

THE BATTLE FOR THE SOUL OF AMERICA

How one inventor's story can help save our nation

By Michael T. McKibben, Founder

Leader Technologies, Inc.

TRANSCRIPTION:

This may come as a surprise to you, but I invented social networking.

I have the patents to prove it

I have just served a MILLER ACT NOTICE on The Executive Branch at The White House

We are demanding that the government pay us for using my invention since 2000

President Trump had nothing to do with this theft, but his predecessors Bill Clinton, George Bush and Barack Obama did

However, the Miller Act requires that we serve the notice to the current U.S. executive

That it is why it is addressed to President Trump.

The abuse of my inventions by the government now totals into the trillions of dollars in damages

The Miller Act 40 U.S.C. §3131 allows unpaid suppliers to federal contracts to get paid when the prime contractor does not pay for benefits they have received

President Trump can fix this injustice to me, my shareholders, the U.S. Constitution and We the People

In 1993, just as Bill Clinton was bringing his Arkansas drugs, pedophilia, money laundering & blackmail machine to Washington..

Globalists aligned with Clinton, also called the "Establishment," the "Deep State" and the "shadow government," hatched plans to seize control of the emerging Internet via rogue U.S. intelligence insiders

However, historically, this agenda reaches back to 1776 when all power was placed in the hands of ...

"We the People"

In 1995, I helped bail out AT&T from great industry embarrassment

I rebuilt their AT&T AccessPlus 3.0 email system in six months, in time for the release of Windows 95

Bells Labs, who quoted three years to build it, became my testers

The commercial Internet was just beginning

I launched one of the first 10 website hosted by AT&T WorldNet, along with Disney and others

I knew three things from that experience:

AT&T, Microsoft, IBM etc. were focused on legacy "groupware" for collaboration platforms
Groupware could not handle large-scale Internet volume

If we could solve this Internet "scaling" problem, it would be revolutionary

So, in 1997 I assembled a world class engineering team

We worked on the Internet "scale" problem for three years

In December 1999, we had the proverbial "ah hah" moment

We invented a new kind of metadata

It enabled the exchange of metadata instead of whole files

Some experts say our discovery was akin to Edison's light bulb in its impact on society

For example, in rough numbers...

In legacy groupware, a 1 MB file shared with 100 people generates 100 MB of data
In our invention, a 1 MB file shared with 100 people may generate 10,000 bytes. That's a 10,000% efficiency!

We knew our discovery was unique

Among my team were architects of major digital networks ...
... in banking, defense, procurement, intelligence & telecommunications

I started looking for the best patent attorney in the country immediately

In February 2000, we were introduced to law professor James P. Chandler
He was touted as the best

Chandler's credentials seemed to prove that...
He advised the White House, Congress, Judiciary, law enforcement, U.S. intelligence and private commerce

By April 2000, attorney Chandler was participating in our engineering design sessions

We thought we were being well protected by attorney Chandler

We were wrong

Before we tell you how Chandler ripped us off for the Deep State . . .

. . . allow me to give you some of my background

My wife Nancy and I both became Christians while attending Ohio State from 1969-1973

Nancy studied honors French and Russian languages

I studied Civil Engineering, and played semi-professional trombone

After graduation we postponed our careers and toured the world in a jazz-rock, pop Gospel music group named Living Sound

Living Sound felt called to ministry behind the Iron Curtain in Communist lands

We performed in schools, concert halls and churches all over Eastern Europe

We did 17 concert tours in Poland under the patronage of Roman Catholic cardinals

Wyszynski and Wojtyła

Notably, none of us were Roman Catholic

The Church in Poland welcomed us with open arms

They protected us from the secret police trying to stop us

Our translators Richard (Ryzsard) and his wife Renya (Renata) risked everything to organize and translate

The secret police dogged us

But no one stopped us

Sometimes brave local priests and grandmothers with babushkas would step in to shoo them away

We sang to well over 2 million Poles

From Poland, we expanded our work into the Soviet Union

No contemporary Gospel music group had ever tried it

Would the KGB arrest us?

Would our friends be persecuted?

Nobody knew the answers because it had never been done before

We felt strongly that God wanted us to trust Him and to try

We certainly didn't want to get anyone in trouble, or hurt

So, I travelled to Tallinn, Estonia to meet with Church leaders to discuss the idea

I told them we wouldn't come if they didn't want us to do it

Two days later, they said they would take the risk and wanted us to COME

Brave young Church leaders volunteered to organize and translate

Two leaders, Jon & Herbert, said their Soviet government was evil

They believed it was their Christian duty to speak out

They said everything in the USSR public culture was a lie

They believed we could together "speak truth to power" through our music

I asked them:

"We know people go to prison for what we're planning. Are you prepared for that possibility?"

They said yes.

Herbert later served two prison terms

Jon was threatened with a 10 yr. term before Ronald Reagan's intervention

Another Leningrad friend, Valeri, was incarcerated in a mental hospital

We had recorded his Christian rock album "The Trumpet Call

It was broadcast into the USSR by the BBC

Living Sound toured three times in the Soviet Union, once for over a month

A fourth official invitation, to an Armenian rock festival, was cancelled just days before it was to begin

KGB watchers were everywhere

Even so, everywhere we went, local musicians were eager to jam

Churches organized packed concerts, sometimes with just a few hours notice

We shared our faith in Jesus Christ with all these newfound friends

On the month-long 1979 tour, when we arrived in Moscow,

the KGB had lost their patience with us and cancelled the rest of our travel schedule

They forced us to stay in Moscow

Then, miracle after miracle unfolded

Herbert called Artemy Troitsky, a blacklisted underground music promoter

For two nights we jammed with two blacklisted Soviet bands: Arsenal and Time Machine

The audiences were 300-500 of the USSR cultural elite

One attendee was Alexandra Pakhmutova

She had just been appointed to the Supreme Soviet along with future Soviet premier Mikhail Gorbachev

She had just been named the official composer for the 1980 Moscow Summer Olympic games

We recorded two of her songs: We Can't Live Without Each Other and Childhood Dreams

She included those songs on the official 1980 Summer Olympic film

We then became the first (and only) American Gospel music group ever to perform on national Soviet TV

We had no idea what God was doing, but we knew it was special

We were just 20-somethings full of faith and love for our fellow human beings

Despite the good news in Moscow, the story was bad news for those who had helped us

They were persecuted

We saw up front and personal the totalitarian police state's tactics of fear, intimidation, censorship and oppression

Little did we know that we were witnessing the final days of the failed globalist attempt to take down Christianity in Russia

During the Communist reign of terror, they murdered over 40 million Soviet citizens, mostly Christians

Within 10 years, Communism collapsed

TRANSCRIPT: BATTLE FOR THE SOUL OF AMERICA by Michael McKibben, Leader Technologies

Christian Russia had been an impediment to globalist goals for world domination

Our main contacts and translators were Estonians

They told me in 2012 that our presence in the early 1980's opened a window on new possibilities for them

They credit our work as not insignificant inspiration for "The Singing Revolution" in the Baltics in 1989

Soviet tanks pulled out of the Baltics rather than run down the choirs

Some of those choirs had recorded on equipment we left for them

Imagine that, change without war

The mistakes of godless Marxism and social unrest (that I experienced in the Soviet Union) are now being repeated . . . in America!

The same "New World Order" globalists who funded Vladimir Lenin and the Bolsheviks in 1917 ...

... are now working to destroy our American Republic in 2017

These globalist bankers did not go away with the collapse of the Soviet Union, they only regrouped!

. . . now back to Chandler

Now back to Chandler

Little did I know that Chandler was working for these New World Order globalists

When I met them, they were busy rewriting laws, regulations, policies and issuing executive orders in order to gain permanent control of the Internet

When Chandler realized that we had solved IBM's & Microsoft's "scalability" problem, he set out to steal it

S
peculation, you say?

No, we have hard proof thanks to whistleblowers and his legal assistant who screwed up Chandler's Empty Ethical Commitments

Chandler agreed to be an ethical director with a duty of good faith

He also signed multiple attorney-client confidentiality agreements

Chandler pretended to protect our interests ...

While he secretly fed our innovations to the New World Order globalists in the IBM Eclipse Foundation and the National Infrastructure Advisory Council (NIAC)

Chandler stole everything

As a part of this theft, he stole our proven capabilities to collect and analyze high volumes of security video

Chandler stole everything

He stole my Harvard kickoff idea.

TRANSCRIPT: BATTLE FOR THE SOUL OF AMERICA by Michael McKibben, Leader Technologies

I had proposed to team with IBM and do a university launch at Harvard where my son was attending in pre-med

(Zuckerberg was still in high school)

Chandler stole everything

He stole our proven social integration with telephone and wireless

Chandler bastardized our designs

Our design respected personal privacy

Chandler's Deep State theft did the opposite:

it dis-respected personal privacy

Chandler used government power to force the tech community to submit

Chandler leveraged government power to get companies to comply with his NIAC plans

They appear to have coerced anyone who resisted

Government agencies were probably clueless about this conspiracy

All spying power was centralized in the National Security Staff (at the White House), NIAC and the IBM Eclipse Foundation

It appears that the very same globalist New World Order forces that destroyed Czarist Russia in 1917 are now trying to takedown the America Republic in 2017

America and Russia appear to be their primary targets

Hence, they are striving to drive a political wedge between the two countries

Chandler has been one of the spy masters helping direct this campaign

Chandler knew my essential concept for handling personal data was respect:

If you host it, you own it.

He turned this Constitutional respect for privacy on its head into the opposite:

We (the government) host it, we own it

This is the very same kind of crony capitalist model that Adolf Hitler employed

Just look at some of Germany's largest companies today: Hitler-era companies like VW, Mercedes, BMW, Krupp, Siemens, Bayer are bigger than ever

WWII is a prime example

With globalism, humankind is doomed to continuous wars that feed the "military-industrial complex" that President Eisenhower warned about

Chandler and IBM ripped out my privacy controls and are pushing a Big Brother "Internet of Things" with Deep State shadow government assistance

Their "public-private" deal was simple:

Spies get all user data for blackmail (in the name of security, of course)

Private companies exploit that data for profit

Chandler-drafted executive orders created this mess, starting with Clinton and carrying on through Bush and Obama

My Leader shareholders and their families deserve a payday

As an American entrepreneur and inventor, I played by the book...

... so did my investors

I hope this doesn't sound pushy, or arrogant, but don't you agreed that its about time we get our payday?

I ask you, if you were an electrician hired by the prime contractor to wire a building, you did the job, the contractor was paid, and you were not, wouldn't you demand payment? Our case is really that simple, except in our case, the damages happen to be astronomical

We are a test case

There may have never been a larger financial crime in history

If Leader's property is not protected, who's will be safe from globalist confiscation?

Soviet citizens owned no property

Americans may soon have their property taken if this madness is not stopped

Many of our officials are blackmailed by the current illegal spy data collection dragnet

When President Trump pays Leader, Leader will be able to provide respectful social media that provides the features you like, without sacrificing your privacy and property rights

If we lose this battle, I fear the ideals of America will disappear forever

Why?

Because the globalists have almost full control of the Internet and have set about to crush voices of accountability

If the Internet is controlled by tyrants, then they will blackmail everyone

We the People can restore God-fearing accountability to our governance

Our politicians and bureaucrats have become neutered by the blackmail

We have an imperative that We the People control the governance of the Internet, not the globalists

Privacy Matters

Your Fourth Amendment privacy rights matter

America fought a Revolution to secure the right to privacy over our papers and personal effects

My hijacked invention is being used to recreate old Soviet-style censorship

These very same globalists have created all the conflicts of the 20th century

It is now time for all American citizens to take a stand and say NO to:

Media censorship

TRANSCRIPT: BATTLE FOR THE SOUL OF AMERICA by Michael McKibben, Leader Technologies

Spy intrusions

Unmasking of personal information

Profiting from the data of peoples' private lives

End
