that committee. Mr. Lovett usually attends instead of Secretary Marshall, because he has been away so much and otherwise occupied. We thresh out these programs, weigh the values, and between us, we have always been able to come to conclusions.

On matters of basic policy we have on occasion gone to the President to explain what we are contemplating doing because, after all, he has the ultimate responsibility.

We have not found it impossible to come to an agreement. This is really carrying on much of the same type of work as we did during the war, and which has been continuing since the war. It would be more concentrated in its attention. But I do not see any grave difficulties.

Of course, if there is a situation where there are fundamental differences of opinion they must go to the President for his ultimate decision.

I presume the Congress would follow the program from time to time, and would give an expression of its views. After all, if the people of the country and Congress are not satisfied with the work as administered and progress being made there will be questions raised in connection with appropriations for the future.

Chairman EATON. Failure is the last court of appeal in your point of view, but there is a further appeal from the President to the Congress.

Secretary HARRIMAN. Certainly.

Chairman EATON. Thank you very much.

Secretary HARRIMAN. May I say this. You have asked a question on administration, and I want to emphasize that I would not shoulder this administrator with responsibility for decisions as to how much we should eat at home, and what our policy at home should be, and our relation to other countries. You would be putting on an administrator's shoulder a burden which would be impossible for one organization or man to fulfill. They must remain with agencies outside of this organization.

Chairman EATON. He would have to spend most of his time up here.

Secretary HARRIMAN. Defending the interests of the communities that each of you represent, sir.

Chairman EATON. Mr. Richards.

Mr. RICHARDS. I want to congratulate you and your very fine committee, and the other members of your very fine committee, who have made such a comprehensive report of your study of the European situation.

As I understand it, the recent war cost the United States between \$200,000,000,000 and \$300,000,000,000. The national debt of the United States now is about \$265,000,000,000, and for that reason I am very glad indeed that you went into very fully the question of the alternative, if we do not do this thing, because I think we can only

justify a position in support of this program in the full light of what may happen if we do not do it.

You mentioned here that the United States has already spent in Europe, since the war, about \$3,000,000,000 in grants, about \$7,000,000,000 in loans and credit, \$10,000,000,000 in all. This bill proposes to furnish something over \$6,000,000,000, of which from 20 to 40 percent will be in the form of loans and credit.

In view of the fact that Europe is already obligated to us to the extent of \$7,000,000,000, not to mention normal commercial debts, that they are further obligated to the International Bank for certain loans, do you think that it could be expected that 20 to 40 percent of this money could be repaid in the future without endangering the European economic program?

Secretary HARRIMAN. I believe 20 percent is a sound minimum. You see, each country is in a different position, and certain of these countries are in a position to pay considerable sums of money, not all are obligated. We are dealing with 16 different nations with different conditions. Therefore, I believe that we may get repayments on 20 percent. The amount above that I think will require a detailed analysis of the position of each country, the amount that is going to each country, what their programs are, and to some extent it would depend upon one of the objectives which we have contemplated in this program, to get these countries to expand the production of their raw materials, particularly in their colonies or dependencies, and then be able to take back for our current needs and stock-piling such of that increased production as is necessary.

It is most important for us in connection with being assured of a source of supply. As you know, we are much more dependent for our raw materials abroad than we were prewar, both because of our depleted national resources here and because of our expanding needs with this very much larger economy we now have.

Now, I speak of that as being one of the variables which we do not know until our negotiations are made with each country. If they can expand their production of these raw materials it may well increase their income over what now appears to be evident. Therefore, I think that the administrator should have flexibility in the decisions.

I certainly agree with the thought which I gather is back of your question, that it would be most unwise to saddle any country with a debt which it could not pay. Our object is to get back to sound credit, and if we follow the pattern of former experience, such as after the last war, private credit begins to take the place of Government credit, private investment in place of Government investment, and when you get a period of confidence and stable currencies we find that to follow.

To get back to healthy conditions will also follow. If you saddle countries with a debt it hinders a return to normalcy.

Mr. RICHARDS. It would also discourage our people if they expected to get 20 to 40 percent repayment on this money and get none of it back?

Secretary HARRIMAN. It would certainly be most unfortunate.

Mr. RICHARDS. You mentioned in your very admirable statement here that these people over there requested a certain amount of scrap, and that you had turned them down flat in your recommendation. Is that the only instance in which they have been turned down flat on anything they have asked?

Secretary HARRIMAN. I think that is the only instance where they have been turned down particularly. The reason for that, Mr. Congressman, is that the one limiting factor, or the one bottleneck in our steel production in this country is the shortage of scrap. We would be more closely operating on a 100 percent capacity basis if we had more scrap in this country. If we shipped scrap out of this country it would reduce our steel production and reduce our ability to carry other programs. We also feel that the European countries, and we, ourselves, have not made as energetic an effort to organize scrap collection in Europe, and particularly Germany, as was possible.

Mr. RICHARDS. Is it not a fact that scrap is all over the place over there?

Secretary HARRIMAN. That is correct. There is no question of the need for more scrap in Italy, Britain and other countries, to some extent. In Germany they can collect more scrap than is now being collected. It was not turned down from the standpoint that they did not need scrap, but the place to get it is in Europe, rather than in this country.

Mr. RICHARDS. I saw one plant there covering about 5 square miles with nothing but scrap. None of it has been utilized.

Secretary HARRIMAN. That is correct.

Mr. RICHARDS. It seems to me that some plan could have been worked out to use this scrap where it is needed most.

Secretary HARRIMAN. These problems have been growing, and with all of the problems we have been having the problem of collection of scrap is now receiving the attention which it deserves. That is being organized some.

Mr. RICHARDS. There is one other material that is very essential to steel production, as I understand it, and that is chromite.

Secretary HARRIMAN. Manganese is the most important for our production.

Mr. RICHARDS. They both are in short supply in the United States, are they not?

Secretary HARRIMAN. We are importing chrome. There is no shortage of manganese and chrome to keep our present production going. There is a desire on our part to stockpile some of those critical materials, both chrome and manganese, in order to see us through in emergency if it should come.

Mr. RICHARDS. Domestic production does not meet the need for those two materials?

Secretary HARRIMAN. No. We import most of our manganese and a large part of the chrome.

Mr. RICHARDS. A great deal of it comes from Russia?

Secretary HARRIMAN. I think 20 or 25 percent of our manganese and chrome comes from the Soviet Union.

Mr. RICHARDS. The fact that we need those materials is good ground for trading with Russia, is it not?

Secretary HARRIMAN. Well, we are trading with Russia now on an open basis. We are buying what we can in Russia and they are buying what they can here, subject to export controls.

Mr. RICHARDS. Are those two materials produced to any extent in this 16-nation group?

Secretary HARRIMAN. Well, not directly in those nations, but their dependencies, West Africa, for instance, one of the colonies of Britain,

produces a very substantial amount in the Gold Coast. They produce manganese. Of course India is now a free dominion. We get a large quantity of manganese from India and also get a substantial quantity from Brazil.

Now, part of this program would contemplate the expansion of the production of raw materials so that that should be considered.

Mr. RICHARDS. Do you think we would have a right to insist, through a provision in this bill, or otherwise, that part payment for the money we are letting these nations have, be delivery to the United States of these commodities when they are surplus to the needs of Europe?

Secretary HARRIMAN. I am glad you say "over and above their normal transactions," because I think we would be destroying future trade if we did not permit our purchases for our current requirements to be paid for in cash, which, again, gives them in those countries the dollars to buy from us the needed commodities. It is the program, approved by Congress, to stockpile those critical materials.

I hope that program can be fulfilled. It has not been possible since the war to make much progress. But I would hope that as a result of this program these countries can properly be asked, and, if satisfied, be willing to do it and expand their natural resources in colonies and dependencies to increase production, to be sure of what is very touchy in many items, for instance, tin, which we are very short of, and to increase it for current requirements and protect our expanding economy, and then over and above that to ship to us tonnages which we can stockpile and keep as a reserve.

It is in that area in which we can expect to get repayment. You can handle it two ways. It has been proposed one way. The Congress, of course, could appropriate more money, bearing in mind what we would get back for nothing in the way of stockpiling, or in accordance with what the administration has recommended, that certain sums be granted as loans, and then we purchase out of the appropriations the Congress has made, or may in the future make, for stockpiling, which funds would be used to repay us.

It seems to me the one that has been recommended is the more practical method of dealing with it. So indirectly we get repaid through the goods we get here later, which we take in repayment and add to our stock pile.

Mr. RICHARDS. The bill here suggests that we be allowed the privileges of purchasing.

Now, I was just wondering whether it should be written in the bill that certain critical materials should be furnished us in part payment for this aid.

Secretary HARRIMAN. Well, sir, then you would have to reduce the amount of loans that you would expect to make because it is contemplated on this recommendation that we will get repaid with dollars that are appropriated for the stock pile. You could handle it either way. Then you would have to increase the appropriations for the European aid program to take account of the material which we would get for nothing for stock-piling.

I am not sure I make myself plain. I will put it another way: You would have to increase the amount of grants-in-aid. Then you would get back some of the grants-in-aid not in the form of dollars but in the form of material or as is recommended you could make more

loans which they would repay out of dollars through our purchase of these raw materials for stock piling.

Mr. RICHARDS. To put it another way, you start to run in a circle and meet yourself coming back?

Secretary HARRIMAN. Yes. This is a method, and I think the most practical method, of doing it.

Mr. RICHARDS. I was trying to get out of that vicious circle.

Secretary HARRIMAN. Well, sir, at the moment, the reason why we are not buying for stock pile is that these materials are not being produced in sufficient volume over and above current needs of ours, and other nations. This will require additional facilities which will require capital expenditures, which will have to be made, and it will be a period of time before they can afford to make those expenditures. It will take steel and other equipment which they first need to rebuild their own facilities at home. But I certainly believe it should be the objective of the program to divert at the proper time the energies of the European countries to expand these productive facilities, and it is only through exploration and development and exploitation of these natural resources that we can hope to be assured of a supply of these critical materials with an additional amount for stock piling.

Mr. RICHARDS. I have one more observation. The United States has taken over many additional military obligations for the protection of Europe. These additional obligations cost us one billion annually, which is another reason why this aid should not be a one-way street.

Secretary HARRIMAN. I agree with you, sir.

Chairman EATON. Mr. Mundt.

Mr. MUNDT. Talking on the subject of manganese, I wanted to point out that it was pretty hard to justify exports of war potentials to Russia which make her strong enough to jeopardize the peace of the world and to cause 16 countries to come to us for assistance on the basis that we were short of manganese, because we have in one State of the Union alone, South Dakota, the world's largest deposits of manganese. You can get them from us without building up a formidable aggressor by making exports for those things in return for peace of the world.

Chairman EATON. Will the gentleman yield?

Mr. RICHARDS. Yes.

Chairman EATON. Why have we not discovered South Dakota before?

Mr. MUNDT. They have been discovered, sir, but they have not been exploited and developed, and I do not think that probably is an appropriate question for the Secretary of Commerce. That is not his particular field. That is handled by the Bureau of Mines.

Secretary HARRIMAN. Thank you, sir. That is correct.

Mr. RICHARDS. I might add that the gentleman's State has the finest pheasants in the world. You cannot beat them.

Mr. MUNDT. If we were going to encourage all these superlatives, it would occupy the rest of the afternoon.

Chairman EATON. They certainly have very fine representatives in Congress, too.

Mr. VORYS suggests that we make a 5-minute rule, and he sets a very beautiful example thereby. Then we will go around after that.

Mr. VORYS. I know everybody wants to ask something, and I realize I have more than 5 minutes' worth here.

Who got up this so-called Harriman report, Mr. Secretary?

Secretary HARRIMAN. The committee organized itself into subcommittees on the different basic categories of commodities that were required. For instance, on capital durable goods, Hiland Batcheller; consumer goods, John L. Collyer; development and administration and drafting, Robert M. La Follette; economic and financial analysis, Owen D. Young; food resources, Chester C. Davis; manpower, Paul G. Hoffman; mineral resources, Robert Koenig; transportation, Granville Conway.

The committee, as a whole, had a staff, although a small staff. Mr. Bissell was the executive secretary. He is here, if you want to ask some detailed questions.

Each of the subcommittees had a small staff. They had available to them the information in Government, and they went outside of Government to industry or to the background of the individual experience of the men. The subcommittees' reports were finally approved by the committee as a whole.

That, roughly, is the manner in which they went to work. They worked very strenuously and energetically for the brief time they were at it.

Mr. VORYS. Here is why I ask: I find that when Cabinet officers come up here often the most valuable detailed information comes from the second line of defense that sits behind them, because, of course, a Cabinet officer is a very busy man and he must have much of his studying and assembling of figures done by subordinates.

Secretary HARRIMAN. We are also not always as competent as our staff.

Mr. VORYS. What I am thinking about is this: That the data that is compiled in a particular foreign country is what is ultimately controlling, or at least very important, and I wondered where this committee got its data on the needs in, let us say, Germany?

Secretary HARRIMAN. Well, some of the men had been to Germany, and the information in particular I can explain. Mr. Koenig was over there on the matter of coal, one of the important items; such information was made available as they may have required. I think some of the food committees in Germany were studying requirements in Germany. That was from their own experience and was available in the Government. They also went to the industries who had been doing business, or had plants over there, not only in Germany but some of the other countries, and machinery people who had plants over there, and got from them the estimates of their requirements as they saw them. They had the benefit of their experience.

Of course, fundamentally, they tried to take and seek reports and analyze them in the light of these various other sources of information, which I speak of.

Mr. VORYS. For instance, when I was in Germany as a member of the Economic Aid Committee, we would see things and talk to people, but then when we would ask about coal production, or something like that—we did not go around and check all the mines—but we would ask for statistics. Our information was just as good as these statistics that were handed to us.

I am wondering whether your committee—I see it is the President's committee; but colloquially it is known as the Harriman committee,

and a very fine committee it is—whether you finally got down to where you had to rely on the same statistics that the CEEC fellows did and our officials did, or whether there was any double-check down the line?

Secretary HARRIMAN. Mr. Vorys, there was not time to send anybody abroad. You speak of coal. Mr. Koenig had been in Europe a good many months. He was on the SHAEF staff and he had to do with opening up the mines as we advanced. He also made a special report of conditions in Germany prior to that time, and also a report on the coal production in England, so that he drew on his previous experience in order to analyze the features which were before him. If the committee members were not particularly familiar, they brought in as advisers men that they thought were competent from industry who had been abroad recently, and in almost every case I think that is true. These committees had outside advice from men who had been on the spot; but I do not want to give the inference that we had a year to make a detailed examination. These are estimates, based upon the independent judgment of these men.

Mr. VORYS. For instance, on steel, the CEEC report came up with a proposal for production by the 16 nations of roughly two-thirds more than the steel exports to nonparticipating countries in 1938. As you mentioned in your report, you have cut the steel requests about in half, and yet the total is still very large, in view of the great needs of our economy.

I wondered whether your committee has any suggestions or recommendations about reexporting of this steel, as to where it should go? The amount, you remember, is still very high, compared with any previous production of these countries, as I understand it.

Secretary HARRIMAN. That is right.

Mr. VORYS. The proposition is, roughly, that we shall furnish the crude steel. They shall process it and then sell it. Is that not right?

Secretary HARRIMAN. Well, of course it goes into the pool. Some of the steel products are used for reconstruction and the domestic needs. Some of it is planned for exports. It goes into the flow of their economy, and exactly what use was made of the individual bar, or something, or the ingots, is a difficult question. That is something we have not followed through on. Some will go to reestablish their economy out of domestic use of the exports.

Mr. VORYS. Would you think that they should be exporting—these 16 participating countries—to the East; let us say to Russia—the finished steel products?

Secretary HARRIMAN. I certainly think so. One of the great question boxes about Europe's food in the future is their eastern European trade. They are obtaining a large amount of food from eastern Europe and Russia has also exported food.

To get the economy of western Europe going trade with eastern Europe must be reestablished.

The only way it can be done is by trade.

Mr. VORYS. So that you feel that it would be all right for us to allocate and control and thus reduce our use of steel in this country so that these countries could take the crude or semifinished steel and process it and reexport it to Russia, for instance?

Secretary HARRIMAN. Assuming they get in turn the vitally needed food.

Chairman EATON. The time of the gentleman has expired.

Secretary HARRIMAN. May I just say this: I do not believe in trying to build an iron curtain to the west of the iron curtain. I believe in attempting to break it down. That can be done by trade.

Mr. VORYS. I hate to see us furnish iron for the iron curtain, though.

Chairman EATON. I would hate to see both sides of the iron curtain come down at the same time.

Mr. LODGE. Mr. Chairman, may I suggest that since the gentleman was in the middle of questioning, he be given more time.

Mr. VORYS. I gladly yield at this time.

Mr. JARMAN. Mr. Chairman, following up that question about export of steel or any commodity to Russia or anywhere behind the iron curtain, in view of the fact that the gist of this thing is a shortage of dollars, would not any food or other material that even Germany we will say, would gain in return for the steel reduce what we have to do to help the situation to that extent?

Secretary HARRIMAN. Yes; if eastern Europe can increase its food production to anything approaching prewar, it will do two things: It will release the strain on dollars; but what is even more important, it will relieve the strain on our agriculture here and the sacrifice that we have to make in straining ourselves to help those countries. Wheat is a tough item.

Mr. JARMAN. This will no doubt sound like a foolish question, Mr. Secretary. It would be foolish but for the fact, in the discussion of the interim-aid bill, despite your testimony before us at that time, the statement was repeatedly made on the floor even after members of our committee refuted it, that we had had no testimony whatever as to the availability of these materials in the United States and as I say, that is the basis for this apparently foolish question that I am going to ask you.

You spoke of eliminating the scrap requests and the reduction of steel by those reductions. I suppose you spoke of the Paris request?

Secretary HARRIMAN. Yes.

Mr. JARMAN. That was gone into very carefully by your committee, I take it, resulting in the throwing out of the scrap and the fact that we would need this reduction and that reduction, and when you had reached your final conclusion, I judge it is your opinion and the opinion of your committee that while some of these goods are in short supply and although it is going to be necessary for us to sacrifice and tighten our belts in instances, by and large this material is available in this country and can be supplied without wrecking it.

Secretary HARRIMAN. That is correct, sir. To cover some of the other aspects, there are a number of commodities such as coal and cotton and certain others where the full requests have been included in the estimates.

The requests were analyzed from two angles: one, the availability in this country or in other parts of the world—the question of availability.

There was not any use of embarking on a program if the goods were not available. The second was whether the estimates at Paris were overambitious in terms of use and they were scaled down with that in mind as well.

The net conclusion, I think, was that the program of capital expenditures which would be required for some of this steel and

other machinery was rather greater than the 16 countries could absorb during this 4-year period.

It would take more like 6 years to expand that production to the degree which they had contemplated in this report. At the same time, we believe that this assistance will be of a nature to let these countries get back to a self-sustaining basis.

Mr. JARMAN. There is no use in getting them back on a self-sustaining basis, is there, if in doing so we should put requirements in this bill that they pay back a great deal of this in strategic materials 5 or 10 years from now?

In other words, if we create a situation which would endanger them falling immediately back into the slough of despondency, the situation in which they now find themselves, immediately after we pulled them out—there would not be much system to that; would there?

Secretary HARRIMAN. No, sir.

Mr. JARMAN. Now, considering this \$6,800,000,000 that is proposed under this bill, 20 to 40 percent of which is expected to be loaned.

Now, the crux of the situation being the dollar shortage, if we put in any stipulations about requirements of payment in strategic materials which would increase those loans to a larger amount than 20 to 40, would it not be necessary to add that much to the six-million-eight?

Secretary HARRIMAN. It would be.

Mr. JARMAN. And therefore we would be just taking out of one pocket and putting into the other; would we not?

Secretary HARRIMAN. We would; that is correct.

Mr. JARMAN. Now, short supply: Of course, many of these goods are in short supply. We had several amendments on the floor offered by well-intentioned young gentlemen, I am sure, from my part of the country, to eliminate the shipment of anything that was in short supply.

Is it the opinion of your excellent committee that we can supply these goods? A sufficient number of them are in short supply, are they not—that an amendment to prevent shipping anything in short supply would ruin the program; would it not?

Secretary HARRIMAN. It would. I do not mean to say that some quantities are not in adequate supply. Dried fruits, for instance, we can send. We may even have some wheat in surplus. I think we have enough cotton and coal, but it is taxing our transportation. But in other areas, even though we have some in surplus, we have not enough and we must realize that this cannot be undertaken unless the American people are prepared to make an immediate sacrifice for the ultimate gain.

Mr. JARMAN. Speaking of sacrifice, can you compare quickly the tax that the Englishman pays as compared with our tax? I mean, which pays the most?

Secretary HARRIMAN. Oh, they pay very much more. I have forgotten what it is now, but during the war a single man paid a 50-percent tax on his income over a hundred pounds, over \$400, and that went up to nineteen and six to the pound.

That is 19½ cents out of every 20 cents.

Mr. JARMAN. A great deal more?

Secretary HARRIMAN. A great deal more, and corporations paid 100 percent excess-profits tax.

Incidentally, they paid a larger percentage of their war expenditures out of taxes than we did, I think—about 10 percent more.

Mr. JARMAN. I wonder, how wrong I have been in making the statement which I have made promiscuously in my district to the effect that while our taxes are high in this country and we want to reduce them when that can reasonably occur, that if this plan does not become law and assuming the worst, that is, a domination of the rest of the world by communism and the necessity to fortify this continent and maintain the necessary standing army, that this period of ours would during the years to come probably be reflected upon as a low-tax period.

Was I very far wrong in that?

Secretary HARRIMAN. I think you are very right, sir.

Mr. JARMAN. That is all, Mr. Secretary.

Chairman EATON. The gentleman from the manganese section of the country, Mr. Mundt.

Mr. MUNDT. Mr. Chairman and Secretary Harriman, on page 13 you mentioned that the calculated production of farm machinery next year is going to be 20 percent higher than it was last year.

Of the calculated farm machinery production for next year, what percentage is it expected you will ship overseas under this program?

Secretary HARRIMAN. I do not think we estimate 20 percent above. I think I said that the machinery on the farms was 20 percent above prewar.

Farm machinery production for next year I have not included. Unless we can do something to help increase the amount of iron and steel available, I doubt if it is very much greater. It would be slightly greater, I think. It would be about 10 percent greater.

Mr. MUNDT. And what percentage of that greater production is calculated to be shipped overseas?

Secretary HARRIMAN. I think that the total exports of farm machinery from this country, it is contemplated, will be about 10 percent to Europe and the over-all would be about 15 percent.

It would be about 15 or 16 percent of our agricultural machinery for export and about 10 percent would go to Europe.

Mr. MUNDT. Does that mean we are going to have 5 percent less farm machinery available domestically next year than we are this year?

Secretary HARRIMAN. No, we would have roughly 5 percent more. Your expansion in production amounts to more than the increased shipments to Europe would.

Mr. MUNDT. That is what I was speaking of. Now, we come to something a little more vital. On page 17, in view of these considerations about freight cars and of the great need for them in the United States, we propose to permit exports of only 20,000 cars to all of western Germany. I think that is very commendable, that you are going to maintain the transportation system of the United States and limit exports to 20,000.

In that connection, I would like to find out what is going to be the policy of this administration about exporting freight cars to Russia, which was done through 1947?

Secretary HARRIMAN. I do not think there will be any shipped to Russia next year.

Mr. MUNDT. I know about some that were shipped this year but there may be a lot more than that.

Secretary HARRIMAN. I will submit the figures to you. They are a very small number.

(The information is as follows:)

During the eleven months ending November 30, 1947, 281 cars valued at \$1,616,254 were shipped.

Mr. MUNDT. That to me is the crux of a very difficult problem that you are going to have to face up to, and I think you realize it. It is a realistic approach to this program now in which we are sort of engaging in economic strife or ideological warfare, or something. I agree with you this is not just a humanitarian gesture, but it is a very essential part of our program if it is anything at all, and I think it is.

I think we are going to have to have some kind of modification to what you said was an open trade program with the Soviets whereby they would buy in this country what they could get and we would buy in their country what we could get without screening it, apparently from the standpoint of effectiveness of what they buy here upon this European situation which we are trying to help alleviate.

Certainly freight cars and locomotives and trucks and tractors are something which, in the hands of the Soviets, regardless of where they get them, help them increase the pressure and develop a formidable attack economically upon the 16 western countries they do not want to have successfully functioning in the ERP.

If we are going to, through congressional action, give \$6,000,000,000 or any major portion thereof in trying to make this program work in those 16 countries, I think it is an axiom, I think it is just naturally part of the program, and we might as well announce to the world that we are not going to, during that period, ship to the Soviet the type of things they need in order to succeed with their program of crippling our venture in Europe.

Now, what is wrong with that suggestion?

Secretary HARRIMAN. Well, Mr. Congressman, I would like to put it this way. We have the problem that we have only been controlling about 25 percent of our exports. We got down from controlling pretty nearly everything during the war to the natural fact that we did not have to control so much and then we were under considerable pressure from our appropriations standpoint and we had to reduce it to that amount.

When you control exports you have to have enough staff to make quick decisions or else you cripple all trade. We have additional funds now and we have recently, in the last week, placed all of the exports to Europe under control.

We felt that was a desirable thing to do.

Mr. MUNDT. May I ask a question for information here: By that, do you mean that before an American exporter can ship something he has to get some kind of clearance.

Secretary HARRIMAN. He has to get a license and that would include Russia and its satellites, as well as all western Europe.

Now, we believe that is desirable. That is a recovery area in which consideration of everything they buy here is important to make sure they are using their dollars for the most useful things and also to protect our economy.

We are finding that we should control more than we have in order to protect ourselves at home.

Now, that policy will make it most important for us to review **what** we had not been able to review, the major part of the trade to the Soviet Union and eastern Europe.

We will be developing policies in that respect. I want to say this, though, that in approaching that I think that we must consider definite questions on shipments to all countries regardless of what equipment goes out. I do want to emphasize the fact that we could not have world recovery as rapidly as we otherwise could if we attempted to shut-off trade from eastern Europe.

The food is most important of all, but then there is a great shortage of timber, coal from Poland also being a vital factor, and the trade between western and eastern Europe and trade between those countries and this country is important in recovery.

Now, as I say, I am not in sympathy with the idea of building up an "iron curtain" to the west of the "iron curtain." I am a firm believer that if we can get recovery in western Europe the pressures of the better living in western Europe will force a reduction of the rigidity of their controls which we say they have over certain countries in eastern Europe and that we can hope for a peaceful world only if we pursue that policy.

As far as such things as tractors are concerned, if they are available, I think we want to encourage that type of thing to increase agricultural production.

Now, you can play it two ways. We can accept the fact that a conflict is inevitable—and I do not accept that—or we can pursue the policy of trading with those countries, but in all cases we must see that they do export the things that we need, not only for ourselves but for the recovery of the countries that are interested in those things.

Mr. MUNDT. May I summarize that to be sure that I have it clearly in mind, because I think that this is one of the big vital issues around which the success of the program is going to revolve when it passes through Congress and the country must understand it clearly.

Am I correct, then, in my understanding that as of today and henceforth, all exports to European countries, which includes those behind the "iron curtain" and those this side of it, now must receive official approval by your control board before they are shipped?

Secretary HARRIMAN. That is correct. I beg your pardon. I am corrected. I must say we have announced it. The effective date is March 1.

Mr. MUNDT. Yes, and certainly that is a very commendable constructive step because we are going to be impelled by the realities, I am sure, to restrict certain types of exports to certain areas. Otherwise you are going to be accessory in trying to defeat the program and you do not want to do that. If it is going to succeed, do you agree with me that you must have in these bilateral agreements some kind of understanding with these 16 countries that they, in turn, exercise some kind of discretion in the type of things which they are shipping to the other side of the iron curtain? If we build up 16 European economies which, in turn, ship over into the Soviet area war potentials, because of their desire to get wheat or coal, then, we are engaging in a very vicious circle which comes back to jeopardize our security at some future date.

Secretary HARRIMAN. Well, I think, very frankly, that the less attempt we make to dominate other countries in this program, the better

off we are and the better results we will obtain. I think we had better leave it to those countries to decide on how they should develop their trade. It is absolutely impossible to define this war potential. In total war, as you said, even machinery for the farm in practice increases the war potential. Food is the really basic commodity on which a nation fights a war. I feel very strongly that trade must be encouraged, that we should not interfere with the bilateral arrangements. I know of the leading statesmen of these different countries, that they have the same thoughts and objectives in mind that we have. It may not satisfy any one individual. He might disagree on the kind of trade that is desirable or is not. I might disagree with him. In the last analysis, I think the time is going to come of more prosperous conditions in western Europe and the pressures of people for a better life will tend to make for a change in the objectives of the present rulers of those countries. I believe if we embark on a program of trying to hold them down, it will lead to disaster and lead to developments in the wrong direction. The standard of living in the Soviet Union is very low, as you know, and as the standard of living is increased, people begin to realize they can have a better life and when the Soviet Union begins to pay more attention to the improvement of the standard of life of their people, then, you are going to begin to have a more peaceful outlook.

Mr. VORYS. Mr. Jonkman?

Mr. MUNDT. A parliamentary inquiry. May I have the record show that silence does not mean consent, but simply that my 5 minutes have run out?

Mr. VORYS. Yes Mr. Jonkman.

Mr. JONKMAN. Mr. Secretary, Chairman Eaton has already asked a few questions about the function of the Administrator. Are there not more significant differences in the form of organization proposed by the President's bill, on the one hand, and, for instance, the committee which you headed and the Herter committee, on the other hand. By that I mean, to put it briefly, in my estimation the President's bill appoints only another Assistant Secretary of State while, on the other hand, your committee, if I may call it that, and the Herter committee propose a corporate form of organization of a Board of Directors in which the Secretary of State will be one of the directors and in that way it will integrate our foreign policy. Would you care to comment on that?

Secretary HARRIMAN. I would prefer to have the exact recommendations of the so-called Harriman committee presented to you by Mr. Bissell who is here, or by Senator La Follette, who wrote it. I do not find myself in full agreement with that proposal. On almost all of that report I agree, and the only thing I disagree with is the question of administration. It is not far afield. I cannot see how this can function in much of any other way than the one I have attempted to describe.

Mr. JONKMAN. When you say the one you attempted to describe, you mean in the Harriman report?

Secretary HARRIMAN. No.

Mr. JONKMAN. Do you mean the President's bill?

Secretary HARRIMAN. I have not discussed it in detail with Secretary Marshall, but I know generally what it does. I would not be surprised if it did not operate much in the way I outlined it in answer

to Chairman Eaton's question. Of course, the Herter committee's report is quite a different set-up from the so-called Harriman committee's recommendations. The Harriman committee report suggested the possibility of a form with a council attached to it which included largely the members of the Cabinet which this administrative group would have to function in. The Herter committee proposes, as I understand it, an independent Board of Directors of part-time individuals with export controls within the function of that corporation. I find myself not in agreement with that proposal. I want to say I have tremendous respect for the work of Mr. Herter and his committee. It has been very constructive and I cannot believe they entirely considered what would happen if this Administrator had such an independent authority and they put in an independent group of part-time men who had not been through, and were not responsible for, certain parts of it.

Mr. JONKMAN. At the present time, do you not think this will involve a big business administration? As I said to Secretary Snyder this morning, we are going to spend more on this program annually than our average annual budget for the 10 years in the 1930's. Will you give us an illustration? There has been considerable discussion here about stock piling of materials, whether we could not ask some of these 16 nations to bind themselves, not during the life of this program, but in the future, after the program has been consummated and they are back on their feet, to repay some of this money with stock piling materials. There has been quite a little discussion as to whether that would be in loans or in grants. Well, now, in loans, I cannot see any question there at all unless you want such things as uranium or exceedingly strategic and scarce materials, because any nation would be glad to pay its bills in commodities. In fact, that is one of the troubles we have with European countries, they want us to take more imports. But if we are going to take that from the grants, I can see it is going to be most difficult for a foreign policy-making organization to put itself in that position of the Shylock that says, "Just as soon as you get on your feet we are going to have a mortgage on you and then you are going to have to repay some of this stuff," while, on the other hand, if you had an independent auxiliary administration or a corporate organization, they would look at the business aspect more. After all, this is not relief any more, it is not helping the person for relief. We are putting them back on their feet in business and oftentimes furnishing the capital. Do you not think that the form of organization proposed in the so-called Harriman report or the Herter committee would give us a far better business administration than the State Department, which, from the very nature of its functioning, is under a difficult situation along this line? I am not criticizing them except for that.

Secretary HARRIMAN. Well, as I have said in answer to the question of Chairman Eaton, I believe that there should be an independent administrator to handle the operating functions. Now, on the question of the positions as to foreign policies, they must be under the Secretary of State. I do not know how you are going to define in advance what each of the countries can do in the way of developing natural resources. I have had certain discussions with certain people. There are potential sources of raw materials which are not entirely explored yet.

Mr. JONKMAN. I am not interested in taking the time on that. I would like to have you answer the question whether or not, for instance, if the State Department handles it, it would be far more difficult to lay down those conditions than if you have an independent corporate organization.

Secretary HARRIMAN. I would not have felt so; no. I think that those programs have got to be worked out with the full analysis of all of the administration, the Department of the Interior and the Department of Commerce, in terms of our knowledge of what we need and in terms of what can be expected in the way of future trade relationships. I think the Herter committee puts too much responsibility on a group of men who are entirely outside the Government. I think you will get a much better and more satisfactory arrangement if it is within the Government.

Mr. VORYS. Mrs. Bolton.

And again it is understood that the time schedule suggested by the Chair does not mean that silence gives consent to the last statement of the witness.

Mrs. BOLTON. Mr. Secretary, in the matter of the strategic materials and the method by which we might set up the agreements in the matter, if it would be feasible, it does seem as if it would be forward-looking on our part to do something about it. Would you feel that it would be wise to include such a condition wherever practicable?

Secretary HARRIMAN. I think much as it has been proposed is the right way. It is an objective and the Administrator should be charged with the responsibility to negotiate on what can be done in the way of expanding the production of these strategic materials and the amounts that can be obtained over a period of years, and those programs should be borne in mind in connection with what proportion of our assistance should be in the form of the grants-in-aid and what percentage should be in the form of loans. I think one has to bear in mind that to be effective this must be a continuing program and what might be decided in the way of percentage this year might be changed in another year and any new conceptions can be adjusted. The future question of grants-in-aid can be adjusted by what has been found out in the meantime.

Mrs. BOLTON. The strategic things would be in the Loan Division, however.

Secretary HARRIMAN. Yes, because they would be in terms of dollars, but actually what they could supply would be taken into consideration on those grounds.

Mrs. BOLTON. I have been informed that there is a difference between the State Department method and the other bill before us, which is the Herter bill, that in the State Department it is put in more or less as a condition and in the Herter bill it definitely negotiates toward that end. Does there seem to be very much difference to you?

Secretary HARRIMAN. I have not studied the language. I thought the State Department proposal made it perfectly clear that it was one of our objectives to get the maximum increase in production that was within reason and within our requirements. I do want to impress on your the fact that I am concerned over the availability of the raw materials we need, not alone for our strategic stock piling, but for our current use. I would think that the Administrator should have made clear to him that one of his responsibilities to this nation is to

see that these developments are undertaken. I do want to say that to my knowledge it is impossible to lay it down now because in some areas there are indications that minerals are there but they have not been explored sufficiently even to say what can be developed from them.

Mrs. BOLTON. Of course, the other countries would have to have machinery to develop and also they would have to have engineers to do the work.

Secretary HARRIMAN. They would have to have the machinery for their own production and there is also the question as to whether in certain cases American corporations might not be able to undertake these developments. And they might. It should all be left to the Administrator to work out and I would hope that at the proper time he would give it his attention.

Mrs. BOLTON. And in some of the considerations given we would have to consider, I suppose, what the ultimate goal is in this whole matter, whether it is for a controlled economy or whether it is for the thing which we always feel is American, the free-enterprise method, so that private capital would be developing these materials in different countries rather than just a Government-controlled economy.

Secretary HARRIMAN. Well, I must confess that I feel in these European countries that remain under what we call a democratic system, where the people express their own opinions as to the form of their economic development, that it is none of our affair, but when it comes to a totalitarian dictatorship, where a few people dominate, then, you have a potential difference. After all, we have in our own experience had the Government make certain regulations and if a country in western Europe felt that it would better develop its resources by a Government-controlled enterprise, I do not think that is any of our affair. At this time I think we ought to create opportunities for American private investment because that will get back to normal trade and business relationships.

Mrs. BOLTON. Could a further condition be inserted into the law that would provide that no alteration in the terms of agreements on businesses conducted by American concessionaires may be made without the approval of the United States Government?

Secretary HARRIMAN. I must confess that I hate to see that type of condition written into the law. Conditions change from period to period, and it should be our national policy to protect investments abroad in an appropriate manner, but conditions do change and I do not think you could give a concessionaire that authority if a country of its own free will wants to take over those assets. It is its right to do it, but we must insist, of course, that the investors be properly compensated for it. I would not favor writing in such a condition. I think it must be left to future development, although I firmly believe that American investments abroad should be protected. I do recognize the right of any nation to nationalize its resources if it finds it is necessary to do so, but American investors should be properly compensated for that.

Mrs. BOLTON. My 5 minutes is up, so I cannot go on.

Mr. LODGE. I would be glad to yield.

Mrs. BOLTON. Thank you very much Mr. Lodge.

Mr. VORYS. Mr. Lodge.

Mr. LODGE. Mr. Secretary, in connection with the strategic materials which have been holding our attention for some time, my under-

standing is that our stock-piling-development program runs over a period of 25 or 30 years; is that correct?

Secretary HARRIMAN. I have forgotten. I think it is 20 years. It is a long term.

Mr. LODGE. Do I understand you correctly that the administration's attitude means that these countries can never produce enough to repay something above the balance needed to support those countries?

Secretary HARRIMAN. I am not sure I understand your question. Would you mind repeating it?

Mr. LODGE. In other words, if they should reach a point where there is no dollar deficit, could we then receive some of these stock-piling materials in the future by way of quid pro quo for sums turned over under this program?

Secretary HARRIMAN. What was contemplated, as I understand it, was that the possibilities of supplying our stock pile would be taken into consideration in connection with the long-term loans which we would be making to these different countries and that that is a long-term repayment as far as our stock-piling program is concerned. The ability to repay the production of these foreign countries would be taken into account in connection with the size of the loans that are included in the program.

Mr. LODGE. I misunderstood you, Mr. Secretary. I understood you to say to the gentleman from Alabama that you felt that it would be a mistake to make long-term commitments' providing for repayment of any part of these sums in the long-term future.

Secretary HARRIMAN. If I made an incorrect answer, I want to correct myself, because I firmly believe that we should expect these countries to repay all that they reasonably can without interfering with their coming back to a normal relationship and get back to the time when private capital will take care of the future investments that will be required.

Mr. LODGE. Then, in that case there would be no reason not to increase the amount of these loans to more than the 20 percent now contemplated and provide for repayment of these loans in strategic materials in the long-term future?

Secretary HARRIMAN. Well, I believe that within this range it is a fair topic to set up. I think it would be unwise to set up any longer time of repayment at this time. After all, in the future, we may find that our guess as to the amount of strategic material has increased as a result of experience. This is a 4-year program, and adjustments can be made. I would think it would be unwise for Congress to insist on more than this range at the present time and have any real contemplation of getting the money back.

Mr. LODGE. Supposing it were expressed in such a way that the payments would not be made unless there was something above the balance needed to support these countries—in other words, something beyond these terms?

Secretary HARRIMAN. I would rather see the program stimulated as best it can be and set those goals. In your case there would not be the same incentive to meet those adjustments which are necessary. I think you would get about as much as we can fairly contemplate receiving in time.

Mr. LODGE. Is that not a pretty hard thing to stimulate?

Secretary HARRIMAN. Most of these developments are pretty long range developments—10 to 20 years. The loans will run for at least that period of time, and I would think you would have to make them about as precise as possible, and I think it would leave the future open. I think we ought to make these arrangements so. Otherwise, if there are contingencies hanging over the heads of different countries, it will affect their credit and their position, and I believe it would be wiser to set them in advance rather than leave them open.

Mr. LODGE. After all, is not credit a question of dollar balance? And if it were provided that that would first have to be satisfactorily handled, it seems to me that it would not affect their credit.

Secretary HARRIMAN. Well, it is such a variable factor. We'll know the kind of restricted conditions which people are living under now, and if you had contingencies over their heads so that they could not program their balance of payments, there would always be the question as to whether they should increase the food rationing of the British people or pay us a little more. I think it would be far better in our relations with each of these countries if we made a fixed agreement. I think we would get more incentive and there would be more recovery and it would work out better in the long run. If you leave that contingency open, then you get into every aspect of the life of each of these countries, because they are so restricted today. When you say that they ought to pay us more or less, causing a decision as to whether they should have a little more gasoline rationing or a little more food rationing, I would not think we would want to keep such a continual decision hanging over their heads.

Mr. VORYS. Mr. Mansfield.

Mr. MANSFIELD. Mr. Secretary, on the basis of the report made by your committee, and other committees which have looked at it from a domestic angle, is it your contention that the United States is well able to undertake the cost of the proposal now before us?

Secretary HARRIMAN. I believe that it was the conclusion of this committee that this country should embark on this program and should undertake this program and pursue it, as I have quoted, with boldness and determination; but, by the same token, it is recognized that it cannot be done out of our surpluses—that there will have to be a definite sacrifice in terms of consumption at home during this period. So when I agree that we are well able to do it, I must qualify it by saying, "With certain sacrifices, we are."

Mr. MANSFIELD. But, in your opinion, the sacrifices are well worth the achievement of the goals which have been set and which are, as I see them, a certain amount of humanitarian relief for a distressed people, the economic rehabilitation of western Europe, and we hope eventually all of Europe and the world, and, finally, as a hold-back of the spread of communism; is that correct?

Secretary HARRIMAN. Yes. I would put it in a slightly different way, but that is substantially correct. I think you can put it another way. I think we would be repaid economically, although that is very hard to prove, in terms of our world trade over the years. But in terms of the main objective of peace, the investment is tiny as compared to what we would face if we did not embark on it.

Mr. MANSFIELD. Mr. Secretary, would you give this committee the benefit of your views as to what would be the result here if this proposal were defeated?

Secretary HARRIMAN. I read from the statement of the so-called Harriman committee and I can read it again very rapidly. Or if you prefer, I shall give it to you to read.

Mr. MANSFIELD. If you have already given it to the committee, I will read it later.

Secretary HARRIMAN. I am handing you the part I read.

Mr. MANSFIELD. One more question, Mr. Secretary, and maybe two. Would you think it advisable to attach conditions to this legislation if it is reported out of this committee by means of which we would be able to get back from countries which have materials, minerals and products which are critical and in short supply in this country?

Secretary HARRIMAN. I do not think I would express it that way. It is the objective that these countries should expand their natural resources at home and in their colonial possessions, not only to assure us a normal supply for our economy but also to help us build up our stock pile. I think it should be expressed as an objective, not in terms of a condition, because it is very hard to define a condition and in the last analysis it is the general skill of the Administrator and wisdom of the administration in this program and the energy and good will of the people. I think we can best get that by stating objectives rather than conditions.

Mr. MANSFIELD. I see. Thank you, Mr. Secretary.

That is all, Mr. Chairman.

Mr. JONKMAN. Any further questions?

Mr. LODGE. Yes, I have some more questions.

Mr. JONKMAN. Mr. Lodge.

Mr. LODGE. With respect to the petroleum situation, Mr. Secretary, I understand that England, France, and Holland have big oil holdings, possibly as large as our domestic reserves. Why could we not cup some of our fields in from 5 to 10 years and repay the owners by deliveries from European-held oil reserves abroad? I am informed that the estimates of those reserves permit commercial use along these lines. Could we not keep these cupped fields for naval reserves and be repaid several hundred million gallons a year from foreign assets?

Secretary HARRIMAN. You mean with our domestic consumption held down?

Mr. LODGE. Yes.

Secretary HARRIMAN. I think in answer to that we would have to consider the whole world petroleum situation, our own requirements and the requirements of other countries, and I think the administration should consider that question. As you know, we have under control of our own companies very large reserves in the Middle East which in some ways are larger even in potentialities than those of any other country.

I think that a study should be made. I feel very strongly, as your question indicates, that we should conserve our petroleum resources in this country and should embark upon a program of expanding production abroad and increasing our imports. Generally speaking, at the present time, known reserves in the United States are about a third of the known reserves in the world and I imagine we probably know more about our reserves than at least certain other areas. We are now producing about two-thirds of the world's petroleum. That certainly is a reckless thing to continue to do and I certainly agree with what I gather is the background of your question. We are in

a very difficult shortage of petroleum products in this country this winter, and as Secretary Krug has testified before other committees of Congress, it looks as though next year is going to be serious also. We are expanding and have expanded fantastically our use of petroleum products in this country, approaching double what we used before the war. That is not the exact figure. Now, it would be reckless for us to go ahead and drain our own resources to take care of our immediate requirements. Now, Europe at the present time gives as per capita use of petroleum something less than 10 percent of petroleum products that we use in this country and it is contemplated under this plan, if the plan goes through as it is planned, that they will get up to about 10 percent per capita by the end of this program.

They use 10 percent per capita as compared to us. In other words, they use 1 barrel per capita compared to 10. One-tenth as much. Not 10 percent less, one-tenth as much. I do not think we can have European recovery if we deny Europe the value that comes from the use of petroleum products in internal combustion and so forth. What I am getting to, I think we should consider in expansion of world production our own resources and European resources under the control of the European countries. I think it would be perfectly appropriate to consider what part of their production they could, over a period of years, contribute to us, but I do not think anybody can be in the position of answering now what part of the available resources in the Middle East and Far East and the Caribbean, and so forth, we can now count on their contributing to us from their resources. I think it requires a very exhaustive study and I think that will be made, and I certainly agree with you that that study should consider what contribution they can make to our increasing requirements of petroleum products. I, for one, would like very much to see us conserve our supplies.

Mr. LODGE. I am in full agreement that without petroleum the European recovery program cannot work. I presume you will agree with me, Mr. Secretary, that unless we have adequate petroleum in this country to enable us to fill our vital needs with respect to heat and transportation and what not, this country cannot back up the European recovery program.

Secretary HARRIMAN. I agree fully. All I was trying to say, sir, was that it takes machinery and steel and capital and so forth to develop petroleum resources held by other countries. I think we should consider them in the requirements along with our requirements before we arrive at a figure at which it might be fair to ask them to contribute to our needs.

Mrs. BOLTON. Mr. Secretary, as I understand it, the European recovery plan from the standpoint of fuel counts upon a very definite amount, a very large amount, of oil from the Near and Middle East.

Secretary HARRIMAN. That is correct. They are pretty nearly dependent upon that.

Mrs. BOLTON. As I have gone into the figures, my information indicates that the oil production in the Western Hemisphere just about takes care of the Western Hemisphere and that the Near East could take care of the European situation as well as its own requirements as they increase?

Secretary HARRIMAN. Potentially.

Mrs. BOLTON. Now, if the Near East production is stopped, as it now has, as far as deliveries to the Western World are concerned, what will that do to the whole plan of the European recovery program?

Secretary HARRIMAN. Well, if there is a recession of petroleum from the Middle East it would be extremely serious to Europe as well as ourselves.

Mrs. BOLTON. And it would be a major difficulty, would it not?

Secretary HARRIMAN. A major difficulty to us and to the world.

Mrs. BOLTON. Especially to western civilization?

Secretary HARRIMAN. It would be, yes.

Mrs. BOLTON. Thank you.

Mr. LODGE. Would you have any objection, Mr. Secretary, to our cupping certain wells within 5 or 10 years?

I did not mean as of today. I mean within 5 or 10 years.

Secretary HARRIMAN. Well, I would like to see us establish a national policy. I would rather not say exactly what we should do. I would like to see us embark upon a full study in connection with this program of the long-range fulfillment of our requirements as well as the requirements of the other nations of the world and in that connection how it should be properly handled I do not know.

I am not familiar with what means should be adopted to see that we do not overdrain our present resources.

Mr. LODGE. Is there any present project toward such a solution?

Secretary HARRIMAN. I think Mr. Krug can best answer that.

Mr. LODGE. Is he going to testify before us, Mr. Chairman?

Mr. VORYS. Tomorrow afternoon.

Mr. LODGE. Mr. Secretary, in the Harriman report that it is stated—

The committee feels strongly that top priority should be given to provision of steel and equipment to repair war-damaged nitrogen fertilizer plants as rapidly as possible and the allocation of adequate supplies of coal to operate these at capacity.

Now, that brings me to the question as to how you feel about the dismantling of sheet steel and steel-rolling mill plants in Germany, and the second part of my question is, How do you feel about the dismantling of the huge nitrogen multiple plants in the French zone?

Secretary HARRIMAN. Well, I am not familiar with the details. I fully agree with that statement in the committee's report. As you know, the whole question of the plants in Germany has been reviewed and I think it is an established policy of all concerned that we must get Germany's coal production and industrial steel production up from its present low.

I think we have got to recognize, and we do recognize, as far as the administration is concerned, that there are fears of our western allies that Germany is not only a military threat but lest Germany should become the predominant industrial nation of Europe again. This European recovery program contemplates expanding steel production as well as bringing the German steel production back up to a substantial level.

I am getting off the nitrogen end but it is very clear that Germany must always play its part in the recovery of Europe and our plans should, and I believe do, accomplish that objective.

I am not familiar with the particular plants that you speak of. But nitrogen production for fertilizer is a very important element in the whole program.

As I have said, food is the most critical item of all and nitrogen fertilizer is needed in great quantities.

Priority should be given in coal, in my opinion, and in getting their plants back in full production.

Now, what exact amount of nitrogen fertilizer is needed, I cannot say.

Mr. LODGE. It is, however, interesting to note that the amount of nitrogen production lost in Germany because of dismantling is approximately 500,000 tons, according to the figure that I have, which amounts to 300,000,000 bushels a year, which is three times the amount that the American consumer was called upon to save in the Luckman food conservation program.

Bearing in mind the importance of nitrogen as mentioned in your report, I hope that you have considered this problem.

Secretary HARRIMAN. The existing nitrogen plants are not operating at full capacity, and this recommendation was directed to the supply of coal in order to assure a maximum production of the plants that are available, which we are not obtaining at the present time, as you know.

Mr. LODGE. When it comes to the question of coal, if we had not dismantled some of these steel mills in Germany we would be able to conserve a good deal of our steel and manufacture more freight cars and we could have transported more coal.

Secretary HARRIMAN. Well, this year, as you know, Germany has produced less than 3,000,000 tons of steel.

The program contemplates expanding that production to about 10½ million tons, so there is 7½ million tons more capacity there that they can expand.

That is the contemplation of this program.

Mr. LODGE. Mr. Secretary, in connection with your answer on this dismantling, and taking that in relation with your position with respect to the shipment of finished goods to Russia, do I take it, then, that you feel that Germany is more of an immediate threat to our national security than Russia is?

Secretary HARRIMAN. No, I have never testified to that.

Mr. LODGE. I was just asking the question.

Secretary HARRIMAN. No, I do not think so, but I do believe we should carry out the program of the recovery of Germany along the lines that are indicated. That is a vast task and steel is going to be required in more quantities than before the war and we should help the other countries come back.

I think we can assist in developing a healthy economy in Germany without making her a potential threat in the future.

She is not a threat at the present time. But I do think we must be, may I say, vigilant in our objectives in Germany for a long period of time, the principal aspect of which is the political side, namely, the encouragement of a real democracy in Germany.

I believe that can be done. I am satisfied that can be done of we stick to it because there was enough of a development of a democracy in Germany in the prewar period to make a decent economic life in Germany.

It is the opinion of those who are dedicated to those concepts that the opportunity can be extended to Germany to help form a peaceful western Europe.

Mr. LODGE. I am inclined to bear in mind, Mr. Secretary, your very wise statement that war potential is a very difficult thing to define. The problem is to see that Germany is playing her part and that is a bigger threat to the peace of Europe than to try to draw a distinction between a plant which manufactures one thing and a plant which manufactures another.

These plants can all be converted one way or the other, I imagine; do you not?

Secretary HARRIMAN. There are certain direct war production plants which are in the program to dismantle.

Seven and a half million tons of steel production in the Ruhr will provide enough steel for Germany to rebuild and I fully agree with you that we must bend our efforts in encouraging the increased production in Germany.

It has lagged way behind, as you know.

Mr. LODGE. Could we not more easily afford to ship coal to Germany than we could steel and would it not be wiser to ship more coal and get more steel production in order to rehabilitate these nitrogen plants and thereby increase the production of wheat in Europe and diminish the drain on American wheat and thereby reduce the cost of living in America?

Secretary HARRIMAN. I would think our interests ought to be directed toward an increase in the production of coal. When you begin to transport coal in ships 3,000 miles or more and bring back ballast, it is a very expensive operation.

I think our energy should be directed toward increasing the coal production and getting the steel production. I think the program there outlined is a pretty ambitious program for the immediate future and the important thing is to get coal as fast as possible.

Mr. LODGE. Can you not get more coal if you have more steel to improve the coal mines with?

Secretary HARRIMAN. Well, you can get some improvement in the production of coal by shipping steel for repair parts, some of which have been contemplated, and this 20,000 cars is one of the items in order to help transport the coal, but coal is the one great natural resource of Europe and we ought to do everything we can to stimulate that production.

I must confess that I have been gratified by the progress which has been made in the last 6 months in increasing the production of coal in Germany.

That is the most rapid way to get a dividend, I believe, and get recovery, is to bend efforts toward increasing coal production.

Mr. JONKMAN. Mr. Secretary, on page 12 under the section of agricultural machinery, you state:

The estimate here presented is that the United States would supply a hundred thirty-six million dollars for farm machinery during the first 15 months.

Now, is that what the final figure is for farm machinery?

Secretary HARRIMAN. That is the round figure, the estimate for the 15-month period.

Mr. JONKMAN. That goes into the bill for whatever you ask?

Secretary HARRIMAN. Yes; that is correct.

Mr. JONKMAN. Because the CEEC report, the general report, calls for \$370,000,000.

Secretary HARRIMAN. That is right; it was cut back for two reasons; one, the question of our own needs here and also a very serious question as to whether Europe could use that amount of additional farm machinery that quickly.

Mr. JONKMAN. That was your first shot, of course, and that pleased me very much. Your mining machinery you left about the same and your electrical machinery you left about the same.

You handle only the items that come within the cognizance of the Department of Commerce.

That is why you confined yourself to these articles here? That is the only serious cut that you have made, is it not?

Secretary HARRIMAN. That is what?

Mr. JONKMAN. That is the only serious cut that you have made, is on farm machinery. I think you cut steel plants down from a hundred million to 48,000,000.

Secretary HARRIMAN. Steel is about half.

Mr. JONKMAN. That is the steel plants?

Secretary HARRIMAN. No, also steel. It includes semifinished steels.

Mr. JONKMAN. Well, the CEEC general report had \$370,000,000 for iron and steel products. How much did you cut that?

Secretary HARRIMAN. About in two, I think.

Mr. JONKMAN. You cut that \$370,000,000 in two also. I want to say you have done a very good job.

That is all, Mr. Chairman.

Chairman EATON. Well, that has been a cooperative job with the State Department.

Mr. JONKMAN. But you still get a larger amount than the five billion-nine that the CEEC general report calls for, I mean not you, but the general result.

Secretary HARRIMAN. No, I do not want to give the idea that we have any made contribution there. As I said, cotton is available and has not been cut and coal is available and has not been cut.

Mr. VORYS. Could I say a word?

Secretary HARRIMAN. May I just say this: I do not take any pride in anybody's cutting these estimates because I am interested in seeing the maximum recovery in Europe as quickly as possible.

It is a question of availabilities and its effect on our domestic economy.

Mr. JONKMAN. Of course, you are certainly not going to give them a hundred million when 48 million will do the job?

Secretary HARRIMAN. That is what I mean by cut.

Mr. VORYS. Could I say this: You and the executive departments have scaled down certain CEEC requests and have made adjustments between them. Have there been any bad diplomatic repercussions from that, that you know of?

Secretary HARRIMAN. No. When the committee adjourned some of the working committees came over here and consulted with our people.

The members of the so-called Harriman committee consulted with them and also the members of the State Department, and our people consulted with them.

We considered their estimates and requirements and their more detailed information in the CEEC report as to the justification.

I do want to make that plain, that these figures are really all estimates and from my experience in the war, we will never really get down to a bill of materials until you sit across a table with each country and estimate exactly what they are going to use this material for and when, so that at best these are, in my judgment, intelligent "guess estimates" of what will come out. In the final analysis they will take this general form but they will inevitably have certain increases and certain deductions.

Mr. VORYS. But the fact that this has changed considerably from the 29 billion that was the first collective product of the CEEC committee has not ruined the chances for recovery; that is true, is it not?

Secretary HARRIMAN. Well, I believe that the figure that is now requested is a figure which can attain the results that we are after.

Mr. VORYS. What I am getting at is that if the Congress, which has an over-all responsibility fully as extensive as that of the executive department, in its collective wisdom should review and adjust this program that would not necessarily mean its collapse or failure; is that not true?

Secretary HARRIMAN. Well, I think that if this program were—I say substantially cut—it would be dangerous to the effect we all wanted when we embarked on this program.

Mr. VORYS. There is a straw man that is being fought with great success around here. That is the alternative of backing out and doing nothing.

In my judgment the chances of our doing that are extremely slight. On the other hand, there is also a tendency of all the cabinet officers who have come up here to say, "Now, we have gone over and back and forth on this and we have disagreed with each other and made adjustments up and down, and that is all right, but if anybody up on the Hill attempts to do that, then the whole thing is gone and the world is sunk."

Now, I do not think that is true, and I do not think that is the way to win friends and influence people up here. But that has been the attitude through 10 days of hearings here.

Secretary HARRIMAN. Well, how do you want me to express it? I will try to put it this way: now, these estimates that have been made are probably about as good estimates as you can have before you to consider.

Another group of people working on it would have come out with a somewhat different figure, perhaps larger and perhaps slightly smaller.

Now, you are asking us for our honest opinions. Now, I must frankly say that if you cut this figure substantially, from the studies that we have made I think that there would be a risk what we would not attain the objectives that we were after.

As far as I am concerned, as a taxpayer and an American citizen, I would rather see us appropriate a larger sum than this. I think in the long run the recovery would be faster and the over-all cost would be less.

I accept this figure because I think it will do the job. When you say, if you cut a hundred million dollars off it, should we stop the program, of course I would say, go ahead with it, no matter what is appropriated, but I am satisfied in my own mind that insofar as one

can analyze these various problems that if the Congress cuts it substantially it will be taking a risk of not attaining the objectives that we are after and that if we see it through it will cost us more in the long run.

I want to just explain this a little further. I went to Germany last summer, and I think if we spent more money in Germany, I figured roughly a third more between the British and ourselves, we would have more recovery.

The food is so low there although the situation now may be different, I do believe, that if you under-finance we will have to come back for more money.

I could not honestly say that a deep cut in this program would not be a dangerous thing to make.

Mr. VORYS. You are talking language which the Members of Congress understand and I wish we had heard more of that point of view. I think others have questions.

Mr. LODGE. Mr. Secretary, in connection with the shipments to Soviet Russia, could you inform this committee whether during the past year there have been any shipments of electrical equipment, including generators, for us in the development and manufacture of the atom bomb to Soviet Russia?

Secretary HARRIMAN. I have no knowledge, and nobody has that I know of, of the Russian program for the development of the atom bomb. There has been electrical machinery shipped. We know that power is necessary and I do not know where it is being used. There were substantial shippings of machinery.

I have not got it with me, but I will be glad to give you the full list of shipments to Russia this year by categories.

They were not under control and were not reviewed and from now on we do expect to have more information about it.

Mr. LODGE. What I had particular reference to was the report that duplications of the electrical equipment which the General Electric Co. in Chicago supplies to Oak Ridge, have been shipped to Soviet Russia.

Secretary HARRIMAN. I am not familiar with that.

Mr. LODGE. That would go through the Treasury Department, would it not?

Secretary HARRIMAN. The shipments of machinery have not been under control and we have not reviewed the individual shipments.

We get the totals from the Bureau of the Census, who tabulate by categories the shipments to different countries.

I could only give you totals. We would have to go back to the companies to know exactly what each item was.

Mr. LODGE. Would it be possible to find that out?

Secretary HARRIMAN. It would be very difficult. It would require a very considerable staff to go back to each of these items. In the future we can review machinery.

Mr. LODGE. Would it be much of a job to get a list from the General Electric Co. as to what items which they sent to Oak Ridge they also sent to Soviet Russia?

Secretary HARRIMAN. That would be available.

Mr. LODGE. That is what I had reference to. Now, would you say, in the light of your remarks earlier in the afternoon, that it was justifiable, to send such equipment?

Secretary HARRIMAN. I certainly think we should not send machinery that is specialized or directly used only for atomic energy production.

Mr. LODGE. I agree with you.

Secretary HARRIMAN. We are in consultation with the appropriate authorities on that question and will continue to be.

Mr. LODGE. I had an idea that we might be sending such equipment and I would be very much interested in knowing about this. Mr. Secretary, just one question in connection with the general purpose of this legislation, which constantly refers back to 1938 figures. I suppose this is done as a convenient measure.

Secretary HARRIMAN. That is correct.

Mr. LODGE. Would you say that the purpose of this program was, so to speak, "put Humpty-Dumpty together again"?

Secretary HARRIMAN. One of the objectives stated is to continue the cooperation in Europe. I feel very strongly that the continued economic cooperation in Europe should be an important objective of the program and I think we should encourage in every way that we can the fulfillment of the undertakings of the European countries in the closest economic cooperation.

I do not think you can get a satisfactory recovery in Europe and a firm prosperity there unless these trade barriers that I touched on are permanently broken down and they would get more of the economic integration or certain conveniences in breaking down trade barriers and then the freer exchange of goods.

Mr. LODGE. In other words, you believe that we should look toward an economic federation of Europe rather than toward the restoration of the crazy-quilt pattern of Europe with all its conflicting sovereignties?

Secretary HARRIMAN. There are many people who have tried to attain economic federation of Europe through conquest and there has never been the opportunity such as we have now to encourage it with peaceful objectives.

Therefore, I would hope that the administration would give that very high consideration.

As far as I know, all of the European countries in principle accept that. I think they would welcome cooperation from us and the right kind of pressures from us in encouraging the permanent development of those relationships.

It is a difficult thing to do, as you well know, and I think we would be remiss if we did not use all of our ingenuity and the right type of encouragement to accomplish that.

It would be tragic.

Mr. VORYS. Will the gentleman yield?

Mr. LODGE. Certainly.

Mr. VORYS. A change is difficult, to something new, but restoration of what existed in 1938 would create a difficult situation which Lord Lothian described as "the 26 nations that constitute the anarchy that is Europe;" and certainly our objective is not to restore that situation.

Mr. LODGE. That is the point I was trying to get at.

Mrs. BOLTON. Well, is it not true, if I may be permitted, that anything we do that merely rolls things backward is against the whole law that is functioning today to set up a new world? If we are trying to go backward we will find we are not progressing.

Secretary HARRIMAN. The reference to 1938 was purely a convenience in judging the size of expansion and the standards of living that existed at that time.

Mr. LODGE. It seemed to be important to stress the orientation of the program, Mr. Secretary, and perhaps you would agree, that the challenge is that either these nations can get together with the impetus of the European recovery program on a voluntary federated basis or they will succumb to an involuntary federation imposed by a Moloch state.

Would you agree with that?

Secretary HARRIMAN. Well, all you need do is to go back in history and see what has happened.

Mr. LODGE. Well, would you agree with that as a statement of the issue?

Secretary HARRIMAN. Well, I would rather put it affirmatively that I do not see a permanent recovery in Europe and an expanded economy unless there is the type of economic cooperation which is contemplated.

Mr. LODGE. I thought I had put it affirmatively and stated a choice.

I am just anxious to find out, Mr. Secretary, whether the administration is still going on tiptoe on this measure.

Secretary HARRIMAN. I am not trying to quibble words, but I did not hear your question very carefully. I think you are going to have continued difficulties in Europe on one account or another unless the objectives of the undertakings that the European countries have been spelled out are fulfilled, not just for this period, but permanently.

Mr. LODGE. But it would be hard to justify this measure if there were not the threat which we are all familiar with.

In other words, it is a strategical measure. Is it not?

Secretary HARRIMAN. Yes. That is certainly one of the controlling aspects of it.

Mr. LODGE. Thank you very much.

Secretary HARRIMAN. And I think if we could attain the objectives which you hold out the money we spent would be cheap at the price if that is the only thing we got out of it.

Mr. LODGE. I quite agree with you.

Mr. VORYS. Thank you very much.

(Thereupon at 5 p. m., the committee adjourned.)

UNITED STATES FOREIGN POLICY FOR A POSTWAR RECOVERY PROGRAM

THURSDAY, JANUARY 22, 1948

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met, pursuant to adjournment, Hon. Charles A. Eaton (chairman) presiding.

Chairman EATON. Mr. Secretary, you may proceed.

STATEMENT OF HON. CLINTON P. ANDERSON SECRETARY OF AGRICULTURE

Secretary ANDERSON. The success of the European recovery program depends to a large extent on food. Without adequate food there is little chance of real industrial recovery. A great amount of careful work has gone into the preparation of the food aspects of the program which is before you. These estimates represent our best thinking, and I am glad to have this opportunity to discuss them with you.

I understand that this committee has already had opportunity to study the testimony which I presented to the Senate Foreign Relations Committee. Therefore, I will only briefly summarize some of the most important points in that statement in my discussion here, and then present some additional information.

One point of which I am keenly conscious as Secretary of Agriculture is the importance to American farmers of a strong European market. All of us have taken pride in the tremendous increase in this country's food production in recent years. Our farmers have produced enough to feed our own people better than they have ever eaten before and at the same time enable us to respond to the needs of other countries with record-breaking shipments.

This record production has been achieved through increased use of fertilizers, a great expansion of mechanization, improved varieties—such as our new hybrids, improved insecticides and fungicides, and general improvements in farming practices. Weather helped, too. But last year the weather was unfavorable over a wide area. Though ideal for winter grains, which helped in our record wheat crop, it was adverse for some spring-sown crops and particularly bad for our corn crop. But in spite of the weather our total crop production was about up to the best 5 years of our history and within 5 percent of the all-time record set in 1946.

Come bad weather or good, our farmers are not going to give up the new tools which science and industry have given them. This

means assurance of greater total production than we have known in the past. It is fortunate that we are going to have an over-all abundance of food and fiber in the years to come. This prospect should be in the forefront of the thinking of all of us when we face decisions regarding American agriculture.

The many groups that have testified before the House and Senate Agricultural Committees on long-range agricultural programs have been practically unanimous in stressing the needs for substantial foreign markets for our agricultural products now and in the future. We all recognize that in the interest of conservation we need adjustments in the acreage of some of the crops which now bulk abnormally large in our exports. This is particularly true of grain. But even after we have achieved a well-balanced pattern of land use we shall still need good markets for cotton, wheat, tobacco, lard, rice, and certain fruits and vegetables. We have always needed good outlets for these crops, and in the past Europe has been a major market. For most of these crops we shall need a considerably larger foreign market than we had in the years immediately before the war. Our farmers also have a big stake in foreign markets for our manufactured goods, for such markets make jobs and food buying power in this country.

Western Europe is the world's biggest market for food exports. Since the turn of the century from 60 to 75 percent of our food exports have gone to the nations of western Europe. Unless the economy of that area can be restored to a strong, self-supporting basis the producers of our export crops will suffer directly, and all our farmers will suffer indirectly.

Conditions in western Europe affect our agricultural exports in many diverse ways. I have for some time been concerned about the need for expanded markets for our citrus fruits. As you may know, citrus products are now selling at extremely unfavorable prices to growers. Canada traditionally has been our best foreign citrus market. Before the war it took about one-half of our citrus exports. The United Kingdom was the next best market, taking about one-third of our citrus exports. Britain's dollar shortage has now caused most of the British market to disappear. But the effects have gone further than that. It is a sort of chain reaction proposition. Canada has been doing all she could to help in the rehabilitation of western Europe. In so doing she has shipped to Europe a large portion of the goods which would normally have come to the United States. This has resulted in an acute dollar shortage in Canada. Hence, beginning last November, the Canadian Government limited citrus imports from this country to not more than half the amount imported in fiscal year 1947.

I cite this situation as one illustration of how the break-down of European economy affects not only our trade with Europe, but with other countries of the world.

In one way or another this situation in Europe adversely affects our market for apples, pears, and other fresh fruits; prunes, raisins, and other dried fruits; cotton, tobacco, lard, and other agricultural products.

The implications of the program which you are considering, of course, go much further than agriculture; they involve the future of democracy in Europe, the strength of our allies on that continent, and

in fact, the very peace of the world. Nevertheless, thinking from merely the limited vision of our own agriculture, when you consider what the outlook would be without healthy, stable customers in western Europe, the prospects are not pleasant to contemplate.

In order to get a clear picture of Europe's food problem today and what is involved in her recovery—insofar as food is concerned—I have two maps which I would like to show you. I have big ones here from which I will talk. Smaller copies are included in my prepared statement.

These maps show the international movement of grains and soybeans, prewar and last year. The reason soybeans are included is that before the war Manchuria exported large quantities of them, and the virtual disappearance of those exports is an important factor in the present food deficit in the Far East. The inclusion of soybeans prevents these figures from being comparable with those which we normally use regarding grain movements. The width of the bands reflect the actual amounts of exports and imports, and they are carefully drawn to scale.

I would like to point out a number of aspects of this picture which explain the present European food problem, and then I want to come back and discuss the prospects for improvement in some of these areas.

First, notice the situation in South America. The country primarily involved here is Argentina which, before the war, was by all odds the world's largest grain exporter. Last year her grain exports were only about two-fifths of what they were before the war.

If the question is, Why are the Argentine exports down? the best answer is that Argentina has reduced acreages of grain and flax, and in addition had low yields in 1945 and 1946.

Secondly, they have had some change in their agricultural procurement program so the farmer has obtained a relatively small share of the price.

Mr. BLOOM. Is that also because the Government took control of the wheat market and other markets?

Secretary ANDERSON. The effect of the Government taking control of the market has been to change the price received by the farmers against the price received in world trade. I think that it is not the fact so much that the Government controls the export because this Government controls the export of grain from this country. It is the fact that the Government has not reflected the export price in the price paid to farmers, whereas we do reflect that.

Mr. BLOOM. The Government pays them \$2.35 and they sell it for \$5.

Secretary ANDERSON. Sometimes the Government spends a little bit less than that. The average price for the new crop is nearer \$1.70 than \$2. I am not inclined to criticize the Government's reason for that. We do things in this country that we do not always take the trouble to explain to the other countries. It is a fact which has had an influence on the amount of crops that have been available. I might say that the present wheat crop in the Argentine looks very promising, and may be due to a very substantial change in the Government's policy. I hope that is the reason. At least, whether that has helped there, as it has here, they do have a wheat crop coming on now that is substantial in proportion, and may be very useful in world trade.

Second, you will note that Canada's exports have increased sizably. Canada always exported a large quantity of her grain and she has done all she could to increase these amounts.

Third, you will notice some decrease in exports from Australia. That was due to a bad wheat crop in 1946. They are now harvesting a very large crop and their exports this year will be above prewar, though not likely to set a new record. Australia, too, has cooperated fully in meeting the world food crisis.

Fourth, notice the shipments from eastern to western Europe. Eastern Europe was normally a major source of grain supplies for western Europe. In 1946-47 this source had dried up, and eastern Europe was in fact a net importer.

Fifth, you will notice that the Far East has changed from a sizeable exporter before the war to a net importer since the war. In terms of total food her prewar exports averaged about 4½ million tons. Last year she imported 6½ million tons. This has required the United States and Australia to send to the Far East food which might otherwise be available for Europe.

Finally, you will notice the tremendous increase in exports from the United States. Before the war the United States exported some 4.6 percent of all grains moving into world trade. Last year, with almost exactly the same total world movement of grains, we exported 52.4 percent. Those are figures on grain only and so do not exactly correspond with the ones on the map.

You will notice also that prewar western Europe imported 24,000,000 long tons of grain and soybeans. In 1946-47, in spite of the increased shipments from this country and Canada, western Europe's total imports were only 17,400,000 long tons. That is 28 percent less than prewar.

To appreciate what that decrease in imports meant to the diets of the people you have to remember that western Europe's own grain production in 1946-47 was still substantially below prewar, whereas her population had grown by about 8 percent. You also have to remember that the reduction in supplies of meat and milk and eggs and most of the other major food items was even greater than for grain supplies. The Europeans have been able to stretch their grain supplies by cutting down on their livestock feeding and using portions of their coarse grain for human food. But that, of course, has cut their supplies of meat and milk and eggs still further. It adds up to a distressingly poor diet.

As you know, people in the Department of Agriculture, working with technicians from the Departments of State and Commerce, have spent a great deal of time in recent months working out the food aspects of the European recovery program which has been presented to you. This study has included several aspects: The minimum food requirements of the participating nations over the next 4 years, the portion which could be supplied from indigenous production, the amount which could be supplied from other nations, and the part which the United States might supply. We had to consider the needs of other food deficit areas, as well as those of Europe.

As I pointed out to the Senate Foreign Relations Committee this study led us to scale down considerably the estimates of the participating nations as to the quantities of grain and some other foodstuffs which they might expect to import during this program. It was not

because these nations were asking for more than they needed—to the contrary their figures were exceedingly conservative from the standpoint of need—it was merely that we do not think the exporting countries physically could furnish the quantities of food requested—particularly in the first 2 years of the program.

I have here a table—table 1—which compares our estimates of grain imports available to the participating countries from all sources, with the estimates of grain needs worked out by the European countries. You will notice that for the current year, 1947–48, import requirements are estimated at 29.9 million tons as compared with our estimate of an availability of 19.5 million. For next year they requested 27.7 million and we estimate 19.9 million available. For 1949–50 the figures are 27.6 as compared with 22.8, and for 1950–51 they are 27.4 and 22.8.

In the following lines we indicate how our estimates of grain availability break down between the various exporting regions. These figures involve a number of assumptions which you should know about. They are based on our knowledge of the prewar production and exporting patterns of the nations involved, the current trends in production and exports from these countries and the background of information and experience gathered through our participation in what is now the International Emergency Food Committee. After we had worked up our figures through this method we had an opportunity to check our estimates for Canadian exports with representatives of that government. It was gratifying to find that our estimates checked very closely with theirs.

Turning to the specific figures, you will note that the estimates on Canadian exports increase through next year but then begin a slight decline as Canada starts adjusting to a somewhat more normal wheat acreage.

The next line “other Western Hemisphere,” consists primarily of exports from Argentina. We estimate over the next 4 years that Argentina will increase her grain exports considerably above the present low level. As I pointed out earlier, that Nation was at one time the world’s largest grain exporter. The biggest portion of those exports were corn, but Argentina also exported substantial quantities of wheat. One of the commonly discussed needs in Argentina is some adjustment in the price paid farmers for their grain so as to offer greater incentive for increased production. Another often expressed need is for certain items of farm and transportation equipment and supplies. A program designed to restore Europe’s industrial economy will unquestionably help establish a desirable pattern of trade around the traditional United States, Latin America, and European triangle.

The “other nonparticipating countries” primarily involve eastern Europe and Australia. Australia will this year export about as much grain as could be expected from her in the next 4 years.

We have assumed a gradual increase in exports from eastern to western Europe. Any time you set down figures on expected exports from eastern Europe you have an assumption which you can’t prove. But we had to make estimates and we did have pretty good figures on the prewar exports, the land resources, and the conditions of the agriculture of these nations. So we can estimate with some confidence the approximate amount of grain which these countries

should produce under normal weather. The amount which will be actually offered for sale in the western European countries is, of course, a question involving many ramifications. However, we do expect a substantial increase in grain movement from eastern to western Europe.

There are several reasons for this: In the first place, the lack of exports for 1946-47 shown on the map before you was not due primarily to political considerations. The best grain-producing areas of eastern Europe—the plains of Poland, the Danube Basin, and the Ukraine—were seriously affected by either actual destruction of war or the political upheaval that followed. For example, a large portion of the ex-German territory now occupied by Poland is still not under cultivation. Furthermore, eastern as well as western Europe suffered from considerable bad weather up until 1947.

In the second place, this past year there was considerable improvement in the crops of eastern Europe and already some grain is beginning to move out. The USSR has recently agreed to ship Britain 750,000 tons of coarse grain between now and September in return for British-manufactured goods.

In the third place, supplies of manufactured goods would provide an incentive for other eastern European countries to export grain to western Europe. Eastern Europe has never been self-sufficient in manufactured goods, and there is little likelihood that she will become self-sufficient for many years. Her normal source of those manufactured goods is western Europe, just as western Europe depends on that area for food. As the agriculture of eastern Europe is revived on the one hand and the industry of western Europe on the other, there will be a very strong incentive to the revival of this trade.

All this adds up to the fact that although we have assumed some increases in grain exports from the various parts of the world which I have mentioned, the assumptions do seem to be reasonable. I call your attention also to the fact that the countries of western Europe themselves expect to have their grain production up to slightly above prewar levels by 1951. We have studied their estimates country by country, and believe that in most cases their goals can be achieved, and possibly in some cases surpassed.

Now we come to the last line on table 1, the estimates of grain which will be available from the United States.

Since these figures are of particular importance, I shall discuss them in some detail and indicate what effect the estimated exports of grain and other agricultural commodities would have on the economy of the United States.

The estimates of grain available from this country anticipate that for the next 2 years we will continue our acreage of wheat and corn at approximately the present levels. During the current year our wheat exports are proceeding at a planned rate of 450,000,000 bushels. However, if present conservation efforts are successful, our exports might run as high as 500,000,000 bushels. Such record-breaking quantities are made possible in part because of the exceptionally high yields which we had last year. Since we can only figure on the basis of normal weather and normal yields, we have dropped that figure down for next year and the year after. I might say that in the estimate of 300,000,000 bushels of wheat export to all countries, including western Europe, for next year, we have made adequate allowance for food used

by our own population as well as for other domestic uses, such as feed and seed. So, exports in this amount not only should constitute no strain on food grain supplies in this country, but probably represent a fairly good estimate of the amounts which we want to export with our present high level of production.

For the last 2 years of the program we have dropped our proposed wheat shipments down to 250,000,000 bushels so as to begin gradually decreasing our wheat acreage to more desirable levels.

As to feed grains, we estimate exports of about 100,000,000 bushels to Europe and elsewhere for each year of the program. Roughly about half of this amount is expected to be corn. With a normal yield of some 3,000,000,000 bushels from the anticipated corn acreage this would be an exceedingly small amount and would obviously have little effect on the amount of meat available for our consumers.

Turning from grain to other items in tight supply, let me say a further word about meat. We do not plan during the first 2 years of the program to export from this country to western Europe any of the types of meat which we consume. Whether we send any meat to western Europe during the last 2 years will have to depend entirely on the situation at that time.

I think your table will show a small amount of meat going to Europe. It is not beef or pork or mutton. It is horse meat, and therefore we are not worried about it in our own supplies.

The other two major food items which have been in short supply are sugar and fats and oils. We are a big sugar importer, and do not plan any sugar exports. However, world sugar supplies should be adequate to meet the needs of the participating countries.

I should be glad if you go into that in detail because it does present an opportunity for low-cost calories although not the most satisfactory food.

As to fats and oils, though some exports from this country are planned, they are more than offset by Philippine copra and other forms of oil which we will import. We have been a net exporter of fats and oils in recent years. But for the next 4 years we expect to be a net importer of these items.

I think it ought to be said we were a substantial net importer and it is planned to return to a more normal position.

Those, as I say, are the major food items involved in this program which now are in tight supply in this country, and I say to you frankly that I do not anticipate that exports in these amounts would add to the inflationary pressure in this country or call for any undue sacrifice on the part of our consumers. The reason I make that statement is that exports in the volume estimated represent considerable reduction from the present level at a time when we are continuing all-out production.

The other agricultural products covered in the proposed exports from this country are items which we have in relatively ample, if not abundant, supply.

This includes small dried egg shipments—much smaller than we have been making in recent years—a gradual decrease in our exports of cheese and dry skim milk, some increase in our exports of fresh and processed fruits, and increased shipments of cotton and tobacco. I discussed the picture regarding these items, as well as timber, fertilizer, and farm machinery, at some length before the Senate

committee. Though I will not cover that material again in this statement, I shall be glad to answer any questions which you might care to ask.

Now a word about the administrative machinery for carrying out this program. I am sure that others in the executive branch who have been working directly on this question would make more valuable witnesses on this aspect of the program than I. I do, however, have a general acquaintance with various proposals which have been made, and I would say that the organization recommended by General Marshall and Ambassador Douglas appears to be by far the best I have seen.

In this connection there is one point on which I have strong convictions. I believe the Department of Agriculture should continue to perform those functions for which its organization and personnel are best fitted and in which they have had long years of experience. This is provided for in the administration's proposals, and I do not believe my emphasis of it involves any undue pride of agency.

The job of buying large quantities of needed foods, when such purchase tends to have considerable effect on market prices and the normal flow of supplies, is at best a delicate operation. Through the Commodity Credit Corporation we not only have an agency which has had years of experience in handling much larger quantities of food and fiber than will be involved in this program, but we also have field personnel located at strategic points over the Nation which is experienced in dealing with food and fiber trade. Its people are also familiar with the problems of transporting, storing, and scheduling for ocean shipping, which will be involved in this program. CCC has also worked with most of the governments participating in this program, both in buying for them and in helping them locate supplies in this country which they desired to buy for themselves.

Closely related to the administration of this program is another phase of CCC activity which I should like to speak to you about. Section 7 of Public Law 395 passed by the recent special session of Congress authorizes CCC to engage in projects in non-European countries which would increase exportable supplies of food through purchase arrangements, or by furnishing technical assistance, seed, fertilizer, machinery, and other requirements of a similar nature. We now have under study specific areas and crops for which this authorization might be used. However, I feel it only fair to point out to this committee that we cannot expect too much in the way of results through this legislation during the 1948-49 crop year. The reason for that is simple. To be effective, this type of action must be taken before planting time. Planting time in most of the world begins in the next couple of months and, as all of you know, international negotiations take time.

This brings me to another factor which makes fast action difficult, if not impossible. Before we can act under this legislation we must first negotiate and get a firm commitment out of the country involved. Then we must present the proposal to Congress and wait 60 days to see if it is disapproved. Now even if Congress did not disapprove the project it would very likely be too late to take action after waiting 60 days. Congress, of course, might require some change in the agreement which the other country would find unacceptable, whereupon the circle of negotiation—submission to Congress, and waiting

60 days—must start all over again. Even for future years this 60-day requirement puts us at a distinct disadvantage since it requires a firm commitment out of the other country at a time when we are not able to give such a commitment ourselves. In short, the hands of administrative officials who will be responsible for carrying out negotiations are tied before they start.

Believing as I do that this authority could be very valuable to us in lightening the burden which the European recovery program places on our grain resources, as well as increasing the chances of the program's success, I urge the Congress to reexamine this 60-day waiting period provision so that changes can be made in order to expedite negotiations.

In closing, I would like to give you my conclusions about the food aspect of this European recovery program.

First, let me emphasize that the quantities of food which would be available to the people of western Europe under the estimates worked out by the executive branch are much less than those people had before the war. The plans envision a gradual increase above the present Spartan levels, but even at the end of the 4-year period the people of Europe would still have little more than a subsistence diet. Comparing per capita amounts with prewar, they would have less of most of the principal foods, including meat, sugar, fats and oils, milk, eggs, fresh fruits, coffee, even less bread grain. They would have some increase in potatoes, fish, cheese, cocoa, dried fruits, and fresh vegetables. We have cut the figures presented by the European nations very drastically, and should the diets fall below the general level which we have indicated, it will endanger the success of the entire undertaking.

My second conclusion is that the United States can furnish the quantities of food indicated as available from this country without adding any extra strain on either our food supplies or on food prices. The fact to keep in mind on this point is that the total food exports which we are recommending from this country—not only for western Europe but for the entire world—are less than we have been exporting in the last 2 years. In the items which are in tight supply, such as grain and fats and oils, this reduction is particularly significant.

Third, the chief unfavorable aspect of this program on our agriculture will be this: It will delay the time when we can begin reducing our grain acreage, particularly wheat, to more desirable levels. It will necessitate increasing conservation efforts if we are to prevent further reduction in our soil resources.

Fourth, this program, as I pointed out in the beginning, will constitute an investment in the future prosperity of American agriculture which should continue to bring returns for many years to come.

Finally, viewing the outlook in terms of our need for strong, democratic friends in Europe, in terms of the impetus which European recovery will give to world-wide recovery and in terms of improving the chances for world peace, I feel that we have no alternative but to undertake this program.

Chairman EATON. Mr. Secretary, we thank you for this very illuminating discussion.

We have adopted a system here in questioning of starting around on a 5-minute basis with each member being allowed his time. After we go around once then we start the open discussion.

I have one question. In the export of American food to Europe under this plan, they will be paid out of money furnished by the American taxpayers of whom they are a portion; is that correct?

Secretary ANDERSON. The farmer?

Chairman EATON. Yes. If we buy a bushel of wheat under the Marshall plan, the money comes from the American taxpayer?

Secretary ANDERSON. That would depend upon the particular method of financing worked out with each country.

Chairman EATON. Will that lift our economic structure to any appreciable degree and greater prosperity, do you think?

Secretary ANDERSON. No; I think that if we did not require some of these foods, we would merely be turning back to conservation practices in many of the farming areas of the country, and thereby perhaps reduce the amount of national income and farm income.

Mr. BLOOM. It would reduce the price, too, would it not?

Chairman EATON. You would not consider this farm subsidy to American agriculture?

Secretary ANDERSON. No, indeed.

The prices that the farmer will get for this will not be too greatly above the prices which he would get if he were merely dropping production to more normal figures.

I do not think that a program of this size, particularly in the last 2 years when we are talking about exporting 200,000,000 bushels of wheat, would not make too much difference to him because under the wheat agreements which have been under way for many years, we have been talking about export of 180,000,000 bushels of wheat in a longer period of time to come—20 years or more. This figure is not greatly above that figure.

Chairman EATON. I was thinking of the general impact on our economy. In the old days when the farmers sold a million bushels of wheat for export, they received pay for it from the country to which it was exported. Under the Marshall plan, when we ship a million bushels of wheat, they are paid out of money paid forth by the general taxpayers, of which they are a general portion; is that right?

Secretary ANDERSON. I think that is right, but it is only the same story that they had always in the creation of foreign credits. Sometimes they were paid by these countries from foreign loans which were paid for by the American taxpayer.

Chairman EATON. Sooner or later the American taxpayer has to increase his crop some way.

Mr. Bloom is an expert on agriculture.

Mr. BLOOM. Mr. Secretary, a further inquiry with reference to the question that the chairman asked you: Is it the intention of giving away all of this grain, or are you going to sell some of it? Are you going to be paid for some of it?

Secretary ANDERSON. Mr. Bloom, I think the best answer is that in all of the transactions that we have had with European countries, the matter of who makes the final payment has chiefly been a matter for determination by the State Department. We do not attempt to say how much will be loaned, how much will be cash payments. We get our money from the State Department and it has the problem of international finance before it. I cannot tell you how much of this program would be paid for by loans, how much would be paid for by

the export of goods, how much might be paid for by transfer to this country of products we might want in our economy, such as olive oil. We have to leave that to the State Department. It is completely out of our field. I would like to answer your question, and I am not trying to avoid it, but I must say we do not in our department reach the final decision as to how payment shall be made. We turn it over to the State Department and they reach that decision, which is properly within their province.

Mr. BLOOM. Your answer to the chairman's question was a positive statement that this amount of grain that was going to be exported would be coming out of the taxpayer's pocket. According to the last statement that you just made, that is not quite so, is it?

Secretary ANDERSON. I think as to the entire program the State Department will know there will be certain recoveries that may come back to them. I do feel that for the first year or two of the program, a good deal of the money that will be put into the program will come from the American dollar. That money is eventually repaid; whether it is immediately repaid on the basis of goods, I am not in a position to say, but at the beginning of it, it will probably be a matter of paying us in American dollars at least.

Mr. BLOOM. If you send them bread grains, and they make the bread, do they sell that bread or give it away? In other words, if we give them the material to make the bread and these countries sell the bread, then we are not altogether achieving the desire that we want to achieve to feed these people. If they are going to sell that bread, they get money for it. Do you not think we ought to be paid for the grain?

Secretary ANDERSON. I do not know that I can answer that question except to say that the primary purpose of the program is not relief. The primary purpose is recovery. If they sell that for some type of exchange and use that for their recovery, and hasten it thereby, then we were primarily interested in whether or not it comes back to us in some form of payment, and we increase our commitments, or whether they use that in their recovery program. I think it is a decision that should be made by the administrator and not by the Department of Agriculture.

Our function is to see that they have grain available for these needs and ship it when requested, to do what the administrator decides, or administration, or whatever, may be set up for the operation of the program. What it decides the receiving country should do with its money is not a question with which the Department of Agriculture would become involved. I do think that he would have to decide whether he wanted immediate repayment of so much for grain, or whether he would regard those grain shipments as instruments by which the economy might be more rapidly restored. It might, for example, as we found last year, be that there were quantities of olive oil available in certain European areas which they were anxious to trade or sell for goods made in Germany. The reason they wanted to sell for goods made in Germany in preference to the United States was that they had tractors of German manufacture. They wanted the repair parts to fit into those tractors. It was far more desirable for the quick recovery of both countries that the surplus quantities of olive oil in Italy be traded directly in the German economy and

repair parts be traded to Italy. We did supply, in the meantime, grain to both countries.

Mr. BLOOM. Is there any difference in giving grain to any of these participating countries and their making bread and selling the bread, is there any difference in that procedure than if we were to give them leather, and they were to make the leather into shoes, sell the shoes? Do you not think we ought to be paid for the leather as long as they are making a profit out of it, and getting the price of the leather besides the price of manufacture? Would that same thing not apply to foodstuffs?

Secretary ANDERSON. Yes; it is a question of what coin you want when you are repaid.

Mr. BLOOM. We have got to be repaid, or should be repaid some way if they sell it. If they give it away, if it is to feed the starving people over there, and give them food to eat, shoes to wear, and clothes to wear, and they put that on the market and sell it for a price, make a profit out of it, do you not think there should be some accounting of that?

Secretary ANDERSON. Yes; but I think that the accounting can be in terms of what the money is used for in the restoration of their economy. I do not think it always needs to be returned to us directly.

Chairman EATON. The gentleman's time has expired.

Mr. Jonkman.

Mr. JONKMAN. Mr. Secretary, on page 10 you say:

We do not plan during the first 2 years of the program to export from this country to western Europe any of the types of meat which we consume. Whether we send any meat to western Europe during the last 2 years will have to depend entirely on the situation at that time.

Are the figures available as to the amount of those types of meat we exported up to that program for 2 years in dollar value and in volume?

Secretary ANDERSON. Yes, they are available. For which years?

Mr. JONKMAN. Only 1946 and 1947. We are starting with 1948.

Secretary ANDERSON. During 1946-47, out of our total exports of 499,000,000 pounds, 235,000,000 pounds went to European recovery program countries.

Mr. JONKMAN. That is for 1 or 2 years?

Secretary ANDERSON. For the 1 year, 1946-47.

Mr. JONKMAN. Half a billion pounds a year.

Secretary ANDERSON. Out of this country; yes.

Mr. JONKMAN. Do I understand that we will export during the next 2 years that much less?

Secretary ANDERSON. This year we were not shipping meat to these European countries.

Mr. JONKMAN. This year or next year?

Secretary ANDERSON. Next year we are shipping no meat to the European countries except horse meat, and the year following.

Mr. JONKMAN. That should ease up the meat situation in the country. What is the annual consumption of meat?

Secretary ANDERSON. In calendar 1947 it was about 22¼ billion pounds.

Mr. JONKMAN. It would be at least an easing up of 2 percent.

Secretary ANDERSON. Yes. Even that amount was not going to these countries. Only 235,000,000 pounds. About 1 percent.

Mr. JONKMAN. Since when have you not been shipping any?

Secretary ANDERSON. I imagine the last meat went in the spring of 1946 in any sizable quantities. We shipped some small quantities that previously had been contracted for in the summer of 1946, but they were relatively small quantities. Starting the 1st of July 1947 no meat went to Europe. Some small quantities have gone to neighboring Western Hemisphere countries. Some small quantities went to Cuba because we had contracts. We shipped them so much rice and wheat in exchange for sugar. Our transactions with Cuba were almost entirely on a trade basis. They sold us 1 year about \$450,000,000 worth of goods. We sold them wheat and meat.

Mr. JONKMAN. The policy of not shipping the types of meat consumed by the American people has already been in effect for a year.

Secretary ANDERSON. Yes; starting July 1, 1947, no meat whatever has been going into Europe.

Mr. JONKMAN. With reference to wheat, has the Government already bought the wheat for the interim-aid program?

Secretary ANDERSON. I think it would be safe to say that we have not bought all the wheat for the interim-aid program. There was a statement made yesterday as to the totals. We have acquired sufficient wheat as grain and sufficient flour to cover the period through March 1948. We have not acquired much flour or wheat for April which is still in the interim-aid program. Most of the interim-aid program requirements are covered, however, since a good deal is in pipe lines.

Mr. JONKMAN. It is considered the pipe line that you run from the interim aid into the Marshall plan, if it is adopted?

Secretary ANDERSON. The pipe-line stock is the working stock necessary to keep the export programs operating without interruption.

Mr. JONKMAN. How much wheat have you on hand for that program now, do you know?

Secretary ANDERSON. Not exactly because our purchases are not broken down separately for each program. There have been acquired, however, by the Commodity Credit Corporation and by commercial interests, 435,000,000 bushels of a 520,000,000-bushel goal for grain and grain products.

Mr. JONKMAN. That covers you through the April pipe line? That is, you calculate that it will?

Secretary ANDERSON. No; it covers through March, the tentative March allocations. I am concerned with the shipments we have made and the shipments we are going to make during January, February, and March on our present allocations as they are all covered by the supplies of grain we now have.

Mr. JONKMAN. I agree with it on the basis of shipments. I was not interested in allocations, but I like to know what is shipped.

Chairman EATON. Mr. Jarman.

Mr. JARMAN. Mr. Secretary, when the interim-aid program was before the House, there was a determined effort to amend it to prevent the shipment of anything in short supply in the United States. You stated that you expressed the opinion that the quantities of food indicated as available from this country could be supplied without any extra strain on the food prices. Even so, what effect, as far as food is concerned, would an amendment like that have?

Secretary ANDERSON. Any amendment which says that you cannot ship items in short supply makes you stop and test what the use of

that commodity would be if you allowed everything to run unrestrained. For example, under it, I would have to use an illustration to show you what I mean. Under the price decontrol bill, if you recall that was passed in August of 1946, it became my duty to certify those things which were in short supply month by month. I continued to say that cereals were in short supply to the very last day of the legislation, and I mean they were still in short supply as far as we were concerned, and in June of 1947, when people were talking of this terrific billion four hundred million wheat crop and the possibilities of another large corn crop, the corn crop failed and cereals did show up in extremely short supply over all. If you allowed everybody to use everything, if you did not discourage in any way the consumption of grain, you would shortly find yourself in a situation where they were extremely short, and you would have price difficulties.

Right now, if people continue to conserve on the supplies of grains, if they do not feed hogs beyond reasonable weights, if they do not fatten cattle to top finished grades, if you do not allow unlimited amounts to distillers and brewers, and others, we have a sufficient supply. What the demand would be if you took off all restrictions and all suggestions, and all attempts to bring about conservation, I do not know. Therefore, I hate to have legislation that says I must stop and find which things are in short supply. They are all interrelated, a great many of them are, and you might have a bountiful supply of cottonseed oil, and great shortage of lard, but that shortage of lard would have its effect on the cottonseed-oil supply very quickly. If you cut off the imports of copra, it would see its effect on the cottonseed oil supply shortly. Therefore, would I be justified in saying when we have the greatest supply of cottonseed oil that it is in short supply? People would say I was doing something absolutely contrary to Congress, intent. It is not in short supply. It is in relation to other world demands and substitution of other products.

Mr. JARMAN. You do not think it would be beneficial to the program or the country for such an amendment to pass?

Secretary ANDERSON. I never tried to tell the Congress what I think it ought to do. But I would be glad to say it is a bad amendment to pass just as I thought an amendment restricting the amount of carry-over was a bad amendment. It had to be considered in connection with what the next crop was. The amount of carry-over does not mean a thing; 150,000,000 bushels, with an absolute failure of the wheat crop, does not mean a thing; 150,000,000 bushels, with a whale of a wheat crop, is a huge supply; 80,000,000 bushels, with a big wheat crop, is ample; 150,000,000 bushels, with a small wheat crop, is far too small.

Mr. JARMAN. Another amendment vigorously pursued when that was under consideration was to prevent the shipment of fertilizer and machinery, farm machinery as long as they were in short supply, something of that kind. The burden of the argument was, as I recall, that our farmers could not produce the food because they did not have the fertilizer and the machinery. Of course, the argument on the other side was that it would be better to let them produce a little over these than for our farmers to continue to have to do it. What do you think about an amendment like that as to the program?

Secretary ANDERSON. I think that is an amendment where the matter of individual judgment comes in very heavily. You can

argue both sides of that, and we do argue both sides of it in the Department. It is pretty persuasive on both sides. I opposed, for example, the shipment of large quantities of tractors by UNRRA on the ground I did not think those tractors were going into the hands of people who had the know-how to operate them. It seems to be a simple thing to operate a tractor in these United States where youngsters are brought up with a kit of tools in one hand and learn what to do with a model T Ford early in life. It is something else to people who happen to use animals for their motive power for a long time. They do not understand what a magneto is supposed to do. Some of those tractors were wasted, and that has been amply proved. Unless you have the skilled people who can start off those tractors and see that they are serviced properly, utilized, that the fields are large enough to use the type of tractors shipped, then, it is a waste to send that tractor there, and we in the Department have vigorously opposed large wholesale exportation of American tractors in the present program. The number of tractors will be substantially limited. Therefore, I say to you that wholesale permission to export large quantities of tractors would be a very bad thing. A limitation on how many tractors you can send is something that would require a tremendous lot of knowledge of the situation by the persons putting on the limitation. I doubt if it could be easily done. I mean to say that I doubt that the information is quickly available to the Members of Congress.

For instance, it is pretty hard to say how many tractors you can put into France that will be well used or how many can be put into Italy and be well used. I questioned the other day tractors going into Norway. I did not think it possible for those tractors to be used. I have an explanation back as to why they are being used. I am not completely satisfied as to that. We fight those things as vigorously as they need to be fought out. I say it is a doubtful area and, as to fertilizers, I am on a little better ground. We are not shipping large quantities of fertilizer. Something like 8 percent of the commercial nitrogen and small quantities of phosphate. When you ship a ton of fertilizer, you eliminate the necessity of shipping 6 or 7 tons of food. To the extent we need that fertilizer, it can be well used and we ought to ship limited quantities of it. We are providing for the shipment of limited quantities of it. I do not think that the shipment of all fertilizers could with wisdom be barred by the Congress because the immense amount of food to be shipped would need to be even larger. All of the economy is on the side of a small shipment of food and of a large amount of fertilizer.

Mr. JARMAN. That is the position I took against those amendments, and there was one fertilizer, only 1.7 percent of the supply of which was contemplated in the program. I believe it was nitrate.

Secretary ANDERSON. I testified so much, but I believe 8 percent is about right.

Mr. JARMAN. I say that was the other program, not UNRRA. As to the interim aid, I further took the position that while the farmers of our country might, by being required to continue to produce this food at high prices, might profit somewhat by it, I did not believe they were that selfish. What prompted this question was a statement you made awhile ago, which I am not sure I got, to the effect that, but for this program, what would happen to the farmers. Do you remember what you said? It seems to be contrary to what I had in mind in my argument.

Secretary ANDERSON. I said this: Someone says: "Why do we not quit all this and let Europe get back on its own feet?" I think one of the answers is: Because of the requirements of war, and the requirements of postwar support, that we have asked our farmers to produce present quantities of a great many things. They are geared now, and they have their seed in the ground for the largest winter-wheat acreage we have ever known in the country. It is the largest we have ever sown. In any event, it is an extremely large acreage of winter wheat. The farmer cannot be suddenly told that we do not want that much production. You can stop a factory half way, stop the assembly line, and start up again in a few days, but once you put that wheat in the ground, you have to go on through and harvest it. If that all came through, and there was no program of support whatever, I think we would have some very serious repercussions in agriculture. My limited knowledge tells me that you cannot have that happen without tearing down every business institution in the country. We found it out twice, and we will find it out quickly again. My concern is that it would destroy a great many businesses of all kinds, the people of Europe would lose their example as well as their food. I think it is a great thing to have a country agriculturally and industrially alert to point to as to how democracy works. I mean that more than anything else. The American farmers are in pretty good shape financially, perhaps better than some others, but the cutting off of these agricultural commodities would have, I think, serious repercussions on our whole industrial life.

Chairman EATON. The time of the gentleman has expired.

Mrs. Bolton.

Mrs. BOLTON. Mr. Secretary, am I right in thinking that you said that the prices here are not affected by the exports, and that there is an ample amount of feed, corn, and so on for this country?

Secretary ANDERSON. I am sure I did not say that.

Mrs. BOLTON. Please correct me. That is why I am asking the question.

Secretary ANDERSON. There is no provision for the export of corn, and there is a shortage of corn and feed corn.

Mrs. BOLTON. I was well aware of it.

Secretary ANDERSON. Yes.

Mrs. BOLTON. I want to ask you quite definitely what method do you have, or do you not do it at all, to follow the home food and the foreign food program, and if you check in the different countries on the use of food and fertilizer, or is that done by some other agency?

Secretary ANDERSON. It is done primarily—and it depends on the program. In the UNRRA program they were checked by UNRRA. In the State Department program they are checked by the State Department.

Mrs. BOLTON. In this new program, who checks?

Secretary ANDERSON. In this new program I am not able to say to you if it is the Secretary of State or is checked by the State Department. When you have agriculture attachés in these countries who report primarily to the State Department, it is secondary to us. They are agriculture people, however, but their services are available to the State Department, and they are primarily the ones.

Mrs. BOLTON. You have no responsibility in the matter of decision as to how much food shall go?

Secretary ANDERSON. We have the responsibility of the decision as to how much food shall go.

Mrs. BOLTON. You do not follow it when it gets over there?

Secretary ANDERSON. No. We do not set up two organizations to follow it. The State Department is supposedly following it, and I think it is.

Mrs. BOLTON. What relation do you have envisaged with this new organization and the State Department plan of organization for this new program? What do you envisage as your relation to the Administrator?

Secretary ANDERSON. On the production side, I would think that we would have available to him a staff of people most of whom we could very quickly recruit, and most of whom are probably now available, who would examine production plans in these areas to see if they are producing the things essential to their own food source. It is pretty hard to illustrate except by an examination. When we made the examination of Poland last July, we tried to determine whether the wheat shipments proposed to Poland were essential. We found Poland was placing primary emphasis on sugar for export and rehabilitation of her livestock industry. Therefore, we knew it was not grain that was greatly needed for her own people. If its people were hungry, they would have been trying to feed them first with grain and not trying to get sugar for export. Upon that knowledge of their emphasis, we were able to draw some conclusions about their needs for wheat which subsequent months have proven to be very accurate.

Now, the Poles show up with fairly good supplies. We have tried to go in to some of these countries to find if we thought it would help to meet the goals we have set out. If it would not, we would not attempt to remedy it ourselves. It would be our responsibility to go to the Administrator, as he has the responsibility in this connection because he is the one who is going to be able to say we will or will not supply these things, depending on their cooperation with the program.

Mrs. BOLTON. Do you have responsibility to keep him informed?

Secretary ANDERSON. We would have a responsibility to keep him informed as to their program, not as to their compliance with it.

Mrs. BOLTON. Then, he is responsible for checking their compliance with it?

Secretary ANDERSON. I would think so, because that is a situation in which we find ourselves in Germany now. We have made certain recommendations and laid out certain programs, but the responsibility for carrying it out comes to the administrator in that area.

As to the shipment of foods, we feel it should be our responsibility to get together these agricultural supplies and see that they are shipped and landed where the Administrator requires them. We do not think we ought to have the responsibility for distribution.

Mrs. BOLTON. So far as I can find out in my study of the bill, none of that is spelled out in the State Department bill as submitted to this committee.

Secretary ANDERSON. I think that is true, and that is why I have stressed it in my testimony, and stressed it before the Senate. I feel it would be extremely unwise to have another procurement group. I base that upon some experience I had in the closing days of the war when we were dealing with two or three agencies that had some

responsibility. Mr. Crowley had a general plan and UNRRA had one, and we had one, and when we tried to put them all together, we might have found certain stocks and there had been competition there under unusually distressing circumstances.

Mrs. BOLTON. Do you represent the United States in the International Food group?

Secretary ANDERSON. Yes.

Mrs. BOLTON. In that group, has there been a study made of the places from which western Europe can hope for food supplies if they are developed?

Secretary ANDERSON. Yes; but not as much in the International Food Council as in the Food and Agricultural Organization. The International Emergency Food Council has now become the International Food Committee and has been merged with the Food and Agricultural Organization. Theoretically and practically, probably it was the function of the International Emergency Food Council to deal with shortages and try to find ways of plugging up these present groups. Food and Agriculture Organization was to look for the long-range program.

Mrs. BOLTON. In the long-range program, and in the studies made by that group, what consideration, what share was the Near East to have in that?

Secretary ANDERSON. In the supplying of food?

Mrs. BOLTON. You have the greatest value in the long-range program.

Secretary ANDERSON. In the long-range program the great emphasis was placed on rice production in Burma, Siam, and French Indochina.

Mrs. BOLTON. What about the closer and nearer land of the Near East which is fabulously rich?

Secretary ANDERSON. I am not sure, because in an area like Saudi Arabia it will require irrigation projects.

Mrs. BOLTON. But rather simple ones and simple ones in which you have the greatest value?

Secretary ANDERSON. Not simple from what I saw. They run into hundreds of millions of dollars.

Mrs. BOLTON. The original one?

Secretary ANDERSON. There are a great many simple possibilities for improvement of food supply in that area. That is Food and Agriculture Organization's province, and Food and Agriculture Organization does have a group in that area working now in that question of food supply.

Mrs. BOLTON. That has been taken into consideration with the food supply for western Europe?

Secretary ANDERSON. Yes; although western Europe does not depend on that area and probably will not depend on that area for its supplies of food. That area has need for those supplies in their own land, if adequate diet should become available. We have looked to the possibility that western Europe will depend on Canada and Argentina.

Mrs. BOLTON. And the development of North Africa?

Secretary ANDERSON. The British are trying to remedy their fats and oil situation. There is a project there now which is somewhat started out of a suggestion made by the Department of Agriculture. We just told them that they could not continue to depend on large quantities from us.

Mrs. BOLTON. You are to be commended.

Secretary ANDERSON. The British went down and tried to put it in operation and they have had some unusual problems.

Mrs. BOLTON. What about the French in North Africa?

Secretary ANDERSON. They are doing something but not as yet operating with the same vigor as the British.

Mrs. BOLTON. It is not your responsibility and, under the new arrangements, it will be the responsibility of the State Department to fulfill those responsibilities.

Secretary ANDERSON. Not as to North Africa. I do not think the economic recovery program would touch the State Department's responsibilities in North Africa. I think that is still Food and Agriculture Organization's responsibility and not the State Department. It is an interesting field that I would like to further discuss that we, as a nation and part of the United Nations, should continue.

Chairman EATON. We will hear from Mr. Mansfield.

Mr. MANSFIELD. Mr. Secretary, in your opinion would the enactment of this legislation contribute much toward the inflationary spiral now in effect in this country?

Secretary ANDERSON. If you would ask me whether it need add anything to the inflationary spiral, I can answer that quite easily, by saying that it need not. I also recognize, and I think we all recognize, that as soon as a program is announced, that envisions the export of 10,000,000 bales of cotton in the next 4 years, that has a strengthening influence on the cotton market. It does not mean that it needs to have one because we know, as a practical matter, that this country has always exported cotton. We will undoubtedly be exporting cotton again, but some sort of export arrangement will be made for the export of cotton regardless, and, if that does not happen, it would be disastrous to a great section of our whole economy. The fact that you announce that sort of an export program does strengthen the market. If you announced that we were going to export 350,000,000 bushels of wheat, that would have, for a while, a little stimulating influence on the market. If you stopped, then, and showed that would not be at all an unusual amount of wheat for us to ship in connection with our present supplies, that story does not seem to have much influence on the market. For some reason or other, the optimism runs high in the grain exchanges and, as soon as you give them one encouraging word, it seems to move things along well.

Mr. MANSFIELD. Looking at this legislation practically, then, we can assume that it will undoubtedly contribute to inflationary processes now in effect in the country?

Secretary ANDERSON. No, I do not say that will contribute to them. I think it will not contribute to those things that might break our industrial and agricultural prices substantially, namely a sort of turn-down in all of our present level of high national income. There is nothing in it that I see that causes real trouble. Our real great difficulty today in the domestic field is the high price of meat, butter, and eggs, and none of those things would be affected by this program.

Mr. MANSFIELD. You stated also that if there was no foreign market for these extremely good crops that we have been having that the result would be surpluses, naturally, and the further result would be deflation in agriculture which, in turn, would spread itself out to other fields.

little plots of ground into wheat. He had the most disastrous weather he ever had.

Mr. SMITH. Is it true, is it not, that considerable grain is still being held by the farmers who refuse to take it to market?

Secretary ANDERSON. In Europe?

Mr. SMITH. In Europe, yes.

Secretary ANDERSON. I am not sure. I wish I could answer that question correctly. I would say that I have an impression that—and only an impression—in Germany the collections have been much poorer than we anticipated. They are based to some degree on inability to collect, not solely crop failures.

The French Government last July established a price for grain which was more appealing to the farmers and has brought increasing quantities of grain from the farmers there.

Mr. SMITH. Considerable grain, however, has gone into the feeding of cattle, has it not? I believe in the testimony that we have on the interim aid bill, that in Italy alone cattle had increased 25 percent.

Secretary ANDERSON. It is like a man who has only one necktie. When he gets an extra one, he has increased 100 percent. Italy is like a fellow with two neckties. The Italian livestock situation is notoriously bad. They have increased a little bit, by a big percentage, but not a significant increase in quantity.

Mr. SMITH. It is not a fact in the interim-aid bill we provided millions of dollars to pay farmers to get their grain on the market?

Secretary ANDERSON. I do not know that.

Mr. SMITH. I think you will find that to be the fact.

Secretary ANDERSON. Would you tell me where I could find that?

Mr. SMITH. This was incentive goods. Mr. Mansfield referred to the matter. We get more production if we give the farmers incentives.

Secretary ANDERSON. I subscribe to that. I understand the interim-aid bill authorizes not to exceed 5 percent of available funds to be used for procurement of incentive goods.

Mr. SMITH. Mrs. Bolton reminds me there are 80,000,000 dollars for that purpose alone, for the purpose of incentive payments.

In that matter of collections, have you been satisfied with them as we have gone along?

Secretary ANDERSON. In other countries?

Mr. SMITH. Yes.

Secretary ANDERSON. No.

Mr. SMITH. Do you recommend any way whereby we can help that situation so that the American taxpayer is not paying the bill for European countries.

Secretary ANDERSON. I was just going to say in the case of the mission which went over to see the people in Japan, we were not happy at all over the fact that there came in a request to us from headquarters over there for a very substantial quantity of grain at a time when it was extremely difficult for us to scrape any more grain out of the American barrel. A mission went to Japan, and I think two members of that mission are here this morning, and they made a survey and found out that our collection methods were bad. The grain was not coming out. The matter was rather heatedly discussed with members of General MacArthur's staff, and finally it came to the attention of the general himself. A new project was set up to better the collection program in Japan. This year that is working well. We are collecting above the amount that they have

set aside for their goal. That has been a success. On the contrary, the situation in Germany has been a disintegration of the collection machinery because we are not able to believe that the potato crop has failed as greatly as the figures indicate, nor led to believe that the collection of grain has failed as greatly. We think it cannot be solved by saying that neighbors must get together and solve this. We think there must be some strong method, as adopted in Japan, if we are to have decent collections there.

Mr. SMITH. Does that apply to Italy and France, also?

Secretary ANDERSON. I think there are other factors in Italy.

Mr. SMITH. Just one more question. Mr. Secretary, with reference to the matter of tractors: It is my understanding that the tractor industry in the country has been called upon for a set-aside of a certain percentage of production this year.

Secretary ANDERSON. I have no knowledge of that. I am sure there is no such thing as that.

Mr. SMITH. I would like, Mr. Chairman, to ask unanimous consent to place in the record, at this point, a request that has been made showing that many tractors are expected to be taken from our production for overseas shipment.

Secretary ANDERSON. Let me see it, too, because it is news to me.

Chairman EATON. No objection?

Mr. BLOOM. Let us all see it.

Secretary ANDERSON. I am certain there could not be. It would be well for me to comment on it here.

Mr. SMITH. I do not have it here.

Mr. SMITH. Do you believe there ought to be an allocation of tractors?

Secretary ANDERSON. Yes.

Mr. SMITH. For overseas use?

Secretary ANDERSON. Yes.

Mr. SMITH. To what extent would you say? What percentage of production?

Secretary ANDERSON. Probably around 10 percent for the ERP countries.

Chairman EATON. The gentleman's time has expired.

Mr. JAVITS. Mr. Secretary, have you made any estimate of the demand for meat per capita in the United States for 1947 as contrasted with the supply?

Secretary ANDERSON. The Bureau of Agricultural Economics worked up some figures that I would rather they introduce because I know they have calculated how much we are now consuming, if there were all the meat we wanted within what we might regard as reasonable prices.

Mr. JAVITS. Would you be good enough to introduce that calculation into the record?

Secretary ANDERSON. Mr. Wells, I am sure, could testify right now.

Mr. JAVITS. Could you give it to us briefly?

Mr. WELLS. Average per capita consumption during the last year was 155 or 156 pounds, we have generally estimated with reasonable prices American consumers might buy 165 pounds per capita if they could get it. It appears that the supply for this year will not be more than 145 to 146.

Mr. JAVITS. Mr. Secretary, are there material diversions of grain to feed cattle?

Secretary ANDERSON. There is a certain amount of normal use of grain for the feeding of cattle. That is not as large as you might anticipate because of unfavorable feeding ratios. For instance, the last few days cattle prices turned down nearly a dollar, and when wheat prices move up and cattle prices down, you intensify the unfavorable ratio.

Mr. JAVITS. Does the pressure of grain demand for feeding increase the price of grain?

Secretary ANDERSON. Yes, the high price of meat naturally attracts grain to that feeding, but not much wheat. The price of wheat is such that it is not a desirable feed at \$3 a bushel.

Mr. JAVITS. I note that you plan to export 100,000,000 bushels of other grains. Does it affect the prices of those other grains?

Secretary ANDERSON. Yes, sir.

Mr. JAVITS. Do you believe that it is advisable that the use of grain, for feed, should be enhanced in order to take up eventually the difference between what we are now exporting to Europe and what we will export to Europe at a time when the need there diminishes, or do you believe that curtailment should take place at that time through reduction of the acreage allocated to grain?

Secretary ANDERSON. I am not sure that I understand exactly what you mean. I know this: There will be an increased consumption of grain in the cattle industry as soon as we can afford to use those grains for that purpose. We, in the Department, are conscientiously trying to bring about the increased grain consumption. Temporarily, that goal has to be put aside. We hope to get to livestock as quickly as we can.

Mr. JAVITS. For a constructive agricultural policy under present circumstances to bring it in accord with the ERP, that goal of increased grain consumption should be deferred?

Secretary ANDERSON. That is right.

Chairman EATON. Mr. Lodge.

Mr. LODGE. Mr. Secretary, I was interested in your statement on page 10 where you say:

I do not anticipate that exports in these amounts would add to the inflationary pressure in this country, or call for any undue sacrifice on the part of our consumers.

I do not quite know what you mean by an undue sacrifice.

In interrogating Mr. Clayton on this matter, I find that this is what he said:

We produced last year 1,400,000,000 bushels of wheat. The human beings in this country cannot use over half of that, to save their lives, and they do not eat over half of that. Of course, we feed a certain amount to animals, which is unfortunate, and you have a lot of wheat you have to export.

Mr. LODGE. Yet the price of wheat goes up?

Mr. CLAYTON. And yet the price of wheat goes up, because there is such an enormous demand over the world for it. The production of wheat in other countries has declined so much that they have to have our wheat.

The point I am trying to get at is this: I favor the principle of the European recovery program, but I would like to know from such an eminent authority as you, do you really feel certain that that statement of yours on page 10 is exactly what you want to say about these inflationary effects of these exports of wheat? I think the American people can take their medicine, they have shown that in the past.

Secretary ANDERSON. I will say what I said before. I cannot understand what makes the price of wheat jump in the manner that it sometimes does. From 1930 to 1946, the total use or distribution of wheat in this country has averaged 770,000,000 bushels. That from the 1,450,000,000 bushels leaves 680,000,000 bushels for export and carry-over. Knowing that we are going to export at least 450,000,000 bushels, that would leave 230,000,000. If we export 500,000,000 bushels, that would still leave 180,000,000 bushels for carry-over and additional use in this country. You would think this quantity would drive down the price of wheat. Yet they pay no attention to it. The speculative market seems to feel that the important figure is 450,000,000 bushels. Every time you announce something about it, the price of wheat drops. It dropped a little because we said we have only 50 to 80 million bushels to acquire.

Mr. LODGE. That is what you said to Mr. Mansfield. That it need not, but it does. Your statement therefore is not in conflict with Mr. Clayton. You do not say that it will not.

Secretary ANDERSON. I say that it need not.

Mr. LODGE. In further regard to this question, I have here a statement which has been gathered from the Agricultural Department statistics, the statement and letter are from Dr. Fitzgerald of the Foreign Agricultural Commission, and corroborated by the State Department. It points out there would be a carry-over of only 25,000,000 bushels at the end of the year on the basis of those estimates.

Secretary ANDERSON. I am sure that is not right. There is a mistake there somewhere.

Mr. LODGE. Apparently, Mr. Secretary, there is some conflict between your figures and the Department of Agriculture figures.

Secretary ANDERSON. There is no Department of Agriculture figure in existence that indicates the carry-over of 25,000,000 bushels. Someone has made a mistake.

Mr. LODGE. It is indicated on this statement that according to Department of Agriculture the figure for feed is 325,000,000 bushels, whereas you apparently put that at 250,000,000 bushels. I wonder whether you could comment on that so that we can reconcile the figures.

Secretary ANDERSON. Surely. At the time that 325,000,000 bushel figure got into existence, it was based on the possibility that wheat prices would remain low, corn would be scarce, and that thereby a great deal of wheat would be diverted into feeding of livestock. You can feed wheat to cattle at \$2.06 a bushel which was about the export price at that time. You cannot afford it at \$3. Immediately after the announcement of goals, this looked like a possible use. We took figures from everybody in the Department. We have different groups, including the Bureau of Agricultural Economics, and the Production and Marketing Administration. They all had made an estimate and this was a sort of a median figure. After we got our first reports, this was made well in advance, after we got our first report in the year, it became evident we should scale that down to 250,000,000 bushels. Now we are getting indications that it might run as low as 200,000,000 bushels.

Mr. LODGE. In other words, there is no conflict between the Department's figures and yours?

Secretary ANDERSON. No, the trouble is that we set out a set of figures shortly thereafter after the BAE conference, one of Mr. Wells' people got up and revised that figure substantially, and revised it in the right direction.

Mr. LODGE. The reason for the apparent disparity between the two figures is that a different time was taken?

Secretary ANDERSON. That is right.

Mr. LODGE. There is, in fact, then, no difference between your estimates and your Department's estimates?

Secretary ANDERSON. No, because I am using the very figures which Mr. Wells supplies to me. I have to. It is the only place I can get figures I can rely on. There is a change as time goes on. Very shortly we have additional figures and disparities. Those could jump the other way. As we get more and more information, as we go along in the year, then, we know more and more how much is going to be used in the year.

Mr. LODGE. Then, would you say that 25,000,000 carry-over is a very unlikely estimate, would you?

Secretary ANDERSON. Yes.

Mr. LODGE. You would say a 25,000,000 carry-over would have inflationary effects?

Secretary ANDERSON. Very definitely. It is impossible to get a 25,000,000 carry-over. You need so much for warehousing, so much in docks, terminal elevators. The day will never come when you can shrink it to 25,000,000 bushels.

Mr. LODGE. I am glad to have that for the record.

Chairman EATON. Mr. Jackson.

Mr. JACKSON. Mr. Secretary, if my question is a little nonrural, it is because the agriculture in our district comes from window boxes.

Secretary ANDERSON. Victory gardens there are important.

Mr. JACKSON. And small.

What are the latest estimates you have, Mr. Secretary, relative to the crop, the wheat crop for next year? What are the prospects?

Secretary ANDERSON. The last figure indicates a total crop somewhere in the neighborhood of a billion to a billion two hundred million bushels. The acreage is there to produce that much wheat. Whether or not the crop conditions are there to produce that much wheat, I do not know. The conditions have improved very materially. We got rain when we needed it. You have to have continued good rain to save it permanently.

Mr. JACKSON. How did that compare with last year?

Secretary ANDERSON. One billion four hundred million. The average is way, way below that. These are very unusual and extreme crops. The thing that it does do is to make an attractive price for wheat. Farmers gamble for \$3 wheat when they do not for \$2 wheat.

Mr. JACKSON. So do other people. Percentagewise, what is the amount of the total United States wheat shipments sent in the form of flour?

Secretary ANDERSON. Last year about half was shipped as flour. This year there will be well under half in flour. We expected to ship about a third, and it is running at about that figure. The reason we tried to get more and more into whole wheat was that they have a higher extraction ratio than we do. They will put 90 to 96 percent

of that flour—or wheat into actual flour whereas we will put 68 or 72 percent into it. We will get certain byproducts of shorts and middlings if we manufacture the flour here. They would like to have it as human food over there and they desire us to ship it over there that way.

Mr. JACKSON. The coarse grain itself?

Secretary ANDERSON. That is right.

Mr. JACKSON. I am sure that all of us in Europe were struck by the amount of white bread available. White bread in France, white bread in Italy, and in many cases, and certainly the nutritive value declines considerably.

Secretary ANDERSON. It depends a whole lot on whether you are in the home of the ordinary family or whether you are in the resort hotels and restaurants because they do, as could be expected, they realize the heavy dark bread is not popular in restaurants and would serve you in a hotel what is more expensive. Generally speaking, many of the countries in Europe have kept their flour extraction ratios running 90 percent and over. Most of the countries in Europe, for their ordinary trade, do utilize fully the kernel of wheat. We do ship some flours in all of those areas, and some of it has found its way into hotels and served on this basis.

Mr. JACKSON. Would it not be desirable to send all of it in grain?

Secretary ANDERSON. No, not entirely, because sometimes when you get to sending it all in grain, it gets used for livestock as well.

Mr. JACKSON. That would be true of all of it?

Secretary ANDERSON. That is true, in part, but once it is sent in flour we know it is used for human food. We have done what we think is desirable. We have reversed the ratio. This year we have sent a large portion of it in grain. That phase of that varies, when the country has asked us to change our policy and send more and more in grain than we did before this year.

Mr. JACKSON. Relative to the prices of grain and with particular reference to wheat, there have been several reasons advanced for the high prices of wheat. Would you care to comment as to what the effect on the price of wheat speculation of the grain market has been?

Secretary ANDERSON. No, sir. I say that this year's supply was so ample that, taking out the whole export program, there was more grain left than we were going to use, and we put a small amount in surplus. Normally when that happens, that has a depressing effect upon the market. Every time we would announce that we were going to buy, every time the ticker out of Washington the night before said that Commodity Credit Corporation would take bids tomorrow morning, that had a nice wholesome or strengthening effect on the grain market. Why that should happen, I do not know, unless hope does keep springing eternally. That means higher prices. There was nothing in the total amount of purchases that need have driven up the price of wheat too high. However, you may recall that a very well known wheat producer is reported to have said the price of wheat would get above \$4 and \$4.50, as he left an interview at the White House. I challenged that statement immediately because I saw nothing in the picture to permit it to go there. I am glad that subsequent events proved it cannot go there. The way the grain market is worked, I could not guarantee it would not. We have found that Commodity Credit Corporation moves into the market to buy rather limited

amounts of flour, and the whole flour market seems to move up in response to that.

Mr. JACKSON. Does it have a direct effect? Large scale Government purchases do have an effect on the price.

Secretary ANDERSON. We are going to buy less grain here on out the rest of the year than the flour mills will be buying. Why should not the large-scale flour-mill purchases of the General Mills or Pillsbury affect the market, buying a large quantity of grain? That does not change the bid. If we go in and buy a comparable amount, that does.

Mr. JONKMAN. Mr. Maloney.

Mr. MALONEY. Mr. Secretary, in the last few days there was an announcement in the press that a quantity of Idaho potatoes was on the dock and consigned to Scotland.

Scotland refused them and other countries refused them. Was that statement true, and if so, why?

Secretary ANDERSON. I do not know.

Mr. MALONEY. You have no knowledge of that?

Secretary ANDERSON. No, I cannot tell you. We have a large purchasing operation going on all of the time. If it was operated, I have not heard about it.

Mr. MALONEY. Yesterday.

Secretary ANDERSON. We do ship potatoes abroad, and we ship them abroad under favorable price limits. However, the shipment of potatoes at this time of year is a hazardous business. There was a possibility of their freezing in transit on the docks, or freezing in the cars, and the countries do prefer to have wheat.

Mr. MALONEY. Mr. Hoover sent a message yesterday to the Senate in which he advocated limiting the time of this aid to 1 year. Now, there are several vantage points to that. I want to point out one to you and see what you think about it. If we have this long-range aid and we tell Europe what we are going to give them in grain next year and the year after, would that not be likely to limit the farmers in their efforts to produce? Would they not rest on their oars and say: "Here we are getting so much grain from America or Argentina, and we do not produce, or it will not be necessary for us to produce?" There are other questions, but that is purely an agricultural question on the 1-year aid. What is your thought on that?

Secretary ANDERSON. My thought is that telling them they shall have a little smaller degree of starvation by doing that would not appeal to them. What I mean is this: We are not sending them enough grain to relieve their actual needs for cereals, at best. We are not sending them enough to restore their livestock populations. Nearly every country over there would like additional supplies of grain. The fact that we are making some contribution—and their total is still below their needs—I do not think ought to restrain them from going ahead and doing the best they know how. It is, to me, similar to what you might say to a young man going away to school—if he were your boy, you can say to him: "I am going to send you so much money a month. With what you have coming, that ought to see you through in reasonably good fashion." It does not mean he will drop every source of revenue because a portion of it comes to him. He might want enough to sustain himself decently. I think the countries of Europe are in that situation. They would like

enough so their people can live decently. They have to increase their efforts if the plan is to be successful at all.

Mr. MALONEY. Then you do not approve of the 1-year plan?

Secretary ANDERSON. No; I think it is much better if they can count on what is coming over for a reasonable period of time.

Mr. MALONEY. On page 10 you say:

Whether we send any meat to western Europe during the last 2 years will have to depend entirely on the situation at that time.

I was wondering what situation you were thinking of.

Secretary ANDERSON. If we should have, in 1948, another 3,300,000,000-bushel corn crop, as in 1946, instead of 2,400,000,000, as we had in 1947, then we could safely say to the American farmer—or he would do it automatically—"Greatly increase your output of pork." There are two ways you increase the meat supply. You can increase it very rapidly through pork. Increase of beef is a slow process, and probably we cannot expect much improvement in the beef situation for years to come. You can expand pork tremendously almost overnight. That would be available sometime in 1949. If we had another big corn crop, you could have large quantities of pork by 1950. Therefore, at the end of 2 years we might know whether we would be able to send them some pork.

Mr. MALONEY. What I am interested in is that it would depend on our own situation rather than the European situation?

Secretary ANDERSON. That is right.

Mr. JONKMAN. Mr. Jarman is recognized for a question or two.

Mr. JARMAN. Mr. Secretary, referring back to Mr. Bloom's question to you wherein he drew a distinction between supplies for food to prevent starvation and leather and other goods that would be manufactured into products—and he felt we should be paid for the leather—is not the nubbin of that proposition the fact that this is a recovery program and an indirect effort to preserve permanent peace rather than a relief proposition? We do not regret our part in the recovery, for the world recovery, and contributions for world peace that we hope continues.

Secretary ANDERSON. The decision would be one for the administrative program to decide—how quickly they needed a payment, basing it upon the speed of recovery or factors of recovery we could look at. We do not extract it all at once, the total amount of food that you can get out of an area. In that connection, I think if you would read some of the statements Mr. Hoover made about Russia's program, of taking reparations out of the current food production, you will find he strongly deplored their action. He said, very correctly, they defeated the very things we were trying to accomplish.

Mr. JARMAN. You referred, on page 12, to this 60-day wait for approval of Congress and urge that it be changed. I am not sure that I understand it.

Secretary ANDERSON. Here is what I mean: Suppose we should find in the next few weeks there was an arrangement that we could make would be advantageous. I wish the thing would be affirmatively approved. When you draft a treaty it can be submitted to the Senate, and the Senate could, if it wanted to, approve it that day, if it were urgent. If we should find that we can enter into negotiations with another group that was satisfactory, I wish there would be changes

that permit an immediate affirmative approval by the two Foreign Relations Committees, Senate and House, by the Appropriations Committee perhaps of the Senate and House, by somebody who could say to me at once, "Go ahead and finish it up."

If you wait 60 days, things get cold. I am not trying to take away full congressional approval. I said to Senator Taft, "I fully subscribe to the plans in any respect being approved by Congress." I still simply say when you are in a trade, I wish there were some similar provision that said if I could submit the matter—and, I would hope, in executive session—to the two Foreign Relations Committees, I mean the committees of the House and Senate dealing with foreign matters, and they might give me committee approval, and I could then proceed. If you want to have that checked by the Appropriations Committees, fine. We want the chance to move quickly.

Mr. JARMAN. I can understand the undesirability of that wait. That provision is in the bill.

Secretary ANDERSON. I sent that in to the so-called anti-inflation bill.

Mr. JARMAN. Which has become law.

Secretary ANDERSON. That is right. I did not object to it, and I do not object to it now. Although if we had a chance to see it in advance, we would have recommended that the provision be one to give a possibility of affirmative action. I am perfectly willing to have congressional approval, if it should be necessary, but I would so much rather have a right to bring it to the committee. explain it to the committee, and have them say, "Yes; we would like to have you do it," or, "No; we do not want you to go ahead." That is all I mean by that.

Mrs. BOLTON. Mr. Secretary, you said in the beginning of your prepared statement that the farmers have a stake in the foreign market.

Secretary ANDERSON. Yes.

Mrs. BOLTON. With this I agree. They have been deeply disturbed over the destruction of food supplies, the burning of the potatoes and the destruction of citrus fruits at different times when there are starving people in the world and when food costs are up, I find them utterly unsympathetic to the reasons that are given. They ask why potatoes cannot be reduced to potato flour so that they could be shipped—the idea being that the potatoes in the bottom of the hold rot. The reasons given them were that this was too expensive a process for the amount of food value in the potatoes when it was made into bread. My women are very unsympathetic to that. They say potato flour bread is better than no bread. What are we going to do about that sort of thing?

Secretary ANDERSON. On the question of potatoes, we have offered to give them away to these areas. The shipments of potatoes being made at the present time are required under the export program, based at prices virtually giving them away.

Mrs. BOLTON. It seems very reasonable to me that women should object to such waste.

Secretary ANDERSON. No; you have a time exporting potatoes. It is not an easy thing to explain. You have a type of potato that carries 70 or 75 percent water. When you start to ship that abroad you have to decide whether it is better to take the criticism of people who see them destroyed or ship something of real value.

Mrs. BOLTON. The 30 percent which is not water could be made into potato flour.

Secretary ANDERSON. It can be, at a price well above what wheat flour would cost.

Mrs. BOLTON. Exactly; but when there is no wheat flour?

Secretary ANDERSON. You were dealing at that time with another government which had very limited dollar funds, and which tried to get the greatest possible value out of its dollar. The foreign government had to decide whether it wanted potatoes or wheat. We did not have the authority to say they must take potatoes.

Mrs. BOLTON. Also, right nearby, potatoes were difficult to get in our own markets. That was another objection that I had from the women.

Secretary ANDERSON. They have been plentiful all over the country.

Mrs. BOLTON. Yes; but not distributed so they could be obtained.

Secretary ANDERSON. I do not know. I think the marketing records show there are potatoes available all over the country in plentiful supply.

Mrs. BOLTON. Perhaps the records might not have covered all the areas. Am I to understand that the reason they are not being sent abroad is the refusal of the country there to accept them at the price; is that it?

Secretary ANDERSON. First of all, we tried to make disposition of them. They were offered to charitable institutions. The institutions get, after awhile, all they can handle. Then we offered them for industrial uses. They are offered to people who make starch, people who make many other products. Then they are offered to livestock feeders. There is only a limited amount of the potatoes that you can feed direct to the livestock. Then they do not want them. When you have exhausted those channels, there is very little you can do with them. I have furnished this total figure as against the total crop of 384,000,000 bushels; when you get down to the distribution of a million bushels, it is not a large figure. It looms large in a photograph. I realize that. I got enough copies of that picture. Any destruction of potatoes in 1947 is going to be no larger than the destruction of potatoes in 1937. Nobody worried about it then. Any time you get one of those unusual situations—the same thing happened to butter during the period when we were buying butter, and they printed pictures of some butter destroyed in Philadelphia. Mrs. Bolton, you know that butter goes rancid every day in the year, in every kitchen in the country.

Mrs. BOLTON. I send it back to my grocer when it does.

Secretary ANDERSON. I congratulate you on that. The grocer has nobody he can send it back to.

Mrs. BOLTON. He will send it to you.

Secretary ANDERSON. He sends me a copy of the picture, but it is a hard problem. We destroyed tremendous quantities of potatoes in 1946. We destroyed tremendous quantities of it; but out of the 1947 crop we will have about the normal percentage of destruction or shrinkage. A certain amount of them always go out of condition. Cars are not available when the farmers want them. That goes right along. We are trying to see they are not wasted.

Mrs. BOLTON. Can you assure me that the farmers understand that they have a stake in export trade?

Secretary ANDERSON. No; I cannot assure you, but I can assure you that we have done everything we can. I have been surprised how many of them understand it. You notice the regular list of the American Farm Bureau on it every day.

Mrs. BOLTON. Ohio farmers did a good job, too.

Secretary ANDERSON. They saw conditions and reported honestly and favorably what they saw.

Mrs. BOLTON. Thank you.

Mr. LODGE. Mr. Secretary, the Krug and Harriman reports both stress the need of fertilizer as an A-1 priority.

Secretary ANDERSON. Yes.

Mr. LODGE. The report stated that you were able to satisfy or to meet only about three-quarters of world requirements. In these circumstances does it seem wise to you to dismantle nitrogen plants in Hochbau in the French zone of Germany?

Secretary ANDERSON. You see, you have the best of me, Mr. Lodge, because I am not sure that I know the particular plants to which you are referring. I do say to you in general that we have felt it extremely unwise to dismantle any of these nitrogen plants. I do know that last summer I tried to get a situation straightened out where one of the plants we were very much interested in would be back in production. It had not been our fault that that plant had gone out of production. We made a three-cornered deal that should have put it into production. We carried out our part. The British carried out their part.

Mr. LODGE. Where was that?

Secretary ANDERSON. It was the old I. G. Farben plant at Höchst, in the United States zone. And its operation depended on liquid nitrogen that it got from a plant in the French zone at Ludwigshaven. We agreed that we would send additional quantities of food in the Ruhr to permit the British to mine additional coal, and send the additional coal to Ludwigshaven, and then send the liquid from there to make fertilizer. It is that sort of horse trading that you have to do there. The British delivered the extra coal, the French made the extra ammonia water, and promptly shipped it in to the French. They have problems of their own, the French do.

Mr. LODGE. I am in sympathy with the problems the French have faced. I have no doubt that one of the things we must do under the European recovery program is to integrate the various elements in these matters in order to achieve what I believe to be a worthy objective, which is an Economic Federation of Europe. Obviously, we are going to ship wheat into France. They are going to get it. Surely we cannot take a formalistic attitude and say, because this is in the French zone, we cannot make a suggestion as to the dismantling. I am sure that the French authorities would respond understandingly to a suggestion from us that these nitrogen plants which are multiple and important at Hochbau in the French zone should not be dismantled. I would appreciate it very much if you would present a memorandum to this committee on this subject because that is one of the things that many of the people find hard to understand. An opinion from you would be very valuable to us, indeed.

Secretary ANDERSON. I would be very glad to do that, because one of the things that we have worked on as hard as any single thing I can think of is that these plants built by the Army should not be dismantled and tossed aside. They should be used.

(The information is as follows:)

In undertaking to ascertain the exact status of plants located in the French zone of Germany which are capable of being used for the manufacture of fertilizer, I have asked the Department of the Army for a statement upon the matter. Following is the information received from the Army, which I understand is based upon official reports received from OMGUS:

"With regard to bizonal Germany, United States/United Kingdom zones, there has been no destruction or dismantling of fertilizer plants since the cessation of hostilities, and destruction or dismantling is not contemplated.

"Two plants, one designed to produce concentrated nitric acid, and the other to produce synthetic fuels, are being converted to the production of nitrogenous fertilizers.

"Two new plants for the production of Rhenania phosphate have been placed in operation.

"French zone production of nitrogenous fertilizer has been indicated by the French to be 44,000 metric tons of nitrogen per year at the present time. The French are not operating the calcium nitrate plant or the ammonium sulfate plant at the Oppau works. The first could be placed in operation in 6 months and the second in 18 months. The combined capacity is 55,000 tons of nitrogen per year. This possible increase is reflected in French Marshall-plan figures.

"Soviets have destroyed potash mines in the U. S. S. R. zone, but they have stated in the Allied Control Council that the mines destroyed were exhausted mines that had been used for the underground production of war materials.

"No fertilizer plants in Germany have or will be declared for reparations. Synthetic ammonia was set aside as a prohibited industry. However, the Allied Control Council authorized production of synthetic ammonia for Germany's peacetime requirements until such time as exports could pay for all imports.

"Some persons have claimed that the dismantling of steel plants and blast furnaces capable of producing basic slag involves dismantling and destruction of fertilizer plants. We are unable to classify steel plants as fertilizer plants. Obviously, the need for basic slag cannot justify the retention of steel plants above the required level."

Mr. LODGE. May I say to that, insofar as there might be disagreement within the President's Cabinet, I am on your side.

Secretary ANDERSON. Thank you very much.

Mr. LODGE. Mr. Secretary, on page 6 you compare requirements to availabilities. That is a very interesting comparison, and the thought that arises in my mind is this: Are these availabilities going to be sufficient to maintain even the austerity rations which are essential in order for these governments to survive? If the bread ration in Italy goes down at all, the de Gasperi government will be in very grave danger. We cannot ship any more than we have; but does not this mean that perhaps we should cudgel our brain to find some other way of adding to the rations—perhaps not the bread ration, but some other rations—in order to give these people a diet which will protect these governments and thereby protect American security?

Secretary ANDERSON. Yes; I think so, and I think possibly the answer comes in two parts. I think that not enough was done with the fishing situation. I think substantially greater quantities of fish could have been available with just a little bit of the right type of cooperative planning. We allowed ourselves to get into a situation where we missed some of that because of an argument over a few dollars in one country. I still feel it might have been avoided. As to the bread ration in Italy, I do not think that is as much at stake as food levels in some other areas which have been out of line with the very different situation in France and Italy.

Mr. LODGE. You mean that the Italians have not been able to import what they otherwise would have been able to import?

Secretary ANDERSON. I mean that we have a higher bread ration in France than we have in Belgium and Italy. We have scaled some of those down more than we have the Italians.

A very good crop seems to be coming on in Argentina and a greater export potential in Australia. We may be able to do what you have suggested, substantially.

Mr. LODGE. I am glad to hear you say that, Mr. Secretary, because, as the Secretary of State intimated, if we did not appropriate enough, we might lose the benefit of what we did appropriate. I believe that unless we can go this extra step of providing an adequate ration, we may find that the political situation in Italy will become very threatening, indeed. It is now the most threatening spot in Europe, and I would be tremendously interested in some kind of a program which would look toward meeting that situation. Since we are making the great effort, let us try to make it effectively, and in the light of grim realities.

I have one more question, Mr. Secretary, and that is, when I was in France, I found that meat was unobtainable at the controlled price. The only place you can buy meat in France is on the black market where the Government cannot tax it. Is it your opinion that price controls should be maintained in France on meat?

Secretary ANDERSON. I hope you will be satisfied with this answer: I think you realize it would be highly improper for a member of the Cabinet in this country to comment on the situation in France. I do not believe I should do it.

Mr. LODGE. May I ask you if, in your opinion, the Administrator of this program should refrain from making any comments to the governments of the several participating countries as to the management of their internal affairs?

Secretary ANDERSON. I would reply that he should not refrain. That he should be very vocal.

Mr. LODGE. It seems to me that we must be tactful, of course, but many Europeans have said to me: "Please urge us into doing the right thing to achieve this economic federation. We look to you to be the catalyzing agent to precipitate a proper state of affairs because we are bound down by certain obsolete traditions and we recognize that." You would think it quite proper for an Administrator to comment on that?

Secretary ANDERSON. I am sure it would be proper, and I am very sure I saw some things that a strong pointing out of what was involved would have resulted in beneficial effects many months ago.

Mr. LODGE. You would not say that the removal of price controls on meat in France would necessarily be a poor thing?

Secretary ANDERSON. I believe I stand by my other answer, Mr. Lodge. I do not think it is proper for me to comment on what takes place in another country.

Mr. LODGE. I thought it was an interesting question, Mr. Secretary, because of the fact that it seems to me foreign affairs and domestic affairs are so very much linked. I wondered whether this administration was going to take the attitude with respect to the other countries, in the matter of inflation, as the President took in his message on the state of the Union regarding inflation in the United States. Would you say this: Insofar as foreign affairs are very much linked with domestic affairs, you certainly would approve of a non-partisan attitude in both connections?

Secretary ANDERSON. Yes; I think that I have tried to welcome an unpartisan attitude in the administration of this plan.

Mr. LODGE. I am glad to get that opinion.

Mr. JONKMAN. Are there any further questions?

Mr. JONKMAN. Mr. Secretary, you have been very helpful. Thank you for your valuable time.

(Whereupon, at 12:30 p. m., the committee recessed, to reconvene at 2 p. m.)

AFTERNOON SESSION

Chairman EATON. The committee will come to order.

STATEMENT OF HON. J. A. KRUG, SECRETARY OF THE INTERIOR

Secretary KRUG. I would like to say, Mr. Chairman, that I very much appreciate your committee accommodating its schedule to my time.

That is a very unusual courtesy nowadays for Cabinet officers to receive.

Chairman EATON. Our committee welcomes an opportunity to please.

Secretary KRUG. I might explain the documents that are before you. I brought along for the information of the committee a copy of the report I made in the Senate. I have also distributed copies of the National Resources and Foreign Aid Report, and copies of the hearings before the subcommittee of the Committee on Public Lands, investigating our national resources.

I think those three reports will give you some helpful background data on the resources of the country as they relate to the foreign aid program.

If I may, I would like to read a comparatively short statement, and then, of course, submit myself for questioning.

Chairman EATON. Please proceed.

Secretary KRUG. I support the European recovery program not only for its fine humanitarian purposes but as a sound investment in world recovery and our own future well-being.

Our resources and facilities are adequate to do the job; in fact, the export burden under the program is not likely to be as great as the one we handled last year.

I think people frequently forget that and look upon this as a superimposed burden. The total exports should not be as great as the total for last year.

There will be some difficult supply problems in a few basic commodities but they will diminish as the world economy gets into production. These are the conclusions of the Report on National Resources and Foreign Aid made under my supervision last fall. They are even more valid today. We must do the job because we want to assure peace and plenty for ourselves and for the world.

Before the Senate Foreign Relations Committee last week, I elaborated my reasons for supporting the European recovery program. To conserve your time, I have made available to the members of the committee copies of that statement and will summarize some of the points before moving on to discuss those aspects of the program of particular concern to my Department.

In brief, I made the following points:

1. Our long-run interests lie in getting world production into gear and in restoring world trade in order that our own industries and our own resources can be intelligently developed and their products effectively exchanged for those of the rest of the world.

This conclusion is based upon a recognition that our own resources must be supplemented from abroad. Recovery of European production is essential to restoration of multilateral trade throughout the world and therefore of course to our own well-being and security.

2. With the economy of the United States operating at highest peacetime levels and exceeding wartime peaks in many instances, our agricultural and industrial facilities are being heavily strained and this itself is creating problems that must be solved.

Obviously any program of exports would superimpose an additional load, but we had better begin to solve the problems created by the present load on the camel's back rather than attempt to label the final straw. Foreign aid requirements may augment but do not create our difficulties.

3. For the most part, the problem today lies in certain basic world shortages that must be cured if the world economy is to get off dead center. These include wheat, fertilizer, coal, petroleum, steel, and certain items of equipment made of steel.

The supply of those basic commodities must be used during the next few years in such a manner that they will have the greatest effect in solving the problem of world shortages, so that these shortages will not continue indefinitely.

Energy resources: Basic to European recovery and to world development, as well as to our own economy, are the energy resources: coal, petroleum, and water power. Europe's major energy source has been coal and its productive economy is keyed to coal even more closely than our own. Its basic iron and steel, fertilizer, chemical, textile, metalworking, and transportation industries have been crippled by coal shortages, and the lag in these industries has dragged down the entire economy. Without coal, European recovery is impossible.

Europe is not short of coal resources, any more than we are. Coal production is down because coal production depends upon the productivity of the rest of the economy, including food, and that, in turn, depends on coal.

To break this vicious circle, temporary imports of coal are essential. The European nations have set maximum coal production goals for themselves during the next 4 years and are stringently limiting its use.

Their goals can be obtained only with intense and uninterrupted effort. The result of that effort will be that the requirements of coal from the United States even this year will be below Europe's imports of our coal in 1947, which totaled 40,696,000 net tons, and will taper off rapidly after the winter of 1948-49.

European requirements will therefore not seriously affect our own coal supplies if our industry can maintain its current high productivity. The peak requirements will amount to 6.8 percent of our monthly production at present production rates. During 1950-51, requirements will drop to 2.5 percent of our monthly production—based upon current production rates—and during 1951-52 to 0.9 percent. Thus, the coal requirements are small in terms of our total production. They are insignificant in terms of our vast coal resources.

Petroleum is Europe's other major source of energy and must be supplied if European recovery is to be achieved. Together with electric power, petroleum is rationed in practically all of the participating countries and the program assumes that consumption, except for the most essential uses, will continue to be drastically controlled.

European air and road transport and some of its rail and water transportation are dependent upon petroleum. The European food program requires motorized agriculture. For industrial and domestic fuel, petroleum products are essential. And lubricating oil particularly is vital to industrial activity.

The current world shortage of oil must be relieved by expanding production and refining facilities throughout the world. The European recovery program is a part of this effort, particularly through the rehabilitation of European refineries that will make possible the more effective use of oil from the Middle East.

The sources of oil for European requirements cannot be predicted for the entire period, but with the rehabilitation of European facilities the great bulk will come from the Middle East and Caribbean.

One point on our own exports should be emphasized: Not one drop of oil or oil products will be supplied by the United States which will not be more than offset by our own imports of petroleum.

During the early part of the recovery period, exports to Europe from the United States are not expected to exceed 150,000 barrels a day, or 2 to 3 percent of our available supply. This is less than the average of about 175,000 barrels daily exported to Europe in 1947. Moreover, they will drop off to an average of 50,000 barrels per day at the end of the program, which is less than 1 percent of our production.

In 1948, our imports are expected to exceed our exports by at least 24,000,000 barrels, and domestic production is expected to be increased by 95,000,000 barrels.

The present shortages of petroleum here at home are due, not to current exports, but to an unprecedented and still increasing domestic demand resulting from our peak industrial and business activity. Our per capita consumption today is more than 608 gallons as compared with 367 gallons in 1941. A fantastic increase.

A total increase in United States consumption of 115,000,000 barrels is expected in 1948. To be sure, continued exports to Europe and other traditional areas of export of American petroleum products will aggravate our own shortages but the world is dependent upon our highly refined petroleum products.

The availability of export controls in this country will assure a continuing opportunity to appraise the relative need for American oil exports and to reduce them at any time it appears that they are being used for nonessential purposes.

In this connection, I shall continue to call upon the National Petroleum Council, which is meeting here today, which consists of representatives of the oil industry and has been advising me on petroleum matters.

This group will be of great value in aiding the Department of the Interior in meeting its responsibilities of assisting the Administrator of the European recovery program with technical advice on production and distribution problems that arise in the participating countries and on the ability of our domestic economy and production to meet the demands of the program.

In order to protect our own petroleum consumers against continuing, and possibly more aggravated, domestic oil shortages and to do our part in supplying necessary products to Europe, we must take every step to increase oil supplies here and abroad and to curtail the non-essential uses of oil. This will require the cooperation of the Government, industry, and the public.

Future of American energy sources: In addition to action to break supply bottlenecks and effect curtailment of consumption, we must go forward with intelligent and intensive programs to develop additional sources of energy for our expanding production and our future higher levels of living.

We cannot maintain our current levels of consumption—quite aside from any foreign rehabilitation program—unless we accelerate programs to conserve and develop our own natural resources for energy production. Today's advanced techniques in the transformation of energy forms permit the ready substitution of one form of energy for another; for example, hydroelectric power for coal or oil.

The availability of all forms of energy sources will to an increasing degree in the future, constitute a primary index of the industrial production and the standard of living of a country such as ours.

The petroleum situation, which I have outlined to you, brings home the clear lesson that we must consider this problem together with our coal and water-power resources.

We should continue the development of our water power potentialities in order that the kilowatts thus generated take their rightful proportion of the load imposed by our increased power requirements.

The development of the Federal water-conservation projects now under construction or authorized by the Congress will prevent from wasting down the river annually, coal, oil, and other natural resources equivalent to 50,000,000 barrels of oil.

Such hydroelectric development carries with it appreciable benefits in flood control, navigation, and irrigation, which in turn have a direct effect upon food production and the fertility of our lands.

Even the most sanguine proponent of water-power conservation would not support that this alone will meet our increasing fuel needs. We must develop programs for the increased exploration and production of natural crudes and for furthering the possibilities of synthetic liquid fuels.

But the development of these fuels cannot be accomplished overnight and for that very reason we should expand our research and investigations in these technologies.

We already have under way experimental projects for the production of synthetic liquid fuels from natural gas, bituminous coal, lignite, and oil shale.

About 20 percent of the total coal reserves in the United States are in the form of lignite.

These lignite deposits would have a conversion value to synthetic liquid fuels of approximately 500 billion barrels, or about 25 times the present proved petroleum reserves of the United States. Our oil shale reserves are estimated as capable of yielding over 90 billion barrels of crude oil, or about five times our proved petroleum reserves.

Experimental work is also being undertaken by combined oil and coal industrial interests for the gasification of bituminous coal and the manufacture of synthetic liquid fuels. These programs of both in-

dustry and Government add up to efforts to effect a long-term solution to our energy problem. They must be expanded.

I have elaborated upon the energy problems because they are crucial to the European recovery program and to our own future and because they fell into the area where the Department of the Interior will be concerned, not only in giving technical assistance in the administration of the program, but also in guiding the development of long-range measures to increase our supplies. In this connection, I am appointing a National Coal Advisory Council, as a counterpart of the Petroleum Council I have mentioned, to provide advice from industry on these matters.

We also have a Minerals Council which works in the minerals field.

We must also consider the mineral base of our industrial economy.

The problem of these nonrenewable assets of iron, copper, lead, zinc, and the other materials basic to our civilization convinces me that we must play a double-header today if we are to remain in the running tomorrow.

We must first stimulate search for new mineral deposits through the use of modern ore-finding techniques. Means must also be found for the more economic utilization of low-grade ores. We must then make every effort along the lines of the European recovery program to create a world in which we will have access to materials elsewhere, and we should encourage their development.

We should not attempt to rely either upon domestic or foreign sources of raw materials alone, but should assure ourselves that both are available to us.

Our industrial economy has everything to gain by accenting greater production. I agree with Mr. Baruch that an "all-out production drive here and in the rest of the world" is needed at this time. I do not fear overproduction because a needy world will be greedy for our products. In no other field is this clearer than in that of minerals. Our own need for mineral raw materials is unsatisfied by current world production. For this reason, I will outline our current production and reserve positions.

No other great power within its home borders has so far been able to match the self-sufficiency in minerals that we have enjoyed for generations.

At the same time, we have been extracting our minerals at a far greater rate than any other nation, and since mineral deposits are irreplaceable, we must face the fact that we will be confronted with the problem of maintaining our economy with a declining supply of raw materials available at home.

As a matter of fact, during the last war we were hard-pressed to meet requirements and were forced to go abroad for several minerals which we formerly never needed to import.

With a view to summarizing the available information on this point, the Bureau of Mines and the Geological Survey undertook a study of the Nation's mineral reserves at the close of the war.

The results of this study recently were published as an appendix to the hearings before a subcommittee of the Senate Committee on Public Lands and I am making copies of it available to you.

The report shows that since 1870 the yearly value of production of minerals increased from about 200 million dollars to 12.4 billion dollar dollars, a sixtyfold increase. The physical volume of production

was greater in 1947 than in any other year in our history. The end of this upward trend in the demand for mineral raw materials is not in sight.

To meet these requirements, we must develop a dynamic program of exploration and research that will continually bring into production new resources to replace those that we exhaust. We must also look to world sources.

We already are dependent on foreign sources of supply for substantial proportions of many important industrial minerals. The minerals in which we have been able to maintain a large measure of self-sufficiency in the past, fortunately include coal and iron ore, the two minerals most fundamental to the maintenance of our industrial machine.

But the report shows that we have imported in varying proportions minerals that are extremely important such as lead, bauxite, tungsten, manganese, nickel, chromite, and tin.

While in some recent years we have been able to improve our position in a few commodities, notably nitrates, mercury and potash, our greatly increased demand has exceeded our ability to produce, and our self-sufficiency in copper, zinc, lead, and other minerals has declined materially.

We shall continue, as in the past, to rely on foreign sources for those minerals that cannot be produced in adequate quantities within our own borders. The European recovery program will make a major contribution in this direction. Economic recovery abroad will stimulate the production of raw materials which in time will facilitate importation into the United States of minerals that are in short supply.

In summary, I repeat my endorsement of the European recovery program for world recovery and world peace. It is essential to our own continued productivity and prosperity.

I believe that the underdeveloped areas of the world including those in our own country must be brought into production quickly and effectively.

I am not afraid of overproduction. I believe that we can do the job because we have demonstrated that we can do those things that we set out to do.

That, Mr. Chairman, is my formal statement.

Chairman EATON. Thank you very much, Mr. Secretary. I am sorry that a vote is being called downstairs.

You lay great emphasis on the petroleum situation. What grounds have you for being sure that in this 4-year period the necessity for exports from this country will diminish?

Secretary KRUG. Well, Mr. Chairman, we cannot be certain of that. The conclusion is based on rehabilitating the European refineries and constructing some new ones and getting a crude source from the Middle East, and from South America.

I think you will be interested in the charts attached here which show that. So that if during this period, we, for any reason are blocked out of any of those oil-producing areas, then the exports from this country would have to continue at a higher level. This shows the gradual reduction in our share of European requirements, as the Middle East expands its production.

Chairman EATON. Of course, that depends upon the freedom of Middle East production from outside control.

Secretary KRUG. Yes, indeed.

Chairman EATON. I am turning you over to Mrs. Bolton. You will excuse me.

(At this point, Chairman Eaton left the meeting and Mrs. Bolton presided.)

Secretary KRUG. Thank you.

Mrs. BOLTON. I am sorry to have missed the reading of your statement. I am particularly interested in what I judge was your statement in the matter of the crude coming from the Middle East, the starting of refineries elsewhere to refine such crude oils. Will not the cutting of the Aramco pipe line, which I understand has been done in two places in the last week, have quite a major impact on the plan?

Secretary KRUG. I do not think that in itself would. If the unsettlement in the Middle East is to continue for any time it will have a direct bearing.

Mrs. BOLTON. It is an expectation of what may continue?

Secretary KRUG. I hope not. I would not want to see the Middle East cut out of its function of providing the world supply for a continuing period of time.

Mr. BOLTON. Am I right in thinking that this whole plan of European Recovery counts very largely on the Near East and the Middle East oil supply?

Secretary KRUG. It is planned that way at the present time. However, if necessary, we could make up the difference from other sources. I hope we do not have to do that.

Mrs. BOLTON. What other sources?

Secretary KRUG. We have to expand our own production. We have to curtail some of our uses.

Mrs. BOLTON. We are supposed to have a limited amount of crude in reserve. Then we will be drawing on those reserves, will we not?

Secretary KRUG. Yes.

Mrs. BOLTON. Then what happens to us?

Secretary KRUG. It will bring the day sooner when we will have to rely on coal, lignite, and shale for our liquid fuels. In my formal statement I tried to outline steps in that program which I feel are essential anyway, if we are going to take care of our own future, whether or not we have this foreign-aid program.

Mrs. BOLTON. I am glad you feel that way. But the possibility of the new hemisphere, as I understand it will supply the new hemisphere over a long period but it cannot supply the world.

Secretary KRUG. Yes. There are tremendous resources in the Eastern Hemisphere. If they were properly utilized they would take care of all the requirements of the Eastern Hemisphere for a long time to come. In the Western Hemisphere our demands are so high that I am fearful unless we develop synthetic fuels we will exhaust our petroleum.

Mrs. BOLTON. Am I right in thinking that in the last war we took top-grade octane?

Secretary KRUG. We made the very best we could.

Mrs. BOLTON. Then in the development of jet propulsion of all sorts and kinds, we do not take the top. We take something a little lower down.

Secretary KRUG. That is right.

Mrs. BOLTON. That is the kind of fuel that is important to the civilian population?

Secretary KRUG. But when you start out with crude you can come out with any finished product you need.

Mrs. BOLTON. Exactly. But you would have to have octane. We have not gone beyond the need of that, have we?

Secretary KRUG. We will need both.

Mrs. BOLTON. In increasingly large quantities?

Secretary KRUG. Yes.

Mrs. BOLTON. Because we are going off coal in a great many places. Diesel engines are being used increasingly in our transportation systems. Will we not run into the possible danger of being held up in our transportation?

Secretary KRUG. I do not believe so, if we promptly take the steps we should be taking to prepare a future. We cannot do these things overnight.

I think it will take about 10 years to get into substantial production of synthetic liquid fuels. So if we are going to need synthetic liquid fuels 10 years from now we have to start right now.

Mrs. BOLTON. You feel secure in the situation in the Near East today?

Secretary KRUG. I do not.

Mrs. BOLTON. Then would you be very reluctant to rely upon that if you were this committee, sitting around this table trying to work out a recovery program for Europe with the insecurity to very life at the moment? Would you feel that we would be wise to plan either a different tempo of recovery or an entirely different field from which to draw for fuel?

Secretary KRUG. Well, I think we must plan the European recovery with the best information we have available now. We should have in it the flexibility for meeting what we might encounter during the course of it.

One of the uncertainties is the Middle East oil. If for any reason we cannot make that available for the oil refineries in Europe, then we will have to find some other system. I think we certainly can do it either way.

Needless to say, if you have uncertainty in the Middle East for any extended period it is going to reflect against the ERP. It is based on trying to get these countries at peace and at work.

Mrs. BOLTON. In the South American countries, are they inclined at this moment to give concessions to American firms?

Secretary KRUG. Yes; I think they are. The difficulty at the moment is that any development in South America requires American steel. Right now we do not have enough steel for our own expansion. It is very difficult to get any steel for development work in South American countries.

Mrs. BOLTON. Also of course the pipe lines?

Secretary KRUG. Yes, pipe lines; oil-country goods and refineries.

Mrs. BOLTON. If the security situation is such in the Near East that the pipe lines cannot be continued there do you think there would be any way of reimporting the pipe or bringing it to those places where it might be of use to the western world?

Secretary KRUG. Yes; I think it would be possible. A pipe line alone, however, would not be particularly helpful in the problem in South America.

Mrs. BOLTON. It might be for us?

Secretary KRUG. It might be in this country.

Mrs. BOLTON. We are short, are we not?

Secretary KRUG. Yes; we are short of pipe lines, too. If we are not using it there we certainly should be using it at home.

One of my colleagues points out that there is a water route to the Middle East. You can get it with tankers.

Mrs. BOLTON. I understand that. If we only had T-2's, those would cost us about \$450,000 to build, and there is not the steel to build them with. If we had those making round trips, it would be nice, would it not?

Secretary KRUG. The Navy Department advised me that they estimate the cost of a T-2 tanker to be approximately $4\frac{1}{2}$ million dollars on a basis of current labor, material, and construction costs.

The tankers would require a lot more steel and a lot more material than the pipe line. I hope we can get the pipe line.

Mrs. BOLTON. Do you know what the time would be for building those, even if we could get priorities on them?

Secretary KRUG. I would say it would take a year.

Mrs. BOLTON. That would mean no strikes, sufficient steel, and plenty of labor.

Secretary KRUG. You would have to divert the steel from something else.

Mrs. BOLTON. That would be another matter that would need control?

Secretary KRUG. Yes. I do not think you should venture to build them without the steel.

Mrs. BOLTON. So it would be difficult.

Secretary KRUG. It would be difficult to substitute tankers for pipe lines.

Mrs. BOLTON. And we do not have enough of the tankers.

Secretary KRUG. That is right.

Mrs. BOLTON. I think I have used up my 5 minutes.

Mr. JAVITS, you are next on the list.

Mr. JAVITS. Mr. Secretary, as I read your chart, is it not a fact that today the ERP will get its oil largely from the Caribbean area?

Secretary KRUG. No. You see, from the chart with the circles on it, at the present time the center circle indicates the situation as of today. In the segment or "piece of pie" at the top it shows the Western Hemisphere other than the United States is a little larger, having 4.3 percent, or 17.3 million metric tons. The United States is 9 million metric tons. The Middle East, 8.6.

Mr. JAVITS. In other words, from now until the projected period of 1951, the ERP will get 50 percent of its oil from the Caribbean, roughly, and about 25 percent from the United States, and only the remaining 25 percent from the Middle East?

Secretary KRUG. That is right. That is the way it starts out. Now, it would be expected during this period you would gradually shift over some; at the end of it the Middle East would be carrying most of the load.

Mr. JAVITS. Then toward the end the Middle East reserves, it is assumed, will be more developed than ours?

Secretary KRUG. Yes. It requires two things: development of the Middle East pipe lines and construction of refineries in those countries.

Mr. JAVITS. Now, as far as the Middle East is concerned, for their future development, Mr. Secretary, do you believe that the Middle Eastern countries concerned are interested in having their oil resources developed?

Secretary KRUG. Yes; they are. They would stand to gain very materially in having them developed.

Mr. JAVITS. Do you consider it very essential to their own economies that their oil resources be developed?

Secretary KRUG. Yes, without a doubt, their oil resources, their oil reserves are their most dominant natural reserves.

Mr. JAVITS. Do you know how much of the annual government expenditure budget of Saudi Arabia comes out of the royalties that Saudi Arabia gets for oil?

Secretary KRUG. I do not have that figure but I would imagine it to be a very high percentage.

Mr. JAVITS. Would you give us that figure?

Secretary KRUG. It is 90 percent.

Mr. JAVITS. What is the same figure for Iraq?

Secretary KRUG. I would have to get that figure.

(The information is as follows:)

The Near Eastern Affairs Desk of the Department of State estimate that the following percentages of the total revenues of the countries as noted are derived from the development of their oil resources: Iraq, 19 percent; Iran, 12 percent; Suria 0, Saudi Arabia, 75 percent.

Mr. JAVITS. If you would be good enough to do that; also the same figure for Iran and for Syria. But for Saudi Arabia you say it is 90 percent?

Secretary KRUG. Yes, sir.

Mr. JAVITS. If you have no opinion on this, feel free to say so, but do you believe that at this time it is at least as important for the United States to endeavor to sustain the UN decision with respect to Palestine as it is to make available Middle Eastern oil production? I am speaking of this time, right now.

Secretary KRUG. I am afraid that is a question that my opinion would be pretty much worthless on.

Mr. JAVITS. But you will produce for us these figures on the other things?

Secretary KRUG. Yes, indeed.

Mrs. BOLTON. Mr. Richards.

Mr. RICHARDS. Mr. Secretary, you mentioned two or three times in your very admirable statement just now that you were not afraid of overproduction in this country. I imagine you predicated that upon the theory that European buying power is going to be sustained?

Secretary KRUG. I predicated it on the assumption we are going to get the world back at work again.

Mr. RICHARDS. And they could buy our materials?

Secretary KRUG. That is right; some of it.

Mr. RICHARDS. They cannot buy our materials unless they too are able to produce. They cannot get dollar exchange without having something to sell to us.

Secretary KRUG. Either directly or through some other country.

Mr. RICHARDS. Then you developed the idea, I thought very strongly, that if our people are going to be provided with jobs a sound

economy in Europe must here in the United States be a part of the picture.

You also mentioned shortages in this country of certain raw materials.

Secretary KRUG. Yes.

Mr. RICHARDS. I believe you mentioned zinc, chromite, manganese, and tin—or did you mention tin?

Secretary KRUG. Yes; we have to import all of our tin.

Mr. RICHARDS. Where are we getting most of our replacements in those articles?

Secretary KRUG. They come from various countries of the world. Of course the tin comes mostly from the Dutch East Indies and from Java, including Malaya.

We get various materials from South America. We get copper, of course, in very large quantities from Chile. We get substantial quantities of material from Africa.

Unfortunately, with the world production so low, these materials are short for everybody. There is a tremendous competition in the world markets for the materials in short supply. Before the war I think we considered about 5 materials as critical; now there are over 50. By that I mean that they are materials that you cannot meet all your requirements with:

In tin the demands of the military stock pile have gone unsatisfied because we have not been able to buy enough tin to take care of industrial uses.

Mr. RICHARDS. What about chromite? Where do we get most of our chromite from now? That is a very essential material in steel production.

Secretary KRUG. We will leave this copy with you.

I will recite some of the figures.

Copper: The principal place is Mexico, Canada, Rhodesia, and Peru.

Cordage fibers: Panama, Philippines, and the Netherlands East Indies.

I will skip to some of the better-known ones.

Nickel. Some comes from Canada, a little from Cuba.

We have some—

Mr. RICHARDS. Do you have those figures on chromite handy?

Secretary KRUG. Yes; we will find it for you.

Mr. RICHARDS. I want particularly the figure on how much chromite we import from Russia.

Are these short, critical materials you mentioned produced to any degree in the 16-country area in Europe?

Secretary KRUG. Not in quantities that could be exported. They will need practically all of their raw materials for their own industry and will have to import some on top of that. So if we are going to bolster our position it will have to come from other countries.

That is why I say we need the restoration of world trade, the European countries sending equipment and know-how and South America and Africa, China, India providing raw materials.

We have the sources but not the quantities of chrome. If you want the quantities you will have to wait.

Mr. RICHARDS. If you will put that in the record, it will be all right.

Secretary KRUG. Very well.

(The information is as follows:)

The quantities of chromite imported into the United States from all sources for the years 1944, 1945, 1946, and the first 11 months of 1947 were as follows:

Chromite imported into the United States

[In short tons]

Country	1944	1945	1946	11 months, 1947
Cuba.....	349,059	297,820	204,268	131,650
New Caledonia ¹	34,492	34,391	21,007	18,396
Philippines, Republic of.....			30,465	175,515
Sierra Leone ²		6,397	32,912	16,480
Southern Rhodesia.....	187,781	221,555	99,557	58,474
Turkey.....	96,777	70,845	9,015	36,149
Union of South Africa.....	40,376	110,415	235,340	204,082
U. S. S. R.....	112,315	166,142	98,982	217,467
Other countries.....	25,690	6,900	25,875	27,846
Total.....	848,390	914,765	757,391	888,956

¹ French Pacific Islands.

² British West Africa.

With further reference to your inquiry as to the principal foreign sources of supply of major strategic materials imported by the United States, I should like to submit for the record a listing of the better known minerals and the sources of supply for each of these minerals.

Principal foreign sources of supply of the major strategic minerals that are listed for stock-pile procurement by the U. S. Government

Material	Source	Material	Source
Antimony.....	Mexico, Bolivia, Peru, China.	Mica.....	India, Brazil, Madagascar, Argentina.
Asbestos.....	Southern Rhodesia, Union of South Africa.	Monazite.....	India, Brazil.
Bauxite.....	Surinam, Netherlands Indies.	Nickel.....	Canada, New Caledonia.
Chromite.....	Union of South Africa, USSR, Philippine Islands, Cuba.	Platinum.....	Canada, Colombia, U. S. S. R.
Cobalt.....	Belgian Congo, French Morocco, Northern Rhodesia.	Quartz crystals.....	Brazil.
Copper.....	Chile, Mexico, Peru, Canada.	Talc, steatite.....	India, Italy.
Diamonds.....	Belgian Congo, Union of South Africa, Gold Coast.	Tantalite.....	Belgian Congo, Brazil, South Rhodesia, Australia.
Graphite.....	Ceylon, Madagascar.	Tin.....	Bolivia, Netherlands East Indies, British Malaya, China.
Lead.....	Mexico, Canada, Newfoundland, Australia, Peru.	Tungsten.....	China, Bolivia, Brazil, Argentina, Burma.
Manganese ore.....	India, U. S. S. R., Union of South Africa.	Vanadium.....	Peru.
Mercury.....	Mexico, Italy, Spain.	Zinc.....	Mexico, Canada, Peru, Bolivia, Australia.

Mr. RICHARDS. Do you think that production of any of these short materials could be developed to the point where they are surplus to the needs of Europe and that area?

Secretary KRUG. I doubt very much whether you could safely take raw materials out of the European countries, with the populations they have and the kind of industry they must have to support that population. I think they will need their own raw materials.

Mr. RICHARDS. If it develops that production can be developed beyond domestic needs and ordinary commercial transactions, do you think that those things should be turned over to us in part payment for this aid?

Secretary KRUG. Yes. I agree with what Mr. Baruch said the other day—that we ought to offer to buy raw materials of every description we need, not required in the countries of their origination.

On the other hand, we want to protect our domestic mining industry. We cannot afford to ruin it. We need a careful balance between what we import and what we produce at home.

Mr. RICHARDS. You do not think any of the money provided here should be used as part of the purchase price for any of those materials?

Secretary KRUG. I doubt very much if any of these particular countries will be able to return part of this money in raw materials.

Mr. RICHARDS. Take Great Britain. Of course Great Britain has no tin in the United Kingdom, but they do have in their so-called Empire.

Secretary KRUG. That is what I referred to before. While we cannot get it from those countries, there are other countries in which those countries have an interest. We do have probabilities there.

Mr. RICHARDS. You agree that in these negotiations we should keep constantly in mind the needs of the United States along that line and get what we can for this country?

Secretary KRUG. Yes, indeed. I think that will be one of the great contributions of the recovery program to our own economy. It will put us in a position to get the raw materials we need for an expanding economy.

Mr. RICHARDS. What do you think about the method of administration of this European recovery program?

Secretary KRUG. I think there has been a tempest over the question. My own feelings are that if you are the right man for the job you do not have to worry too much about these organization charts. Whenever I find somebody paying too much attention to his lines of jurisdiction I find he usually is not doing a good job. I think if the President, with the approval of Congress, finds the right man for that job he will do a good job and will work out the questions that seem perplexing at the moment as to his relations with the State and other Government departments which must necessarily have an interest in this program.

Mr. RICHARDS. What would you think about a plan that envisages the President or the Secretary of State setting the foreign policy course in this thing and then have a clear line of demarcation and a corporation to administer the law?

Secretary KRUG. We need a business management of this program, and I do not think the business management will have any trouble following the foreign policy laid down by Secretary Marshall.

I had experience with that in many years of the war, and the relations in those programs were far more complex than they are in this one. We had very little trouble working it out.

Mr. RICHARDS. If we cannot work it out it is just a weakness of the democratic form of government and not the act itself?

Secretary KRUG. Yes. In our Government you cannot put any one man in any position where he has complete authority to do what he wants to do. It is too complex. You have to work with other men as a team.

Mr. RICHARDS. As a matter of fact, an absolute dictatorship, from the standpoint of efficiency of operation, might be better?

Secretary KRUG. I doubt it myself.

Mr. RICHARDS. I am inclined to agree with you.

Secretary KRUG. You know they used to say earlier in the war that if we had a dictatorship we would do a better job. I do not

think experience demonstrated that and those of us who knew about Germany frankly admitted that we could do a better job of mobilizing for the war than they did and certainly better than the Russians.

Mr. RICHARDS. Maybe we did not do a better job immediately, but in the long haul the democratic institutions did a better job.

Secretary KRUG. There is not the slightest question in my mind, either for the long haul or for any of the short-time jobs.

Mr. RICHARDS. Thank you, Mr. Secretary. That is all, Mr. Chairman.

Mr. VORYS. I have no questions at this time.

Mr. JONKMAN. Mr. Jarman, do you have any questions?

Mr. JARMAN. I am sorry, Mr. Secretary, that we have been interrupted, as I am sure my colleagues are. You have been interrupted by a roll call. That is part of the democratic system, even though it does disturb us.

I have one question. Although you feel that it naturally behooves us to look out for our interest about these strategic materials—that is, watch out and get them wherever we can—I take it, if I understood you correctly, that you do not feel that we should tie down in this bill, as a part of the payment for the \$6,800,000,000, a provision to require the countries to return strategic materials to us gratis as part payment for this.

Secretary KRUG. I do not think we should tie it down that way. I think the Administrator should be instructed to make whatever arrangements he can to get raw materials into this country and repayments as soon as possible for the amounts expended.

But if you are to tie this down to any current exchange of raw materials for money you ruin the entire program because the program is based on the best utilization of their resources that they have been able to work out and that our exports so far have been able to contribute to. If we take out of their economy some additional amounts we will just have to put in more money.

Mr. JARMAN. That is right. Those materials are already figured?

Secretary KRUG. They are already counted once.

Mr. JARMAN. We would just be taking money out of one pocket and putting it in the other.

Secretary KRUG. Yes. Of course, 10, 20, 30 years from now, if we get these economies working again, then we will be in a position to get raw materials from various countries in Africa, South America, and the East; and I am sure that we will get paid many times just for having the opportunity to reestablish world trade and replenish our supply, the materials we need, to support our standard of living.

Mr. JARMAN. I could not more thoroughly agree with you. But to make it clear I know you would not want to stipulate in this legislation anything about 20 or 30 years.

Secretary KRUG. No, sir; I would not want to put anything like that in because we might again put the burden in the wrong place and break them down rather than put them back on their feet.

Mr. JARMAN. And create a situation similar to the one we are trying to get them out of?

Secretary KRUG. Yes.

Mr. JARMAN. Thank you very much.

Mr. JONKMAN. Mr. Lodge is recognized until the ringing of the next bell, or thereabouts.

Mr. LODGE. I do not believe I will have time to ask many questions of the Secretary.

Mr. Secretary, in connection with the last point brought out by the gentleman from Alabama, I understood you to tell Mr. Richards that there were not many strategic materials which could be imported from the 16 nations which participated in this program.

Secretary KRUG. That is from those countries in Europe.

Mr. LODGE. Would that include their colonies?

Secretary KRUG. No. Their colonies do have materials which, with the right development, will give us the source for material supply.

Mr. LODGE. Would you see any objection to writing into this legislation a provision which would provide that at a time when there were no dollar deficits in any of these countries, or in the country which happened to be involved, strategic materials would be turned over to the United States in part repayment of some of the funds turned over under this program?

Secretary KRUG. I would not want to see it made that inflexible. I think the Administrator should make the best business deal he can for this country, but I would not want him put in a strait-jacket so that he might be forced to do something which added an economic burden that one of these countries could not stand.

Mr. LODGE. There is nothing magic or sacred, is there, in the amount which it is now proposed to be required as strategic materials from the 16 countries?

Secretary KRUG. No, sir. And you would not know until you move along and find out how their production steps up, what they need in their own economy and what they have left over.

Mr. LODGE. Now, Mr. Secretary, with respect to oil, which, of course, is the most strategic material of all, since we are providing roughly two-thirds of the oil and since we produce roughly one-third; is that reasonably accurate?

Secretary KRUG. We are using a ratio of two-thirds of the world's use and we have reserves of about one-third of the world's reserves.

Mr. LODGE. What would you think of capping some of our oil wells within the next 5 or 10 years and then provide that we shall be repaid, in 1951 or thereafter, at a time when the Middle East oil production has attained a large production, by oil reserves from those sources? I have in mind particularly the question of naval reserves of oil.

Secretary KRUG. I feel very strongly about that. We want to protect and safeguard a strong petroleum industry in this country. We need that as the backbone of our modern industry. Over and above that, I think we ought to import all the oil we can lay our hands on because it is, as you say, the most strategic of all of these materials.

Mr. LODGE. Then could we adapt to this question of oil the suggestion which I made a little while back on strategic materials in general and provide that with respect to oil, after a certain level of production had been attained in the Middle East, we would be repaid and, in the meantime, that we cap some of our oil wells—or within 5 or 10 years—and lay in a stock of reserves for naval and other purposes?

Secretary KRUG. I am not sure just how practical it would be to set up a definite formula as to when you could hope to get repayment of some of these advances from countries that have interests in the Middle East reserves. I assume that in working out this program the

Administrator is going to lay a firm foundation of repayment which will fit in with the economic revival of the countries.

Mr. LODGE. Are you asking us to assume the same thing, Mr. Secretary? Do you think we should make those assumptions?

Secretary KRUG. Yes. I am afraid if you tried to specify how the Administrator is to get repayment of the amounts proposed under this plan you are going to put him in a strait-jacket which will make it impossible for him to do his job, and instead of getting the recovery of the economy for the expenditure we will just have the expenditure.

Mr. LODGE. This would be after the expiration of the European recovery program. I do not see how it would put the Administrator in a strait-jacket.

Secretary KRUG. Because he would not know, or will not know, until he gets into this in great detail, just what years in their expanding economy they can start repaying in oil or other materials. We certainly do not know at the moment. It depends on how rapidly they move forward, and if you put the burden on even 10 years from now and they are unable to take it you have wrecked the purposes of the formula.

Mr. LODGE. Not if you have a formula whereby they would have to attain a certain level before they would make this transfer of oil.

Secretary KRUG. It might be possible to find that formula. What I have been trying to say is that I have not been able to devise one and I have not seen any that I would consider workable.

Mr. LODGE. I would be glad to have your opinion on that.

Mr. VORYS. You suggest that this be left to the Administrator. If the Administrator takes the view that all of the witnesses from the Cabinet have taken, and other witnesses so far, no administrator will ever make a deal to be repaid in raw materials—ever—because he will be so fearful that we would hurt somebody by attempting to secure repayment.

Now, just a few minutes ago on the floor of the House it was decided that in reclamation projects in this country we are going to have a 50-year limit for repayment from communities and people that cannot pay now, or could not pay in 4 years, or possibly not in 10 years, but they are going to get 50 years. What is wrong with asking that of nations that have potential resources when we are going to furnish the means of their existing and of their opening up those resources?

Secretary KRUG. We have been able to make pretty good estimates on reclamation projects as to what you can expect in the way of repayment and what is required. Even there, with our own farmers and an area we know something about, there is wide disagreement as to what the period should be.

I personally feel that 50 years is too short. It ought to be longer. The Congress, in its judgment, picked a different figure.

In our own country, if we find disagreement as to what that should be for an irrigation project, when we know the future of our own agriculture the way we do, you can understand the difficulties of applying a formula of that kind to the economy of these other countries.

Mr. VORYS. We have learned, here, that western Europe paid for about 25 percent of its imports by returns from investments of various sorts. Those investments, in general, furnished money to countries and people at the time they needed it and then were arranged to be paid back a long while afterward, so that as Europe's natural resources

were depleted, before the war, Europe had a means of paying for 25 percent of its needs.

This picture you have drawn shows that we are, in a period of years, to become depleted in our natural resources. But, as I understand it, you do not propose that we make arrangements so that we do the same that western Europe did and some day, when we are in need, through simply providing for long-time loans that are bearable and are honorable, get back some of the things we need when we need them.

Secretary KRUG. I do not think I said that, and, if I did, I did not mean it. What I am trying to say is that you should not try to put a formula into the bill because I do not see how you can write one at this time. I think you should put in a policy instruction to the Administrator to make the soundest business arrangements that he can, not only for the 4 or 5 years but for a longer period of time, in getting us back the materials and money that we have to put into this thing.

I do not know of any way of saying in what period of years each one of these countries should be expected to make a return of this amount of money. I do not think anybody else does.

Mr. JARMAN. Will the gentleman yield?

Mr. VORYS. I yield.

Mr. JARMAN. Is there not also this difference between that situation of the irrigation projects, the beneficiaries of which are on an individual basis, and this program? Is there not this vast difference of the dollar exchange situation, which does not exist between one irrigation man and another?

Secretary KRUG. This is infinitely more complicated. When you find that you are now arguing for hours about the question of what period you will have on an irrigation project you have some idea of what you would do if you were trying to figure out what term to put on these loans or what kinds of material to get repaid with during what period of time.

Mr. JARMAN. And fine and beneficial though the project may be, there is no comparison, I believe, between its effect on the future of this country and the peace of the world. There is no comparison between that irrigation project and this program for Europe.

Secretary KRUG. I think irrigation projects are pretty important as you know, but I think this is a different category altogether.

Mr. JARMAN. I agree with you. There just really is no comparison.

Secretary KRUG. No, sir.

Mr. JARMAN. Thank you, sir.

Mr. JONKMAN. I may have misunderstood you entirely, but did you mention that there should be no reduction of this amount of \$6,800,000,000?

Secretary KRUG. I did not testify on that at all, I was talking about the repayment of whatever amounts are appropriated.

Mr. JONKMAN. This may be entirely out of your jurisdiction, inasmuch as you treat with available supplies rather than where they are going to. For instance, I see in here the Netherlands is down for \$705,000,000. Have you any idea what that is to be?

Secretary KRUG. I personally do not have that information. The people who studied the matter went over it very carefully. But even at this time there would have to be a further specification before you

would know how many farm implements of what kinds and types are included.

MR. JONKMAN. I have asked for such a statement and we expect to get it from the State Department.

That is all I have in mind.

I think, by way of filibuster, that Dr. Elliott would like to ask a question or two.

DR. ELLIOTT. It would give me great pleasure to ask a question of my old boss in the WPB.

Secretary KRUG. I did not know I was your boss.

DR. ELLIOTT. It was an official relationship, and well sustained, I hope.

Secretary KRUG. Thank you.

DR. ELLIOTT. This whole question of stock piling is, of course, of vital interest to you, as I can tell from your continued interest in it for many years. This question I want to address to you is largely to clarify one or two points that continually have come up and are so likely to be misunderstood.

Suppose I put it this way: It is manifestly impossible to get any large amounts of raw materials of a critical or strategic nature at a time when the whole world is experiencing shortages and therefore there is no possibility of making any sensible exchange, in the immediate future, against American loans or grants or anything else.

That, I think, is common ground, to start off with. And any kind of proposals of that sort are, on their face, ridiculous. You would not be assisting anybody by merely taking back that kind of goods which we are now paying for and spending more dollars. So that is clear.

Secretary KRUG. Yes.

DR. ELLIOTT. Now, sir, on the other hand, viewing it as Mr. Vorys and others have put it to you, and as you have put it yourself in terms of a long-run proposition, it obviously would be possible, if these countries are ever to achieve solvency and balance, to put their assets on the table in repayment, by developing, above and beyond commercial uses, new resources; would that not be true?

Secretary KRUG. Yes; indeed. I think that is an essential part of this program.

DR. ELLIOTT. So that, in that way, repayment of some considerable part of the advances, whether they be in the form of grants or in the forms of loans made or that might be made, might have a bearing on the amount of advances that was put in as grants or as loans.

Secretary KRUG. Yes. I think there is another factor that is frequently lost sight of. At the present time, with materials short, the price is extremely high. If you have got production up to the level of world demand, and with a little margin to spare, prices would come down. So we in effect would get repayment of this loan many times if we can get world prices stabilized at a more reasonable level.

DR. ELLIOTT. I think that is a very important point for the record, Mr. Chairman, and I hope it will be fully noted because that in itself would have an anti-inflationary effect to the degree that we could develop additional resources and bring down world levels of prices.

On the specific point of minerals, as you will recall, sir, when I used to have to report to you on these minerals there were about 200 items, in total, in the stock pile list, and perhaps 40 of them were minerals not produced in adequate quantities for war purposes in the United States.

Secretary KRUG. At least 40.

Dr. ELLIOTT. These are widely distributed in the colonies and territories possessed by the 16 countries. In particular, they are extremely widely distributed in the Belgian Congo, British African territories, and many other territories, including Rhodesia, taking in East Africa; and great quantities of copper and some very interesting minerals that we do not talk about very much, not only uranium but tantalite and columbite, very important war minerals, cobalt, carborundum; and these things that used to give us so many headaches, such as strategic grades of asbestos that we had such heavy sinkings of during the war and had difficulty keeping up with.

Our reserves, as your own experts in the Bureau of Mines have shown, are extremely limited. In some of those we have 6 months' supply and in some no supply. In those that we do have supply they run from 2, 4, 5 years, at the prewar rates of use.

Therefore, from the point of view of building up our natural resources, there need be no limit on the amount of these minerals that we could take and stock pile on a sterilized basis, keeping them off commercial account just as natural resources reserves—just as good above ground as under ground.

Would that be accurate?

Secretary KRUG. There are none that I can think of.

Dr. ELLIOTT. So that if we could arrange to find over a long period the imports for repayment purposes as a condition of these loans, leaving the details to be worked out, giving the administrator a directive and making it one of those conditions which he was to attach to those countries where it was practicable, I believe that would be an equitable protection of the national interest. I do not know how long the period would be. It might run 20, 30, 40, or 50 years?

Secretary KRUG. Yes, where it was up to his judgment.

Dr. ELLIOTT. He would obviously have to proceed in each individual country. If they had little or no minerals of this character, as is the case of Italy, now deprived of her colonies, there is not much to use. Italy would have some sulfur, and steatite talc, but they are negligible in terms of repayment.

Greece and Turkey have considerable mineral resources, directly in the countries themselves. These might well be developed as a long-run proposition.

Secretary KRUG. Yes.

Dr. ELLIOTT. Now, on the question of oil, and I turn back to Congressman Lodge with this introductory statement to bring him up to date.

Mr. LODGE. Please.

Dr. ELLIOTT. I hope we will have testimony before the committee from experts, perhaps your own and outside experts who served in the P. A. W. during the war, about the feasibility of capping certain fields. This would not be possible, because the world shortage of oil is in my judgment the most serious shortage I have been able to find in a study of this European program. It looks to be 40 or 50 percent short, in terms of availability, of meeting the CEEC figures unless we can develop pipe lines and get German pipe into the Middle East and refineries and tankers going faster than now planned.

Your own department cuts down those CEEC requested figures greatly but if the Middle Eastern pipe lines remain cut, or anything of that sort happens often, a very serious situation is created.

Over a long period I think what is back in our mind and what we need help in thinking out is that conditions should be attached to those countries which, like Britain, Holland, in some measure, particularly in the Far East and certainly France, which through their holdings have extremely large reserves of oil.

Those deliveries might well be made over and above the production that they need to carry their own economies over a very long-time period in the same way, barrel for barrel, against the reserves that were kept capped in this country. The exchange could be effected by having this Government pay in advance for taking over a field. I am told the estimates of reserves are now possible on a commercial basis.

Secretary KRUG. I do not think you have to cap fields. The oil wells are running out every day. You reach a point where you do not have to drill as many new ones. I doubt whether we could ever import enough oil so you would want to close down oil fields in this country.

Dr. ELLIOTT. Let me suggest a possible reason for it. The capping of a field with the rigs up in a stand-by condition is a very useful way to keep a potential stock pile of oil because it can be gotten at any time. It is on tap at need.

That deserves thinking about, surely. From the standpoint of a naval oil reserve it does not have to be drilled and a rig set up. This proposition is something to be explored and it is on that line that we like very much, if it were available, to have testimony (a) as to the practicality of whether or not estimates as to commercial reserves were feasible. Would it be possible to estimate these United States within commercial limits? Settlements might be made on such estimates because you would obviously have to pay the owners of capped wells in oil from abroad either by supplying them with equivalent values. If those figures could be worked out in practical relationships, the repayment might be made by debtor countries in kind.

The estimates that were prepared for the Select Committee on Foreign Aid do not differ very greatly from the State Department's estimate for the other minerals that could be produced by foreign countries for our stock piles.

I believe the State Department figured perhaps 160 or 170 million dollars annually over and above commercial needs in minerals might be put in. The estimates prepared by Simon Strauss, who was working during the war for Metals Reserve, for the select committee, ran perhaps 200,000,000 at '45 prices or nearer 250 million at present prices.

Secretary KRUG. I have seen those figures. Frankly, Dr. Elliott, I do not believe we have the information to reach any very accurate conclusion. I think it requires a tremendous amount of additional study.

It should be done, and the Administrator ought to have that as one of his responsibilities, pointing out what this world economy can do and where we are going to get it.

Dr. ELLIOTT. I would respectfully beg leave to suggest that those "order of magnitude" guesses in the minerals field made by experts with some knowledge of the developmental possibilities of the world are at least as accurate as the CEEC figures and some figures submitted by the Administration as the basis for loans or European aid grants to be advanced by this country.

I think, as you have indicated, both have to be screened.

I would not have any doubts about that at all.

Mr. LODGE. Your idea is that what is sauce for the goose is sauce for the gander?

Dr. ELLIOTT. That is right. If this oil proposition could be developed carefully, and it is on that we were looking for some study—it may be that it is an impractical idea—but if it has practical implications and reserves could be figured out and such deals made, after 5 to 10 years some of our oil fields might be kept in a standby condition for naval oil reserves. It might well be possible, under those conditions, to have European countries repay three or four hundred million dollars a year out of oil to this country.

That would be a very substantial item, the two figures added together, \$200,000,000 for strategic minerals plus perhaps another \$300,000,000 for oil payments.

Secretary KRUG. We would certainly be happy to give that more study.

Dr. ELLIOTT. If you would get figures on that it would be of considerable use to us.

Secretary KRUG. Yes, sir.

Mr. ELLIOTT. Thank you very much.

(The information is as follows:)

Because of the numerous variables and the complexities of this situation, a categorical answer cannot be given at this time and I seriously doubt the practicality of an answer which would have to be based upon broad assumptions, the accuracy of which would certainly be open to question. For example, the technical problem of "capping" oil wells is a most difficult one, which involves considerable risk. Unless all the wells in a field or a pool are tightly cased and cemented, the reservoir sands might be damaged. In addition, there are also very real difficulties of an economic and a legal nature, which would make it extremely difficult to require the capping of specific wells. It would also seem to me that such a program of capping our domestic production would at least have a psychologically ill effect on a program designed to accomplish the utmost in new exploration and development, which is so essential at this time.

Concerning the return flow of oil as a repayment feature of the European recovery program, I doubt very much the practicality of attempting to work out the details of such a problem at this time. Basically, the objective of the establishment of adequate refining and transportation capacity in the participating countries is sound and, if successful, it will permit the flow of crude oil from the Near and Middle East directly to these refineries. The net result of such a procedure would be to make available to the United States an additional equivalent amount of crude oil at least from the more adjacent Caribbean areas and thus accomplish a desirable benefit insofar as the United States is concerned. In addition thereto, it would also have merit from the standpoint of security. The entire problem, however, as I have pointed out, is one which will require skillful and efficient administration throughout the life of the program, and I do not recommend an attempt be made at this time to formulate the specific methods by which such objectives can be achieved.

Dr. ELLIOTT. Those were just fill-ins. Now, the members have come back.

Would it be possible to say one final thing, that the estimates of the CEEC figures for petroleum requirements, reasonable as they may be from the point of view of development schemes they are trying to put into effect, are not likely to be filled with available world oil resources, including every export possibility from the United States, by a very large amount?

Mr. LEVY. These estimates have been reduced by about 22 percent by the U. S. Executive Branch.

Dr. ELLIOTT. In the statement submitted to the President?

Mr. LEVY. Yes, sir.

Dr. ELLIOTT. And providing the development proceeds according to your best hopes, including tanker figures?

Mr. LEVY. Yes, sir.

Dr. ELLIOTT. Are refining capacity and pipe lines being put in?

Secretary KRUG. Yes, sir.

Dr. ELLIOTT. The pipe lines to the Middle East in most instances do not seem to be available. Will they be available later?

Secretary KRUG. In 1950 or 1951 they will be.

Dr. ELLIOTT. So the middle-eastern increases will not in most cases have an important effect?

Secretary KRUG. Crude oil will be shipped by tankers.

Dr. ELLIOTT. But the other oil will be there too. Additional oil will be available if lines are laid into the Kirkuk fields?

Secretary KRUG. Yes.

Dr. ELLIOTT. Are you counting on the Kirkuk fields being opened up to reach that efficiency instead of the figures of the Herter report?

Secretary KRUG. Yes, sir; in fact Kirkuk field is liable to come in next year.

Dr. ELLIOTT. Thank you. I have no further questions.

Mr. LODGE. Mr. Secretary, with respect to this vital question of oil, there are certain plants in Germany which are going to be dismantled, according to present plans, and which manufacture pipe. I have it here that—

Among the doomed pipe-producing plants are some of the most modern and most efficient units in Europe, four large units of Mannesmann in Gelsenkirchen, Duisburg, Dusseldorf, and Witten, and that these plants are especially equipped for welding of large-diameter pipe.

This type of plant has been given top priority by the Herter committee as essential to alleviate the delivery of oil and gas in the United States as well as to provide Europe with critically needed oil products from the Middle East.

I would be interested to have your comment as to whether you think that there are valid and sufficient reasons for going ahead with the dismantling of these plants.

Secretary KRUG. I made no study of the matter whatever and hardly am in a position to give you an informed answer. I would say if the other material necessary to operate those plants can be made available, we certainly have short pipe all over the world and we ought to have the pipe lines to operate them.

Mr. LODGE. If the other material necessary to operate them cannot be made available in Germany it would have to be made available wherever the plants are sent and the value of the plant after dismantling is estimated at 8 percent of its predismantling value.

Secretary KRUG. That dismantling of plants is not a very good proposition. I have found that out from experience.

Mr. LODGE. I believe it is very important for this committee to have your view on that dismantling business. There are many of us here who do not quite understand why it is going on at this particular juncture. Several of us feel it might have been a good thing to withhold at least temporarily the dismantling of many of these plants, particularly this type and the nitrogen-producing plants, at least until the full implications of the whole situation had been fully explored, with particular regard to the European recovery program.

I should like to ask you if you will be so kind as to submit to this committee a statement giving your opinion as to the dismantling of this type of plant.

Secretary KRUG. I am afraid I could not give an opinion without making a pretty detailed study of what plants are being dismantled and why, and I assume from all the discussions of the question that a study of that kind would take a very considerable period of time.

Mr. LODGE. On the other hand, many of us in Congress think it is very important in connection with this program, and I am sure you would not want to delay action.

Secretary KRUG. I am happy to do anything you want me to do. I am reasonably busy with the Interior problems and it seems to me what they do in Germany is in a field somewhat foreign to my own.

Mr. LODGE. Well, that of course is a question on which I could hardly comment, except to point out that insofar as you are testifying on the world oil situation with respect to the ERP, the question of these plants has a very direct and pertinent bearing. It seemed to me that you were not just testifying on the problem within the United States.

Secretary KRUG. I would like to know more about why they are dismantling those plants.

Mr. LODGE. I quite understand that you would not want to answer it now.

I was in hopes that you would be able to give us an answer, sometime at your convenience.

Secretary KRUG. I would be happy to make a study of it.

(The information supplied by Secretary of Interior Krug is as follows:)

I have studied the data and information available to me on this subject in the Department of State and in the Department of the Army. I think I should make it very clear, however, that I have only a general knowledge of the conditions existing in Germany, and that I have not heretofore concerned myself in any way with the German reparation program.

From the information furnished me, I find that, when it became evident that the Soviet Union was not prepared to agree to any practical measures to restore Germany's economic unity, General Clay was instructed to prepare, in collaboration with his British colleagues, a revised level of industry plan for the combined United States-United Kingdom zones in Germany. This revised plan, the preparation of which was begun in the spring of 1947, was published on August 29, and the list of plants selected for removal thereunder was published on October 16, 1947.

The revised plan was designed to insure the retention in the bizonal area of sufficient industrial capacity to afford the basis for the development of a reasonable standard of living, and for a substantial German contribution to European recovery through exports of manufactured products. Its general effect was to provide for the retention of a capacity adequate to sustain a level of industrial production comparable to that which prevailed in 1936. On a per capita basis, this level was estimated to be approximately 75 percent of that of 1936, but provides for a volume of exports 15 percent greater than that of 1936. It is my understanding that the list of plants selected for removal as reparation was drawn up on the basis of the revised level of industry plan, and that the dismantling program has been carried on on the basis of this list.

I find that careful consideration was given to the question of the availability of labor, housing, transportation, fuel, power, and raw materials; and that serious shortages in several of these essentials were important factors in arriving at a decision on the dismantling of these plants. It seems apparent that these shortages will continue for several years to come. The material available to me discloses that these shortages are such as to make it practically impossible to utilize fully before 1951 even the capacity scheduled for retention under the revised level of industry plan.

I further find that consideration was given to the importing of additional coal from the United States in order to bring into production the plants scheduled for dismantling, but that a decision was reached that transportation, labor, and other shortages would make such imports of little, if any, value.

There is further evidence from the material supplied me that, quite aside from any moral obligation which may exist to replace through a reparation program facilities in other countries which had been destroyed by German aggression careful consideration was given to the question whether the recipient countries, would have the necessary transportation, fuel, labor, housing, etc., to utilize these facilities efficiently, and to place them in production with reasonable promptness. I further find that, in making the decision, consideration was given to the costs and the delivery time of new facilities which might substitute for the reestablishment of German dismantled facilities in other countries. It was determined that similar new facilities and equipment were not available from other sources; would in any circumstance involve considerable additional costs, largely in terms of scarce dollars; and that such new facilities could in large part not be procured and placed into operation in a comparable period of time.

In summary on the basis of the evidence available to me, it appears that all significant factors were carefully considered in the preparation of revised level of industry plan, and of the list of plants to be dismantled thereunder.

The data available in Washington do not, of course, completely fill the requirement of a technical investigation with respect to specific and individual plants. Investigations of this character necessarily fall within the operating responsibility of the military authorities in Germany. Such experience as I have had with industrial production in this country convinces me that technical opinions of this kind are dangerous and misleading unless they are prepared upon a basis of complete and detailed information and total familiarity with the subject, such as could only be obtained through operational experience in the field.

Such evidence as is available in Washington, however, indicates that in the selection of individual plants for removal full attention was paid both to Germany's domestic needs and to the needs of European countries for industrial exports from Germany. Since your question was directed specifically to certain pipe-welding or pipe-fabricating facilities, I was much interested in the available information on this specific subject. This information indicates that technical representatives of the contractors for the Near East oil pipe lines were called in to examine these facilities and report upon their possible contribution to the petroleum development and pipe-line construction in that area. It was their opinion that the facilities in question were incapable of manufacturing any materials needed for the near eastern oil development.

I do not like to labor the point that my own unfamiliarity with situation and lack of complete data make it impossible for me to give categorical answers to your queries. While I doubt, however, if my statements have added anything to the material already available to you and your committee, a more definite answer to such a specific question could only be supplied after a careful and detailed examination of the entire subject. Such an examination would require the availability of information as to inventories, personnel, methods, transportation, housing, raw materials, supplies, energy sources, and similar data concerning all of the industrial plants. In addition, it would require a careful survey of the plants on the site in order that related factors might be given consideration.

It is my understanding that the Department of State and the Department of the Army are now collecting additional information for your committee, and that detailed consideration is being given to the question of whether certain plants technically capable of producing items in critically short supply might make a greater contribution to European recovery if retained in Germany. I understand that this information will be furnished to your committee at the earliest possible date.

Mr. LODGE. The same thing applies to the dismantling of many of the other steel plants and where that would have a bearing on your department is with respect to coal.

It seemed to me that it might be worth considering not to dismantle all of these sheet and steel rolling-mill plants in Germany, but to provide them with the coal to function and in that way we could export less steel, which is in relatively short supply here, as I understand it, and much more expensive; we could instead, export more

coal to the French and German plants which now have not got enough coal to operate.

I wonder whether you would care to comment on that?

Secretary KRUG. It is perfectly clear to me that the speediest way to get more steel production would be to put back into production the capacity wherever it is located, which is already available, and I would urge strongly that if there is steel capacity in Germany which can be made productive, and by "can be" I mean coal, Congressman, coke, and the other things that go with it, that we ought to be using that capacity to help out in this program and not diluting our already short supply in this country to take care of the demands in Europe.

Mr. LODGE. I am glad to hear you say that, Mr. Secretary.

Mr. VORYS. I wondered, Mr. Secretary, if this is in your line, as to whether we should ship coal over to Europe, or use measures to stimulate their own production of coal? It has occurred to me that with our coal at about \$22 a ton, delivered over there, we could spend considerably less than that in incentive goods, or certainly in food if it was available, to stimulate the production of more coal over there.

Secretary KRUG. You are right on the principle. Certainly it is better to get the coal there. This program, however, takes into account the maximum stimulation, which is considered practical. My own view is that it is optimistic and they will not be able to make those goals, and we will have to ship more coal rather than less.

In other words, with all-out drive to get more coal production in Europe and in England they will fall short of their projected goals, so that this amount which makes up only the deficit will probably be insufficient. A somewhat larger amount will be needed when this plan is finally worked out.

Mr. VORYS. Now, on timber, we have got in here a considerable amount of timber for the next 15 months.

What are our resources of timber compared to those of western Europe, do you know?

Secretary KRUG. No; I do not, offhand. I do know that our own resources of timber are hardly sufficient for our own needs, and any inclusion of timber in this program would only be on the basis that it is absolutely essential to the program and cannot be obtained from cutting their own forests in Europe.

Mr. VORYS. When we were in Germany the Germans said that they had in their requests timber, and having driven through vast and magnificent, orderly forests there, which was an unusual sight to me from central Ohio, I said, "Why don't you cut your own timber?" They said, "That would mean cutting ahead so that we would be going into our natural resources."

Well, I suggested that we had had to dip into our natural resources to finish the war they started and if they had the timber, I was wondering whether it might not be a good idea for them to dip ahead for a few years through this period.

I wonder whether we are going to have to cut ahead into our natural resources in order to supply them with timber so they will not have to cut ahead into their natural resources.

Do you know what the balance is on timber?

Secretary KRUG. I do not know, to be quite frank with you about it. I certainly would oppose our cutting ahead to any greater degree

than they have. We are already cutting ahead in this country and have been for many years.

Mr. VORYS. I appreciate our questions to you should be directed to what we have here in this country, not the comparisons.

Secretary KRUG. I would be happy to try to find out.

Mr. VORYS. We have to make those comparisons in the committee and therefore we are searching for all the light we can get.

Secretary KRUG. We will give you a report on that.

Mr. VORYS. I think it would be fine to have it in the record at this point.

(The information referred to is as follows:)

WESTERN GERMANY

Complete information is not available at this time. The forestry section of the military government, however, estimates that in the American zone of occupation 21,839,000 cubic meters of timber was cut in 1947, which is approximately twice the estimated growth (10,919,000 cubic meters). This cut timber consisted of approximately 5,480,000 cords of fuel wood; 395,000 cords of pulpwood; 33,000,000 cubic feet of pit props; and 2,080,000,000 board feet of saw timber used for lumber, ties, poles, etc. It is estimated that the ratio of cut to growth is at least 2 to 1.

Information from the same source as it relates to the bizonal areas indicates that the cutting program for 1948 will total 30,000,000 cubic meters while the growth for the same period is estimated at 15,500,000 cubic meters. This cut will consist of approximately 3,743,000,000 board feet of saw timber; 911,000 cords of pulpwood; 118,000,000 cubic feet of pit props; and 4,475,000 cords of fuel wood. The reduction in fuel wood estimated above as compared with 1947 and approximating 18 percent is based on the assumption that increased coal production will make such reduction possible.

In general it is estimated that "overcutting" in the American zone is less serious than in the other three zones. The forests in the French and Soviet zones particularly have suffered great damage from snow and ice, bark beetles and other pests, and to some degree, fires. This has necessitated heavier cutting than would have been normally required. This condition has been aggravated by the necessity of cutting more timber into fuel wood which would otherwise have been suitable for lumber, pit props, pulpwood, etc.

Prior to the war, the normal productive capacity of the German forests, on a sustained-yield basis, was estimated at about 38,000,000 cubic meters, which included both industrial timber and fuel wood. With the advent of Nazi control, Goering ordered the increased cutting in the Prussian State forests in 1933, which policy was soon extended to include the public forests of the other states and later to private forests. In 1933 the ratio of reported cut to normal cut (38,000,000 cubic meters) was 128 percent and in 1937-38 this same ratio was increased to 161 percent. It declined to 130 percent in 1940-41; raised again to 140 percent in 1941-42; reached 150 percent in the next 2 years; and reached 160 percent in 1944-45.

In general it is estimated that the total timber stand in Germany as of 1933 was reduced by 200,000,000 to 250,000,000 cubic meters by "overcutting" from that date to the end of the war. This does not include destruction from military operations concerning which complete information is not available. The reduction from 1945 to date might amount to a 5-percent reduction. The fact that there are still some good stands of timber left in Germany is due to a sound policy of conservation that was followed for many years before the war.

PARTICIPATING COUNTRIES

Data relating to lumber production and standing timber are fragmentary and rather incomplete with respect to the 16 participating countries. Not all of these countries accumulated accurate data and there are many variations in their methods of reporting and the classifications included thereunder. This is particularly true of "standing timber" on which estimates are generally made at rather long intervals and in many countries are not made at all. The following table sets forth the best available data, which, however, is in the nature of an estimate.

Estimated stand of timber; about 1935

Country	Volume of all timber	Volume of saw timber ¹
	<i>Million cubic feet</i>	<i>Billion board feet</i>
Germany (all).....	58,610	200-235
Great Britain.....	2,260	7
Norway.....	11,390	36
Sweden.....	50,050	167

¹ Saw timber includes trees large enough to be sawn for lumber; in the United States these minimum diameters vary from 9 to 15 inches; in Europe, those of 8 inches and over. Norway and Sweden figures are from International Yearbook of Forestry Statistics 1933-35. All-timber volume for Germany is from TIDO Report 30, German Forest Resources and Forest Products Industries; saw-timber volume is calculated. All-timber volume for Great Britain is from International Yearbook; saw-timber volume is calculated.

With respect to lumber production, figures are more readily available although they are not to be considered as other than estimates. The following table sets forth these data as they concern the participating countries.

Lumber production¹ of participating countries for selected years

[All figures are million board feet]

Country	1934-38 average	1948	1951	Country	1934-38 average	1948	1951
Austria.....	815	739	726	Portugal.....	477	477	477
Belgium.....	165	203	203	Sweden.....	3,146	2,898	2,898
Denmark.....	168	156	177	Switzerland.....	376	357	357
France.....	1,795	2,450	2,471	Turkey.....	192	103	103

Norway.....	717	829	811				

¹ Includes sawn lumber and railroad ties.

NOTE.—Figures are based on CEEC report.

UNITED STATES

The rate of timber cutting in the United States has been much greater than the rate of growth for at least 50 and probably 100 years or more. The stand of saw timber has been reduced by more than 40 percent in the last 40 years. Although the total drain and growth of all wood are now almost in balance, the drain on saw-timber supplies (trees large enough to yield sawlogs) still exceeds the growth by more than 50 percent.

In 1938, the saw-timber volume was estimated at 1,764 billion board feet while in 1945 this same estimate approximated 1,601 billion board feet. By calculation, giving allowances for rates of cutting and other drain of growth, the stand in 1928 is estimated at about 1,850 billion board feet, in 1947 at 1,575 billion board feet, and in 1951 at about 1,500 to 1,530 billion board feet.

Estimated stand of timber in United States, about 1935

Volume of all timber.....	cubic feet.....	520,000,000,000
Volume of saw-timber.....	board feet.....	1,765,000,000,000

On a basis of the Forest Service and census for the United States, the following data reflect lumber production in selected years.

Lumber¹ production of United States for selected years

[All figures are million board feet]

1934-38 average.....	24,645
1947.....	38,000
1951.....	34,000-36,000

¹ Includes sawn lumber and railroad ties.

For convenience, I have treated western Germany in all of the tables given above as one of the participating countries under the European recovery program.

Mr. LODGE. In connection with this steel question, I quite understand the natural fears which many people have. However, I feel that the most imminent threat today in Europe is not Germany. I feel also that an impoverished, distressed and diseased Germany is much more of an imminent threat than an undismantled Germany. It seems to me that if we take the proper police methods to handle the situation, perhaps by internationalization of certain areas or by other means, we can save ourselves a great deal in the export of steel. Let us, therefore, look very carefully, into the question of whether these steel plants should all be dismantled.

Secretary KRUG. While my opinion was never solicited on that question, I certainly as a private citizen have felt that demolishing a big segment of German industry is a very poor preventive for another war.

Mr. LODGE. I think you will agree that almost everything which we use is war potential in an absolute sense. We could say that wheat is a war potential.

Secretary KRUG. Certainly.

Mr. LODGE. Does not it seem to you that the important thing is to get an international organization which could handle this thing, rather than try to decide which plants are war potential and which are not?

Secretary KRUG. That is my feeling.

Mr. LODGE. Mr. Secretary, in view of this shortage of oil, do you anticipate that it may be necessary to ration or price control oil in this country?

Secretary KRUG. Yes, sir.

Mr. LODGE. Would that be in the near future?

Secretary KRUG. It is too late to do anything about it this winter, but it looks to me quite likely that we will have to ration fuel oil next winter.

Mr. LODGE. Would we have to do that even if we did not have ERP?

Secretary KRUG. Even if we did not have ERP; yes, sir.

Mr. LODGE. In other words, you make that quite clear, that it is not because of the ERP that we may have to have rationing of all petroleum products and not just fuel oil?

Secretary KRUG. That is not necessarily true. We finally, during the war, rationed gasoline and fuel oil. We did not ration other petroleum products. It may be possible. If you recall, during the war there were periods when the gasoline rationing was lifted and then put down. You may have a time when you do not have to ration gasoline when you would ration fuel oil. But it is a thing we are watching closely in this cooperative program with the industry to see if by voluntary means we can get consumption down. The oil industry is spending about a million and a half on that program, and they are very hopeful that it will produce the desired result. I certainly hope that it does. But I am not at all certain it will, and rather than have people go cold next winter I think we should take steps, that are necessary.

Mr. LODGE. Do you think that rationing without price control is a practical method of dealing with the situation?

Secretary KRUG. I think it is preferable to have both. .

Mr. LODGE. It is pretty hard to have rationing without price controls according to you?

Secretary KRUG. I think it is difficult, although during the war we had price control on coal. We never rationed coal.

We had price control on petroleum, and it was rationed.

Mr. LODGE. Thank you very much, Mr. Secretary. I am very much obliged to you.

Mr. JONKMAN. Mr. Jackson.

Mr. JACKSON. Mr. Secretary, I am very sorry we have been running in and out of here all afternoon and I do not know what has been touched on and what has not, so if I ask some questions that are already in the record, I can undoubtedly look them up rather than have you answer them again.

Would you care to comment or hazard a suggestion, Mr. Secretary, as to how long our proven domestic reserves will be sufficient for American consumption in a peacetime economy?

Secretary KRUG. Well, those calculations are really a bit misleading because the proven reserves as of any date are the reserves you just happen to know of at that time. Obviously, there is a lot of oil we do not know about at this time.

If you take the oil we know about, it is 20,000,000,000 barrels, which will last for 10 years at the rate we are going now.

But I do not want to give the impression our oil will be gone in 10 years because if we did not find another barrel we would not be able to draw it out of the ground in a 10-year period.

We would have to find substitutes and it would run for a considerable period of years.

Mr. JACKSON. Assuming the same proven reserves, how long would that last us in a total all-out war effort such as the last war?

Secretary KRUG. As it happens, our peacetime economy is using more oil than our all-out war economy.

Mr. JACKSON. More than we shipped overseas?

Secretary KRUG. We are using more petroleum today by at least 10 percent than the maximum of the war years.

Mr. JACKSON. That was for ourselves and for our allies, all the oil we used?

Secretary KRUG. That is right.

Mr. JACKSON. The reason I brought this up is because of the fact that during the debate on aid to Greece and Turkey it was stressed very strongly that free access to the oil in the Middle East was essential to our national security, that we could not afford to have access to the oil in the Middle East denied to us.

That is the reason I brought this up about our domestic problem.

Secretary KRUG. I think that is entirely true. If we had to superimpose another war on the uses we are now making of petroleum we would find it impossible to get it from our domestic sources.

We were fortunate at the start of the last war to have productive capacity in excess of our then consumption, so we drew on the extra capacity to meet the war needs and drilled our new wells too.

Now, we are using every drop of our available capacity. We could draw a little more by exhausting the wells sooner than they should be, but we are drawing now at the maximum economic rate of production

from all the wells, and if we had another war, we could not get more from our existing wells, except by shortening the life of those wells.

Mr. JACKSON. Now, further, with reference to timber, as Mr. Vorys mentioned awhile ago: Is it not possible that there might be a much more economical and feasible plan to cut timber in Africa, in the colonies, rather than deplete our available supply, or cut ahead, as you put it?

Secretary KRUG. I think that might be possible several years from now. Fortunately if we are going to cut timber in any quantity you need a lot of equipment.

Heavy trucks, sawmills, roads, heavy equipment for handling it, and that equipment is not available in areas of the world where perhaps the timber is.

I would say it would take at least 3 or 4 years to get any considerable expansion of timber production in other parts of the world.

Mr. JACKSON. But certainly, it is a very desirable goal to work for?

Secretary KRUG. Yes, indeed. I think it is perhaps our most extravagant of all wastes the way we have used up our timber reserves in this country.

Mr. JACKSON. To go back, I know the matter of stock piling materials was touched on here. Unfortunately I did not get your entire comment on it. I know in the case of New Caledonia, for instance, they furnished us, all the allies, a considerable amount of nickel, during the war.

Secretary KRUG. Yes, sir.

Mr. JACKSON. A great many of us should like to see some provision written into the act which would give us some future use, as distinguished from current production, which would, of course, discount the balance-of-trade estimates, something that might insure future return in new development and exploitation of new sources of supply. And I wonder if you would comment on that?

Secretary KRUG. We have discussed it at considerable length. In summary, my view is this: Certainly that ought to be done but I would not like to see you put into the bill anything that would put the Administrator in a strait-jacket, so he might be forced to make a deal with somebody which in itself would pull down the structure we are trying to build, which is a sound, healthy world economy.

I think whatever you put into it should be to the effect "You make the wisest business deals you can for this country, with particular consideration to replenishing our storehouse of materials" is all right, and Congress ought to have the Administrator up here very 3 or 4 months to find out what he is doing about it.

I do not think you can write language or formulas that will fit it.

If you do, I am afraid the result will be the ruination of the program.

I have tried to contrive a formula and I have not been able to find one. I think I said before I have not been able to find any other formula by anyone else that seemed to me workable.

Mr. JACKSON. Of course, I cannot subscribe, unfortunately, to the theory that we cannot condition this program, any more than a banker cannot condition a loan. If you went to a banker and you owe him \$10,000 and you want to borrow another \$10,000 he will tell you to quit hitting the bottle, and hitting your wife, and stopping some things you have been doing, and possibly do some other things.

We all know the situation: "That is fine; sometime in the future. We have got the Greece-Turkey bill; don't do it in this bill; let's do

it in the \$342,000,000 bill. The relief bill came along; this is not the time to do it, but possibly in the interim-aid bill we can work it. Now is not the time to do it, but possibly sometime in the future we will be able to work out a detailed plan to get something back for the billions of dollars we are pouring out."

The only natural question that occurs to a lot of us is: Just when are we going to take some concrete steps to see if we cannot get back something in material return for these billions of dollars, without fatally handicapping any program of aid?

Secretary KRUG. Tell the Administrator to do that, but do not tell him how to do that; then check on him.

Mr. JACKSON. It would be all right in the law to tell him it should be done, without laying out any specific details?

Secretary KRUG. That is right. A statement of policy that you would like to get this money back, if possible, should be included. That is his job.

Mr. JACKSON. Thank you very much.

Mr. VORYS. Mrs. Bolton.

Mrs. BOLTON. If I might return to one or two things: You were speaking, I think, about the administration of this program and suggesting that the man was what mattered, and then you left him free to do what he chose.

Under the State Department suggestion, that would be one man; and you would be reluctant to have us set up any different arrangement, would you?

Secretary KRUG. I think it would be one man. He should have an advisory board. I do not think that would handicap his program; perhaps members of the Cabinet could be helpful to him and perhaps a group of citizens.

We had a WPB advisory board during the war that I found very helpful to me. That Board included only Government officials. We also had hundreds of advisory committees that included the best brains we could get in every industry.

I assume he would like to work with groups of that kind in administering this program.

Mrs. BOLTON. Do you think it would be possible to get a really top-flight man without having the thing written up a little more as to what he is getting into?

Secretary KRUG. The natural question of anyone being requested to take a Government job is, "What is the job?" But, as I said before, whenever they start worrying too much about what is the job, they are not going to do a good job, anyway.

Mrs. BOLTON. But any man in business, if he is asked to do a job, will want to know what the job is. This, of course, would look very much like an under secretary of state as far as the general set-up is concerned, would it not?

Secretary KRUG. I would not think so. Personally, I am not sticking for any particular one. We followed throughout the war the principal that the State Department controlled the WPB on policy, as to foreign matters.

We kept them in their field and had no trouble with them.

Mrs. BOLTON. Did you have an adequate definition of foreign policy?

Secretary KRUG. We defined it as we went along; and if we tried to spell it out at any predetermined point, I am sure we would have been in trouble.

Dr. ELLIOTT. I would like to ask a question that I think will bring out a difficulty if foreign policy is to be the only touchstone applied, and at the discretion of the Secretary of State.

For instance, when the State Department worked with you, Mr. Secretary, or your predecessor as Program Vice Chairman of the WPB on the subject of gold mining machinery to South Africa, the State Department took the view that gold mining machinery could not be cut off because of the effect on the political situation. The WPB, on the other hand, asked South Africa to export 200,000 tons of coal more a month to Europe, if railroad cars and mining machinery were sent by the United States to South Africa. The WPB, as I recall it, stuck to its guns and said that unless 200,000 tons of coal a month more were exported from South Africa—

We will not only cease buying low grade manganese and low grade chrome in South Africa, but we will not export gold mining machinery to South Africa. Since we ourselves have stopped gold production in the United States, we want coal, not more gold, to be produced by South Africa.

That was a business proposition, and in the end the WPB view stuck and the 200,000 more tons of coal a month were forthcoming.

They were extra. But that tough bargain could have been defined under the President's bill, could it not, as foreign policy? And it could have been stopped. In other words, it was the position of the Chairman of the WPB—and I believe that may be what you are bringing out—that enabled him to speak with authority on that, because he had to protect the resources of the war as a whole.

Secretary KRUG. During the war we never resolved it in writing. I am sure we could not. It is the State Department's sphere of operation as against the WPB sphere of operation, that is.

We had a number of instances where they thought foreign policy required something, and we did not think so. I do not recall a single one that was not finally worked out between the Chairman of the WPB and the Secretary of State; and we did not win all of these, you remember.

Dr. ELLIOTT. No; but we won a sizeable percentage of them; and the position was not that you had to take a directive from the Secretary of State. But this matter, affecting foreign policy, had to be acted on on both grounds. That is the point I had. The WPB chairman was an equal, not a subordinate. He could argue and had Cabinet rank.

Mrs. BOLTON. Mr. Secretary, in the matter of keeping closely in touch with the Congress, you have suggested that the Administrator come up every 3 or 4 months to inform Congress.

Secretary KRUG. Probably more frequently than that.

Mrs. BOLTON. What would be your feeling if, in order to keep the Congress very intimately informed, a committee of Congress, this special committee, be appointed somewhat similar to the Atomic Energy Committee, which meets very frequently?

Secretary KRUG. I think that might well be a good idea. During the war I found committees of Congress that dealt especially with war-production problems to be very helpful.

I met with them, not once every 3 or 4 months, but every 2 or 3 weeks.

Mrs. BOLTON. My thought was, at least once a week; and in that way we would be more able to follow our own instructions under the new organization bill, which is that whatever we do we must follow.

Secretary KRUG. I certainly will not see any objection to that, and I think it would have many advantages.

Mrs. BOLTON. Now, to go back to the Administrator: If everything was pinned upon the man, supposing something happens to that man? Then what do we have left?

Secretary KRUG. You will need more than one man; and I assume, if he is the right kind of a man, he will have around him a number of people who can take his place.

Mrs. BOLTON. Thank you.

Mr. Richards, do you have a question?

Mr. RICHARDS. We have had our say.

Mr. JACKSON. I have one additional question: From time to time, Mr. Secretary—and I suppose this is characteristic of all Members of Congress—we get letters demanding to know why two or three tankers are loaded with oil for the Soviet Union. Is any oil being shipped at the present time?

Secretary KRUG. I do not believe so.

Mr. FENTRESS. The principal petroleum products under export controls have no allocation for Russia at this time. There are one or two products not under control, and small shipments are going to Russia.

Mr. JACKSON. But not oil or petroleum?

Mr. FENTRESS. The principal products—aviation gasoline, heating oils of all kinds—are under control.

Mrs. BOLTON. That holds good of the Middle East, Bahrein areas?

Mr. FENTRESS. That holds good only within the United States.

Mrs. BOLTON. That is a very different situation.

Mr. JACKSON. Now, of course, much of the oil in Saudi Arabia we do control and we buy. That means that oil under our control is not being shipped?

Secretary KRUG. We are not controlling foreign oil at all, whether American companies happen to be developing it or not. The only controls we have any power to enforce are over exports out of this country.

Mr. JACKSON. But oil belonging to those countries may be shipped directly from the port of debarkation to any country?

Secretary KRUG. If it does not originate within the United States.

Mr. LODGE. Is it contemplated that any petroleum products of any nature will be shipped to the Soviet Union?

Secretary KRUG. Not to the best of my knowledge. The Secretary of Commerce handles that. We give advice only with respect to availabilities.

We have been strongly advocating that exports be held at the absolute minimum.

Mr. LODGE. With particular reference to Soviet Russia?

Secretary KRUG. With reference to everyone.

Mr. LODGE. Do you feel that a different theory should be taken with respect to Soviet Russia than with respect to other nations?

Secretary KRUG. I think Russia is in a position to take care of its own oil requirements if it wants to get in and do the job.

Mr. LODGE. Therefore, in view of our present shortage and particularly the shortage in New England, it would not seem well to stop shipments to Russia?

Secretary KRUG. That is what I would conclude.

Mr. JAVITS. Is there any way in which the Department of the Interior would tie into the proposals under the ERP for these 16 nations and their colonies and dependencies—I emphasize that—to engage in oil exploration, to see if they can find new resources?

Secretary KRUG. We would expect, under this arrangement, to be the technical brains of the Administrator in the petroleum field, and we would be doing our best to influence him at all times to keep the exports of petroleum at a minimum—to make sure they go to essential purposes and to develop all the petroleum he can any place in the world.

Mr. JAVITS. Do you find under this bill any section which gives you an official connection with that effort?

Secretary KRUG. We have no authority under the bill to tell the Administrator to do anything.

Mr. JAVITS. It would then be informal?

Secretary KRUG. Yes.

Mr. LODGE. The Secretary of Commerce advocated that the Administrator should have nothing whatsoever to do with questions of American internal economy, questions of availabilities. Questions of what we could afford would be up to the heads of the departments. If you subscribe to that view, and that becomes the law, then the Administrator would have to come to you?

Secretary KRUG. He would come to us and say: "Can I get this much oil in the United States for shipment to France, Belgium, or Holland?" And we would tell him whether or not he could. If he insisted that he had to have oil, which we felt was more urgently needed here, Averell Harriman and the Department of Commerce would have the controls over the exports. His program could be blocked. Then it would be an appeal to the President.

But I would not expect any contingencies of that kind developing. It would seem to me that is up to the various department heads.

The Secretary of Agriculture for food, Interior for coal and oil, and Commerce for other commodities and equipment, would be able to sit down with him and work out a program that would do his job, with the minimum impact on our own domestic economy. Obviously you could not have him in a position to go out and take some oil equipment or pipe capacity that was desperately needed for our own industry and ship that abroad.

Mr. LODGE. Exactly.

Mrs. BOLTON. What do you think of the Foreign Aid Council set up under the Herter bill for just that purpose?

Secretary KRUG. I have not had a chance to make a careful comparison between the bill proposed by the President and the bill proposed by Mr. Herter, and my own feeling on the administration end of it is that it is given far too much prominence.

The difficulties, I think, are largely imaginary if we get the right kind of people to administer the program; and if we do not get the right kind of people, it will not work anyhow, regardless of the type of organization chart you have worked out.

Mrs. BOLTON. I wondered if we might ask Mr. Elliott?

Dr. ELLIOTT. Mr. Vorys suggested before he left that I put a question to you.

The shortage of both gasoline and fuel oil has increased, we are told, by the recycling processes to increase the octane ratings of gasoline, which has been put up to a very high point, according to Mr. Frey in the report he wrote for the Select Committee on Foreign Aid, by a race between the oil companies.

Is that not capable of being cured now by the powers which I believe would be vested in you, sir, with the Justice Department, in consultation with the industry to work out arrangements to limit that high octane race that is going on? If this race produces new motorcars that require higher octane content, will not that still further deplete our supply of gas and fuel oil?

Secretary KRUG. There has been that kind of a race and it did have that result. Fortunately the tremendous demands on the industry automatically reversed it, so for the past 3 or 4 months the trend is the other way.

We have a committee of industry working with us on that and they have promised complete cooperation to get the maximum of petroleum products to do the job.

Dr. ELLIOTT. Under the new law you would have the right to do that to any extent you and the Department of Justice would agree?

Secretary KRUG. No, we have no power. If the industry is willing to do it, it is all right. We would get the industry together and ask them if they would do it but if one member or if the industry says no, we have no power to require it.

Mr. LODGE. With respect to our national defense, we read in the paper about the insufficiency of petroleum products.

In particular it is my understanding there is just barely enough at this time to run our very much diminished Navy. Suppose we were called upon in the interest of national security and to maintain the peace to demothball some of our ships and suppose we get 70 air groups, which is my devout hope, what are you going to do?

Secretary KRUG. We would immediately have to ration fuel oil and gasoline. We found out after the trial that all other schemes were of no avail. The other alternative is to cut down on the demand where you can cut down without hurting people.

We have to do that immediately, if we have a substantial increase in the military requirements.

At the present time they are running about 4 percent of total consumption. During the war at one time I think they were up to 32 and 33 percent.

Mr. LODGE. In other words, with a certain amount of sacrifice on the part of the American people, and they have always been willing to make sacrifices, and with sacrifices that would not be too painful, we could still expand our armed forces, even without substantial imports of petroleum products?

Secretary KRUG. We would have to do a more drastic job of rationing then we did during the war, if we had to carry on any major defense operations.

Mr. LODGE. It could be done?

Secretary KRUG. Yes.

Mr. LODGE. I am very glad to hear that, sir. Thank you very much.

Mr. VORYS. Are there any other questions?

Mr. MANSFIELD. Mr. Secretary, the question I had in my mind was answered on my arrival here by the questions put to you by my colleague, Mr. Jackson, relative to our own national resources.

However, there has been some talk here about petroleum. Could you give us, offhand, if you can, the amount of petroleum and petroleum products which we are exporting now, and the amount we are importing?

Secretary KRUG. Yes. At the present time, taking the past year as an example, we exported about 450,000 barrels a day to all countries, including Canada, and we imported about the same amount. That is gradually shifting so we are importing a little more than we are exporting and in the current year we would expect to import about 24,000,000 barrels in excess of what we export.

So the imports are gradually working up and the exports have been gradually working down.

Mr. MANSFIELD. Is it true that as far as our Navy and armed forces are concerned, outside the continental limits of the United States, that they receive the major portion, if not all, of the petroleum and petroleum products which they need from either the Middle East or from South America?

Secretary KRUG. They use large quantities from the Middle East and South America.

Mr. MANSFIELD. So consequently there is the least possible strain upon our oil economy under the circumstances?

Secretary KRUG. Yes. Military requirements, as I mentioned, amount to 3 or 4 percent of our total oil consumption, as against 32 percent during the war.

Mr. MANSFIELD. But most of the military consumption, especially in the Navy, is brought in from outside sources, and in the western Pacific, it all comes, I believe, from the Persian Gulf area?

Secretary KRUG. I believe that is right, but I would not be certain. I am told that is right.

Mr. MANSFIELD. The point I wanted to make is that as far as the Government is concerned, we are trying to do everything we possibly can to see that all the oil is retained in this country for the use of its civilian population and its industries?

Secretary KRUG. Yes, we have been doing everything possible with the limited authority we have.

The industry on its own has been doing, I think, a very remarkable job, when you figure the consumption in this country has almost doubled per capita since before the war.

They have kept abreast of it. Everybody is shifting from coal to an oil burner, and naturally you cannot get new oil wells, new refineries, new pipe lines overnight.

Mr. RICHARDS. Mr. Secretary, what part of our imports now—not talking about what the Navy uses, but imports for organized commercial transactions in this country—comes from the Middle East?

Mr. LEVY. Practically nothing. Most of it comes from Latin America.

Mr. RICHARDS. Where do most of the imports in oil come from?

Secretary KRUG. Practically all of it from Latin America and the Caribbean area.

Mr. RICHARDS. That is all.

Mr. MANSFIELD. That is all.

Mr. VORYS. Mr. Secretary, I want to thank you and to apologize for this in-and-out performance which was not of our doing but because of roll calls. You have been very good-natured and patient in taking part in this chain reaction around the table here.

Secretary KRUG. Thank you. I had a very pleasant afternoon.

Mr. VORYS. There will be a short executive session of the committee as soon as we have the room to ourselves.

(Whereupon, at 4:30 p. m., the committee went into executive session.)

UNITED STATES FOREIGN POLICY FOR A POSTWAR RECOVERY PROGRAM

TUESDAY, JANUARY 27, 1948

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met, pursuant to notice, at 10:30 a. m., Hon. Charles A. Eaton (chairman), presiding.

Chairman EATON. The committee will be in order. It is with peculiar delight that I am able to present to the committee my old-time colleague and beloved friend, Phil Reed, who became chairman of the board of General Electric on his fortieth birthday. Enough said.

Mr. Reed.

STATEMENT OF PHILIP D. REED, CHAIRMAN OF THE BOARD OF DIRECTORS, GENERAL ELECTRIC CO.

Mr. REED. Mr. Chairman and gentlemen, my name is Philip D. Reed and I am chairman of the board of General Electric Co. Four of the past seven years I spent in Government service—a year and a half with the War Production Board in Washington and two and a half years in England, first as Deputy and then as Chief of the United States Mission For Economic Affairs in London. I have made four trips to Europe since the war.

My approach to the problem of the European recovery program is that of a businessman. Approximately 94 percent General Electric Co.'s production is sold here in the United States. On the average, about 6 percent of our production is exported to various countries of the world, particularly South America. I give you this background for such use as it may be in evaluating my testimony.

The importance of reaching a sound decision on the European recovery program can scarcely be overestimated.

Shall we go through with it? Where do our best interests lie? Can we afford it, or can we afford not to proceed with it? We have already, as you know, given or loaned 10 or 11 billion dollars to these 16 countries. Would more be sending good money after bad; would it in fact be "operation rathole"?

Let's assume for the moment that we decide to make no further grants or loans to the so-called Marshall-plan countries and that we limit our exports to what those countries can pay for currently with goods, services, and such dollars as they have left. What would that decision mean to these countries? They would, of course, be forced immediately to reduce their standard of living to new low levels

that could be supported by their present production. Food supplies, already very low, would drop drastically. In Austria, for example, the daily diet is around 1,500 calories, and in other countries it varies from that level to a top of 2,700 calories in Great Britain, compared, you will recall, with almost 3,500 calories per day here at home.

People cannot live and work on 1,500 calories a day; and at the higher levels—1,900, 2,100, 2,400—in other western European countries there is in all cases a serious deficiency from the standpoint of maintaining good health and efficient production. A sharp reduction from these levels would confront millions with starvation and so weaken and discourage the rest as to reduce their productivity, destroy their hope, and set the stage for complete collapse. If we assume, as we must, that heavy cuts would also be necessary in imports and consumption of fuel, raw materials, and machinery, it requires no stretch of the imagination to picture western Europe as a political and economic concentration camp.

This in a very real sense is what we face if we go onto a cash-and-carry basis with Europe. Police states would be necessary to maintain order and to keep any government in power. You may judge for yourself whether this is precisely what Russia wants to happen and whether these police states would be Communist-controlled.

What, then, would our position be?

First, can there be any doubt that our expenditures for military defense—Army, Navy, and Air Force—would be increased by many billions every year? It would be surprising to me if the increased exposure and risk of war resulting from the conditions I have described did not justify a 50-percent increase in our military appropriations. This, as you know, would mean more than an additional 5 billions per year.

Second, trade with Europe and with other areas of the world would be greatly reduced and our standard of living here at home would suffer accordingly.

Third, such trade as took place—and there would be some because we require many raw materials and products from Europe and her colonies—would be carried on with official representatives of police states, not as heretofore with thousands of private producers and traders in those countries. It would not be long before the private exporters and importers here in America would find it necessary to join forces in order to bargain effectively with the foreign government monopolies. At this point our Government would, of necessity, step in to legalize and supervise the operation, and from that moment our free-enterprise system in foreign trade would disappear indefinitely.

The step, gentlemen, from Government participation in and control of America's foreign trade to a far larger degree of regulation and control of our home market and production is indeed a short and human one.

Although much more could be said, my fourth and final point on what our position would be, if we elect to go on a cash basis with western Europe is this: We are a decent, sympathetic, humanitarian people. It is my best guess that if Europe found herself in the plight I have described, with millions suffering and starving, the churches, schools, and relief agencies of this country, and not improbably the Government itself, would be raising huge sums of money for the relief of these unfortunate peoples. In other words, we as individuals are

going to do what we can in any event, as a matter of good conscience, to relieve suffering abroad. To whatever extent we would do this—and I leave it to you to say how much it would be—we would be spending our American dollars year after year to alleviate the results of economic collapse which the European recovery program is designed to prevent.

So much then for what would happen if we don't go through with the European recovery program. Now let's add up a few of the plus items if we do go through with it. In general they are the points I have already mentioned but expressed in reverse.

Our expenditures for Army, Navy, and Air Force would not have to be increased many billions because of the collapse and communitization of Europe. Indeed, if the European recovery plan achieves its ends, conditions in Europe, political as well as economic, would be infinitely more conducive than they are today to the achievement of lasting world peace and a strong, effective United Nations. Under these circumstances we might reasonably look for a substantial reduction, rather than an increase, in the cost of our Military Establishment.

If we successfully prosecute the European recovery program we can look forward to a mutually beneficial exchange of goods with Europe and other foreign areas at a level commensurate with their improved economic condition. This would lift our standard of living and contribute to high employment.

Again, the European recovery program would go far toward preventing the creation of police states in western Europe which might well force our Government into the practices and exercise of controls which by their very nature are destructive of private competitive enterprise.

And, finally, by helping western Europe to restore her production and regain her economic and political feet we minimize and perhaps avoid the necessity of continually passing the hat for the relief of starving Europe.

From all this it would seem clear that America stands to gain or lose a very great deal indeed by what happens in Europe in the next few years. No one questions the absolute truth of the statement that the most unhelpful thing we could do to the friendly nations of the world is to so strain or inflate our own economy as to bring on a depression in this country. That, of course, is what Russia is waiting for. And it must be our prime objective so to conduct our affairs that it will not happen.

But to say we cannot afford the European recovery program because of its inflationary effect here at home requires careful analysis. We must remind ourselves of all we stand to lose and of the inflationary effect of increased military expenditures we face if we do not go through with the program. We must recognize that while the exporting of scarce commodities is undoubtedly inflationary, exports under the proposed European recovery program would be no more so in 1948 than were our exports in 1947—indeed, they are estimated to be less. And we must face the fact that our exports are not the sole cause, are not even the major cause, of our inflation here at home.

In view, therefore, of the tremendous stake we have in European recovery and the preservation of her democratic institutions, I am convinced that we must proceed with the program, recognizing that it

adds to the inflationary pressures at home and makes all the more imperative an intelligent, comprehensive, and courageous set of measures designed to relieve inflationary pressures and hold our economy in balance through this difficult and terribly important period.

Now, assuming we decide to go ahead, what would it cost us? My answer is that no one knows within \$5,000,000,000 above or below any given estimate of what it would cost. Here are some of the variables that make it impossible to fix a figure:

1. Our price level hasn't stabilized yet. Who knows whether it will be 10 percent up or the same amount down, or some other figure up or down, 2 or 3 years from now? The difference in the cost of European aid at different American price levels could affect the total by billions of dollars.

2. Consider how much less food Europe will require from us if European weather conditions are excellent during the next couple of years and bumper crops result. And consider, on the other hand, how much more we will have to supply if crop weather abroad is unusually bad as it was last year. Here again the difference would run into billions of dollars. The same, incidentally, applies to our ability to supply food if we should have had crop weather in our country.

3. Russia will do everything in her power to sabotage our program, and we can be quite sure it will be done well and with imagination. Until we see what methods she will use, what tricks she will try, who can say to what extent these efforts will neutralize our program? This is war, gentlemen, economic and political war, and the cost of war is importantly affected by what moves the enemy makes and what we must do to counteract them.

There are other matters that will influence the cost of the European recovery program, but perhaps I have said enough to demonstrate that it cannot be determined at this stage.

I recommend, therefore, that Congress, after taking note of the various estimates that have been made by several responsible groups, make no attempt to agree upon an over-all amount. The important thing is that the program be undertaken with full recognition that it will cost us many billions and that the prospects are good that those billions will have been well spent if we proceed promptly, intelligently, and realistically, being neither penurious, on the one hand, nor profligate, on the other.

Having authorized the program without naming a specific amount, I believe the Congress should appropriate the 6.8 billions requested by the President for the first 15 months. Thereafter additional appropriations can be considered in the light of conditions and accomplishments as they may appear. Holding the purse strings, Congress will have ample control over the program beyond the initial appropriation. Whether the 6.8 billions is exactly right for the initial period I do not know. As I have indicated, the variables are too great to permit close estimates. We do know, however, that to appropriate too little would be very serious. And if we provide for administration of the program that will be competent and efficient, any overage in the appropriation will not be wasted but will be available for later use.

Before leaving this phase of the matter I want to emphasize the extreme importance of the psychological effect of what Congress does

at this time. I have been told repeatedly by Europeans in whose judgment on reactions, both east and west of the iron curtain I have the greatest confidence, that prompt action by Congress on this matter and the appropriation of a fully adequate amount for the first period would have an enormous psychological impact throughout Europe.

I need not remind you that timing is often more important than the act itself. In this case, where quite apart from our central objective of helping European recovery we have in Russia an avowed and active enemy of that objective, an early announcement of prompt and full support would give Russia less time to mobilize her counteroffensive and might well require her to move prematurely and unwisely in western Europe. I am convinced that prompt action on our part has special value to the effectiveness and ultimate cost of the program.

The next question is, How should the program be administered and what limitations and conditions should be imposed by statute on the Administrator? Here again it is exceedingly important that we take the right course. It will be clear to all that effective and efficient administration of a European program can be achieved only if wide latitude and freedom of action are given to the Administrator. Each of the 16 participating countries has different conditions, resources, and problems. The character of the aid required, the production goals to be established, the steps to be taken by the foreign governments to restore economic and monetary stability, the capacity of each country to pay in whole or in part for American aid, and the things each country must do as a part of the over-all program of economic cooperation between the participating states, will vary widely from country to country.

It is most important, therefore, that the enabling legislation shall impose no unnecessary restrictions on the Administrator in working out the over-all program with each country and in carrying out the broad purposes of the act. Indeed, the success of the entire program may well depend on the flexibility and scope of the administrator's authority in dealing with the participating countries.

Accordingly, the act itself should be expressed in terms of broad basic principles and objectives. It may well, however, include by way of guidance and suggestion as distinguished from mandatory requirement, points to be considered by the Administrator and, if appropriate, included in the agreements to be worked out with participating countries. I yield to no one in my desire to minimize the cost of this program to the United States, but we must not lose sight of our basic objective, nor risk failure by insisting on the inclusion of provisions that would profit us little and might jeopardize all.

Two bills are now before the Congress, the so-called Herter bill and the administration measure. The Herter bill would place responsibility for administration of the program in a new corporate agency to be known as the Emergency Foreign Reconstruction Authority. This agency would have broad powers, including procurement, export controls, investment of foreign currencies, and so forth, and would be headed by an administrator and directed by a bipartisan board appointed by the President with the advice and consent of the Senate. This administrative set-up gives a minimum of voice and influence to the State Department in the handling of the program.

The administration bill, on the other hand, provides for an Administrator appointed by the President, as in the Herter bill, but gives him

no board, much less authority, and provides for most operating matters to be handled by the regular Government departments. Also, it makes the Administrator subject to the direction and control of the Secretary of State on all matters affecting foreign policy and provides for an ambassador to handle all negotiations with the participating countries.

In my opinion the proper organizational set-up lies somewhere between the two bills. There is no doubt that the State Department has a vital interest in the European recovery program. It is equally clear that important domestic questions are involved which are not within the jurisdiction of the State Department. Organizationally, therefore, it is a split job which will call for the closest kind of cooperation between the various interested departments, including State, Treasury, Agriculture, and Commerce, under the over-all direction of the Administrator. If important differences of opinion arise, the President will have to decide.

In my view the Administrator should report direct to the President and should have an advisory board presided over by the Secretary of State and made up of the Administrator, the Secretaries of the Treasury, Agriculture, and Commerce, the head of the Export-Import Bank, and the United States representatives on the Monetary Fund and International Bank. An ambassador at large appointed by the President, approved by the Senate, and responsible equally to the Administrator and the Secretary of State should head and coordinate the activities of the European recovery program in Europe.

The Administrator's staff should be small and of exceptional competence. A considerable part of it will have to be borrowed on a temporary basis from business, and its job will be to formulate recovery programs with each participating country, clear them with all interested departments, obtain Presidential approval and then see that the programs are fully and promptly carried out.

Although the Administrator's power to operate and break bottlenecks should be broad, normal operations such as procurement, export control and loan transactions, and so forth, should insofar as practicable be handled by the Government departments or agencies now performing these functions.

The Administrator in cooperation with the State Department must arrange for suitable personnel to follow the progress of the program in each country. This will include seeing that all commodities and equipment furnished under the program reach their destination and are put to the intended use, checking on the performance by the foreign governments of all terms of agreements with our Government, including production targets and steps to be taken to restore economic and monetary stability.

In the long run American private investment abroad will be a potent factor in maintaining a healthy balanced world economy. This fact should be prominent in the minds of the Congress and the Administrator to the end that all possible encouragement be given to the flow of private investment funds into Europe and other countries.

I cannot leave this discussion of the Administrator's responsibility without mention of Germany. Although, strictly speaking, it is not one of the Marshall plan countries, it is a country for which we as an occupying power have direct responsibility and it is also a country whose economic well-being is probably the key to European prosperity.

Again, although the problems are many, more production is the basic one. Incentives for the German people, not in worthless marks, but in food and fuel, in certainty as to their status and in opportunity to work their way to better things, must be provided if the German economy is to get off dead center. We have waited too long for Russian agreement. Western Germany must now be included in the program of European recovery, and the planning and procurement of American aid should be the responsibility of the Administrator of the European aid program. In addition, as the principal occupying power we must promptly take the steps—monetary reform, organization of a German government, and so forth—which will restore incentive and vitality to a normally hard working but now hopeless and lethargic people. These things are fully as important to European recovery as a program of aid for the 16 participating countries.

More production, and this applies to other European countries as well as to Germany, must be our central objective; it must be a condition of our aid and a test of whether that aid shall be continued beyond the initial stage. Although we cannot, it seems clear to me, dictate to a sovereign power or a sovereign people the economic system they shall use, we can and in our own interests must make production performance and the achievement of predetermined goals a condition of our continued assistance.

I spoke earlier of the need for early action by the Congress for psychological and timing reasons. I now urge it again on grounds of effective administration of the program. The Administrator will have an enormous task on his hands, and the sooner he can get organized and functioning the better it will be for all of us. There must not be a hiatus between the interim aid and the European recovery program.

My final point on this matter of European recovery is of capital importance. It stems from the fact that the people of Europe—west as well as east of the iron curtain, barring only Great Britain—are in very great ignorance of America's intentions, motives, plans, and assistance given to date. In most countries the newspapers carry next to nothing about us. Newsprint is in very short supply. In some countries, including France, most of the newspapers are Communist-controlled and, in accordance with the Communist line, present a distorted and critical picture of us. American books and magazines are very scarce, radios are relatively few and programs concerning America are both limited and inadequate.

If we are to go through with the European recovery program we must not fail to get all the benefits that are in it for us. One of them is that the people of Europe be fully aware that we are helping them and in what way and to what extent. Another is to demonstrate by every means at our command that our intentions are not imperialistic and that we seek only a peaceful, prosperous world of free people. Again we shall have a tremendous opportunity to show, by the very aid we are giving, the merits and advantages of our way of life as compared with communism, especially as measured by the status and standard of living of the average man and woman.

To do these things we must plan and organize just as in any business, having built a fine product, we must advertise and promote its sale. Fortunately, the ground work has been laid for the kind of a selling

organization we so badly need. The bill authorizing United States Foreign Information Service has passed both Houses of Congress unanimously and is about to become a law. Appropriation of adequate funds to operate this Information Service is no less important than approval and implementation of the European recovery program itself.

Chairman EATON. Mr. Reed, we thank you for your very, very statesmanlike analysis of this tremendously important and difficult situation.

Mr. REED. Thank you.

Chairman EATON. I am sorry that Mr. Mundt is not here to enjoy your endorsement of the Voice program, although I am not surprised that you so endorse it. I have had so many opportunities of asking you questions that I will not take the time on this occasion. We have a rule here now so as to give everyone an opportunity of going around, of limiting each member to 5 minutes, and I will ask that Mr. Vorys begin the questioning on the 5-minute basis.

Mr. VORYS. Mr. Reed, you certainly presented a fine analysis of our problem and the answer. I remember talking with you on this organizational problem in 1944 in London, when you were lend-lease officer over there, and asking you about whether the program should be under the State Department or separate. You said, as I remember it, that although there was a separate Lend-Lease Administration, you were functioning very satisfactorily officially under the Ambassador there. Is that the way that you would contemplate that this program would be operated in the various countries?

Mr. REED. Mr. Vorys, it seems clear to me, based on the experience that I had abroad during the war, that the worst thing this country could do would be to provide two separate and independent channels from our Government to any foreign government. The moment there are two doors open to a foreign government they can play one against the other. Therefore, I believe that our embassy in each country must be the official point of contact with the foreign government.

Now, having said that, it does not necessarily follow that the foreign embassy or foreign ambassador should have complete control of what passes through that office to the foreign government. That must be the amalgamation of thinking and planning and responsibility of our Government generally in terms of this foreign job.

As I see it, the European recovery program placed, as I have recommended and as is contemplated by both of the bills we have mentioned, under an administrator who reports direct to the President, must be in terms of the formulation of the separate agreements with these 16 countries worked out by the administrator, in close contact and communion at all times with the State Department; and, if there are differences between the State Department and the administrator as to what shall be included in the program or what our official point of view shall be, then that must be resolved before it gets to the foreign government. It just must not go with differences of view to London or Paris or to any other foreign government. They must be resolved, and if necessary the President must resolve them before the project is presented to the foreign premier, or whoever it happens to be.

The mission we had in London did not have one boss, or two bosses. We had five bosses. We represented in London the Lend-Lease Administration, the War Shipping Administration, the Petroleum

Administration for War, the War Food Administration, and the War Production Board. In addition to that we did many things for the State Department. We frequently had instructions on that same subject from as many as three of those Departments which were inconsistent in themselves, to do so-and-so with the British in connection with the working out of the particular program, and it was our job to compose those differences and to see that before they reached 10 Downing Street, or wherever it may have been, that the American front was together.

That can be done, and we did it under conditions which seem to me to be much more difficult than those that confront us now, and I do not have any doubt, Mr. Vorys, but what it can be worked out along the line I have suggested. I am afraid that is a very long answer to your question.

Mr. VORYS. Well, a lot of these answers have to be long. Is this not the important thing: That in any foreign country we must present a united front to the foreign government and therefore you can have only one top boss in that country, and that would be the ambassador, but that the representative of, say, the European recovery program must have the right when he disagrees with the ambassador to report back to Washington to somebody, so that you do not have the ambassador controlling the flow of information back here? Now I am not telling you, but I am merely asking you.

Mr. REED. That is absolutely so, and one of the reasons, one of the strong reasons, why I say the importance of a sort of ambassador at large for the European recovery program is to accomplish the very thing you are talking about. If an ambassador of that type were appointed who had a roving commission covering each of the 16 countries, if you let him concentrate on the problems of European recovery program, he could and would, I believe, if he were the right type, so lubricate the machinery of the 16 different embassies and the ambassador in each of those countries—and they vary tremendously in personality, in competence, and everything else—that he could and would, being a State Department man, and also answering to the Administrator, smooth that whole operation out in a way that the Administrator's people would get cooperation from the embassy.

The presentation and the convincing of the local ambassador that this was the right course to take, coming from the ambassador at large as well as the administrator, would, I think, enormously lubricate that whole machinery.

Chairman EATON. The time of the gentleman has expired.

Mr. REED. I am afraid that is largely my fault.

Chairman EATON. Mr. Bloom.

Mr. BLOOM. No questions.

Chairman EATON. Why, Mr. Bloom!

Mr. BLOOM. I am satisfied. I am ready to vote right now.

Chairman EATON. Mr. Mundt.

Mr. MUNDT. Mr. Reed, I am sorry I did not get an opportunity to hear your fine statement, but I have skimmed through part of it and several people have pointed out several sterling and estimable statements on page 16 especially, which I assure you I concur with heartily. I remember you spoke before a committee of Congress over on the Senate side, favoring our information bill. The testimony was so persuasive that after you finally permeated the minds of the Members of the other body, they voted unanimously for the bill.

It took some time to sink in, possibly because of your large words, I guess. It took 6 months' time.

Mr. REED. I heard your testimony, and I thought it was wonderful.

Mr. MUNDT. I do not think that helped so much, but there was a lot of testimony from the outside, which is really what helped. I did not hear the questions Mr. Vorys asked, and he probably went into the matter of how you felt this administrative set-up should be handled over there. If you went into this other portion of it you need not answer again, but I feel we can best serve the purpose stated in this act if we have behind it as great an element of the American population as possible.

That means, since we are divided politically into two parties, that we must bring into harness the best principals of the two parties of an advisory capacity, or a directive capacity, or in some capacity in this bill. Then I think it will be on sounder ground. I wonder if you have commented on that either in your statement or in interrogatories by Mr. Vorys.

Mr. REED. I am not sure I entirely understand your question.

Mr. MUNDT. You have not commented on that question, have you?

Mr. REED. I have recommended an administrative set-up to deal with this program which is neither the Eaton bill nor the Herter bill, but it runs down between the two.

Mr. MUNDT. Does it provide some place in this administrative organization for a bipartisan advisory board of that type?

Mr. REED. No; it does not. It provides that an administrator shall be appointed with the nomination of the President and with the advice and consent of the Senate. That administrator would be guided by an advisory board which, in my judgment, should be headed by the Secretary of State because of the enormous interest of the State Department in these matters, and it would then be filled out with the administrator and Secretaries of Treasury, Commerce, Agriculture, Export-Import Bank head, our representatives on the International Fund, and the bank.

That board, incidentally, would not in my judgment have power to approve or disapprove specifically programs formulated by the administrator. Their job would be to assist him and consult with him, and to fulfill their responsibility of developing a sound program. The President, however, would have to approve each program before it was promulgated or implemented. Of course, the advisory board I speak of would, I have no doubt, be consulted by the President before he approved any program.

Mr. MUNDT. Such support as that would not bring into focus at all the advisers and counselors of the minority party, whether they happen to be the Republican Party as it is now, or the Democratic Party, as it is likely to be after next January 1. Either way it does not bring that into the picture.

Mr. REED. No. That is quite true.

Mr. MUNDT. Do you not think, from the standpoint of the two factions, one holding the support of the American public, that it is important that members of both those major parties feel they are sharing in the administration and the advising of this project; and more important perhaps, the European people and leaders who do not understand our political system any too well, might feel that this has more continuity and that they can bet on it more confidently if it has

a bipartisan aspect rather than it being the administrative creature of one Administration which might be changed after the November election?

Mr. REED. Would this bipartisan board you have in mind have the power to determine what the programs would be, or would it simply be advisory?

Mr. MUNDT. It would be advisory with some administrative authority. I mean, it would have nothing to do with foreign policy. That reposes in the President and in the Secretary of State. It deals with the economic aspects.

Mr. REED. It goes without saying that bipartisan support is always desirable, but the executive agency in our governmental set-up must be given responsibility for the execution of the will of Congress. Congress, having set out in the statute the objectives it seeks, and they being obviously bipartisan, otherwise it would not be passed, would then assume that the executive must be given responsibility for carrying it out. Anything that suggests additional legislative activity at the level of operation and implementation of the statute does not seem to me to be entirely consistent, and I am afraid it might develop into slow-downs resulting from differences in view, or possibly political reasons that might interfere. Maybe I am wrong.

Mr. MUNDT. The chairman has signaled that I have just a minute of my time left.

Mr. REED. Excuse me.

Mr. MUNDT. I would like to get the next point in. The difficulty of these programs is this: They are bipartisan all right during the legislative process, but when they get to the administrative level they become one party entirely. I am trying to find a way in which you can retain the values, as I see them, of marshaling the strength and the intelligence of both parties in this program, all the way through, and not short-circuiting it as soon as the bill is signed.

Chairman EATON. Could we not fix that by having a Republican administration in Congress?

Mr. MUNDT. No; I do not think so. You would still have the same Congress.

Mr. BLOOM. A good idea.

Mr. MUNDT. I am for the eventuality you described though, Mr. Chairman. I think it is a fine idea.

Chairman EATON. The time of the gentleman has expired. Mr. Kee.

Mr. KEE. Mr. Reed, I was interested in your discussion of the amount of the appropriation to implement the proposed program in the event it is decided that the program shall be inaugurated. As I understand it you approve of the Administration's estimate of \$6,800,000,000 and would advise that that amount be fixed as the minimum?

Mr. REED. I indicated in my statement that I do not know whether it is right or not. I don't think anybody can say whether that precise figure is the correct one. I would throw the responsibility right back into the executive side of this Government myself. If the administration is good and efficient, the money is not going to be wasted if too much is appropriated. If too little is appropriated, great danger lies, it seems to me, in that deficiency. I do not think we can tell whether 6.8 is the figure. Certainly, I cannot, but I did approve it on the

theory that it is the result at least of careful study and I would then place all my study and debate on seeing to it that we had an efficient, hard-hitting administration to deal with the expenditure of those funds, and put my reliance there rather than try at this stage to put our finger on the exact amount it is going to cost for 15 months, because I do not think anybody can make that determination.

Mr. KEE. You understand this committee's authority with reference to the amount of the appropriation is extremely limited. We can fix the maximum beyond which the Appropriations Committee cannot go, but we cannot put a floor under the appropriation by that committee. Personally it would be my view, and I hope you will agree with me, that inasmuch as the State Department and practically all of the officials of the Government, after long study of this proposition, have adopted the figure of \$6,800,000,000, which as they say is the minimum of what it will take to carry on this program, and the entire matter will have to go to the Appropriations Committee anyhow in the long run, with a chance that it will be very closely scrutinized by that committee, that that amount should be the amount fixed by this bill when it is reported out. Is that your view also?

Mr. REED. That is my view.

Mr. KEE. With reference to your discussion of the administrative machinery, the Herter bill, I believe, provides for the appointment of eight members as a board of directors of the organization to assist the executive director in the administration of the program. Those eight members shall be, as required by the Herter bill, composed of four members each of the major political parties in the United States. Fourteen members of the organization are provided by the Herter bill, of which eight would be these civilian appointees, who are non-partisan appointees. The other six would be officials of the Government in certain capacities.

Would you think that that is an idea that should be adopted and carried into the legislation; that is, that we should have a bipartisan organization that would be established and given full corporate powers with eight nonpartisan directors?

Mr. REED. As I indicated in answer to Congressman Mundt's question, I had not recommended that. Perhaps I do not understand all of the reasons why that type of an organizational set-up should be used. I have talked with Congressman Herter and with others who are interested in his bill, but it seems to me that the kind of organizational scheme I have suggested is more consistent with our theory of government operation, and that on the whole, although I recognize full well Congressman Mundt's point that the maximum of obvious and evident bipartisan support is desirable here, nevertheless, I believe that the effective, rapid, and efficient administration of the program would be greater under a kind of a scheme that I have talked about, than the kind of a scheme he has talked about. I think there would be more debate and delay under that kind of a scheme than under this one.

Mr. KEE. Thank you.

Chairman EATON. The time of the gentleman has expired.

Mrs. Bolton.

Mrs. BOLTON. Mr. Chairman, Mr. Jonkman will be back shortly. He had to testify before another committee.

Mr. Reed, in considering the amount of \$6,800,000,000, have you considered it at all from the standpoint of doing the job, but on the

basis of doing as little as it is humanly possible to do by way of dollars, and still be effective and not putting all one's trust in dollars?

Mr. REED. Yes. I think it is unfortunate for us to think in terms of dollars at all, if we can avoid it. We have in the last analysis to translate these things into dollars because that is our unit and the common denominator of the measure of value, but I think we can think of it in terms of tons of steel and food and machinery and other items that are required to accomplish a specific and a clear objective; the objective being much more easy to state than it is to achieve and to analyze the real need.

Mrs. BOLTON. The objective would be definitely the setting up of security?

Mr. REED. Exactly.

Mrs. BOLTON. Not security. That is a bad word for final security would bring a static condition precluding growth.

Mr. REED. That is the ultimate.

Mrs. BOLTON. I mean what we generally mean by it.

Mr. REED. That is right. I quite agree. I think we must keep bringing ourselves back to the consideration of physical things that are going to be furnished under this program.

Mrs. BOLTON. And the morale?

Mr. REED. Absolutely.

Mrs. BOLTON. You spoke of the Germans and others. What is your view of them? Are they hopelessly discouraged?

Mr. REED. Yes; I think they are.

Mrs. BOLTON. Very hopelessly so?

Mr. REED. Yes.

Mrs. BOLTON. Is it just discouragement, or is it a deep, secret sense as some people tell us that they will come back and do it again?

Mr. REED. No. I think it is a hopelessness and a frustration and a lethargy that has resulted from almost 3 years now of not only very low diet—that did not bother me at all for the first year and a half or so; I think it was perhaps a good rather than a bad thing—and with complete uncertainty as to their status. Hundreds of thousands of them still are not permitted to work. They have not been cleared yet under the denazification scheme that has been going through. I think it has been slow and it has been a difficult job, but the result of it has been that substantially all the German people who have any ability based on previous experience to operate, to plan, and to act in executive capacities are immobilized, and the long time that it has taken to release them and either to classify them as bad or to say, "All right, you are all right and you may now proceed," has taken so long that that category, which, as you know, are the leaders in terms of production and economic activity, has just bogged down.

Mrs. BOLTON. You feel they are an important factor in the reestablishment of western Europe?

Mr. REED. Oh, yes; terribly important.

Mrs. BOLTON. Have you any reactions that you would express in the matter of the French franc in the past 48 hours, Mr. Reed?

Mr. REED. No; I am not sufficiently expert, Mrs. Bolton, in those matters. Just from the curbstone—

Mrs. BOLTON. I am speaking from the curbstone, too.

Mr. REED. My question on that is as to timing and not as to the desirability of the act. Certainly it was inevitable and certainly it is

realistic as viewed from my standpoint. Whether the timing of it in relation to other countries and the Monetary Fund was the best, I am just not competent to form an opinion on.

Mrs. BOLTON. Is it possible that the Monetary Fund and the World Bank itself should be reviewed? We are going to insist on the reestablishment of the fund currencies. They have taken a step to do that in their own country. Perhaps, if it runs counter to the Monetary Fund and various other things in the Bretton Woods agreement, it would seem as though we should study those in relation to all the currencies of Europe.

Mr. REED. Yes, indeed. That is what the Monetary Fund, of course, was created to do.

Mrs. BOLTON. Exactly, and of course if it does not do it we have to find out; do we not?

Mr. REED. To prevent competition in devaluation among the countries, which was so common during the thirties—that is its objective. As I say, I am just not sufficiently acquainted with the details of that and the background of that situation to have a view about it, but I certainly think that our members of the Monetary Fund should have a very strong view about it.

Mrs. BOLTON. In the matter of the method by which bipartisan interest and control might perhaps be secured in this legislation, would it seem to you that there might be a place for the group that Mr. Herter sets up, not on the operations but more in the advisory echelon?

Mr. REED. That would help. It seems to me if it were not purely advisory it would be almost sure to slow down the work and it would be definitely inconsistent with our theory of Government operation.

Mrs. BOLTON. Yes.

Mr. REED. I have not mentioned it here, but it seems to me that the Administrator would want to set up a number of advisory groups drawn from industry and the segments of industry where he is going to need the most help.

Mrs. BOLTON. He might, but I am speaking of what Congress would want to set up.

Mr. REED. Isn't it true that under the Taft-Hartley Act a continuing joint committee of the House and Senate was set up to watch very closely those operations and to see how it was going and to be able to act quickly if it seemed to be desirable to do something about it? I think that is the kind of a committee, perhaps as a standing committee, to work closely with the legislative body. To do that would be perfectly within the authority of Congress and I think perhaps a very desirable thing.

Mrs. BOLTON. Like the Atomic Energy Commission?

Chairman EATON. The time of the lady has expired. Mr. Jarman.

Mr. JARMAN. Mr. Reed, we are always happy to have you before this committee.

Mr. REED. Thank you.

Mr. JARMAN. Just as any other committee of the Congress must feel, because your testimony is always so able and beneficial.

Mr. REED. Thank you.

Mr. JARMAN. I want to express my appreciation of your presence here. Do you believe any considerable number of the people of the United States consider politics in connection with this effort to save the world? I mean American politics.

Mr. REED. Outside of Washington, you mean?

Mr. JARMAN. Yes.

Mr. REED. I do not know quite how to answer that. I would say, generally speaking, "no." I think they are trying to determine what really is right and whether our interests will be served or whether we are just again being made a Santa Claus.

Mr. JARMAN. There is no doubt in the world in my mind of the correctness of your opinion, and my mail indicates that to be true. That being the case, I do not share this fear about whether we have a bipartisan proposition or not. We have one party in control of the Congress and one in control of the Executive. It seems to me the way to make this thing bipartisan is for both Houses of the Congress to pass a bill with well-nigh unanimity and then for the Appropriations Committee not to quibble about the amount but to appropriate the amount you suggest with unanimity and then the other party, of course, and the Secretaries of the different departments will be on this Board that you suggest to administer it. It seems to me that is not only enough nonpartisanship, but I believe it is as much as people outside of Washington, as you say, want.

In fact, I cannot help but feel it is beneath the dignity and righteousness and the high level of the purpose of this program to be quibbling about how many Democrats and how many Republicans we will have in charge of it. I just cannot get that, to save my neck.

Mr. REED. The Congress would have the right and would be required to approve the two principal operating figures in the program—the Administrator and the Ambassador who head it up.

Mr. JARMAN. As far as I am concerned, I do not care whether they are two Republicans or two Democrats. I believe they will be good men and I do not care anything about what party they belong to. I would not insist upon one of them being a Republican and one of them being a Democrat. You touched, in answer to some other question, on what I think is one of the main objections to this, that is—you referred to it, although you did not say it in these words, but time is of the essence in this thing and you referred to the necessity of speed, and the more boards of directors and the more corporations we get, particularly when we have these regular departments of Government represented by men who are skilled in doing these things, it is bound to slow it up. To that extent I fear it will reduce the effectiveness of it. I believe that is practically what you said, and I thoroughly agree with it.

I want to confirm the expression of your opinion when you said this would mean more than an additional \$5,000,000,000 for the military.

Mr. REED. If 50 percent were added on.

Mr. JARMAN. Yes.

Mr. REED. I believe that is enough.

Mr. JARMAN. I believe Secretary Forrester's testimony in answer to questions by me not only fully confirmed your prediction, but he indicated there would be that much this year and a great deal more during the years to come. In other words, you can feel perfectly safe on your prediction. Of course, as you said, no one can know whether \$6,800,000,000 or \$6,700,000,000 or \$6,900,000,000 would do it, but you referred in your testimony to the danger that this might increase inflation in this country. There is a danger here.

Mr. REED. It certainly continues inflationary pressures on this economy to export any goods in short supply. There is no doubt about that.

Mr. JARMAN. And with prices going up, as we see them in buying meals from day to day, and because of the fact that it will probably cost so much more the month after next, or 4 months from now, to buy something, is it not reasonable to fear that \$6,800,000,000 would be too little at that time rather than too much?

Mr. REED. I am a little unhappy about your premise. I hope the price level is not going to go up that much more.

Mr. JARMAN. I certainly share your hope.

Mr. REED. If it does, that would be true. To the extent that it does, the 6.8 would be in effect reducing itself as the price level increased in terms of its purchasing power. There is no doubt about that.

Mr. JARMAN. The very shipment and the very export of these goods is bound to tend in that direction. Of course I hope, and I am sure you share my hope, that the Congress will do something to retard that inflationary spiral, and that that will not happen, but with the facts before us now I am afraid the chances are that that might be too little instead of too great, and I thoroughly agree with your opinion of the necessity of not throwing money in a rat hole by appropriating too little.

That is all, Mr. Chairman.

Chairman EATON. Thank you, Mr. Jarman. Mr. Smith.

Mr. SMITH. Mr. Reed, do you consider that this problem is worldwide, or is it confined solely to the European area?

Mr. REED. You mean, do we have problems in other areas?

Mr. SMITH. Yes.

Mr. REED. We do indeed; of course we do.

Mr. SMITH. Do you think the approach of this committee and the Congress should be to consider the over-all problem so that the people of this country might have a complete picture?

Mr. REED. I think it would be desirable, Mr. Smith, were it possible to do that. Had we all the facts, and had our policy a course of action that was crystallized in all areas of the world as it has in connection with the European picture, it would be well to have brought it all together and laid it on the table. On the other hand, I am so sure that our program is right and I am so sure that it is urgent in terms of Europe that I do not think we can afford to delay that segment of our activity until we have debated or made up our minds, or received recommendations from the executive side of the Government as to what we should do in other areas.

Mr. SMITH. Do you think that the program can be successful, without the cooperation of the so-called iron curtain countries in Europe?

Mr. REED. Yes, I think it can.

Mr. SMITH. Do you believe that production is the problem that confronts Europe today?

Mr. REED. I think production is the common denominator of the problem of every country in the world today.

Mr. SMITH. How will this program assist production, in your own words? You have had a lot of experience in the foreign service.

Mr. REED. This program, if it is properly worked out with each of the 16 countries, would be implemented only if and to the extent that

the Administrator is satisfied that the provision of the items to be included in an agreement with the particular country will have an important effect in lifting the production of that country. The same applies to each of the 16, and applies not only to the direct and immediate results of what we ship to them, but it also and very importantly would depend on those countries laying out a program designed to this same target, and to reach the same end, so that it will dovetail with what we are doing, and together it will produce the kind of a result we are talking about.

I believe that can be done and if in any case we were clear that that result would not follow, I would not make the agreement.

Mr. SMITH. You would be in favor of tying some strings to this program in some way to insist that certain objectives be set out?

Mr. REED. Yes; I think the Administrator has got to go to these countries and should go with a broad and flexible franchise which will permit him to trade and to insist upon whatever he analyzes that particular situation as showing to be necessary, and that will vary enormously from country to country. That is my difficulty with the statute itself. It would be fine if conditions were identical in all countries and the Congress could write into the statutes specific instructions, specific conditions, and specific limitations that would be applicable to all of them, but I am afraid that will not be so, and I am so very much afraid that they will write things in that will hamstring an Administrator when he comes to a particular country.

Mr. SMITH. Do you think we can get back to a free economy in Europe under this program? I have some fear, Mr. Reed, that all we are doing under this program is merely implementing the present system of rationing and allocation. It has been quite obvious that we have not gotten production. The CEEC report that we have states that up until 1946 the countries of Europe had attained a pre-war level of production. The falling off apparently occurred in 1947. How will this program that we are talking about here get these people back to a free economy again?

Mr. REED. There are two questions. One is whether it will assist production.

Mr. SMITH. Yes.

Mr. REED. I think it will and I think it can and I think unless it is clear in each country that that will be the result, that we ought not to undertake it because that to me is 80 percent of the job of getting rationing out of the way and getting controls out of the way. Those things always result from a scarcity of goods. Therefore the obvious thing to do is to get more goods and get more production, and with that will come a lightening of the pressures on prices and the need for rationing and controls. I believe we can make a tremendous contribution to those countries to achieve that end.

Mr. SMITH. But we do have in England today, or in Britain, rather, plenty of coal. We have in France and North Africa great agricultural areas. In other words, the things that they are asking from us can be obtained there.

Mr. REED. Britain in the last 6 months has made very signal gains in coal production. You say that they have plenty. Only now do they have enough to balance their own requirements with their production. A year ago they certainly did not. The Continent is still terribly short of coal and they are short of many items, raw materials

and commodities to be processed. They are short of equipment to produce bottleneck things. A ton of the right kind of equipment aid will produce, in terms of leverage, many, many tons of additional output.

In other words, there are many cases where there are facilities which need only some little gap to be filled in order to make the whole thing more productive, so that it is not like putting in a brand-new plant in Europe. It is supplying the items that are missing in order to make the whole step itself up in production, and the leverage should be and will apply, I think, if it is done intelligently and carefully.

Chairman EATON. Mr. Courtney.

Mr. COURTNEY. I have no questions.

Chairman EATON. Mr. Javits.

Mr. JAVITS. Mr. Reed, I am very much interested in your statement about the fact that this program has to have a business aspect, especially insofar as it is going to result in vastly increased production. Do you believe that under the form of organization which you have suggested, businessmen and business managers and technicians will actually go into the service of the Administrator for the purpose of doing this job, and will you tell us from your experience with the War Production Board just how you figure that out? What resources in American production skill will be made available to the Administrator under the idea for organization which you have in mind?

Mr. REED. I think, that in the last analysis is going to be the Administrator's first and greatest job. If the right kind of Administrator is selected and if he gets the right kind of help—from here and from the White House in presenting a picture of urgency and need to American business, there will result as happened in wartime, people separating themselves from their current activities and devoting a certain amount of time to this kind of job. It is not going to be easy and it is not going to be nearly as easy as it was during the war. To what extent the Administrator will be able to bring around him a body of men of the quality that is required remains to be seen, but certainly that is the No. 1 job, as I see it, for that individual.

Mr. JAVITS. Do you consider that one of the principal things or perhaps you consider it the principal thing which would make the program successful is this enlistment in its operations of the best American management skill. Would you express yourself on that?

Mr. REED. Assuming that the Administrator's franchise is right, then I have no question about agreeing with your statement.

Mr. JAVITS. Would you say it would be the most important thing?

Mr. REED. I can see the Administrator licked before he starts by having in terms of the law a franchise that is too limited or that gives him inadequate leeway in making his deals abroad, and all the rest of it, but assuming he has reasonable flexibility and enough money to spend, then there is no question about it. The quality of the personnel that are assigned to do that job with and for him is the No. 1 item.

Mr. JAVITS. Do you think they ought to be dollar-a-year men, or on salary as regular Government employees?

Mr. REED. I think that has to be determined as the organization is developed and as his needs appear. My personal view of it is that it would be far easier for the Administrator to gather around him a limited number of experts in certain areas and fields on corporate leave from their regular employment by borrowing them for a period of time from those companies, than by requiring them to resign and

cut off their career there with only the hope of getting back and coming down on a strictly temporary job into the Government service.

Mr. JAVITS. You feel, therefore, that an administrator could do better and could get better personnel on a dollar-a-year basis?

Mr. REED. I do not think there is any doubt about it.

Mr. JAVITS. In your opinion, will American industry consider this European recovery program as filling sufficient of an emergency need so that they will come forward and volunteer to do this job?

Mr. REED. No; I do not think that they will come forward. I think they will have to be pried out, myself. A few will come forward, but we have to take a good look at those. The ones you really want you will have to go and get.

Mr. JAVITS. Do you think American business management will consider this as equivalent to the war emergency?

Mr. REED. No. I am afraid they will not and that is what concerns me. That is why I say we are going to need strong backing from the Hill and the White House and other places in order to create the kind of environment and sense of urgency that is going to produce this result. I quite agree with you.

Mr. JAVITS. You state here in your statement that G. E.'s business is only 6 percent for overseas sale. Is that 6 percent critical to the company? Would you answer that in the light of our general interest in world trade as affecting American prosperity?

Mr. REED. Right now we could sell it all right here at home. But either one is in the export business or one is not. You cannot, it seems to us, use export markets as a dumping ground for surpluses when your domestic demand has been filled. You have either got to provide continuity for that business and your international organization has to get its fair share of the productive output of the factories in good times and bad, or you will have a weak and probably a profitless operation.

Mr. JAVITS. Do you consider it important in cushioning recessions? Right now you say you can sell everything you make right here.

Mr. REED. In terms of the future; yes. As of today, not at all. As of tomorrow, or some time, it would be very desirable.

Mr. JAVITS. Do you consider subsection (3) of section 7 (b) of this bill—and I will describe it to you—it purports to make certain guaranties of investments overseas by American industry in the types of recovery projects contemplated by the ERP—do you consider that practical? Would your company be interested?

Mr. REED. I do not think that is spelled out in a way that I quite understand. Let me put it this way. I know that some thought has been given by a good many people to try to find ways and means of stimulating the flow of private investment abroad.

Mr. JAVITS. Let me tell you that the bill provides that 5 percent of the amount appropriated may be used to guarantee first the exchangeability into dollars of the avails of foreign investments of American nationals, and protects them against losses due to nationalization of their investments. It is sort of an insurance against that for projects approved by the Administrator. That is the fact.

Mr. REED. I personally think if that is to be undertaken it should be given a good deal more thought and study than is going to be possible before this program should get under way. I have questioned whether, if that type of thing is to be undertaken, it should

be done on the limited basis of a European recovery program. I think thought should be given to its application to South America and to the Far East. It is a deep and important policy matter. To hook it to this urgent bill dealing with European recovery seems to me not to give adequate time to study it out and to be quite sure that we want it and that we want it applicable in all the areas where American products can go in the years ahead.

Mr. JAVITS. Mr. Reed, my time has expired, but perhaps one of my colleagues will get your personal views on what we should do about this phase of the Administration's program. Thank you very much.

Chairman EATON. Mr. Reed, do you not think it is a safe plan to have the Government guarantee General Electric's profit from abroad?

Mr. BLOOM. It does not say that. It does not guarantee profit.

Chairman EATON. It guarantees against loss.

Mr. BLOOM. It guarantees only 5 percent of the sales.

Mr. MALONEY. Five percent of the amount appropriated can be used.

Mr. REED. Of 100 percent.

Mr. BLOOM. That is what I brought up some time ago. Five percent of the full amount is \$340,000,000 or more.

Chairman EATON. Mr. Mansfield.

Mr. MANSFIELD. In regard to that question which Mr. Javits brought up it appears that the 5 percent is one of the most desirable features of the bill because it certainly offers an incentive to American business to go into this particular area, and if it is successful it will take that much of a burden off the shoulders of the Government. You were asked a question, if in your opinion the problem which faces us in considering the present situation in Europe is world-wide. Your answer was "Yes." Do you think that this country has the resources to go into a Marshall plan for the rest of the world?

Mr. REED. I never knew what the Marshall plan was until these bills began to spell it out. I would not have any more idea what you were thinking about when you said a Marshall plan for the rest of the world, so I cannot answer that question. I do not know how much we would accomplish by trying to answer it. These matters will come to us in sequence and it seems to me we have got to do what we consider to be urgent and doable on a particular program at a particular time. I don't mean that we must lose sight of the fact that there are other areas of the world that need our help, and in our own best interests we probably will have to take steps and provide things, but to delay what seems to be a perfectly clear need with a perfectly gain to us on the European program because of doubts as to our ability perhaps to implelement some great need in some other area later on would simply let the whole thing fall. In other words, we would not even get the clear benefit of the program that is before us, and I cannot see holding that up or disapproving it simply because we might find ourselves unable to implement some other program in some other part of the world at some other time.

Mr. MANSFIELD. What I have in mind is this: Do you think that the western European area is the point which should be given immediate consideration along the lines suggested by the European reconstruction plan?

Mr. REED. Yes. I think it requires immediate consideration.

Mr. MANSFIELD. There are other areas in the world which are likewise being considered and the point that enters my mind is this: One, can we allocate money to those areas and at the same time do so without depleting our resources still further? Secondly, can we afford to appropriate funds for other areas without having in return some such sort of a specific proposal from those other areas as is contained in the proposals of the 16 western European nations? That is the question in my mind because I realize that the resources which this country possesses are not able to go on forever. We have to conserve them. We have to evaluate each step we make and as I see it that point enters in very much into this program.

Could we, in your opinion as a businessman and one vitally interested in this question, be able to carry on the ERP along the lines suggested by you with an initial appropriation of \$6,800,000,000, and at the same time reduce taxes in this country to the extent of \$5,000,000,000 to \$6,000,000,000?

Mr. REED. That is quite another question.

Mr. MANSFIELD. They are tied in together. Where is the money coming from, as Mr. Rich says?

Chairman EATON. That is high authority.

Mr. REED. I have not said that I was favorable to tax reductions.

Mr. MANSFIELD. I know you did not, but I am trying to bring in the two because we are faced with these two proposals.

Mr. REED. I quite agree that we must consider all of these questions—expenditure as well as income, before we deal with the tax-reduction program.

Mr. MANSFIELD. Would it be cheaper or to the better interests of our country to go ahead with a program of this sort and for the time being sidetrack legislation seeking to reduce the payment of income taxes?

Chairman EATON. That is a question which is up before the House at this time.

Mr. MANSFIELD. All right. I will pass it up then.

Mrs. BOLTON. One might say that it is undergoing bipartisan consideration.

Mr. MUNDT. I think you should have told Mr. Reed what the revenues are.

Mr. MANSFIELD. I think he knows it. You mentioned the fact that if this plan fails that the alternative would be an increased expenditure for military purposes. What other alternatives are there in your mind, as far as this country is concerned, in its relations with Europe as a whole?

Mr. REED. What other alternatives?

Mr. MANSFIELD. Yes.

Mr. REED. You mean either we do it or we don't?

Mr. MANSFIELD. That is right. Now suppose we either do not do it or do not go far enough. What is going to be the result of these European countries vis-à-vis in their relations to us?

Mr. REED. In my opening statement I tried to express my view on that. If we do not go through with this program, or, to put it in another way, if we say to Europe, "From now on you are on a cash-and-carry basis. We will ship to you and export to your areas only those things that you can pay for currently out of your current production." What would the result be? The result would be that there would be

a tremendous lowering of their standard of living right away in order to balance their imports with their ability to export, which at the moment is very low.

It seems to me on the food front and on the commodity and machinery fronts that the adjustment downward would be so drastic that it is very easy indeed to visualize Europe as an economic and political concentration camp. I doubt whether there is a government on the Continent that could withstand that rapid downward adjustment in their standards of living if we insist that from now on they pay us currently for whatever they get from us.

If that is so, then you can decide for yourself whether that is not exactly what Russia wants us to do and you can decide for yourself whether if there are changes in government throughout western Europe, those governments will not be Communist-dominated. If you decide they will be, then I think it follows instantly that the military needs of this country for defense and war preparation would be stepped up by an amount greater than what we are talking about spending for the European recovery program.

Mr. MANSFIELD. The result might be, you would say, an accentuation of the present trend toward a state economy and we might very well lose western Europe by default to communism and we would have deflation in this country because we did not find a market for our surpluses?

Mr. REED. Yes, sir; I agree with you.

Chairman EATON. Mr. Jonkman.

Mr. JONKMAN. Mr. Reed, I have a statement that will take me a good 5 minutes to put to you as a question and it will not leave you much time for the answer. There has been considerable discussion about stock piling. Let me say first, the objection to acquiring stock piles has been that recipient nations have already figured that they will get so many dollars for the production which will lessen the need for dollars from us and, if we are going to ask them to give it to us, they will need more dollars anyway. It is not quite clear if they want to get that out of loans or out of grants.

As I see it, if they are going to get it out of loans there is no need of making any provision for it because the average country would be glad to pay in commodities rather than in dollars at any future time. It seems to me what the proponents are seeking to do is to save some of these grants-in-aid. We are told by the State Department that the loans will run from 20 to 40 percent. Let us split the difference and call it 30 percent. That leaves 70 percent of this \$6,800,000,000 that will be in grants-in-aid, of which of course nothing will come back to us.

The bills provide they should create a special account when we give to the government and they sell for local currency. This local currency should be put in a special account. There is further considerable difference as to what we are going to do with that money; 70 percent of \$6,800,000,000 would be \$4,760,000,000, or close to \$5,000,000,000. It has already been intimated that we should use this to stabilize the currency. In other words, burn it up and deplete the currency. Of course, they might replace it with other printed currency. However, after all it is \$5,000,000,000 there.

What I want to ask is, Would it be a feasible plan when that currency accumulates there for the United States to invest that local currency in additional enterprises?

Mr. REED. In additional private enterprises in those countries?

Mr. JONKMAN. Yes.

Mr. REED. I do not think so. As you said, that is an enormous amount of money and if the United States Government undertook to take the currency, the local currency proceeds of the sale of grants-in-aid and invested them in private industrial activities for the production of whatever those countries are able to produce, I think in a matter of 2 or 3 or 4 years we would find the American Government possessed of controlling interests in so many productive enterprises of those countries as to put us in an exceedingly embarrassing position. I think we would be charged with doing precisely what Russia is doing behind the iron curtain today. I do not think it would gain us in the end, because there is still the problem of getting those funds out in dollars.

It might be profitable in local currency, but I think it would be an invasion, if you like, by American imperialism, and it certainly would be classified that way, into the heart's blood and the productive facilities of these 16 countries to a degree so large that it would do us in the end a great deal more harm than it would do us good.

Now, if private enterprise as distinguished from the American Government developed our foreign interests, it would not go into any such quantities as that, and, if it were to find its way in smaller amounts into those countries, I would consider it a very healthy and desirable thing because our American technique would go with it. But for the Government to contemplate the investing in productive enterprise in those countries, to me is a flagrant thing and I think it would be a mistake.

Mr. JONKMAN. In a way you have answered the question with a statement I like.

Mr. REED. I am glad of that.

Mr. JONKMAN. You said it would result in so many profitable enterprises that there would not be any end to it. Is there something objectionable to increasing the production of Europe?

Mr. REED. But not to make the 16 countries subsidiaries of America.

Mr. JONKMAN. I realize that there is that one objection that we would be imperializing and it would be called imperialism.

Mr. REED. Yes.

Mr. JONKMAN. But nevertheless it would remain a revolving fund and all you could ever get out of it would be local currencies. You would not care about it but it would be a revolving fund that would be constantly encouraging production in those countries while your alternative is that you do not know what to do with that \$5,000,000,000 except to give it to the administration in power. In other words, to create revenue for them. That, at all events, is what we are doing if we let them keep that currency.

Mr. REED. I think we ought to retain the veto power on the use of those funds; very definitely. But that is very different from suggesting that the right to, and the interest and return from, those funds shall belong to the American Government and then shall be used for the creation of factories and productive enterprises.

Mr. JONKMAN. I do not say they shall necessarily belong to the American Government. I presume maybe that would be the result. My idea is to create a revolving fund where it is used continually for the investment in new enterprises.

Mr. REED. I think that might be done, without our having any connection at all in the situation. In other words, I think it is a good idea, but I would not make it a firm and absolute rule on the Administrator, but I think on occasion it probably would be a good idea for the foreign government in connection with this food and other materials that are given to them, as distinguished from that on the loan basis, to set aside the fair local currency value of that material in an account which the foreign government could not spend without our approval. The funds would not be our funds in the sense that we could use them independently of the foreign government, but a joint agreement must be reached as to their use.

The results of the expenditure, however, would be for the benefit of the country and not for the benefit of the United States. On that basis we could have the veto power and we could say on this productive enterprise, all right, and on that one, no. We would use our rights, but we would not be chargeable with attempting to enrich ourselves by infiltrating, through the productive mechanisms of that foreign country, officially as a government.

Mr. JONKMAN. I managed to get both the question and answer in. Thank you very much.

Chairman EATON. Mr. Lodge.

Mr. LODGE. Mr. Reed, it came to my attention some months ago that certain electrical equipment which was going to Oak Ridge was also going to Russia. I make no comment as to whether that was desirable or undesirable, because I am not especially familiar with that particular electrical equipment. but I wonder if it would not be an indiscretion for me to ask you whether out of that 6 percent any equipment is going to Russia which has anything to do with nuclear fission?

Mr. REED. No. The answer is emphatically and positively "no." We have a technician of the Atomic Energy Commission in Schenectady where all of our foreign orders are screened, to be absolutely certain that nothing that has application to the development of the production of fissionable material is allowed out. We think we know something about the production of that material ourselves but, in order to be dead sure, we have a representative of the Atomic Energy Commission there just to clear that very point.

Mr. LODGE. I am very glad to hear that. I presumed, of course, there might be such items as generators which could be used either for that, or something else.

Mr. REED. General-purpose equipment; yes.

Mr. LODGE. There is some of that going to Soviet Russia?

Mr. REED. Yes. There is no new business coming in. But we have orders taken as far back as 1945 from Russia at a time when the policy of this Government was not simply to acquiesce in but to urge American business to enter into commercial relations with Russia.

Mr. LODGE. What would your opinion be as to the desirability of continuing to send any electrical equipment to Russia from General Electric?

Mr. REED. I can tell you what our viewpoint is with reference to the uncompleted portion of old contracts that we have with them.

Mr. LODGE. I would be glad to have that view.

Mr. REED. Those contracts were made at arms length, in good faith, and at more than the acquiescence—at the urging of our Gov-

ernment—and we believe there is still some importance in preserving the integrity of contracts. From the standpoint of the General Electric Co. the contracts we have calling for the completion of shipments to Russia, we are meeting, unless our Government says, "We don't want you to do it."

Because there has been too little, by and large for a good many years now, integrity in connection with the maintenance of contracts both on a public and private level, we think it is our job to complete those contracts. If and when our Government says, "No. For top policy reasons we reverse ourselves. We now don't want you to ship"—they can through the exercise of export license controls tell us not to ship—of course, we won't do it. But for us unilaterally to say, "No. We have made a contract but we are not going to keep it," would mean that we would be making the foreign policy of the United States, and we are not going to do that.

Mr. LODGE. That is an excellent answer. Are you contemplating any further contracts with Soviet Russia?

Mr. REED. No. We are not.

Mr. LODGE. Mr. Reed, you suggested the idea of internal force on page 8, where you made what I consider a very interesting statement:

Who can say to what extent these efforts will neutralize our program? This is war, gentlemen—

I think you are entirely right. That brings up the question of internal force, because strikes and riots contribute to the expense of the program, and I believe recent strikes and riots in France were estimated to have cost the French something under 3 months' production. This is a burden on the American taxpayer.

Do you feel that the European recovery program in and of itself will be enough to protect the Governments of France and Italy from these attempts to capture their Governments by internal force, and do you recommend that we use any means other than the ERP to help these Governments in that connection?

Mr. REED. I think ERP would be enormously helpful to those Governments. I know it would be helpful to them—enormously helpful in stiffening them and making it possible for them to deal with their own people and with their minorities. No one can guarantee that the program is going to assure the recovery of Europe or the prevention of infiltration.

Mr. LODGE. I realize that and I wondered if you thought we should take any other steps besides ERP?

Mr. REED. What type of steps do you have in mind?

Mr. LODGE. Well, there are other things we could do to help these governments and to help the police of these governments. You realize, of course, that the Communist Party in these countries is heavily financed by Russia and that the amount necessary to combat these communist disruptions would be but a fraction of ERP.

Mr. REED. I think I indicated at the end of my statement that I believe it is just as important as the ERP itself that we provide adequate appropriations for the United States Information Service Program.

Mr. LODGE. I should like to say, Mr. Reed, that I am in thorough agreement with your very eloquent statement in that connection. My thought is that, aside from the information program and aside from ERP, there are other things which could be done to meet a threat,

things which have nothing to do either with propaganda or with economic aid, but which have to do with brute force, exercised internally in these countries. I wondered whether you would care to comment on that.

Mr. REED. No. I do not care to comment on it. I haven't any view except what my reaction is, and that would be totally negative.

Mr. LODGE. That is the type of war the Russians are waging now?

Mr. REED. That is right.

Mr. LODGE. You feel that we must not use any weapons to counteract that particular aspect of the cold war?

Mr. REED. In the way of arming the police forces. Is that the sort of thing you are talking about?

Mr. LODGE. That would be one thing.

Mr. REED. As far as I know they have not even asked for it.

Mr. BLOOM. Will the gentleman yield for a question?

Mr. LODGE. I have only 5 minutes.

Chairman EATON. Your 5 minutes is up.

Mr. BLOOM. I mean to say, you could not do that under the United Nations Charter if you wanted to, anyway.

Chairman EATON. That question has been settled anyway. Now, Mr. Jackson.

Mr. JACKSON. Not permanently, Mr. Chairman, because I am going to revert back to that question. Is it not true, Mr. Reed, that we have been carrying on in Greece something in the way of a miniature ERP, and that we have been experiencing an organized attack by Communist-led bandit forces to take over the legal government of the country by extra-legal methods. If this is indeed a demonstration of what we may expect from ERP in the other countries to whom it is proposed aid be given, it raises very serious doubt in my mind whether or not the program can be carried forward successfully without augmenting the economic help with some other manifestations of assistance as may be found necessary to implement our assistance.

Chairman EATON. You mean by "material help," militarily?

Mr. JACKSON. By whatever means may be considered necessary to carry out what we are trying to do.

Mr. REED. If the western European countries were physically and temperamentally and spiritually in the condition that Greece is in I would share your doubts very much. I do not consider them to be in that shape and I do not believe we are going to have the kind of difficulty with guerrilla warfare, and so forth, and with the terribly weak government that we are confronted with in Greece. I think your question is a good one. I don't know the answer, but I am inclined to think that the differences in the facts, as they confront us with the western European countries, themselves distinguished between the problem there and the problem in Greece.

Mr. JACKSON. Although, as a matter of fact, the minority concerned in Greece is probably not greater, if as great, as the active minorities in France and in Italy. Eighteen thousand ill-fed and ill-equipped bandits have been able to keep Greece in a state of turmoil for many, many months, and have actually won considerable ground.

Mr. REED. Many, many years, I guess.

Mr. JACKSON. For many and many years, taking refuge in the mountains against oppression, real or imagined, has been considered

an ancient and honorable profession in Greece, but in the present instance I think that the possibility of like activity in other recipient countries should be given very serious consideration in connection with the passage of this legislation. With further reference to Mr. Jonkman's statement on strategic materials and the possibility of some return to us in the way of stock piles of such materials, I suppose you know that in many instances we are a have-not nation.

Mr. REED. I am not sure that I have your question in mind now. You say there are short-supply items?

Mr. JACKSON. So we are led to believe by all the witnesses we have heard.

Mr. REED. That would be moving abroad? Yes. Food also.

Mr. JACKSON. What would be your idea on what Mr. Jonkman was saying? I was thinking of inserting something of this sort in the bill:

In order to speed up the productive capacities of the countries concerned and in order to bring in and develop new media of production—

something along this line—

that not more than 2 percent of the funds herein appropriated, or its equivalent in local currency shall be made available to recipient governments, only for the purpose of exploration, exploitation and development of new sources of supply for production of minerals, ores, timbers, chemicals, salts, industrial quartz and diamonds, or any other item of a like nature in world short supply which may be mutually agreed upon between the Administrator and the government of a recipient country.

Mr. REED. Well, that is permissive, is it, up to that amount? Does it require that that amount be requested?

Mr. JACKSON. That it shall.

Mr. REED. If you apply that to each of the 16 countries I think you will find in some countries you would be just that much short of available funds, because there just are not the raw materials in which we have an interest or in which we would want to make that kind of an investment.

Mr. JACKSON. We may put through specific authority to do that.

Mr. REED. All right, but the bill may well contain it not in terms of peremptory and mandatory instructions, but in terms of strong suggestions to the Administrator and give him authority to do these things. Then, if appropriate, he can fit them into the pattern of the agreements with the 16 countries wherever they fit normally. But to make it a flat, straight-out horizontal requirement, is in my judgment a mistake as I think it will corset him in a way that is going to hurt the bill.

Mr. JACKSON. Thank you very much, Mr. Reed.

Mr. MALONEY. Mr. Reed, in my opinion this program has two phases: One, the rehabilitation of industry in Europe; and the other is the relief of the people of Europe. That is, furnishing them food.

Mr. REED. And building rehabilitation.

Mr. MALONEY. Yes; and building rehabilitation. Do you think it would be feasible to separate in the bill these two phases? That is, separating even the administration into the two phases?

Mr. REED. No; I do not, sir.

Mr. MALONEY. Why not?

Mr. REED. Rehabilitation of industry involves three things, it seems to me. First, a study of the plant necessities to put the machin-

ery into a position where it can function effectively; second, it means seeing to it that the people who are working or who are going to work in those factories receive adequate nourishment in order that they can function adequately; and third, it requires that the pipe line of raw materials and components which would be fabricated in those physical facilities shall also be provided. So that the thing is one task really and all you are talking about in essence is that you provide men able to work and you provide facilities which are designed to do the job and you see that the flow of materials into the plants is there and ready to be worked on and put into the machines.

I do not think you can separate them. You might say on a strictly relief proposition, in the nonindustrial cities, you might separate that, but I do not think it would gain you anything.

Mr. MALONEY. There is one other question here. On page 8 you referred to economic and political war. I am wondering whether the American public really realizes that, in your opinion, we are in an economic war?

Mr. REED. I think the appreciation is growing.

Mr. MALONEY. Is there any way that that can be accelerated at all? I believe if we were in a shooting war the American public would rise up with patriotic efforts to back everything that the Government would do. In this situation they do not seem to know what is going on. Is there anything that we can do to make the American public feel the situation as it exists?

Mr. REED. My own view is that Russia will do it for us. I think she will continue to make bad mistakes in terms of her relations with America and that if that is properly publicized it is going to continue just as it has in the last almost 3 years now to build a greater and greater and most unhappy barrier between us and Russia.

Mr. MALONEY. You do feel, however, that it is unfortunate that the American people do not realize that more?

Mr. REED. Yes, sir; I do.

Mr. MALONEY. That is all. Thank you very much.

Chairman EATON. Dr. Judd.

Mr. JUDD. No questions.

Chairman EATON. Now, Mr. Reed—

Mr. VORYS. Have we finished?

Chairman EATON. We have finished the 5-minute rule. I would like to say before anything overtakes us, that we consider your testimony in reply to our questions the most illuminating and helpful we have.

Mr. REED. Thank you, sir.

Chairman EATON. I hope they will increase your salary. Does anyone want to begin again?

Mr. VORYS. I have a couple of questions. Mr. Reed, on this matter of a corporate set-up, you are chairman of the board of the General Electric Co. That is the board of directors, isn't that correct?

Mr. REED. That is correct.

Mr. VORYS. And I presume that GE like any other corporation is run by its board of directors? That is, they lay down the policies. Is that correct?

Mr. REED. That is true.

Mr. VORYS. Does your board of directors cripple or hamper the necessary executive activities of General Electric?

Mr. REED. No; but they very quickly could and would if they should undertake to operate it.

Mr. VORYS. You have a working understanding of the kind of directives that a board of directors gives and the limits upon the amount of detailed direction they give to an executive do you not?

Mr. REED. Yes.

Mr. VORYS. Why could not that same mechanism which is so thoroughly understood by American business be applied to this program? Why could not the Congress set up a board of directors, let us say exactly the same number. Possibly not of the same caliber, but as near it as we could come, to the board of directors of the G. E. and have them proceed to guide the administration of this thing the way a board of directors should? How would that cripple anything?

Mr. REED. In that case you would not go to the President. You would go to the board—this bipartisan board—and get your clearance and approval from them.

Mr. VORYS. That is right.

Mr. REED. Rather than go to the President.

Mr. VORYS. That is right.

Mr. REED. It could be done. Personally I think it would be contrary to the whole theory of government operation, and I think the program would move less rapidly under that kind of a scheme than under the kind of a scheme I have suggested, but it could be done. There is no question about that.

Mr. VORYS. And it would have continuity, as Mr. Mundt was mentioning, far more than some activity that was just the activity of the administration, or as they say in Europe, of the government then in power. Is that true?

Mr. REED. If I understand your question, I cannot quite see the advantages of it or the need for it in this case, and not in a great many other cases of very important projects that the Congress has authorized. If you do this there will be many other occasions in which you will want to do the same thing and I cannot see why you should short-circuit the responsibility and the authority of the executive side of our Government. To me it is unsound.

Mr. VORYS. As you say, this might be different from anything we ever did. This Marshall proposal is different from anything we have ever done. Is that not true? Remember, we are not talking now, or at least I hope we are not, about some emergency situation in war-time. We are talking about something now where whatever we do is going to be a pattern and a precedent for the dim and distant future. Is that not true?

Mr. REED. I hope not, sir.

Mr. VORYS. Do you mean to say that you think there is going to be a time 4 years from now when we can then heave a sigh of relief and have our Government and the American people quit worrying about the rest of the world and their economic condition, and the combination of economic, political, and ideological developments all over the world? I do not think so. I think the trouble is that too many of us, and possibly you, are thinking of an emergency situation that is going to be over shortly. I do not think that is true. I think whatever we do here is going to be a pattern for years, and years, and years. I would like your comment rather than just mine.

Mr. REED. That may be, Congressman. I would hope certainly that America would grow up to the leadership that has been forced upon us, and literally it is that; and I hope that through the years we will most actively provide the leadership around the world, both economic and political, which will be needed. However, that we are going to have to part year after year with part of our production in order to hold on to that leadership, I do not think follows. I do not mean to say that I do not believe we are going to have to pay the price of leadership, because there is always a price attached to it.

Mr. VORYS. That is right.

Mr. REED. Even if it were only in maintaining a large Military Establishment, but I do not in my own mind contemplate an indefinite subsidy of the economy of Europe, for example. If I did I would be very much concerned about this whole program. I do not think it will be necessary. I think if we do not do something here pretty soon that we may have to do something of that sort, and do it through a military machine.

Mr. VORYS. You consider whatever we do here an investment, do you not?

Mr. REED. I consider it very importantly in the interests of this country. In other words, say it is a good investment.

Mr. VORYS. A good investment?

Mr. REED. Yes, sir.

Mr. VORYS. And on an investment you expect to secure returns of some kind, whether they are precisely measured in dollars and cents or not. Is that right?

Mr. REED. Yes. I do not regard it as an investment from the dollars standpoint at all. I regard it as an investment in the negative sense; that it will save us expenditures far larger and it will hold very real promise of providing a peaceful world and a successful United Nations, which I cannot see on any other basis.

Mr. VORYS. The board of directors of General Electric are not all elected at one time; are they? You provide for different terms of service so that you have a continuity of the board?

Mr. REED. No. They are all reelected each year at the annual stockholders' meeting.

Mr. VORYS. Then I am wrong about GE. You have a tradition, however, do you not, of not changing the whole board every year?

Mr. REED. Yes, sir. I hope that tradition continues.

Mr. VORYS. Particularly the chairman. One other question. You mentioned that we have to have 16 separate agreements.

Mr. REED. The problems, the conditions and the resources. I think those are the three words I used. They will in the various countries differ widely.

Mr. VORYS. When General Marshall made his announcement, on June 5, he talked about a joint activity over there. It was my hope that this time we would have not a whole lot of separate agreements such as we had under lend-lease, but a multilateral agreement with this new organization. Would there not be some advantage in pressing toward unity in Europe with that type of activity?

Mr. REED. I see exactly what you mean. As I understand it, steps will be taken in that direction and have been taken by the organization of a Commission—I forget what they call it—of the 16 countries, on which we will sit, and whose job it will be to try to

develop an over-all program to begin to integrate much more closely the economy of these several countries.

If it were possible to sit down and work out one multilateral agreement with all the countries, and with all of the conditions back and forth, and multilaterally set forth in it, I think there might be some advantage in it, theoretically at least. But practically I do not think it is possible. I think we have got to make our agreements bilateral agreements so that we can in the case of each individual country deal with them at the end of the 15 months or a year individually, and hold them responsible for their performance under that agreement.

If you have a great multilateral deal, I do not think you could hold anybody responsible really, except the whole group, and that does not make a great deal of sense. I think there are great advantages to having bilateral agreements, but having them consistent with and fitting into a pattern which is the over-all pattern of cooperation. You may well provide in each of the agreements that each country shall do certain things in relation to other countries that will help implement that cooperation.

Mr. VORYS. I am not sure that I see what you mean. What I remember is that lend-lease started out as a matter of separate agreements. We soon arrived at a master agreement, which was a stock pattern from then on.

Mr. REED. But bilateral. It was a master agreement, but it was entered into bilaterally.

Mr. VORYS. Yes. Our experience in settlements under lend-lease makes me hope that this will have a different type of result in the long run. I do not see where we get by having so many different agreements and by having each of 16 countries seeking a little different or a little better terms than the other country gets, dealing with the one supplying country. But perhaps I should not labor that point.

Chairman EATON. Will the gentleman yield?

Mr. VORYS. I yield.

Chairman EATON. I would like to have this cleared up in my mind. I got the impression that Mr. Vorys in the back of his mind had the notion if we could turn this whole thing over to the board of directors and the men of General Electric, that it would be well done. Would you be willing to take that responsibility?

Mr. REED. Mr. Vorys is not close enough to General Electric. With all the tasks we have here at home, I do not think he would vote for that if he were really close to it.

Mr. VORYS. You gained the correct impression, Doctor. Let me say one more thing, not to trespass on your time and that of the committee too much. You mentioned here that the board of General Electric, a private institution, in its dealings with reference to Russia will be guided by what the Chief Executive, the President, orders with reference to our foreign policy. Is that true?

Mr. REED. Yes, sir. Of course.

Mr. VORYS. Of course. Can you conceive of a government corporation where the Board of Directors would not also be, of course, subject to the foreign policy of the United States?

Mr. MALONEY. Mr. Vorys, will you yield on that point?

Mr. VORYS. I yield.

Mr. MALONEY. Right along the line you were speaking of, in Section 11 (b) of the Herter bill it says that—

The Council shall from time to time (1) advise and consult with the President with respect to the establishment by him, within the limits of available funds and subject to this act.

Now, it presupposes that the President will be advised and consulted with on all these matters.

Mr. REED. Yes, but his approval is not required. There is a significant difference there.

Dr. ELLIOTT. I beg your pardon, but may I set the record straight on a point of fact. In the Herter bill the President's approval is required. The language is explicit on that. All directives, all programs, all policies.

Mr. REED. The postulate here was that this was not so and that the Bipartisan Board would have the authority to make a decision as to a program quite apart from Executive approval.

Dr. ELLIOTT. I understood you were addressing yourself to the postulate, but I want to correct the impression that the Herter bill does not make that explicit that all programs, policy and administration shall be set by the President with the advice of the Foreign Aid Council which contains these principal Cabinet members, and the Chairman of which is the Secretary of State, as well as the directors of the corporations; and the directors of the corporations by the terms of the bill have no power whatever, except in the implementing of this policy.

Chairman EATON. That does not mean at this point that the Herter bill is 100 percent perfect.

Dr. ELLIOTT. No. It simply clarifies the language.

Mr. VORYS. Mr. Chairman, I think I should say my questions to you were not attempting to draw an analogy between a private corporation and a Government corporation. You are perfectly correct. I was not confining myself to the terms of the Herter bill.

Mr. JARMAN. This question may sound far-fetched at first, Mr. Reed, but I do not believe it will be when I comment further on it. How many men do you have on your board of directors?

Mr. REED. 17 currently. They are a variable number.

Mr. JARMAN. Do you happen to know offhand how many of them are Republicans and how many are Democrats?

Mr. REED. I have not the remotest idea.

Mr. JARMAN. That is exactly the way I want to see this. You do not know and you do not care.

Mr. REED. That is right.

Mr. JARMAN. I want to see this program run that way and I want to see Governor Griswold in it. He is doing a good job in Greece. He is a former Republican Governor of some State. That is the way I want to see this program run. Without stooping to what I regard as petty political considerations on a tremendous world program which is especially very beneficial to us, such as this is.

Chairman EATON. Are there any other questions? We will adjourn until 2 o'clock when we will have Mr. Hazlitt.

Mr. LODGE. I apologize to the chairman. That is, may I say, one of the disadvantages of juniority.

Chairman EATON. Yes.

Mr. LODGE. I simply wanted to ask Mr. Reed this: I am sure that you feel, sir, that foreign affairs are intimately and inextricably tied up with domestic affairs and therefore it is perhaps as important to be nonpartisan in our attitude in domestic matters as in our attitude toward foreign affairs.

Mr. REED. They are fairly general premises, but you are right.

Mr. LODGE. On that basis, Mr. Reed, I wonder if you would care to comment on this: If you were Administrator of this program, would you advocate to the governments of the countries participating that they should base their fight against inflation on the same principles as those advocated by the President of the United States for combating inflation within the United States?

Mr. REED. That is a rather political question, I think. Are you asking me if I agree with the President?

Mr. LODGE. It does not seem political to me, Mr. Reed, because I cannot for myself divorce foreign affairs from domestic affairs. I am impressed with the fact that this whole enterprise is part of a composite picture and I cannot seem to think of it piecemeal. I feel that you cannot think of it piecemeal either because in your large enterprise you must be constantly reminded of the interdependence of these various elements. I think you will agree with General Marshall that this program is impossible of success unless there is a certain amount of reciprocal self-help from these countries. This involves the reduction of trade barriers, the stabilization of the currency, the reform of the tax structure, and what not.

Mr. REED. That is right.

Mr. LODGE. These reforms are so necessary to their existence that they will be influenced by what the Administrator may recommend in that connection. Naturally, therefore, I am very much interested in what philosophy the Administrator might have with respect to combating inflation and restoring stability and achieving a maximum amount of reciprocal self-help. I would be tremendously interested in your view as one of our most eminent businessmen, on that particular subject.

Mr. REED. As I say, I hope that the Administrator's recommendations would receive the most careful consideration by each of these foreign countries in any matter relating to the recovery of their economy. That would include tax policy and anti-inflation policy.

Mr. LODGE. That is unquestionable. I think it will.

Mr. REED. Now, your next question, as I understand it, is whether the Administrator will follow the lead or the recommendations in these various countries that the President recommends with reference to the domestic situation. Do I understand you correctly?

Mr. LODGE. My question was whether you, personally, Mr. Reed, if you were the Administrator of this program—

Mr. REED. I am not, sir, and I do not expect to be.

Mr. LODGE. I would like you, however, to consider that hypothesis, if you do not mind.

Mr. REED. Thank you.

Mr. LODGE. Whether you would advise these governments to combat inflation, to restore fiscal stability, to reform their tax structures, and all these other measures which are proposed, on the basis of the same principles as those advocated by the President of the United States in his message on the state of the Union for combating

inflation and promoting economic stability within the United States. That is my question, Mr. Reed.

Mr. REED. Many of the recommendations which the President made at the opening of the emergency session and again in the opening message on the state of the Union, I do not agree with.

Mr. LODGE. Do you believe there will be any danger that the Administrator will have a tendency to follow the President's economic philosophy with respect to those internal problems?

Mr. REED. I do not know the answer to that. I would hope that the Administrator would, in consultation with his Board, approach the problems in each country on the basis of the conditions there. I think we all understand basically what the principles are and they are not going to have Presidential years in each of these 16 countries as these things are being worked out.

Mr. LODGE. You do not think you would necessarily advocate a \$40 tax cut as a method of combating inflation?

Mr. REED. I would very definitely hope not.

Mr. LODGE. Thank you very much, Mr. Reed.

Mr. JONKMAN. Are there any further questions?

Mr. KEE. Just a moment. Dr. Elliott made a statement awhile back about the Herter bill providing for the absolute approval of the President on the policies. I have very carefully considered the Herter bill and on page 4, paragraph (b), of section 11, it provides that—

The Council shall from time to time advise and consult with the President with respect to the establishment by him, within the limits of available funds and subject to this act, of the programs of United States aid to foreign countries * * *.

That section does not provide for any approval by the President of any decision of the Council or the Chairman of the Council, but on page 5 in subsection (c) in defining what are the duties of the Chairman of the Board it says that in—

formulating for the consideration of the Council proposed programs of United States aid to such countries and proposed policies in connection therewith, and (3) providing for the efficient execution of any programs of foreign aid and policies in connection therewith by issuing, with the approval of the President and after advising and consulting with the Council—

directives not as to the policies but directives as to carrying out the policies which he formulates.

There is no place where it says in the bill that the President should approve the policies. He only has the right to approve the directives issued by the Chairman in carrying out those policies. I found no place in the bill where the President is required to approve the policies formulated by the Council and Chairman. I would be glad to have it pointed out.

Dr. ELLIOTT. I suppose that Mr. Reed may want me to answer that, since it was my language not his. May I suggest that if the language requires redrafting, and I suggest that it might, that that might be done, but the language was intended by the legal draftsman to accomplish that. It says—

with respect to the establishment by him—

that is the President, in subsection (b). I take it there is no question about that—

It says that the Council shall advise and consult with the executive director regarding the execution of such programs and policies, but the

language "by him" refers exclusively to the President, where it says, "the establishment by him" meaning the President, of programs and policies.

Mr. KEE. The policies are formulated by the Council under that section and it provides that the President only approves the directives issued by the Chairman for the execution of the policies.

Dr. ELLIOTT. The other language, in the section you read, says—and that is part 3 of subsection (c) on page 5—"with the approval of the President." No directive can be issued without the approval of the President.

Mr. KEE. That is right. The directive as to how the policies are carried out.

Dr. ELLIOTT. Yes.

Mr. KEE. But nowhere does it say that the President has to approve the policy.

Dr. ELLIOTT. The President establishes the policies in section (b). Isn't the language clear there? Perhaps it may need to be clarified there.

Mr. KEE. It says he shall—

advise and consult with the President with respect to the establishment by him,

By whom? The Council?

Dr. ELLIOTT. The President.

Mr. KEE. Oh, no.

Dr. ELLIOTT. The language could only mean the President.

Consult with the President with respect to the establishment by him,

As it is, up to that part there has been no mention of the executive director in any way. The language clearly refers to the President, but as I suggested in my staff reports it would have to be clarified and nailed down.

Mr. KEE. It will have to be.

Mr. REED. That was definitely the intention, was it?

Dr. ELLIOTT. Yes.

Mr. REED. There has been some doubt in the minds of people about it.

Mr. KEE. There was a very grave question in my mind.

Dr. ELLIOTT. Mr. Herter attempted to clear it up himself in a letter to the Washington Post.

Mr. KEE. I have that.

Dr. ELLIOTT. But there could be no question that the language of the bill up to that time never referred to the Chairman of the Board of Directors at all as the executive director so that that could only mean consult with the President with respect to the establishment by the President. It is just not thought necessary to repeat the phrasing. "By him" could only refer to the President, but I agree with you, sir, that any remaining doubts should be certainly clarified in the language of the bill.

Chairman EATON. We will adjourn until 2 p. m.

(Whereupon, at 12:35 p. m. the Committee recessed until 2 p. m. of the same day.)

AFTERNOON SESSION

Chairman EATON. The committee will kindly come to order.

I have to be outside. I will ask our distinguished colleague, Mrs. Bolton, to take the chair this afternoon.

Mrs. BOLTON (presiding). Should we go ahead?

Mr. KEE. Unless someone suggests the absence of a quorum, I suggest we go along.

Mrs. BOLTON. Mr. Hazlitt, we are very happy to have you here. We have been looking forward to this very much. You made your pronouncements on several occasions. We are looking forward very much to your development of your own ideas for us, knowing you will give us a great deal to think of.

STATEMENT OF HENRY HAZLITT, BUSINESS COLUMNIST OF NEWSWEEK MAGAZINE

Mr. HAZLITT. Thank you, Madam Chairman.

I am greatly honored by the invitation to testify on the proposed European recovery program before your distinguished committee. I have already dealt at length with the basic facts and principles involved in the proposed program of foreign aid in a book which some of you may have read called *Will Dollars Save the World?* I should like here, therefore, to confine myself to suggestions for a positive program, with only an incidental explanation of some of the reasons for these suggestions.

1. Marshall plan or no Marshall plan, Europe will not recover as long as European governments retain the economic policies they have been following since the end of the war. Europe has driven more of its own private capital underground than the total amount it is asking from us. As long as socialization, nationalization, unbalanced budgets, monetary debasement, general price fixing, exchange control, and the whole collectivist network of government prohibitions, permits, licenses, and orders are retained, any amount of dollars we pour into Europe will be more than offset and nullified by stifled production and chronic crises. Our experience with Great Britain will only be repeated on a much vaster scale. Europe will be in a much worse situation after our help is poured in than it was before it began.

Whether or not we decide to impose any conditions with our help, therefore, this basic economic situation must in some way be brought home by Congress to the American people and to the people of Europe. What is most important to the revival of Europe is not American loans but a complete change in the internal economic policies of Europe. Unless the political conditions of revival exist in Europe itself, Europe will not revive. There is only one way to restore production, and that is to restore the freedom to produce and the incentives to produce.

This is the central point that Congress must emphasize in its foreign-aid program. It is more important than any other. If it is thought impracticable to write this central point into the legislation itself, or in a preamble to it, the point ought certainly to be emphasized and underlined, for the sake of the record, in the report of this committee to the House.

Once we recognize this central point, we must recognize also the completely arbitrary and unscientific nature of the calculations of Europe's needs for American aid, either in their own figures or those of the State Department. It is frequently said that if Congress cuts down the \$6,800,000,000 that the State Department asks for the first 15 months, or the \$17,000,000,000 that it originally proposed for 4 years,

we should be giving only enough for "relief" and not enough for "recovery." Secretary Marshall has told Congress that it should "either undertake to meet the requirements of the problem or don't undertake it at all." The implication of this is that any sum under the amount requested by the State Department will not meet the requirements of the problem. But there is no real basis for this view. Whether or not Europe recovers economically in the next few years has little to do with the exact amount of money and goods we send her; it depends primarily upon the policies followed within Europe itself. If those policies continue to be those of the last 2 years, then even if we pour in the whole \$29,000,000,000 that Europe originally asked for it would not bring European revival; it would only weaken and imperil our own economy. Unless Congress recognizes this point in advance, and makes it clear in its legislation or in its reports, it will be blamed for any failure of the program. Congress will be told that the program failed because it gave too little, or because it did not accept the exact organizational set-up proposed by the administration. Yet the real reason for the failure will be the economic policies of Europe itself.

The State Department repeatedly contends that the dollar amounts it proposes to pour into Europe under the Marshall plan have been closely and scientifically calculated. The truth is, as I have already pointed out, that there is no scientific foundation whatever for these estimates. They are completely arbitrary. To recognize their a priori and arbitrary character, we have only to recall a little of the history of how they were compiled.

I might begin by reminding this committee of a fact whose significance seems to have gone virtually unnoticed. On June 12 of last year, just one week after Secretary Marshall's first hint of his plan at Harvard, Benjamin V. Cohen, then counselor to the State Department, and surely a responsible spokesman, made a speech at Long Beach, Calif., in which he declared that Europe needed from us \$5,000,000,000 or \$6,000,000,000 a year for the next 3 or 4 years. This meant a top figure of \$24,000,000,000 and a minimum of \$15,000,000,000. Now, all succeeding estimates since then have kept the Marshall plan figures precisely within that range. The 16 European countries asked for \$22,000,000,000; our own administration reduced the figure to \$17,000,000,000. The proposed life of the plan is still 4 years, as it was in Mr. Cohen's speech. All this may show remarkable prescience on the part of Mr. Cohen. But I suggest that there is a simpler explanation: The nations of Europe were publicly tipped off last June by an official of the State Department concerning how much they could ask for.

In putting together the total of their alleged needs, the European governments used what we may call the balance-of-payments approach. That is to say, they added up all the imports they thought they needed from us and the rest of the world, set against them the exports they thought they could sell; and asked us for the difference. I need hardly point out that this whole procedure was utterly arbitrary and unscientific. No nation, not completely totalitarian, can know exactly how much it is going to have to import or be able to export even a year ahead. As a statistician would say, there are too many dependent, independent, and indeterminable variables. There is no such thing as a predestined trade deficit independent of loans

from the outside, of internal inflation, of price fixing, of tariff policies, of trade controls, of domestic production, of price levels, and of foreign-exchange rates.

To take simply the first of these factors—loans from outside—it should be obvious that the economic causation is precisely the reverse of what the 16 nations' report tacitly assumes it to be.

It is only gifts, credits, or loans from outside that permit a trade deficit to continue.

Otherwise the only trade deficit that is possible is one that is paid for by the sale of foreign securities or foreign currencies previously held, or by the direct shipment of gold. In the long run imports and exports must balance, simply because people insist upon getting paid for what they sell. If we extend no further gifts or credit, the outside world cannot continue to have a trade deficit.

It is the loans and gifts themselves that will chiefly determine the future European net trade deficit with us.

In short, even if we accept all the economic and political assumptions of the Marshall plan, we must recognize that the \$6,800,000,000 figure is completely arbitrary. It is sheer guesswork. There is no foundation whatever for presenting it as a figure which represents the difference between chaos and recovery, or the difference between communism and free enterprise, or communism and democracy, or war and peace, or any of the other frightful alternatives that have been put forward as the consequences of not giving precisely this sum.

2. One of the most important controls in Europe, particularly as it affects the United States, is the pegging of exchange rates at levels far above the real values of European currencies. It is made a crime in Europe for anyone to buy or sell these currencies at less than their official value. The effect of this is systematically to stimulate imports to Europe and to discourage or prevent exports from Europe, by making them prohibitively high in terms of dollars. European exchange control has brought about the present chronic deficit in European trade.

Here is something that the United States does have some power to control. It would be folly to extend foreign aid even a month longer unless we first of all insist on the repeal in the Bretton Woods agreements of the provision (art. IV, secs. 3 and 4) which makes it obligatory for all member governments in the International Fund to prevent free markets in their currencies. The fund agreement, fortunately, permits any nation to withdraw from the fund at any time without advance notice. In insisting on minimum reforms, the United States could quietly point out to other governments the existence of this withdrawal clause. It would be a major error from our standpoint or from the world standpoint to retain the Bretton Woods exchange-control provision any longer. If the administration fails to act of itself, Congress should insist on this minimum reform in its aid program.

When I first analyzed the effects of this European exchange control in my book and in articles several months ago, it was receiving practically no attention whatever from supporters of the Marshall plan. Suggestions that this exchange control should be terminated were dismissed as irrelevant and even heartless. But now, fortunately, the subject is beginning to attract the attention it deserves. The harmful consequences of overvalued European currencies have since been

pointed out, for example, both by the Harriman committee and by Bernard Baruch. In their own interest several European countries have been moving toward reform. Italy, about 2 months ago, announced that it would allow its currency unit to seek its approximate free market level. France is now proposing to adopt a 2-franc system, with an official franc valued at 214 to the dollar compared with the former rate of 119, and a relatively free franc whose value would be determined in a free market.

We may question the wisdom of the particular shape that these reforms have taken. But they are significant as a recognition of the impossibility of retaining rigid control of European currencies at overvalued levels. The United States has been paying heavily, and under the Marshall plan it would continue to pay heavily, for the maintenance of this vicious exchange-control system which until now virtually all Europe has been imitating from the Schachtian system in Nazi Germany. The abolition of this system is one of the minimum reforms that America should insist upon immediately in return for its aid program.

3. For good or evil, the industrial heart of Europe before the war was Germany. The German economic collapse is one of the chief reasons for the present economic stagnation in Europe. But this collapse has been largely imposed, not only by the policies of Russia and of France and Great Britain but by our own policies in Germany. In addition to the misconceived level-of-industry plan, we have imposed on Germany a continuation of the Schachtian controls over wages and prices under conditions which paralyze German production. This paralysis of German production has not only been costly to us directly, by forcing us to support our former enemies, and to pour in hundreds of millions of dollars to make up for the imposed deficiency in output, but it is responsible for causing a large part of the demands for aid from us in other European countries.

By our own insistence, Germany is today, second only to Russia, the outstanding collectivist country in the world. Here, where we have control, is the place to show Europe, by an example in its very heart, what a return to private enterprise can do for recovery. Only the restoration of a free economy in Germany, subject to American oversight and reasonable income reparations, can solve this problem. Congress must insist that the Germans work and be permitted to work, not merely to support themselves but to help make restitution to the neighboring countries of Europe which they looted and to which they brought so much destruction. A reform of our policy in Germany would alone save us billions of the proposed expenditures under the Marshall plan. It would do more; for it would increase world production and not merely redistribute world shortages.

4. It would be a great mistake at this time to initiate any explicit or even implied "4-year program" for Europe. The situation is too unpredictable to work that far ahead. If European governments make the economic reforms they should, the present proposed 15-month aid program may be all that we reasonably need to undertake. In any case, we should not commit ourselves to European aid, either directly or by implication, for more than these 15 months. In order to exercise whatever control is reasonably possible, and to act in accordance with the situation as it develops, we should leave ourselves free to see how it looks a year from now before committing

ourselves further. If it is argued that European nations must know what our contribution is going to be for 4 years ahead so that they can "make their plans," the answer is that we must know what use they make of our first year's help before we can know whether it is worth while offering more.

The proposal for limiting commitments both legally and morally to no more than the first 15 months has already been made by the Harriman committee, by former President Hoover, and by many others. I think it advisable for Congress to go even further. It should explicitly state that this legislation is not to be taken to imply further aid at the end of the 15 months, but that the United States will wait to see what Europe has done for itself in the meantime and what its needs are at the end of that period. Congress is already being told that it must go through with the European aid program because that program has already been promised to Europe by the Secretary of State. There is certainly no good reason why this Congress should impose any obligation, explicit or implied, on the next Congress or the one after that.

5. In the demands of the 16 European governments upon us, we should separate their requests for food from their other requests. We should try to meet the food needs of Europe as far as we reasonably can. And we should meet these needs so far as possible by gifts, and not by loans. I am sure that no American would hesitate to make sacrifices to keep the hungry and distressed going as long as we have the food to share with them.

I feel bound to point out, however, that in recent discussions of the Marshall plan both our surplus of food and Europe's need have been overstated. Before the war the United States produced less than 9 percent of the world's food supply in terms of calories; it produces even today only about 12 percent. Before the war we were on net balance a food-importing country; in the years from 1936 to 1940 we exported an average of \$294,000,000 of foodstuffs a year; we imported an average of \$665,000,000.

On the European side, to cite but a single example, Secretary Marshall, in testifying before the Senate Foreign Relations Committee, made the astonishing statement that the war had "destroyed livestock herds" in Europe. "Destroyed" is a big word. Yet volume II of the report of the 16 nations published by the Department of State, shows among other things that cattle on the hoof in those nations is in excess of 64,000,000 as compared with an average of less than 62,700,000 in the 4 years before the war. Furthermore, though the European governments put the blame solely on the war and on bad weather, the truth is that a great part of the present European food shortage is the result of their own bad policies. They have not allowed the price system to work; they have destroyed the incentive of farmers to sell crops to legal markets or to produce them at all; they have made it profitable for farmers to feed wheat wastefully to livestock; and so on.

But the European food shortage exists, and we should do our best to alleviate it.

I suggest that the best agency to do this might be the International Red Cross. If this is not thought suitable, then we should set up a new American Relief Administration. This administration should distribute food in Europe directly, making use of private European

personnel as well as Americans. It should study the manner in which Herbert Hoover distributed American food in Belgium in the First World War.

Some European governments may insist that most or all of the food we contribute must pass through their rationing system, to be sold by them to their own people while the governments retain the monetary proceeds. In this case all that we would be doing would be to reduce the tax bill of Europeans, or to make available to their governments money for expenditures for other and perhaps undesirable activities. To the extent that European governments insist that they should sell the food our Government sends them, we should insist in our turn that the foreign currencies received from the part of our food contribution which the governments sell must be deposited locally to the account of the United States Government. These funds can then be used by us partly to make Export-Import Bank loans to European private industries and partly to buy European goods to import into the United States.

6. With the food problem thus taken care of, there is no reason why the rest of the problem of European rehabilitation cannot be dealt with on a strictly business basis. We are constantly told that the way to put Europe economically back on its feet is to lend its manufacturers raw materials on credit that they can turn into finished goods to sell to us and the rest of the world. If such loans would really do all this, then it would be sound for private investors to risk their own funds in them. It cannot be argued that private funds do not exist in sufficient quantities. Our own Government has no funds that it does not ultimately take from private funds. Congress should therefore do what it can in removing any remaining legal impediments to the restoration of private credits to Europe. It should see that any red tape or unreasonable requirements on the part of SEC, for example, are removed.

It will necessarily take time, even under the best conditions, for private lending in substantial volume to get under way. Therefore Congress may wish to consider bridging the gap in the following manner: It might enlarge and extend for 15 months the loan authorizations of the Export-Import Bank. It should do this only as a means of ultimately preparing the way, however, for private credits. Therefore it should make the requirements for obtaining such loans essentially what they would be for obtaining private credits. The Export-Import Bank should not be authorized to make loans to foreign governments, but only to European private industries or business firms, and only on the strictest business terms. If the bank were authorized to make any so-called "business loans" either directly to socialistic governments or to their nationalized industries, it would merely underwrite and subsidize the deficits of those industries. In this way we would be directly supporting socialization and so retarding European recovery.

Congress should write the basic conditions for foreign loans into the new Export-Import authorization. It should provide that the past record of the borrowing firm, and its existing facilities, must be such as to give reasonable prospect that the loan will be repaid. The American loan must be an obligation prior to other outstanding obligations except to the extent that the borrower is prevented by previous contract from making it so.

Even if loans are made only to private industries and firms, however—or at least only to such nationalized industries as can affirmatively prove that they are not operating at an open or concealed deficit—the government of the borrowers should be called upon to establish certain minimum conditions if their nationals are to be eligible to receive these loans. The governments must agree in advance, for example, not to socialize, nationalize, or expropriate the borrowing industry or firm during the life of the loans. They must agree not to prevent the conversion into dollars of any repayments on the loans. They must agree not to impose any fresh wage or price regulations which will imperil or wipe out the ability of the borrowers to repay the loans. They must agree to permit free exchange rates, so as to make possible free conversion of local currencies into dollars.

One further possibility that might be considered: On and after January 1 of next year, for example, the Export-Import Bank might not be authorized to make any additional loans in the following 6 months unless there were at least a 10 percent participation on the part of a European lending institution. In this way the American risk would be shared by European creditors who would know more than we possibly could about the individual credit-worthiness of applicants for loans.

I do not pretend to know what volume of loans would be made under these conditions. What we can be sure of, however, is that loans made without such conditions would not only be money thrown away by us, but would fail to bring the recovery we are seeking.

The committee will notice that the proposals I have made here are similar in important respects to the proposals of former President Hoover. They put gifts and loans into entirely separate categories. The gifts would be made by one organization, the loans by another. This is important. Any single organization will find it impossible to mix charity and business. The two things call not only for different techniques but quite different mental approaches. It will be fatal either to the aims of charity or to the aims of business to try to mix them in a single organization.

8. May I remind the committee, as a final point, that the International Bank for Reconstruction and Development was set up specifically to take care of everything that the Marshall plan proposes apart from its purely charitable aspects. To the extent that we now make use of both of them, therefore, the International Bank and the Export-Import Bank should be directed to clear proposed loans with each other so that they do not find themselves duplicating, overlapping, or competing.

I should like to end by underlining once more the point I made at the beginning—that the decisive factor in European recovery in the next year or 4 years will not be the amount of American governmental aid, but the economic and political policies followed by the governments of Europe themselves.

Mrs. BOLTON. That is a very challenging bit of work, Mr. Hazlitt, and I know we are very grateful.

Mr. HAZLITT. Thank you.

Mrs. BOLTON. We have a little system here so that everybody may question you. We have 5-minute periods for the questions from each one, and I am going to leave mine for later in the afternoon and ask Mr. Jonkman whether he will begin.

Mr. JONKMAN. Mr. Hazlitt, in the next-to-last paragraph of your statement, speaking about loans and grants you say:

To the extent we now make use of both of them, therefore, the International Bank and the Export-Import Bank should be directed to clear proposed loans with each other so they do not find themselves duplicating, overlapping—and so forth.

Would you say that loans have no place in the Marshall plan? that they should be carried on by the International Bank and the Export-Import Bank?

Mr. HAZLITT. Well, it depends of course on how you define the Marshall plan. If you define the Marshall plan merely as the grant part of it, merely as the relief part of it, then this will be outside the Marshall plan. If you define the Marshall plan as a plan that originally contemplated both grants and loans, then this might be interpreted as a modification of the Marshall plan. I think it is just a question of definition of what is the Marshall plan.

Mr. JONKMAN. To get at what I want, may I carry the point further? Should the Marshall plan embrace the matter of loans where we have the Export-Import Bank and the International Bank?

Mr. HAZLITT. Well, if you are going to set out to increase the authorizations of the Export-Import Bank, then I do not see where you need any of the loan provisions of the plan as presently constituted.

Mr. JONKMAN. I would be inclined to agree with you. I think the loan element of the Marshall plan is really superfluous; in other words, should be handled by the bank. It, the bank, was created for that very purpose.

The committee has heretofore paid some attention to the matter that you dwell upon, the double standard of currency, illegal currency, and the free-market or black-market currency.

Would you care to comment on the effect of the devaluation of the franc by France in the last 3 or 4 days?

Mr. HAZLITT. Well, I think the most significant part of it is that it is the first major crack. Of course, the Italian situation was also one. But France is a much more important Nation in international trade. It is the first major crack in that respect in the whole system of control of overvalued currency.

Now, the French system is a complicated one, the one that they are setting up now. You cannot call it either a free or controlled system. It is somewhat an attempt to mix the two. It sets a value that is lower for the franc than the present value but that is not a realistic value any more than the 119 is. That is to say, I don't think the French themselves believe the franc has a real going market value of 216. The market rate might be 275, or something more like that. Why they changed the official rate at all I do not know.

They might have achieved their end just by having a free rate.

This "free" rate they have is not entirely a free rate because they are still going to have imports and exports subject to licenses, and so forth. So through their licensing system they will control the demand for foreign currencies.

So it is not a completely free system and it is a little hard to say what it will do. For example, it is a little hard to say whether this will actually lead to any substantial repatriation of French capital

because the people who are expected to repatriate may not have any faith in the value of the present franc, even of the readjusted franc.

They may not have faith in the policy of the Government and they have to pay in any case a 25-percent tax. So how much it will bring back is hard to say. But the chief thing about it is that it is a public recognition now on the part of the French Government that the previous rate of the franc was completely unrealistic, that it did not permit them to export. It made export prices prohibitive in terms of dollars, so it prevented French exportation. Now, the consequence of that was that imports were overencouraged by this artificial rate. Exports were also restricted. As to the difference, the 16 nations have come to us in effect and said "You have to make it up."

The United States has to pay the difference. If we get realistic exchange rates then the trade balances of these countries tend automatically to come to a balance, except for whatever securities they may have to offer or whatever gold they may have to pay for the excess of imports.

So that that in itself would make a tremendous difference in the demands upon us.

Mr. JONKMAN. In other words, you mean it will have a tendency to increase their exports and decrease their imports.

Mr. HAZLITT. That is right. So that the difference is that we will be called upon to finance less of their imports under such a system.

That is the chief result of it. Now of course you have the same problem here in France that you had with the British with sterling. The British objected to this devaluation principally because it will show up the pound. It will show up the fictitious nature of the pound value. It will put great pressure on them to reform.

Mr. JONKMAN. May I ask whether or not it would also create an unfavorable trade relation for the United Kingdom in that the tendency of France to increase exports or decrease imports would work also upon the United Kingdom?

Mr. HAZLITT. It will do that in a dual way. It is sort of a complicated thing. Dealers can engage in arbitrage transactions. The French can import from the United Kingdom at one rate, the official rate for the franc, and resell to us at the free rate. The exports of Britain might go out through that channel then.

In other words, it causes leaks in the whole British system, and the question of how Britain is going to keep those leaks in repair becomes a very serious question once the French do this.

Mr. JONKMAN. But all those leaks are fundamental fallacies in their set-up?

Mr. HAZLITT. They fundamentally result from the fact that the pound-dollar rate is a completely fictitious rate. That comes back to the point you raised a moment ago about the effect of this French reform. When the British made sterling convertible, the convertibility lasted for only 5 weeks. The reason for that was that they made it convertible at this completely fictitious rate of \$4.03 to the pound.

Now, that meant that anybody who had a pound wanted \$4 for it and nobody who had \$4 wanted a pound for it.

So the flow all went one way. It went out and had to be stopped. You cannot have a system half planned and half free. It does not work. It just leaks. So then the British blamed the convertibility feature, rather than the overvaluation feature. In the same way

this French system may possibly break down. They are trying to have a free market within a whole network of controls. Remember, they are still controlling their imports and exports; the whole thing is subject to licenses. It is a little hard to say in advance where the leak is going to come or where the thing is going to crack.

They either have to go further toward free markets or retreat, as I see it. It will be a free system or retreat back to controls.

Mr. JONKMAN. I think you would say it is the first step? A necessary readjustment that must come sometime anyway, before we can be of any help to them.

In other words, the bottom of the barrel is out as long as they have managed currencies?

Mr. HAZLITT. That is right, sir. We have in effect been financing overvalued currencies and helping to keep them overvalued. By keeping them overvalued we have helped to keep world trade unbalanced. We have helped to keep ourselves in a situation where we have to continue the aid.

Mrs. BOLTON. The time of the gentleman has expired.

Judge Kee?

Mr. KEE. Mr. Hazlitt, I understand this situation to be that Western Europe is sick. The United States feels that it is necessary to our safety and the security of our people that it recover.

We want to try to help it recover. You say, as I understand it, that it is impossible for Europe to recover unless the policies of her present governments are changed. Is that correct?

Mr. HAZLITT. Yes, sir.

Mr. KEY. How long do you think it will take for the policies of those governments to be changed, if at all possible?

Mr. HAZLITT. Well, of course, some of these changes come with dramatic suddenness, as the French exchange "decontrol" came, as the Italian changes came.

As I say, once they go to a free system in one place, then they are faced with a dilemma of either freeing more of their economy or going back and recontrolling again. We have a good chance. We have a fighting chance now of having them in their own interests go toward a freer economy.

Mr. KEE. Do you honestly believe that without any outside help whatever any recovery can take place in European affairs?

Mr. HAZLITT. Yes, I do. I am not myself suggesting no outside help whatever. I suggest we give them all the food that we reasonably can.

But answering your question I do think they could have a very great recovery without any outside help whatever, if by outside help you mean help from our Government, which I assume you do, and not private credits. Yes, I think they can. There is no reason, for example, why Germany cannot have an immense recovery if we just let her have the recovery.

Germany is the heart of Europe. Whether we like it or not, Germany has an immense effect on the other countries of Europe. The situation in Holland, Belgium, Switzerland, Sweden, and so on, all the countries surrounding Germany, might change overnight if the German situation changed. So there is a place where we are deliberately preventing recovery by our own policies or by insisting

the Germans follow completely unrealistic policies on wage fixing, price fixing, currency, and so forth.

Here again, there can be a great recovery in France with a free franc. They can give their exports great stimulation. I do not want to stick my neck out and say this thing will work out with the system they have because it is a very complicated arrangement, sir, that they have. It is a curious mixture of freedom and a controlled system. But the Italians have had pretty good results from their devaluation, or rather from their allowing a free market. Europe has been tied up in knots. The governments are tying their people also up in knots by the kind of regulations they impose. I have never argued, "Let them go to work." The people of Europe want to go to work. Their governments will not let them go to work. That is the thing I feel is important.

Mr. KEE. I beg your pardon, but it seems to me that when you say there is a chance of them recovering without any outside help, you are taking the position that we should help only when they change their policy and that if they change their policy they could recover without our help. Therefore what is the use of us doing anything except attempting to change their policies?

Mr. HAZLITT. Well, in the case of food their policies have been in large part responsible for the shortage of food. But the shortage does exist and therefore I feel that we ought to meet a need of that sort and hope that they will not get into it again.

Of course, if we give help and if they make drastic reforms to get our help, they will recover faster with our help.

Our original question was not how fast they would recover but whether they would recover. I can say they would recover. Of course, the amount of aid might control the speed. The chief thing will be the reforms they make to get the aid and not the aid itself.

Mr. KEE. My idea is that you are taking the position that notwithstanding the fact that Europe is sick, and needs help for recovery, yet we have no business going in there to help until she does recover.

Mr. HAZLITT. If you take the case of a dipsomaniac and you try to do something for him and he keeps secretly drinking himself to death, there is not much you can do for him.

My position is that they are doing so much to prevent themselves from recovery that they are going to block the effect of our help.

That is the real problem as I see it. We cannot help them as long as they continue these policies. We did that with England. We have already been through that. We lent the British three and three-quarter billion dollars.

We put conditions on it that they could not fulfill because they followed policies that made it impossible to recover.

As a result of their system they used up in a year and a half almost all that was supposed to last them 5 years and they were in a deeper crisis at the end of the period than they were when the loans were made. That is the prelude, I think. It is an indication of what will be the result of our aid unless they have very radical reforms in Europe.

Mr. KEE. You say in your statement here:

As long as socialization, nationalization, unbalanced budgets, monetary debasement, exchange control, and the whole network of government prohibitions, permits, licenses, and orders are retained, any amount of dollars we pour into Europe will be more than offset and nullified by stifled production and chronic crises.

Then according to your statement, until all those things are changed there is absolutely no use rendering any help?

Mr. HAZLITT. I did not quite say that, Congressman. I said as long as they keep this whole system, it will be more than nullified. If they remove a few of their controls, they will be a little bit better off than if they keep all of them. In other words, if they removed all of them they would be best off of all.

But if they remove a few of them they would be better off than with all of them. I see no contradiction in that.

Mr. KEE. According to your views promptness in going to the aid of these people is not essential. We must give them time to recover. Do you not feel if we take out time sufficient for them to recover they will all be dead before we get around to helping the sick?

Mr. HAZLITT. It is already more than 2 years since the end of the war. The European nations were better off in some respects at the end of the war than they are now. If their troubles had been caused solely by the war, then we would expect that you would see a gradual improvement year by year.

We have not seen that. The 16 European nations themselves in their report declared the condition was much worse than it was 6 months before.

In other words, they had failed to guess 6 months ahead what their condition would be and yet they went confidently on to predict what their condition would be 4 years ahead, after they admitted in the same report that they could not even guess 6 months ahead. The reason they could not guess 6 months ahead was not because of the war, for the war was over. Why were they worse off 6 months later? They were worse off in part because they did have very bad luck on weather. They did have a severe frost and drought. They were worse off mainly, even so, because of the policies they had followed in the meanwhile.

These policies of restrictions have not been discontinued. They have grown greater.

That has been the chief cause of the failure of Europe to recover.

Mr. KEE. Do you not think if we wait until those European nations change their policies there is going to be a hopeless task and a hopeless, chaotic condition over there?

Mr. HAZLITT. If we throw in our funds while they retain their policies there will be a hopeless, chaotic condition over there. I would like to say something about the extent of our funds. President Truman in his message to Congress said that it would equal about 5 percent of their national incomes, this money we were asked to contribute. In the State Department report they say maybe 5 percent but perhaps nearer 3 percent.

So what we are proposing to do is to reform Europe or to restore Europe by adding 3 to 5 percent to its national income. Now, it is quite obvious that what is most important is not what happens to that 3 or 5 percent, not whether that goes up or down a little bit, but what happens to the 95 to 97 percent that is within the European control—in other words, the market that they are creating themselves.

If there is a 10 percent increase in their home production that will be greater than the whole amount that we are asked to put in for 4 years in the Marshall plan. That increase in their own production cannot come except by a difference in their own policies. We cannot save Europe if it is determined to follow present policies.

Mr. KEE. That is all.

Mrs. BOLTON. Mr. Smith.

Mr. SMITH. Mr. Hazlitt, I am very much intrigued with your presentation, and I feel as you do about the general situation, that there must be governmental reform before we can pour our money in there so it will be effective.

You have emphasized this matter of private loans or commercial loans, but you have a big gap to make up in the matter of production, do you not? How about that?

Mr. HAZLITT. That is a very debatable point. Everybody has been arguing on both sides of that question. The supporters of the Marshall plan sometimes say that Europe deserves our help because it has done so well. Then they sometimes say that Europe deserves our help because it has done so badly. The indexes of production average something like 90 percent of the prewar figure.

Those indexes are not, I think, very reliable for all sorts of reasons. If you take the index of coal output alone, which I looked into at the time I was in France, it showed quite favorably at that time, I think, 85 percent of prewar.

But when you examined it you found the weight of the coal was 85 percent of prewar, but the burning power of the coal was not, because it had a lot of slag and they were washing it in poorer ways, and so forth.

So a lot of these figures have a large measure of debatability about them. But if they have already achieved 90 percent of their prewar production there is no reason to suppose that they cannot go on to achieve a higher percentage through their own efforts.

Mr. SMITH. Now, then, it is my understanding, as I read the report which these 16 countries presented to the State Department that up until the end of 1946 they had reached a prewar level of production in Europe.

Now, I do not quite understand how this severe deterioration set in during 1946 except at the end of the year when there was this severe winter condition.

Of course, last summer we had the drought situation. Have you any explanation of that situation?

Mr. HAZLITT. Of course, they did have this very severe situation in their crops. Whether it was sufficient to account for the downturn I do not know. I would like to point out something about these European crops. It raises an important question.

We ourselves had what we might call a crop disaster. Our corn crop fell from 3,200,000,000 bushels to about 2,400,000,000 in one year. That is a "disastrous" drop. It was due to the weather conditions. However, that 2,400,000,000 is only 200,000,000 less than the 10-year average preceding which was 2,600,000,000, and it is actually greater than the prewar 10-year average in this country.

In other words, we had a disaster in our corn crop. Nevertheless even with that disaster we had a greater-than-prewar production, the reason being that we started with very heavy plantings. We started with a big effort, whereas if you start with a subnormal crop, if you plant a subnormal crop, and have a disaster, then it will be a real disaster. That has been the situation in Europe. It does not take too much of a disaster to knock over a nation that does not start well in the first place. Take this whole British situation. In the coal crisis

they had last winter, before the winter started the coal stocks of October 1 of Britain were the lowest on record.

So they started with the lowest coal stocks on record before the winter came. Then with a severe winter it was more of a disaster.

That point has to be kept in mind in calculating the causes for this set-back. I think that in large part, a very large part of the set-back was due to their conditions of control.

Mr. SMITH. Thank you. That is all.

Mrs. BOLTON. Mr. Jarman.

Mr. JARMAN. Mr. Hazlitt, did you ridicule the possibility of the 16 countries stating exactly the amount of their imports and exports? Of course I cannot but agree with that because they could not do it exactly.

But you do not ridicule the idea of them on past experiences, resources, the experience of hundreds of years, the possibilities of assuming a normal weather and of course that might go wrong, but you do not ridicule the idea of them approaching the amount of their exports and imports, do you?

Mr. HAZLITT. Well, as I say, there is no such thing as a pre-determined trade deficit, a trade deficit known in advance. It depends upon the conditions that you are going to have, that you are going to get to. Now, prewar Europe did not have, or these 16 nations did not have, a deficit in trade. A lot of them may have had a deficit in the visible trade balance, but they made it up in invisible items. In other words, a balance of payments existed. They are predicting an unfavorable balance of payments over the next 4 years. If you take this one item alone, it makes a tremendous difference whether France has a devalued franc or whether France has a franc at 119. If the French franc goes on the free market, let's say to 300, then we can buy French goods over here for a third of the price of what they now cost us.

That means an immense difference in France's exports.

Therefore the currency policy alone makes a terrific difference. It makes a terrific difference in the trade balance of these countries in the next 4 years. And they cannot predict what is going to happen, irrespective of that policy.

Again, if you take things like price fixing: When we had price fixing in this country, price fixing of lumber, for instance, a certain unit of lumber sold for a dollar here and you could get \$1.60 for it in exports. Then if we did not put on export controls the whole lumber supply might have moved out of the country.

They have those sorts of things. Price fixing has a tremendous effect on the trade balance. Any one of these things that I mentioned makes more than incidental and minor changes in the trade balance. They are of the first importance. Internal inflation is of the first importance, in the effect that it will have on the trade balance, tariff policies, and of course, direct trade controls. Here these countries put direct prohibitions on imports from America. That has a tremendous effect on trade. The domestic production, of course, what that is going to be, has a tremendous effect. In other words, you have to try to predict too many things at once and there isn't anybody smart enough to do that.

Mr. JARMAN. Is there anybody smart enough to predict positively anything? Nobody could predict how long I live or you live, but

they can take actuary reports and estimate how long we should live on past experience.

Mr. HAZLITT. Well, what they can predict is that if you take good care of yourself you will live longer than if you do not.

Mr. JARMAN. Speaking about this policy: Is it your thought we should dictate the policies of these countries internally?

Mr. HAZLITT. No, I think that is impossible. But we can set eligibility requirements, which are a quite different thing. Not only does a private bank set eligibility requirements but Government banks do so. If you want to borrow or a private firm wants to borrow from the RFC it has to go through a pretty tough inspection and it has to hypothecate almost everything it has to get a loan from the RFC.

If a government wants one of its nationals to get a loan he has to be eligible. We have certain requirements that he meets. That is all I am suggesting. We give them certain requirements that they meet. If they say "We cannot meet those requirements" we will say you do not have to; only if you want to meet them do you get the loans.

We are just offering loans to industries and to nations which will meet these eligibility requirements.

If they say "You are trying to dictate our internal affairs" we will say, "Nothing of the kind. You can have any internal affair you want."

But we are not subsidizing those.

Mr. JARMAN. You could say you do not meet the requirements and you cannot have the loan. But you have this question. I notice you emphasize the humanitarian phase of it. Am I correct in getting the impression that you do not think this country is going to profit by this endeavor any more than just doing a good turn to starving people in a humanitarian way?

Mr. HAZLITT. You mean by giving the food?

Mr. JARMAN. No, the general approach. I had in mind the other, more than the food. I mean, is the only purpose or benefit that we as a country are going to obtain from this program just the humanitarian good that we do by keeping some people from starving?

Mr. HAZLITT. I am analyzing this program in its economic aspects. Considering its political aspects, I did not mean to go into political aspects of the question, but it seems to me that the Marshall plan considered in its political aspects is an attempt to implement a foreign policy that is so vague that nobody knows exactly what it is, and it seems to me that the real requirements are a much firmer and more definite attitude toward Russia, for example.

I do not think we can buy friendship by this plan. We did not buy British friendship by our loan. The leading economic journals of Britain have denounced the loan from one end to the other. They have attributed their lack of recovery to this loan. We did not make friends of the British with our loan. We certainly did not make friends with the Russians by giving them 11 billion dollars of lend-lease.

We did not make friends with Jugoslavia by throwing in hundreds of millions of dollars of UNRRA.

Mr. JARMAN. That lend-lease was war. We were looking for victory, not friends. Russia contributed per part of the victory finally on account of that \$11,000,000,000.

Mr. HAZLITT. But we could have put some conditions on that if we had not been so tender. We could have gotten a great deal more out of that \$11,000,000,000.

Mr. JARMAN. I know my time is up but I have one more question. I do not mean to impose. I have two questions. You referred to our letting Germany have her recovery. I judge you mean the United States. I want to say I cannot help but believe that Russia has had something to do with that.

Mr. HAZLITT. I mentioned Russia in that.

Mr. JARMAN. Russia may also have had something to do with not agreeing to the peace treaties, and so forth, with the fact that conditions in Europe were better 2 years ago than now.

Do you not think Russia had something to do with that?

Mr. HAZLITT. Russia did have something to do with that, but we are also responsible for part of it and particularly responsible for letting Russia have so much to do with it.

Mr. JARMAN. My time is up.

Mrs. BOLTON. This I regret for you are asking very interesting questions.

Dr. JUDD. Mr. Hazlitt, I was interested in your suggestion that we ought not to make any commitment beyond 15 months, except in return for certain changes on their part, or progress, as you would call it, in that period. On the other hand, do you not think there is a real danger in setting a termination date? As you yourself have just well said, what happens to the 95 to 97 percent of the production in their own country is infinitely more important in the long run than the 3 or 5 percent that we put in. And can we actually, knowing human nature, expect them to make an all-out effort to release the hoarded-up resources, or the held-back human energies, unless they are sure that we intend to stay in and win, jointly with them? I think that is almost the most important requirement for the success of the program: Their willingness to put their shoulders to the wheel. Will they do it on a 15-month basis?

Mr. HAZLITT. I think there are really two questions involved there. One is the economic question, and the other is the political question. I will take the economic question first. My own opinion is that if we give aid for 15 months, with no commitment on our part whatever to go any further, and with an explicit denial that there is a further commitment, then it seems to me their energies will be greater rather than less because they may think at the end of 15 months: "We may have to stand on our own feet. So the nearer we come to doing that the better off we are." They do not have to do that. If we think it advisable, based on their effort, we can again give them aid. They will have in mind the fact that they will have to stand on their own feet perhaps at the end of 15 months so they had better well try to get in that position as soon as they can.

Second, they will say to themselves, "The better effort we make, the better appearance we make, the more we do, the more America is likely to think that this program is effective."

Then the more likely they are to get further help. So those seem to me to be very strong incentives to go on. Whereas on the other hand if they have a 4-year commitment they are apt to rest on that, and say, "Well, we are going to be taken care of nicely for 4 years anyway. We do not have to make such a great effort."

I admit in dealing with the psychology of other people there are a lot of debatable elements. That is the way it strikes me. Another part of your question seems to be a political question, that is, of our

staying in there politically. That is entirely a different thing. But that is something we cannot do with the Marshall plan. That is something we have to do with our foreign policy by explicit affirmation of our intention to stay in Germany and by a policy of agreements with other nations. That seems to me to be a separate question from the Marshall plan itself.

Mr. JUDD. Are we not more likely to get success if we follow some middle road, not making any commitment beyond 15 months, but if possible, saying in the report, if not in the legislation, that we look with sympathy upon further aid, if there is evidence that it is needed and that they are making progress in the first 15 months sufficient to justify aid? I am thinking when we were in Greece; one of the chief weapons of the Communists in their propaganda was to say:

What is the use of you Greeks down in the Greek Government making an all-out effort to go along with America? There is a deadline in the bill that says this aid will end on June 30 of this year. All we have to do is wait until they have pulled out and we will take you over.

One of the ways they were keeping up the morale of the Greek guerillas was to say:

Just hang on until June 1948, then America pulls out and we can march on Athens.

I can see a disadvantage in putting a firm termination date. On the other hand I agree with you as to the disadvantage of letting them rest on us indefinitely. It seems to me if we had somewhere written in a recognition of no commitment after the 15 months but that the Congress will make its plans for the period following that 15 months in large degree on the basis of the showing that is made.

That would hold out hope and give incentive and at the same time protect us from overextending our commitments.

Does that make sense?

Mr. HAZLITT. I would see no objection to that whatever, provided the language were quite unambiguous. What I had in mind was the fear that we will be told that we have a moral commitment which we cannot escape, that this is not only a commitment to continue, but a commitment to continue with the same general terms, the same general dimensions in volume of aid.

We have gone through this now twice. You remember that after lend-lease was over, or most of us thought it was over, we learned later that the State Department was continuing to send lend-lease supplies to Russia.

Well, when Congress asked what was going on here, they said, "Why, yes, but we had a commitment."

No matter how much the Russians repudiate their commitments we live up to ours, so even when they are making a cold war on us we still give them lend-lease.

That was because of a mistake in ever making that commitment. The commitment should not have been made. Now we have the same thing happening again when Secretary Marshall makes this speech on June 5.

Up to June 4 of last year, Congress was free to decide what it wanted. But after June 5, it was not, because the Secretary of State, on behalf of the American Government, in effect promised aid, and Congress is being told now that one of the reasons it has to do this is because it cannot repudiate or let down its Secretary of State.

It seems to me that one of the corollaries of that is that the Secretary of State should have consulted the congressional leaders before he made the promise.

But anyway, I am only making that point for this reason, that we do not want to get into any more of these promises. We do not want to get into any of these things that wrap us up in the future.

As long as we are free I think that a statement of your sort would be valuable.

Mr. JUDD. His statement was not unconditional. It was a promise of assistance providing they meet certain conditions. I have one further thing on this matter of commitments. Although we fulfilled all our commitments to Russia, over public protest, the Government did not hesitate to interrupt our commitments to China. The President said we suspended those commitments. We did not want to offend a strong power, but apparently it is all right to offend a weaker power.

Mrs. BOLTON. Your time is up.

Mr. Mansfield.

Mr. MANSFIELD. Mr. Hazlitt, in listening to your statement I get the impression that you are for the Marshall plan—but—what you really advocate is another relief act with any real, sound assistance to be given in rehabilitating Europe to be done by American private enterprise.

Now, what we are trying to get away from is this idea of relief bills time after time, and to do something which would lay the foundation for a real economic rehabilitation of Europe, so that it can get on its feet and be able to take its place in the scheme of the world's economy. Is that correct? That is as regards the first part of my statement: Are you really more in favor of a relief bill than a rehabilitation or recovery proposal?

Mr. HAZLITT. I would say that the State Department has been arguing that any amount less than the 17 billion, or any amount less than the six billion eight, will be in effect mere relief and not rehabilitation.

Now, that seems to me to make the difference between relief and rehabilitation depend upon the size of the sum we give.

My own feeling is that it has very little to do with the size of the sum we give. It has to do mainly with the policies that European governments follow, after the sum has been given.

That will determine whether it is relief or rehabilitation. Europe will determine whether it is relief or rehabilitation. We cannot determine whether it is relief or rehabilitation. So it does not depend upon the size of the sum we give.

It depends upon the reforms they make. That depends in part of course on the conditions of eligibility we set up.

But it depends more on their own efforts to help themselves.

Mr. MANSFIELD. Personally I would be against the voting of any relief funds as relief funds because I feel that we have appropriated enough money in that respect. I think also that insofar as these European countries are concerned that they made very marked advances since the Secretary's speech at Harvard last June, which indicates to me at least that they are trying to do the right thing to bring about some sort of economic stabilization.

For example, you have the Benlux convention, which I will admit was thought up long before the Marshall plan, but which has come into effect recently.

You have this proposed customs union between Italy and France, and talk among the three Scandinavian countries of another customs union.

You have the recent action of the French Government in devaluating the franc. All those things indicate to me that these nations in need are making an effort to achieve economic stabilization. It is only a start. We cannot lay down all the conditions.

I think we should lay down some conditions so we will make absolutely sure that this risk which we are asked to assume will have the best possible chance for success.

You mentioned something about the decline in the British coal pile a year ago last fall. Would you blame socialization for that British coal shortage?

Mr. HAZLITT. I would blame the general controls. They had a great deal to do with it.

Mr. MANSFIELD. How would you reconcile that with the fact that prior to the war, when you did not have a socialist government in Britain, you had a type of coal economy that made it extremely difficult for it to flourish in a healthy condition? According to my information, 70 percent of the income taken out of coal mines went into the operators' pockets, and something between 20 and 30 percent went back into the mines to modernize them to a certain extent and to pay wages.

That is just the exact opposite of conditions in this country where the owners put back in, I understand, about 70 percent and the rest of it stays in their pockets and is used for other purposes.

Now, would you not say that the obsolescence of British mining machinery, the antiquated methods used, the small veins, and in a certain sense the opposition by labor against mining machinery—do you not think all those things helped to create the British coal situation as it exists today?

Mr. HAZLITT. They did. But I should like to point out that the coal production of Great Britain, poor as it was before the war was better than the present coal production. It made enough of a difference to make a tremendous difference today if Britain could restore, let's say, the 1938 coal production. Of course, it is a long history as to why the British got into this condition. One reason I think they got into it was because of the threat of socialization. That has been discussed for years in Britain. The British operator or mine owner had the feat that any capitalization he put in might be seized by the Government at a rate which he would not have much to say about.

I am not saying that is the sole factor but I think it is a factor in the situation.

Mr. MANSFIELD. Do you think the British coal system could have continued in the postwar period for an indefinite time as it had worked in the period before the war?

Mr. HAZLITT. No; as a matter of fact, the British situation has been getting steadily worse for some time, for quite natural reasons.

Their coal supplies are giving out and they have to take worse and worse veins all the time, so it is an increasing problem, sir. I do not think socialization has at all solved that problem.

The way that wages are regulated in Britain and the inability of the British miners to get goods for their pay, and so on, have reduced incentives.

That is a long story to go into.

Mr. MANSFIELD. My point is that, socialism or not, you very likely would have had the same situation as far as the coal industry is concerned that we have at present.

Mr. HAZLITT. I do not think we would have had it if we did not have the very tight controls which the British unions, for one thing, have imposed on the British economy. The union rates are not at all decided by the market there. The market has nothing to do with it. The unions decide these rates among themselves and often they do not get enough of a differentiation between coal wages and other wages.

Mr. MANSFIELD. Thank you.

Mr. LODGE. I was tremendously interested in your statement.

Specifically; I would like to refer to the statement you made on page 9 with respect to the exports and imports of foodstuffs from 1936 to 1940. With regard to the figure of \$665,000,000 of imports, to which you refer, would you not say that that figure included a great many items which are not properly foodstuffs, such as copra, palm oil, linseed oil and other oils for industry, paints, and so forth, and that the real foodstuffs imported were mostly items such as sugar and coffee?

Mr. HAZLITT. Well, these figures include both what are called crude and manufactured foodstuffs. This is not my own classification, but the classification of the Department of Commerce. If you take something like sugar—to take your example—in 1940 we exported about \$31,000,000 worth of wheat and flour and we imported, in that same year, \$137,000,000 worth of sugar. So we imported several times as much sugar alone as we exported wheat.

We tend to think of the wheat we export and forget items like sugar. I could not say offhand what items are included or excluded in these crude and manufactured foodstuffs. I do know that in both respects, both crude and manufactured foodstuffs, we imported more than we exported. As I say, the classification is that of the Department of Commerce; it is not my classification.

Mr. LODGE. I see.

I understood you to say that these participating nations are less far advanced economically now than they were at the end of the war. According to the CEEC report, by the end of 1946 industrial production in France, Belgium, and the Netherlands had recovered to 85 or 95 percent of the prewar level, while Italian industrial production was back to 80 percent of the prewar. I was wondering whether you felt that this report was inaccurate.

Mr. HAZLITT. No; I do not feel that. When I say they are behind where they were I am thinking about a lot of special situations. I am thinking of the British, for example, who are, in some respects, on their own testimony, in a worse position than they were before the loan was made. I believe the London Economist said a few weeks ago that in some respects "we are worse off than we were when the loan was made."

Professor Lionel Robbins a month or so ago said the British were worse off, in some respects.

Mr. LODGE. You do not think that applies to all countries?

Mr. HAZLITT. It depends on which index number you take. As I say, I haven't too much faith in these index numbers. They look better the farther you are away from them.

Mr. LODGE. I would like to point out one further thing. I think Mr. Jarman touched upon it. It has been estimated—and I do not know how reliable the estimate is—that the strikes and riots in France during the last weeks of last year cost the French almost 3 months' production.

Now, if we take the attitude that they must accomplish overnight what they have not been able to accomplish in centuries, and that these governments, threatened as they are by continuous Communist aggression must, under the shadow of those threats and without our aid, do things which may be unpopular in the first instance, we are going to be setting conditions which they will not be able to meet.

Therefore, I propose that we examine this thing in the light of American security. We are faced with a certain number of alternatives. It seems to me that the weakness of your thesis is that while you can perhaps prove it out on an economic chart, you fail to take into consideration the political cloud which hangs over Europe as well as over us.

What will be the net effect of our saying, "We will continue to bring you relief, but we will do nothing for recovery beyond what the World Bank, the Export-Import Bank, and private American enterprise will do"? Do you believe that these governments in these countries will be able to maintain themselves if we adopt that approach through ERP?

Mr. HAZLITT. Well, if we adopt that approach in ERP—and I think you are talking about this business of giving enough for food and making the rest available under the Export-Import Bank—I do not know what the total would be.

Mr. LODGE. My understanding is that you suggest that we should treat this legislation as a relief bill, and then, as far as any loans were concerned, they should be processed either through the World Bank; the Export-Import Bank, or by private American enterprise. I do not know whether I understood that correctly.

Mr. HAZLITT. That is right. I do not think we can make it relief or rehabilitation by naming it relief or rehabilitation. I do not care what it is named. If they do not reform, it will be relief; if they do, it will be rehabilitation. It is the consequence of the relief that is important.

Mr. LODGE. But I would point out to you that if you were in the position of De Gasperi in Italy or Schuman in France you would have to be guided not entirely by what you think is the proper medicine at that time, but which medicine you think the patient is willing to take. If the dipsomaniac to whom you referred makes the slightest bit of improvement, even though he may take an occasional drink, you may be completely warranted in helping him out.

These governments are under a constant threat. They cannot overnight make these Draconian changes which you, from your great knowledge of economics, recommend. They would be jeopardizing their whole government if they did so.

If we say we will not undertake this adventure unless they do these things first, then their governments are almost sure to collapse and you lose the opportunity to do anything.

Mr. HAZLITT. I would like to say this, Mr. Lodge: That when they do take what you call a Draconian step we are the ones that object to it. Now, here are the French, who want to reform and want to reform in the direction of free enterprise, and what happens? We object. We say, "Here, this is a bad thing. This is upsetting things." We are supporting the bad situation.

Mr. LODGE. As far as the French devaluation of the franc is concerned, I agree 100 percent. However, the State Department has I believe announced its approval. The International Monetary Fund has disapproved it. I think you are entirely right. Coordination and cooperation along these lines should be achieved.

I personally feel that it is very important to hold a conference, an international monetary conference. My only point is: Can we be so absolute as to say, "Either you do all these things which we know are good for you or we will not help you to recover. We will only feed you."

Mr. HAZLITT. I am not suggesting that we have any absolutes whatever. I am suggesting that we make loans available to Europe under certain conditions of eligibility. If they do not fulfill those conditions of eligibility we will not only not get the loans back, but the loans will not do them any good.

If the measures they take in order to be popular are the kind of measures that do not bring recovery, then they will not recover, whether those measures are popular or not.

You asked a question about the economic side of it. I have confined myself to that side because that is the side on which I mainly write. I did not want to get into the political side because it is a little bit out of my own bailiwick. But my own feeling is that, on the political side, the Marshall plan is an attempt at a substitute for what we ought to be doing vis-à-vis Russia.

Now, what we ought to have done long ago, for example, was to have taken a much firmer stand against Russia, and that is far more important than our lending money under the Marshall plan. If Russia gives me a kick, and I say, "You can't intimidate me; I will give Mr. Lodge \$5," and, if they give me another kick, I say, "I will give him \$10," that looks to me like an irrelevant answer to the Russian oppression.

Mr. LODGE. My time has expired.

Mrs. BOLTON. Mr. Colmer?

Mr. COLMER. Mr. Hazlitt, I want to specifically agree with you in that last statement. Some of us tried to get our State Department, some 2 years ago, to follow that policy—a firm policy—with Russia, which would have obviated a lot of this necessity for aid. I want you to know that I, as one member, am thoroughly in accord with that statement.

What would you think of the proposition of this Government making grants or loans the repayment of which would be by materials that were necessary for us in our stock-piling program, either now or later?

Mr. HAZLITT. Well, I do suggest something like that in relation to foodstuffs which pass through the rationing system and which are sold by the European governments. I think that those funds ought to be credited to the account of the United States Government. Of course, they would then be in the foreign currency. If France, for

example, sold our foodstuffs—the French Government—what **they** deposited would be francs and not dollars. If that were to our **account** then those funds would be available either for export-import **loans** by us or they would be available for stock-piling purposes, as **you** suggest.

I should like to add that the whole stock-piling question would **not** even arise if there were realistic exchange rates, because if there **were** such exchange rates then the goods would be purchasable at **their** market prices. They would not be blocked. It is because this **whole** system of export licenses for Europe to sell anything is involved **that** we are prevented from getting the materials. They would flow to us to any extent we wanted them if it were not for this whole network of controls.

Mr. COLMER. But, since our dealings with the particular governments are concerned, why could not a bartering arrangement be entered into whereby they would turn over so much materials **that** we needed for so much assessments?

Mr. HAZLITT. I tried to suggest here that in effect we try to **bypass** the governments of Europe as much as possible. If we give relief needs, the food needs, directly, we **bypass** them. If we make the loans to private industry, we **bypass** them. The reason for **bypassing** them is that it is so difficult and almost impossible to impose conditions of any kind—conditions that are worth anything—on the government because the government resents them.

Mr. COLMER. You suggest, though, that the way to do that is by having them change their systems and come in in accord with ours?

Mr. HAZLITT. No; I would just suggest about three or four reforms—just those necessary so that we could get our money out.

Mr. COLMER. Is that not what we did in the British loan?

You say that proved to be unpopular. We insisted on certain specifications being written into the British loan. A good many men, high in the affairs of Great Britain, objected to those provisions and said they would not work and said they would rather not have the loan. They got it, and just to what extent that contributed to the failure of the loan I do not know. I am asking you.

Mr. HAZLITT. We insisted, in that case, on the wrong conditions, to a large extent, and we did not recognize what the effect of those conditions would be, nor did the British.

In other words, asking for sterling convertibility was not a wrong condition, but a right condition. But in order that sterling should be convertible all sorts of other reforms had to be made. You cannot make sterling convertible and keep it at a fictitious rate. The two things do not go together. So as soon as they tried to make it convertible and keep it at a fictitious rate, it broke down. You cannot say 75 cents is worth a dollar and then expect that people will not exchange the 75 cents for a dollar as soon as you make it convertible. That is what happened to the British pound.

Mr. COLMER. Of course, no one can say that the prescription we write would be the proper one now, in advance. We look back now and see, possibly, these errors. But what assurance do we have that the prescription we now write would be the proper one? I make that as an observation.

Mr. HAZLITT. We cannot have absolute assurance. That is to say, there is no argument against it, as there is none for doing it.

Mr. COLMER. The big question in my mind about this whole program—and I would like to have a brief comment on it, if time will permit—is the popular objective, in a way, of the Marshall plan for the rehabilitation of Europe as a means to the stopping of pressure, not the stopping of communism but stopping totalitarianism, because that is what it is. Now, the big question is whether we can afford to go all overboard on this gigantic scale and run the risk of destroying our own economy, with the chance of gaining that objective, or will we destroy our own economy by doing so and defeat the very purpose that we seek?

In other words, if we destroy our own economy we play into the hands of Russia, which is their one hope.

Do you care to comment on that aspect of the problem?

Mr. HAZLITT. That is a very broad question, of course.

I think that there is one aspect that you raise, and that is our belief that we counter Russia by bringing economic recovery in Europe.

As I say, any economic recovery will be brought about by European policies rather than our aid. But, if you grant that, it is doubtful whether such recovery would be very much of an assurance of an anti-Russian policy on the part of Europe.

In yesterday's New York Times, after the British made the statement about a union—a western European union—there was a comment from official sources in Italy, and they said they thought it was a nice thing that Britain wanted to have this resistance to Russia, and so forth, but it would be very inadvisable for them to count on Italy because Italy was too weak a country to do anything. As a matter of fact, under present conditions of their military establishment, they would be more of a liability than an asset in any alliance. Therefore, they would beg not to be included.

I think here is a case where it is not the recovery of Italy that matters but their military preparedness, their military state.

Now, only insofar as the two things are closely connected would it help. It seems to me that as a policy against Russia the Truman doctrine was a much more realistic one, even though it had a lot of weaknesses, than the so-called Marshall plan.

Mr. COLMER. If I have time for this, I would like to ask this question: Specifically, as an economist, what is your reaction to the question that there is a danger of this country destroying its own economy in this all-out attempt to help rehabilitate Europe?

Mr. HAZLITT. Well, I think there is a great danger of our hurting ourselves, not perhaps so much in the direct way that is usually imagined but in a more indirect way.

For example, there is no doubt that our exports of foodstuffs have been one of the major causes for the rise in prices in recent months. The rise of wheat, of course, from \$2 to \$3 is one result. Now, then, we are trying to counter that here—at least the President has recommended that we counter that here—instead of by letting prices go up, by holding them down. If we put in price control in an effort to prevent this from having its effect on prices the result is going to be to unbalance and restrict our own production. Also, it will be to bring us to the very controls that have put Europe in a straightjacket.

Mr. COLMER. Are we not almost going to have to put on controls if we go out on this program?

Mr. HAZLITT. No; I do not think we have to do that. I think that the effect would be to have soaring prices. I think soaring prices would be less of an evil than controls would be because they do not distort and disrupt and restrict production. We just simply add to the evil, as I see it, when we put on price controls. But we can counter that if the program is held within certain restrictions and if the monetary policy does not allow prices in general to soar so much.

Mrs. BOLTON. The time of the gentleman has expired.

I have just one question.

I assume, from your general argument, Mr. Hazlitt, that your idea would be that if we desire the stabilization of the currencies of Europe you would wish it done by freeing them, whereas some people, when they use the word "stabilization" mean an arbitrary fixing and control of the rates, as is done in some places?

Mr. HAZLITT. Yes, Mrs. Bolton. There is a great deal of confusion of thought, it seems to me, about that subject. The only way you can stabilize rates under a free system, as I see it, is under a world gold standard.

You have a choice of only two other things. You have a choice of fluctuating paper currencies, which are bound constantly to vary with each other, bound constantly to be subject to the play of the market every day, or the choice of trying to have an appearance of stability where it does not exist by using the state's police power.

In other words, the pound is not stable at the \$4 rate. It only appears to be stable because anybody who pays less than that for a pound can be put in jail. Now, that is not my idea of stability. That is merely the fiction of stability, enforced by state police power. To substitute that for stability is not the way to bring world stability. Stability is desirable, but it can only come as a result of confidence in a currency, not as a result of a police power applied to a currency. They can only get confidence in a currency, finally, by restoration of a world gold standard.

Mrs. BOLTON. So that is your ultimate goal?

Mr. HAZLITT. Yes. But, as a transitional move, the only way a country can find out how it can stabilize its currency—what it is worth—is to first see its level in an open market. In other words, it is less of an evil for the French to have a free franc, changing its value every day, and perhaps quite violently on some days. That looks like chaos to the ordinary official who wants to impose his idea of those things. It is much less chaotic because while the rate is fluctuating trading is going on, because people are paying for francs in dollars what they are really worth in their estimation. So this is a necessary transitional move toward a real stability based on confidence rather than a fictitious stability based on coercion.

Mrs. BOLTON. It is now a quarter before 4, and we are very anxious to have Mr. Wadsworth make the statement that he wants to make to us before we finish for the afternoon.

If there are questions, I think we should have a further questioning of Mr. Hazlitt rather than change our witness.

Mr. Jonkman, do you have a question?

May I ask that you all be very considerate, each of the other?

Mr. JONKMAN. On page 10 of your statement, Mr. Hazlitt—at the bottom of the page—you say:

To the extent that European governments insist that they should sell the food our Government sends them, we should insist, in our turn, that the foreign cur-

rencies received from the part of our food contribution which the governments sell must be deposited locally to the account of the United States Government. These funds can then be used by us partly to make Export-Import Bank loans to European private industries and partly to buy European goods to import into the United States.

What would be your reaction to going a step further on that and saying that these funds could be used to buy stocks in foreign industry to promote new industry in these foreign countries? And you could state, since it was local currency, that we could invest it all right. But couldn't that help the very movement we are seeking to help—to stimulate production?

Mr. HAZLITT. You are talking about making capital loans as well as processing loans for raw materials?

Mr. JONKMAN. Use this local currency they get back from selling our gifts, which is there to be used for some purposes.

There has been reference made, I think, by the State Department, to using it to stabilize currencies by burning up a lot or by paying debts. Now, instead of using that currency for that purpose—and there is going to be pretty close to \$5,000,000,000 of it because most of this is going to be gratis—suppose we use it to put it into local industries and promote them?

Here in this country we have often said that undertakings are made by the Government that private capital cannot afford. Now it is going to be tremendously helpful there if, for instance, part of the investments are made with these funds so as to encourage the others to put their money into it.

The question is, flatly, to use these local currencies to invest in local industries or promote local industries still to be controlled by the local government and the United States Government.

Mr. HAZLITT. Well, I am inclined to think that that is a rather dubious use of these funds; that the foreign government, if it is at the direction of the foreign government, tends always to favor industries that make the country strong in a military sense. They always have their own political needs as a government in mind. We would just be building up the military potential of Europe without recognizing that that was what we were doing.

If the loans are going to be directed by the foreign government, then they will want to build up the industries that either militarize the country or make it stronger in a military sense or that are insisted on by certain pressure groups.

If we did anything like that I think there should be a minimum safeguard of not going into any such situation except with some contribution from European private capital. And also, again, I think we should insist that the conditions be such that the governments permit European capital to go into it, because if it does not, the thing is no good and will not bring recovery. The European governments have driven more capital underground by their own actions than they are asking for from us. This would help them to get the capital overground, or help them to release that capital. Then you might achieve something with it, but only if you did it, I should think, in cooperation with the European capital taking some of the risks.

Mr. JONKMAN. That is my purpose—that part of the capital of a new venture, for instance, shall be taken by local people and part by this fund. Of course the capital stock would be owned by the fund. Perhaps some would be reinvested.

Mr. HAZLITT. One suggestion that was made to me by an industrialist was that American capital be invited to take the initiative in putting in risk capital while the Export-Import Bank put in the mortgage capital.

I am very dubious about that myself. I think that if the American capitalists made any money there would be a big howl about it. I do not think that would be something that we ought to go into.

Mr. JONKMAN. Just what do you mean by your last sentence:

These funds can then be used by us partly to make Export-Import loans to European private industries.

Mr. HAZLITT. I had in mind their loans for the purchase of raw materials, to be converted into finished goods, to existing organizations. In other words, they would be the equivalent of ordinary bank loans in this country for that purpose, rather than capital loans, to set up new plants, and so forth. Now, of course, I think Congress might consider it an additional safeguard, having some European capital contributions.

Mr. JONKMAN. Then I would like a little further comment from your statement on page 5, second paragraph, the first two sentences:

In short, even if we accept all the economic and political assumptions of the Marshall plan, we must recognize that the \$6,800,000,000 figure is completely arbitrary. It is sheer guesswork.

Then you go on to say that it is your idea that this is based purely on the balance of payments basis.

Mr. HAZLITT. That is the way the 16 governments set it up, and I think that is a very shifting and doubtful basis. Moreover, all those figures are hypothetical, of course. One may think that this is accurate because it is a big guess which is the sum of a lot of little guesses. My point is that the little guesses are all wrong. Therefore, the sum is meaningless.

Mr. JONKMAN. I have been of that opinion constantly. I also think there is a balance of payments proposition. Outside of that they do not know a lot about it. In other words, it is difficult for anybody to set what is the minimum subsistence for a whole people. Still there are going to be some that are going to live in plenty and others are going to have scarcity.

Mr. HAZLITT. All these countries are on different standards of living as it is.

Mr. JONKMAN. According to the CEEC report it started out with the need for 5 billion 900 million. The first item on that was food, feed and fertilizer, \$1,452,000,000. Then they went on, for instance, with coal, in a different category, 342 million; petroleum supplies, 512 million; iron and steel supplies, 370 million; and so on.

Now, I just received a break-down of the various countries in which I find that, for instance, instead of what I put in the category of food, feed, and fertilizer being 1 billion and 452 million, it runs over 4 billion out of the amount of 6 billion 800 million. Does that not tend to verify that that is merely guesswork? In other words, here is the Paris committee that puts down food, feed, and fertilizer at 1,452 million, yet in this report in the Marshall plan they are planning on at least 4 billion 100 million of food, feed, and fertilizer. It does show that it is complete guesswork.

Mr. HAZLITT. There have been a very large number of discrepancies in the individual figures. I am sorry I have not got in mind what

particular discrepancies are or any table in front of me. They shifted estimates a good deal.

Mr. JONKMAN. Assuming they begin with the balance of payments basis, you have had long experience in economic studies and you have been a financial writer for the leading publications in the country—Could you give us any idea as to how they can arrive at some basis of what, for instance, is needed in the Marshall plan other than after having the balance-of-payments basis?

Mr. HAZLITT. I think it has to be arbitrary. It cannot be anything else but arbitrary. The only way I can illustrate that is by perhaps a somewhat frivolous illustration.

If everybody around this table or in this room figured how much the difference was between his income and his needs, if his needs were greater than his income, he would arrive at how much his deficit was. And if he turned around and figured: "Maybe my income is greater than my needs; therefore, how much of a surplus have I got to give the other people in the room to straighten things out?"

I think if each of us made that calculation we would realize that it is a completely arbitrary calculation. Nobody knows where to draw the line of where his needs are. It is a subjective, not an objective thing. It only becomes objective when you get to the subsistence level, when the question is whether a man will live or die. Then, of course, you might have a certain number of calories you can figure as an objective. But, apart from that, the whole business is necessarily a subjective business and you cannot reduce it to an objective figure. You can, but it is an arbitrary thing.

Mr. JONKMAN. Nor could they arrive at any definite conclusion as to how many calories certain persons were getting because of that same thing—that some are way above their needs.

Take, for instance, in France and Italy. I understand it is true, if you have the money, that you could buy anything you want. On the other hand, if you go into England it does not make any difference how much money you have—your rations are absolutely applied to you. So you have no final basis for figuring.

Mr. HAZLITT. They are not quite as strict in England, as I found out. There were a number of black market restaurants.

Yet there is a big difference in the tightness of the controls.

Mrs. BOLTON. Mr. Kee.

Mr. KEE. Pursuing the line of examination followed by Mr. Jonkman, in the event that his ideas were adopted, using this fund to establish industries in these countries, wouldn't that be running into great difficulty by reason of placing the United States as a partner in an industry in a country—a competitive industry with the local industry, and as a partner with the other government?

Mr. HAZLITT. Yes; it would raise a very large number of difficulties of that sort, undoubtedly.

Mr. KEE. This act or bill provides for a payment or a guaranty to investors of 5 percent of the total authorization, that may be used to guarantee outside investors who would enter into these countries for the purpose of building industries.

Do you care to comment upon that provision, as to whether or not it would take care of the situation?

Mr. HAZLITT. Well, one difficulty is, of course, one that I have touched upon a moment ago—if there is any combination of private

capital and Government capital and if the private capital, let us say, is the risk capital and all of the Government capital is the mortgage capital, in other words, if the risk is so great that it eats up the private capital, then, if the thing is a failure, there will be no complaint about it here.

In other words, let us say that the General Motors Co. wants to establish a factory in France and they would put up 10 percent of the capital and the Marshall plan, or the Export-Import Bank, or whatever, would put up 90 percent. If the General Motors Co. lost their money there nothing much would be said about it here. If it were a profitable investment and \$100 of investment became worth \$110, then it means that the General Motors would have doubled their capital and the Government would only still have its 90 dollars. Everybody would object to that. That would be used and thrown all around—that we were using this as something for exploiting American industry. The Communists would pick it up all over the world as another example of American capital infiltration and the subservience to Wall Street, and so forth and so forth.

Therefore, my own feeling is that American capital ought to be kept out of it. American private capital ought to be kept out of any mixture with Government capital.

Mr. KEE. You spoke of our permitting, instead of our entering into those countries with funds, and inducing the construction of new industries. You said that you would leave that to private capital and private investors. How many private investors do you suppose we could induce to go over and invest in any of these countries under present conditions?

Mr. HAZLITT. Well, I think there are American industrialists and big industries here who would like to set up plants abroad.

Let us call it United Motors, so as to be free of anything specific. They might want to set up a motor industry there because it is better for all sorts of reasons to have a local motor industry. Now, they would be willing to go in, I think, if they had certain protections and certain guaranties against seizures, against having their money blocked inside the country so that they could not withdraw the local currency, and so forth.

I have no idea how firm a guaranty could be given to them. I think that when governments have constantly repudiated obligations, have constantly gone back on their word as the European governments have, as in recent years, that it takes a long time to restore confidence, even if you have a good-looking set-up so far as pledges are concerned.

But that, of course, is something that they have gotten into themselves. It comes back to the point that their own policies have prevented them from getting American capital, just as it prevented them from getting European capital. European capital would not go into new industry now because it has no assurance.

Mr. KEE. Granted it is the fault of those countries, that they have made their situation themselves, that does not lessen the necessity of help.

Mr. HAZLITT. They are going to offset our help the way they have offset their own capital in the past.

Mr. KEE. Have you read the provisions of the bill we have under consideration, the one called the administration bill?

Mr. HAZLITT. I have seen the administration bill. I have it here. I have not read it all. I read part of the explanation. I have not read the whole text. At least, I do not have it fresh in my mind now.

Mr. KEE. Have you noted, on page 17 of the bill, the provisions set forth there which would require certain things to be done practically as a condition precedent to the receipt of aid by the participating countries? There are nine clauses there. They provide for bilateral agreements between representatives of this country and the participating countries. They must assume to do certain things before they become participating countries and take part in this aid. Do you not believe that those provisions throw all the safeguards around this program that are necessary?

Mr. HAZLITT. I think you have to have provisions to safeguard the program. I do not think that these particular provisions throw all the safeguards necessary around it. For example, I do not notice that these provisions—and if I am wrong, you will correct me—say anything about the termination, let us say, of price fixing, which is one of the most essential things possible to get a restoration of private industry. I do not think they say anything about the promises not to start to socialize or nationalize an industry after it is started. I do not think they say anything about blocking currencies and not allowing them to be withdrawn, and so on.

These are the kind of things you have to have. You have to have these eligibility requirements, but it seems to me they have to be tougher and more of them than here and also more explicit obligations than there are here if there is to be real protection for the funds that are put in.

Mr. KEE. Whenever you incorporate into an act of Congress, however, these restrictions and provisions, if you incorporate a provision in that before it can be enforced—must be enacted by the parliament or the legislative body of another country, you are interfering with the sovereignty of the other country. We are never in position and never will be and do not want to be in a position of telling the parliament or legislative body of another country what they must enact into law.

Mr. HAZLITT. I do not see that we are interfering with their internal policy.

Mr. KEE. If you wrote into this act something they must do as a condition precedent which before they can do it requires an act of their parliament or legislative body, then, you would be interfering.

Mr. HAZLITT. I cannot agree with you entirely on that. Suppose we say we are making certain loans eligible for private European industries. These loans will be eligible if the private industry does A, B, C, D, E; they will be eligible in such countries as have made agreements or have made or given guaranties, that A, B, C, D, E, and F will or will not be done. We are not dictating to anybody. There is the law. They can ignore it completely if they want. We are not dictating to them. They do not need to borrow the money. They do not need to come to us. If they want to become eligible, these are the conditions. If they do not do that, then, we are going to treat Europe better than we treat our citizens any place. If the Reconstruction Finance Corporation makes a loan, it has conditions of eligibility. It is not interfering with the person who borrows. He does not have to do it. If he wants to borrow, he has to conform

with requirements. We do not interfere with a veteran who gets a loan. If he wants that loan, he has to adhere to requirements A, B, C, D, E. That is all we are doing. We are not dictating.

Mr. KEE. I am sorry, I cannot agree with you, Mr. Hazlitt, because we know that the need over there is there, and the need is a serious need. I would never be in favor, if we are going to meet that need, of writing into the act conditions which we know those countries cannot fulfill.

Mr. LODGE. Will the gentleman yield?

Mr. KEE. I yield the floor.

Mr. LODGE. I would like to say this, Judge, that the problem is somewhat complicated by the fact that when the question was put to certain members of the President's Cabinet as to how we could prevent this aid from going to countries which might become Communist, the answer was that the Communists would never consent to the conditions laid down. Therefore, it becomes a quantitative rather than a qualitative question. We must lay down some conditions, not only for our own protection but simply because we do not want to give the aid to Communist-controlled countries. It is a question of degree.

Mr. SMITH. I have no questions.

Mr. JARMAN. I might bring myself to agree with your theory about those restrictions, Mr. Hazlitt, if this was a strictly business proposition like the Reconstruction Finance Corporation loan is, wherein the only benefit to be derived by this country is the interest that we receive. Then, I would thoroughly agree with you. But to my mind there are so many other correlative benefits that our country derives that I am like Judge Kee, I cannot go along with you on that. However, that is something else.

You have talked a great deal about changing policies. How can a change of policy cause stabilization in a country which cannot produce enough to feed its people in order that they might be able to work or to buy raw materials in other countries for them to work with? How can a change of policy change that?

Mr. HAZLITT. What country do you have in mind, Mr. Jarman?

Mr. JARMAN. I would say half of these 16 countries: Italy, for instance.

Mr. HAZLITT. Well, they have already, I think, achieved some gain by freeing their currency, for example. They can achieve further gains by freeing their markets. I hate to seem almost fanatic on this, but we have treated free markets lately all over the world as if they were things of the past and sort of jokes and things that anybody could kick around any way he wanted to. We have forgotten that when we put price fixing in, allocations, controls, we simply distort and disrupt profit margins everywhere and we disrupt production all over the world, wherever we do it. The price system is a marvelous mechanism. It is really a miraculous mechanism which we take for granted because it has been there for so long and grown over generations. But that decides how much of those different goods are produced, what their exchange ratio shall be, how much the quantities shall change, not only year by year, month by month, but day by day, how this adjustment of supply and demand shall be made.

That is a marvelous mechanism and a very delicate one. When you step in and say that nails can only sell for a dollar or so much, and

this can only sell for that, and you can only have this much coal because that is what you had last year, and so forth, and wages have to be so and so much, you gum up the whole process. There is no adjustment that takes place. The thing is rigid, and has to crack and break somewhere. That happened in England. It happens in all these countries that use this process. The thing busts open. It is bursting open in France on the franc control. It bursts open one place or another. But before it bursts open, it just puts the whole economy in a strait-jacket. That is the thing we have to get rid of. Loans will not do it. They will be thrown down the rat hole as European capital went down the rat hole. As long as they have these policies, they are not going to recover.

Mr. JARMAN. How many of these controls were in existence before the war?

Mr. HAZLITT. You could not count the number of controls that were in existence before or after the war. There must be 50 times as much as before the war.

Mr. JARMAN. They resulted from the war, did they not?

Mr. HAZLITT. They preceded the war; 10 percent preceded the war, and the other 90 percent came after. As to the number of controls, when this country, under the Guffey Act, was controlling what we called "the" price of coal, Dan H. Wheeler, Director of the Bituminous Coal Division, was asked by a congressional committee how many prices of coal they were fixing, and I do not know of anybody who was not there who could remember how many prices of coal they were fixing. They were fixing 350,000 prices of coal. Because there are thousands of mines, there are thousands of destinations, there are all sorts of ways of taking coal, by rail, by freight, by boat, and so forth. They were fixing prices. They had an actual schedule of 350,000 different prices of coal, before we had general price fixing. When the Office of Price Administration was asked how many prices they were fixing, they put out a figure one day. They said 8 million. Then they recalled it a month later and said they did not know. So the people that control it do not know what they are controlling. They have no idea.

Mr. JARMAN. Speaking of coal, there was a discussion a while ago about the coal situation in England. The testimony before this committee from our Ambassador to Great Britain is—I am not sure I remember it correctly, but as I recall it—while the coal situation, we all know, has been bad, I do not know which target he was talking about, but he predicted they were going to exceed the target; I do not know whether he meant this year or not.

Mr. MANSFIELD. It happens I have the figure here. The Ambassador was asked a question about coal and he answered:

The present rate of production of coal in the United Kingdom is at the annual rate of approximately 215,000,000 tons. The British themselves, for the year 1948, have set a production target, as I recall it, of 214,000,000 tons. During the year 1948, they will continue restrictions on the domestic consumption in order that there may be available for export the amount which they undertook to export during the war, which is, to my recollection, 8,000,000 tons. It is likely they will export more than that. By 1952, their program calls for a production of 249,000,000 tons of coal a year, which is greater than the annual rate of production during the period 1934 to 1938. I believe they can achieve that goal if they attack the problem with vigor and determination.

That is Mr. Douglas speaking.

Mr. JARMAN. I construe that to result from the anticipation of the Marshall plan. But maybe that is a change in one of the policies you are talking about that is the cause of that.

Mr. HAZLITT. Of course, they did change one of the policies. You remember they had a 5-day week. They changed that recently, and these figures partly follow from the present longer week. Of course, the British coal problem is partly a long-range problem, but their controls go back pretty far actually. In 1913 Britain exported 93,000,000 tons of coal. In 1929 they exported 40,000,000 tons; then she was down to this 8,000,000-ton figure; then to practically nothing. Now, the last drop was more sudden than it had reason to be. But this is a deeper situation, of course, than her controls. It is because of the coal just giving out, for one reason. I mean it is got from deeper and deeper and poorer and poorer veins and gets more and more costly all the time. But I do not know how many months that rate was based on in Ambassador Douglas' testimony. Was it based on the rate of the last few weeks multiplied to get an annual figure? That might make the figure look much larger than if you took what they had actually produced in the last 12 months.

Mr. MANSFIELD. He was speaking on the subject.

Mr. JARMAN. Do not European countries need some kind of a system to procure fuel and fertilizer and perhaps seed as well as food?

Mr. HAZLITT. My own feeling is that that could be put under the loan system rather than under the grant system. Now, I know that Congressman Herter, and the Herter committee I think perhaps as a group, have put food, fuel, and fertilizer in a group by themselves. I have some doubts whether fuel and fertilizer belong in the gift group. Fuel and fertilizer are two things on which people can make money. We think of the fuel that goes into heating homes. I do not know what the European ratio is, but in this country 80 percent of the bituminous coal goes into industrial uses; perhaps the whole average would be 70 percent, including anthracite, that goes into industrial uses and only 30 percent for house heating. If a 50-50 ratio exists in Europe, they are certainly producing enough and far more than enough for heating their homes—that is, if they did not have the industrial problem to meet. The industrial problem is their big problem, in other words.

Mrs. BOLTON. I have not been in any heated home over there.

Mr. HAZLITT. That is because the coal is used up by industry. Suppose in France 90 percent of the coal supply goes into industrial uses. It does not matter whether we furnish 10 percent of the supply or 15 or 25 percent of the supply. It makes up the same deficiency whether we give it directly to the industrial side or to the heating side. So, if we lend it to industries, then that releases just that much coal for homes. It does not matter which channel it goes into. If these industries make a profit on the coal, then they might be the subject for loans. The same thing would happen with fertilizer.

Mr. JARMAN. I have gained the impression that even some raw materials and equipment might have to be obtained by some of these countries on terms that may be included in loans, but may be on terms that the Export-Import Bank lays down, for instance. That is strictly a business matter, and while I do not believe you agree with me, I see another angle to this, that it wouldn't be considered a business loan or would not be considered a good risk, in other words.

Mr. HAZLITT. I would like to say this about the business side of it—this is a rather technical point and I do not know whether I can make it clear—when any manufacturer borrows anything, raw materials, or borrows the money to buy raw materials and makes them into finished goods, the profit he makes is the indication of his success and also of the service he performs.

If a manufacturer borrows a lower value than the value of what he sells, or a value of less than what he sells, then he has made something. He has added something of his own and therefore he has made a profit. Out of that profit he can repay the loan.

If the value of what he sells is less than the value of what he buys and he has made a loss, that means he has wasted in effect the value of what he has borrowed. It has been thrown away. In other words, if the value of what you lend a man is more than the value, the final value, of what he produces, that means that there has been a net loss not only to him but to the world. There has been a net loss in production and a waste. So if the loans which we make to Europe are not good in the sense of being repayable, they are not good for recovery. They do not being recovery.

That is a rather complicated question. I do not know whether I have made that clear.

Mr. JARMAN. That is clear. But the fact remains that Europe in order to get dollars has to export.

Mr. HAZLITT. That is quite true.

Mr. JARMAN. I suppose more than they import?

Mr. HAZLITT. That is right. The reason it has been exporting so much more than it is importing is because of the overvaluation of exchange rates. That has been changed in Italy and France in the last couple of months. Whether the reform is enough is hard to say at this stage. But it is the beginning of a very encouraging turn toward reality. The exchange rate has been a very great factor in preventing exports.

Mr. JARMAN. Thank you very much.

Mrs. BOLTON. Mr. Judd.

Mr. JUDD. Mr. Hazlitt, I want to get clear on one point. It is with respect to this taking off of controls.

The usual contention is that a country cannot take off controls until it has recovered and has achieved adequate increase in production. Of course, your contention is they cannot increase production and achieve recovery until the controls are off.

The question is the speed with which it is done. I am right, am I not, in the belief that you think that there ought to be drastic sudden removal of these restrictions that have been developed over a period of years and to which the people have become accustomed? Do you think the resulting economic benefits would offset the upset from the shock of a sudden change; or do you have in mind some gradual or progressive change?

Mr. HAZLITT. Well, the most we can hope for, Dr. Judd, is, of course, a graduate change. We cannot hope for a sudden change. We cannot try to impose a sudden change. All that I am suggesting here is that we impose certain minimum conditions of eligibility. Of course, even those conditions which I might think are moderate conditions, they will think are drastic conditions.

Mr. JUDD. You mean they must have these things done before we help, or that they embark upon a course at the same time we embark upon our help? That is, one contingent upon the other?

Mr. HAZLITT. Well, I should, think, of course, as I suggested that the food relief could be given whether or not they make any of these changes.

Mrs. BOLTON. Will the gentleman yield?

Mr. JUDD. Yes.

Mrs. BOLTON. In the item of food relief would you include fertilizer and a few machines, like plows, in those countries that would use plows and tractors?

Mr. HAZLITT. I feel this way about the fertilizer policy—and I hope I will be corrected if I am wrong. Most of the farmers of this country, wanting fertilizer have to buy it in the open market, and if they do not have the money, they have to borrow by going to a bank. They have a loan from the bank for the fertilizer.

The fertilizer is used to produce crops and out of the proceeds of the crops they can pay off the loan. I do not see why a European farmer cannot do the same thing as an American farmer is required to do. In other words, if a European farmer is going to make a profit out of fertilizer he should be able to repay a loan, and for that reason I do not see why fertilizer should be lumped with food.

Mrs. BOLTON. Only on this basis: That if, for instance, they received fertilizer in time to get a decent yield off their field this year, then our farmers would not be called upon to raise food to send over there. They would be raising their own food. Would you feel the first year's method would be a loan?

Mr. HAZLITT. There might be a combination of the two methods. There might be the ultimate intent to put the fertilizer under loans, but an authorization to the American Relief Administration, or whatever it is that carries out the gift part, to make a certain amount of emergency gifts.

Mrs. BOLTON. In order to get the load off the necks of our farmers?

Mr. HAZLITT. That is right. If they had this provision that they are ultimately to have to pay if off, it would have a good moral effect.

Mr. JARMAN. On the subject of fertilizer, the testimony before this committee, as I recall it, is that a ton of fertilizer produces sixteen-fold. I reckon that is the value; I do not know what it is.

The theory that Mrs. Bolton and I have in mind is that if by sending that ton of fertilizer you can get 16 times its value in food, it is much better than to transport 16 times that much food over there.

Mr. HAZLITT. That might come under an emergency provision.

Mrs. BOLTON. Next year perhaps they could make their own fertilizer.

Mr. HAZLITT. If I am wrong on this I would be glad to be corrected. I think we have destroyed fertilizer plants in Germany, or we are not allowing them to operate. That is one of the reasons why we are called upon to supply fertilizer.

Mr. JARMAN. I can very positively tell you that you are wrong in the opinion that fertilizer plants have been dismantled in Germany.

Mr. JUDD. The biggest one had a capacity of 700,000 tons of nitrogen a year, and now it is producing 130,000.

Mr. JONKMAN. I think Mr. Jarman is talking about bimetalism.

Mr. JUDD. I should still like, if I may, to return to the question I asked.

I think it is very important that you be understood on this. Are you or are you not insisting as a condition that they make sudden changes; for example, where you say they must agree to permit free exchange rates? Do you demand that before any assistance is given, at one stroke they give up all these controls that they have become conditioned to, or do you contemplate an agreement to the effect that, "As you move in this direction, we will do this"?

Come back to our illustration of the drunk. He comes along and says, "Give me 10 cents for a cup of coffee." If he takes the coffee and goes back to the saloon, you have lost your dime and he is no better off. You cannot help him with loans until he is out of the saloon. On the other hand, probably he cannot stay out of the saloon unless you are willing to help him. If he wants to stay out and you help him, then you can gradually correct him. If you do not help him and he has no assistance in his discouragement, he goes back and borrows and buys or steals a drink. I think some people are like that.

They have been conditioned to these things. They are opiates, You cannot stop a drug addict suddenly or you may kill him.

That is what Judge Kee was talking about. We cannot insist on recovery before we help. On the other hand, it does not do any good to help if they continue the practices, which ultimately defeat them.

Can we work out a gradual accomplishment of these objectives? I want to be sure that is what you mean, if you do.

Mr. HAZLITT. Well, I have suggested here on page 12 that certain conditions be put in as eligibility requirements. There are only three or four of them. That is all that I would suggest. I do not expect them to change rent control, price control, and a hundred other things overnight. Let them change enough things so money from repaid loans could be withdrawn. Otherwise they will never get private capital unless the lender's money is withdrawable, unless he can get the money back.

The most drastic of the conditions mentioned here is to permit free exchange rates. Italy did it overnight 2 months ago. France did it.

Mr. JUDD. They did it one-half. Do you think it better to take it half at a time?

Mr. HAZLITT. We might have a provision that would permit this half. I do not know how this half-control is going to work out. I think it will be badly.

Mr. JUDD. You think it would be better if they took the whole thing off?

Mr. JONKMAN. I think at least you would want to see them going to a restaurant instead of a saloon.

Mr. JUDD. That is right. We have to take them in sometimes, hand in hand.

I wanted your opinion on that franc devaluation. Do you think this attempt to do it gradually may not have been as good a thing as if they had turned it completely loose?

Mr. HAZLITT. That is very hard to say. You build up tremendous vested interests with these controls that are hard to break down. For example, as a result of an overvalued franc the French have been getting their imports from this country at a low price, with certain exceptions like coal and so forth—things that are uneconomic to export in the first place. Most things they have been getting at a low price in terms of francs. They want to keep that. Therefore they have two rates, one to import and one to export.

That is a little oversimplifying it. Anyway, there are a lot of advantages they are trying to hold on to in this system. Whether they can or not, I do not know. All I am saying here is that the more thoroughgoing these reforms are, the better they will be. If Congress wants to ask a lesser reform for the loans, then it is more likely to get it done; but then it also takes the chance that the loans will do less for recovery.

Mr. JUDD. I am glad to have that clear.

Now I want to ask a different type of question. You have stressed particularly your attitude toward the changes you think are necessary in the policies of each nation individually.

Do you want to make any comment as to what changes you think are necessary in the policies of these nations collectively in their attack upon the problem? Do you think, for example, that it is possible for each of these nations to become self-sufficient and self-sustaining as a completely independent economic unit, as heretofore, or must there be some group attack upon the problem?

Mr. HAZLITT. I am not sure I understand your question about "self-sustaining."

Mr. JUDD. Suppose Belgium should wind up as she was before.

Mr. HAZLITT. Do you mean ability to support themselves?

Mr. JUDD. No; I do not mean completely self-sufficient. I mean ability to become a sound economic unit.

Mr. HAZLITT. Yes.

Mr. JUDD. Do you think that even if they make these changes individually which would take place within a country, western Europe can recover with 16 economic units, in the sense that we have in this country 48 political units, but only one economic unit?

Mr. HAZLITT. Yes. They do not necessarily have to have custom's unions, for example. They can have merely moderate tariff policies. They can end the present bi-lateral system of trade treaties, and so forth, and have a system comparable with that before the war, or let us say pre-1938 or pre-1935, or whatever time you want to set.

Of course, it would be ideal if they had customs unions because you cannot have a customs union without getting rid of all of these controls. That is why the customs union has been deadlocked for a certain amount of time between Holland and Belgium. If you unify your customs rates, it does not do any good unless you also unify your currency or unless the currencies are freely convertible into each other at a fixed rate. Otherwise one has a different rate than the other. It does not work, either, if you have price fixing in one country and an absence of it in another.

When I was in Holland I was told by several persons that there was an immense amount of smuggling of cattle across the line, the border, between Holland and Belgium. The border line goes through villages and village streets and cuts through and into individual houses, and so forth. They found it impossible to stop that. The reason that happened was because Holland had a price ceiling on cattle and Belgium did not, or Holland had a lower price ceiling on cattle than Belgium, and therefore all these leaks occurred. So if you are going to set up a customs union and it is going to be a real customs union, in order for it to work you have to get rid of these nationalistic controls. I would favor that, of course. It would be a wonderful thing. It is a long range thing. The 16 nations discuss

it as a rather academic subject here, although they are very sympathetic.

Mr. JUDD. I know I was asking your opinion as an economist, whether you think that even if they make these individual changes along the lines you have suggested they would wind up other than as 16 separate units, some of which are bound to be nonsolvent, like Italy and England, which have too many people for too little land and not enough food supply or natural resources. Some of our States are economically sound and some are unsound, but they are able to survive because they are part of a whole economic system.

Mr. HAZLITT. I think England and Italy would be able to survive without customs unions if they themselves and other countries follow not too drastic a control system. After all, we have had tariffs and so on for many years. We have been able to survive that. But you get to a point where these controls are not conformable with any sort of economic recovery.

Mr. JUDD. You think the most important thing is what a nation does within itself rather than what they do between themselves?

Mr. HAZLITT. Yes.

Mr. JUDD. Over on page 7 you talk about Germany, and you say that it is the outstanding collectivist country in the world, outside of Russia. They you say, "Only the restoration of a free economy in Germany, subject to American oversight and reasonable income reparations, can solve this problem."

The thing so many of those countries are afraid of, of course, is that allowing Germany to become a free economy will permit her to militarize and throw Europe into war again. Do you think you can get what you have in mind as a free economy, Germany back at work with her economy integrated and interdependent with the free nations of western Europe, or will it allow Germany to grow up as a great self-seeking power in the center of Europe, throwing everything out of balance and running the danger of her trading off to one side or the other and plunging Europe into war?

Mr. HAZLITT. Well, that opens up a great number of very serious problems of course.

Mr. JUDD. I know.

Mr. HAZLITT. Taking the most immediate problem, if Germany has a free economy and if, so to speak, a free economy is imposed on her, which is sort of a contradiction of terms, then Germany would be bound to be integrated in a world economy.

When the Nazis wanted to make Germany a great military power they imposed autarchy on Germany so it would be self-contained. If Germany had to be part of the world economy, dependent on the outside for raw materials, and so forth, dependent for exports, a country that had, as the prewar phrase went, a country that had to export or die, or import or die, if they were that sort of a country they could not make war independently. Yet they could be prosperous; the income level could be high. Reparations ought to be imposed on the income level on Germany. But if it were tied into the world economy that way, then it would be far less of a menace in a military sense than if we allowed it to have autarchy. If we make Germany a free economy and allow that, we build up vested interests in favor of a free economy. The vested interests of today are all built up in favor of retention of controls, but if we have an export industry

which needs to continue that volume of exports, import industries which need to continue that volume of imports, we get big vested interests within Germany, insisting on retention of the system they already have.

That only answers a very small part of the question you raised. But if I were to try to answer the general problem, I would say that from time immemorial there have only been two ways of dealing with an ex-enemy. One is to annihilate it and the other is to conciliate it.

The Romans followed that policy with Carthage. They decided on annihilation and they made the job absolutely complete. I do not believe that we in America have the kind of mentality that would want to make that job absolutely complete. Therefore, it seems to me that our only hope, although this should not be taken for granted because I think we should keep our army of occupation in there almost indefinitely, but nevertheless our hope is to conciliate Germany so it does not turn in desperation to Russia.

Mr. JUDD. So that there is more to gain by staying with the western Europeans than by going the other way?

Mr. HAZLITT. Yes, especially if you tie Germany by free trade into the western economy.

Mr. JUDD. Do you think that can be done?

Mr. HAZLITT. I think it can. We have a good deal of the power to do it now.

Mr. JUDD. I am glad to hear you say that because I think that in some respects is one of the two or three crucial points in the whole matter.

That is all.

Mr. MANSFIELD. Mr. Hazlitt, on page 5 you say:

If we extend no further gifts or credit, the outside world cannot continue to have a trade deficit.

You could add to that, "Nor can much of the outside world be able to eat or produce enough for recovery," so you would get a balanced international budget. You would have a balance of international payments, but what you would have in countries like France and Italy at the present time would be starvation and communism. Do you believe that countries like Italy and Austria, for example, can produce enough to live on during the next 3 years without aid?

Mr. HAZLITT. All these guesses have a certain element of the arbitrary about them. There is nothing scientific about them. On page 69 of the Outline of the European Recovery Program, printed for the use of the Senate Committee on Foreign Affairs is a statement to the effect that "Europeans will be able to pay for about two-thirds of their imports during the next 4 years through their own efforts"; but cannot pay for the other third.

I contend that that statement is a quite arbitrary statement.

The statement is made that they cannot yet pay for all their needed imports, but that they can pay two-thirds. I think that is an arbitrary statement. I think if they could pay two-thirds, 15 months from now they can certainly pay three-thirds, and they can pay three-thirds if they bring down their rates to realistic trade rates.

Mr. MANSFIELD. You are referring to Europe and I am referring specifically to Austria and Italy, which never did have anything approaching a self-sufficient economy. Now they are both war-torn. They have suffered great damage. Italy especially has undergone

communistic upheavals because we have, if not the largest, next to the largest Communist Party in Europe in Italy at the present time.

Now can those two countries, both of them, in which we have a peculiar interest because we are the mainstay of the DeGasperi Government in Italy and in the fact the mainstay of the Government in Austria, how can they get by without outside aid? What inducements are there for an American businessman to go in there and rehabilitate those industries, or to rehabilitate industries or bring in new industries and make a profit and help put those countries on their feet?

Mr. HAZLITT. Well, in the case of Austria, I do not think that as long as Russia is in there there is going to be any recovery of Austria, any permanent recovery of Austria, Marshall plan or no Marshall plan.

Mr. MANSFIELD. Take Russia out.

Mr. HAZLITT. She is there and that is one of the big things holding Austria down. Austria and Italy would be the two countries that would need most in the way of gifts of food. They are the countries that would probably get less, although I am not sure about that, of the loans from let us say the Export-Import Bank. If they conform with the conditions they could get a loan. Italy is nearer conforming with those conditions than most other countries because she has almost a free exchange rate. There are a lot of drawbacks, but it is as free an exchange rate as anybody has. They are in a better condition to get the loans than anybody else. If the individual industries within those countries could function, then they could recover. How could they recover under present conditions, when they have a law in Italy under which an industry is not allowed to discharge any of the workers that it had at a given time in the past, and they cannot produce anything at any value at which they can export it. That is a self-imposed condition. That is compelling these companies to hold men idle. The discipline has gone down terrifically in those factories. It is part of their own controls. How does the Marshall plan overcome that?

Mr. MANSFIELD. That is a good point, but of course answering the first part of your question, the Finance Minister is an outstanding individual who has stabilized Italian currency in a remarkable manner. Insofar as those informal measurements are concerned the De Gasperi government is in a position where it cannot do anything. You have been emphasizing the economic aspects of the Marshall plan. That should be done. But in my book the most important aspect of the Marshall proposal is the political aspect, and what we have to do as I see it are threefold:

One, take care of the humanitarian aspect to a certain extent in countries where that help is needed; secondly, we have to do it on as economically feasible a plan as possible, realizing we are taking a calculated risk; but third, and most important, is the fact that this is a measure designed to contain communism. That is the important thing, not the economics of the thing, although it enters into it.

Now we know that we are taking a chance. We realize that this proposal will keep inflation going in this country. But Marshall proposal or not, as an economist you know that inflation is going to continue in this country. We realize also that it is going to raise a number of other problems. But the way we are looking at this problem, at least as far as I am concerned, is primarily from the political point of view because that is the important factor.
