

FBI protects *mystery man* who made Hillary's emails public on Gmail in Feb. 2014

FBI Director James B. Comey hides a mystery man behind “*unwarranted disclosure of personal privacy*” exemption. QUESTION: If Hillary's State Dept. email is not the public's business, what is?

Special Report | [Americans for Innovation](#) | OPINION | Sep. 26, 2016

Hillary 's Mystery Man is being protected by the FBI

(U//FOUO) [redacted] tried various tools and Googled for solutions to effectively email files. After researching options, [redacted] transferred all of the email content to the gmail account [redacted]@gmail.com. [redacted] connected the administrative the gmail account and used it as a bridge to move the email into a mailbox named hrcarchive

Clearly fraudulent FBI redaction (B)(6) private personnel or healthcare info
exemptions claimed: (B)(7)(C) unwarranted invasion of personal privacy

Source: FBI, James B. Comey. (Released Sep. 23, 2016). Hillary R. Clinton Part 3 of Interview, PDF ¶12, p. 21. Federal Bureau of Investigation.

Sep. 26, 2016— The FBI released a [third batch](#) of notes from its criminal investigation into Hillary Clinton's use of personal email servers. *They prove breathtaking complicity among Hillary, her staff, the State Department, Barack Obama and the FBI.*

Hillary's aide HUMA ABEDIN's comment after reading an email (REDACTED@who.cop.gov) between Hillary and Obama is telling. Obama used a pseudonym (fake name) to avoid being detected. Upon reading it, Abedin "exclaimed '[How is this not classified?](#)'" (Part 3, page 93). This evidence proves another Obama lie—that he learned about Hillary's private email server in the press like everyone else.

Email technology is full of techno speak that loses the average reader. This is why these people have gotten away with their corrupt activity for so long. Therefore, AFI asked email specialists to analyze the FBI report. They found smoking guns within minutes.

Hillary's 2009-2012 emails were *licensed* to Gmail!

Most Gmail users are unaware that they **license all their rights** to emails and documents to **Google**. Google can then use, sell or publish the content the moment they "Agree" to the **1,500+ page** (incl. links) user license agreement. The section titled "[Your Content in our Services](#)" is very clear:

"When you upload, submit, store, send or receive content . . . **you give Google . . . worldwide license** to use, host, store, reproduce, modify, create derivative works, communicate, publish, publicly perform, publicly display and distribute such content . . . The license continues even if you stop using our Service."

Hillary's FBI-protected Mystery Man

On or about February 2014, HILLARY CLINTON directed "[confidential assistant](#)" (page 30) errand-girl MONICA R. HANLEY to find a way to transfer her **2009-2012 email** stored on an Apple MacBook because she did not want to lose it. HANLEY asked Mystery Man to transfer it to the upgraded email system being set up for the Clintons at Platte River Networks in Colorado.

According to the FBI, Mystery Man used "*Gmail as a way to convert the Mac Mail files to a format that could be imported into the new Microsoft Exchange server.*" Exchange server is Microsoft's email system. Some know it as Outlook or even Hotmail. The FBI also said that "[It was not uncommon](#)" (Part 3, page 35) for Hanley to use Gmail to printout emails to "unclassified" devices and make use of Gmail even when on [diplomatic trips](#) (Part 3, page 36). Gmail was also used as a [backup email system](#) when the server was down (Part 3, page 68).

Hillary Clinton herself maintained a Gmail account in which the "*FBI investigation identified [940 e-mails](#) associated with Clinton's personal e-mail account from October 25, 2010 to December 31, 2010 that as of June 21, 2016 remained within the **REDACTED@gmail.com** account.*" 56 were classified CONFIDENTIAL. 302 of these emails had not been turned over to the State Dept. previously. At least one of these emails was classified SECRET (Part 1, pages 17-18).

It is extremely important for readers to understand what is going on here. What the FBI described is the electronic equivalence of your mover *unloading* your household belongings in a truck stop parking lot so that passers-by and thieves can rummage through your possessions.

"Electronic equivalence of your mover *unloading* your household belongings in a truck stop parking lot so that passers-by and thieves can rummage through your valuable possessions."

The moment Hanley sent an email to Gmail it became *unsecure* and free for Google and enemies of the U.S. to exploit. It is inconceivable that senior State Department officials would be so cavalier with America's diplomacy. It begs the question about intent. Was this Hillary's *intentional* way of dismantling America's foreign policy, then using juvenile excuses?

Abedin told the FBI she "[routinely forwarded emails](#) (Part 3, page 86) from her [state.gov](#) account to either her [clintonemail.com](#) or her [yahoo.com](#) account so that she could print them." Again, these are *astounding* breaches of security, and astounding admissions of illegal conduct and stupidity.

Mystery Man also used [Google Apps](#). Google Apps uses the same terms of service as Gmail and claims an irrevocable worldwide license to your emails, posts, documents, blogs, writings, etc.

INCREDIBLE: Immediate jail time earned for astounding breaches of national security by our highest officers

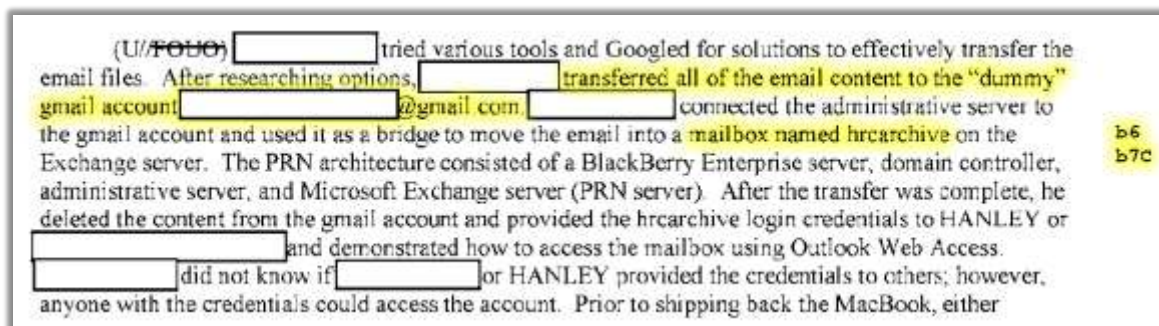

Figure 1: [FBI, James B. Comey, Director. \(Released Sep. 23, 2016\).](#) Hillary R. Clinton Part 3 of Interview, PDF ¶12, p. 21. A "b6" and "b7c" exemption are reserved for personnel and healthcare records and unwarranted invasion of privacy. These markings are an evident abuse and fraudulent.

Mystery Man's "dummy" Gmail account breached national security

Presuming for a moment that Hillary's MacBook email from 2009-2012, and the Platte River Networks servers were secure (which they clearly were not), the act of uploading Hillary's email archive to Gmail alone—for *any purpose*—breached four years of national security involving Secretary of State Hillary Clinton.

No wonder U.S. foreign policy is in **flames** – Hillary herself compromised *everything* she did.

A secure transfer of Hillary's MacBook email should have been handled only by State Department information technology specialist, not by Platte River Networks employees with no security clearances.

[WikiLeaks just released](#) research into this FBI dump that proves **everybody at Platte River Networks had access to Hillary Clinton's emails**, yet none of the Platte River Networks employees had security clearances.

Since Mystery Man has been classified by the FBI as "private," we can reasonably assume that he did not have a security clearance either.

Mystery Man used Gmail to transfer Hillary's MacBook emails to the Platte River Networks servers in Colorado. He dramatically compromised U.S. national security in the process.

Gmail, Yahoo Mail, Hotmail, Facebook, AOL mail etc. *can never* be in the chain of custody for classified documents

The moment the Gmail “dummy” account received Hillary’s 2009-2012 uploaded MacBook emails, Mystery Man licensed those national secrets to Google. The same would have been true if he had used Yahoo Mail, Hotmail, AOL or most other “free” services. From that point on they could be both used by Google and sold to third parties, including predators, spies, foreign governments, foreign and domestic corporations, drug dealers, money launderers . . . anybody.

Even if you delete your Gmail, your emails are not destroyed. Gmail retains rights *forever*.

If you doubt this, go see the new Oliver Stone movie [Snowden](#). It is very accurate.

Hillary for Prison.
