17

18 [Intro Music]

19 **DOUGLAS GABRIEL:** Welcome to the American Intelligence

20 Media, the home of the Anonymous Patriots. I am your host,

21 Douglas Gabriel. Today we have with us one of our favorite

22 friends. He is the founder and CEO of Leader Technologies, and

23 he has been working with us in so many areas. It's so exciting

24 to have him here today. I just want to reach out and thank you

1 for making the effort to come up here to the studios for us,
2 Michael McKibben.

3 **MICHAEL MCKIBBEN:** Great to be here, thank you.

4 **GABRIEL:** People who know us know that we've already done a
5 number of videos with Michael, and some very amazing audios. I
6 guess some people are responding to some of the ones that we
7 recently did. Somehow Michael corners me and asks me questions.
8 He reverses the table. I don't know why he gets away with that,
9 but I think Betsy's in on it. I think there's a conspiracy, to
10 be quite frank with you. But, Michael is here today because we
11 are going to talk about the thing that everybody keeps saying:
12 Okay, we know your story, and I am going to tell it in a very
13 quick nutshell in a second. But, what can we do? What can we do
14 to help? You've been saying it all along, but it kind of goes
15 over people's head because it's such a bizarrely simple solution
16 to so many, many big problems.

17 Not only the problems with them stealing your intellectual
18 property, you can give the exact right terms, but the ideas that
19 you discovered that then became the capacity for the Internet to
20 be scalable. So, that opens up all the different Silicon Valley
21 industries that took advantage of, basically stealing your
22 patent, more or less as the way that I would put it in simple
23 terms, so we're going to talk about that.

1 Because, you have come up with a brilliant idea called The
2 Miller Act where, literally, Donald Trump could simply order
3 the Treasury Department to take a look at your bill that you're
4 presenting, and in so doing you could collapse the entire
5 monopoly of Silicon Valley Boy Kings. You could in fact
6 reconstitute the PsyOps [psychological operations] of Facebook,
7 of Google, of Gmail, of YouTube, all of them, completely,
8 because it all comes back to the theft of your technology by
9 IBM, through a group they called the IBM Eclipse Foundation.
10 When they say Eclipse it's because they eclipsed your
11 technology, and that's the saddest thing.

12 So we'll go into a little summary in a minute. Let's just
13 hear what can people do to help. That's what they want to hear.
14 They've been begging us [to know] how can they can help your
15 cause.

16 **MCKIBBEN:** In big picture terms, we have discovered that the
17 government has spent 17 years distributing our technology to the
18 entire tech world, including all the agencies, and has had free
19 use of our invention ever since it was discovered by them in the
20 year 2000.

21 **GABRIEL:** By government, you mean, not only IBM, government?

22 **MCKIBBEN:** The government itself.

23 **GABRIEL:** But, IBM is basically also an extension of the
24 government per se. Right?

1 **MCKIBBEN:** That's what we've discovered -- that the
2 technology base that the government was intending to use for The
3 Internet of Things was run by IBM, with help from Microsoft, and
4 Cisco, and all the others. It was intended to be a global
5 control system.

6 The solution that our shareholders came up with, I can't
7 take credit for [it, was this]. We looked at: How does the
8 government pay vendors when the vendors have not been paid? What
9 we discovered is that the government can't have liens put on it
10 like a contractor would if [the government] is not paying its
11 subcontractors. But the government passed a law called The
12 Miller Act. The Miller Act allows two tiers of unpaid
13 contractors to a government project to be paid by submitting a
14 notice called The Miller Act notice to the government agency
15 that benefited from the technology. And, as a result, put that
16 [Miller Act notice] forward as a claim to the government. And,
17 the government is then obliged to pay it, if the government has
18 benefited from that technology, whether there was a contract or
19 not. That's what most people don't realize. Everybody tries to
20 play this game that, oh well, you didn't have an official
21 contract, you didn't have signatures. No, that's not the rule.
22 The rule is if benefit has been received by the beneficial
23 party, then they are obliged to pay the people that they receive
24 the benefit from. And that's us.

1 This is an unprecedented situation. So, you talked about
2 some of the results of what this could do. We're not out to
3 change anybody else's business. Now, that may happen, but we're
4 not out to change their business. We're out to protect our
5 interests in our business. So, that's why we put The Miller Act
6 forward. We discovered a...

7 **GABRIEL:** Win-Win-Win scenario.

8 **MCKIBBEN:** We discovered that the government itself was the
9 party who stole our technology. There's never been a situation
10 like this where the executive branch of the government stole
11 somebody's invention, distributed it out to the whole planet,
12 and then has allowed their fascist corporate partners, plus all
13 the government, to benefit from that technology without paying
14 for it. It's never happened before. So, we were looking at an
15 unprecedented situation.

16 Our shareholders, in brainstorming sessions, asked how can
17 we (a) get paid, and (b) what we can do to help fix the problems
18 that this created.

19 Well, one of the big problems that this situation created
20 is complete control of the Free Press. What we now see, and I
21 think it's pretty common knowledge, the Free Press is totally
22 controlled by this cabal of people who stole our invention.

23 So, what we've said is, Mr. President, please pay us for 17
24 years of free use, license our technology going forward, and

1 what we are willing to do is take the cash that is going to be
2 paid to us and put that back into developing a truly Free Press
3 to hold the powerful accountable.

4 **GABRIEL:** This is so topical. It's so important now because
5 everywhere you look you can see that Facebook is being attacked
6 because they admit that they are a PsyOps [Psychological
7 Operations] program that was weaponized by the United States
8 government. That has, in fact, been subsidized by the NSA, and
9 that in fact, they don't really sell that many ads. It's a
10 complete fake. Why did the United States government use
11 Facebook, Google, YouTube, Instagram, and these other groups.
12 That just suddenly, magically appeared as soon as Leader
13 Technologies took the step that was really, in a novices mind
14 like mine, was the quantum leap for scalability to be able to go
15 global with the Internet. They could do it on a small scale, in
16 my understanding, but it couldn't be done on a large scale. And
17 so, you're a revolutionary discovery needs to simply be paid
18 for.

19 Now, can Trump do that? Of course you can do that. Anybody
20 can turn in a bill to the United States government, and say, I
21 rendered these services to you, and so you owe me this. And they
22 should look and say, Well, okay, yeah, I guess you did. [For
23 example] Look, you built that bridge for us. That can be done
24 after the fact, no contract, exactly, as you've described.

1 But, it's the Win-Win-Win scenario that makes me so
2 excited. Because, this could be as simple as the following. We
3 already see from his [President Trump's] December 22, 2017
4 executive order, that Trump seems to be using the Treasury and
5 U.S. Marshals to go beyond the Department of Justice and the
6 FBI, just get straight to business.

7 So, he could again use the Treasury. Use the Intelligence
8 Agency, the Office of Intelligence and Analysis for the
9 Treasury, take a look at your bill and say, well you know what?
10 Not only do we need to pay this company [Leader Technologies],
11 but we also need to take down the monopolies that have arisen
12 out of this, which are, in fact, a terrorist economic national
13 security threat. That's all he has to do, he has to recognize it
14 for what it is, and that is what it is.

15 If you don't recognize Jeff Bezos as an attack on American
16 retail, if you don't understand that Facebook was a C.I.A.
17 PsyOps, then you're just not reading the news. Because, they're
18 all admitting it. Their top CEOs, as you full well, know, have
19 come out and admitted these things. They say, "we don't let our
20 children anywhere near it." Because why? It was turned into a
21 weaponized forum of what your company [Leader Technologies] had
22 developed to give out free information.

23 Think about it. We could go back to the original idea of
24 your patents, or copyrights, your intellectual property, and say

1 this was the idea, we're paying you for, whether it's through
2 certification, or whatever, the people who [stole it will] then
3 really will be paying that— the ones who stole it from you.

4 Those companies probably will fold, and someone will need
5 to take it over. They will have to be dismantled because they
6 have all the backdoors in them. They have all the spyware in
7 them. They have the commercialization that sells your "Black
8 Profile" to everyone.

9 So, what you're saying is that in one fell swoop, Donald
10 Trump could simply pay your bill, and it is [then] possible that
11 this could take down the criminality of the Patent Office. It
12 would take down Silicon Valley's fake military-supported digital
13 warfare weaponized companies that were really built... without
14 your technology they could not have done what has come to be.

15 They went the wrong direction with it. So, in one fell
16 swoop you're saying, what you say is that The Miller Act notice,
17 very humbly, could, in fact, change our entire economy, the
18 entire world economy, in fact, and could put it back into where
19 it was supposed to be -- that information is supposed to be free
20 to give people freedom. It's supposed to give them liberty. It's
21 supposed to empower them, instead of information being used to
22 weaponize against them.

23 So, I salute The Miller Act proposal that you have.

1 **MCKIBBEN:** Thank you, and take that compliment on behalf of
2 the shareholders who helped develop it. But, this is like
3 ripples in a pond. What we discovered is that this Miller Act
4 notice was a very legal claim that we can make to the branch of
5 the government that caused this theft to occur.

6 What we recognized is that nobody had really ever dealt
7 with the kind of scale that we are talking about. So, at first
8 we started saying, Well, my gosh, we're talking about many
9 trillions of dollars, because we've never been paid and
10 everybody's had the benefit of it. Every cell phone has got
11 something like 28 or 30 [social] apps that people use every day.
12 Every one of those apps is infringing our patent. So, we looked
13 at it in terms of, okay, what are we owed as a technical
14 reality? And the number was huge. So, what we said was, let's
15 break this up, and put it into two pieces. One, a \$40 billion-
16 dollar piece for the history. Now that's way under what the
17 number should be. But, going forward, let's say, okay, we've got
18 a problem.

19 The whole market has a problem. Most people use these apps
20 every day -- what we invented. [They] don't pay anything, and
21 when you ask them, do you realize that you're using stolen
22 technology, they are shocked. They don't know. And when you say
23 that the person who, the company that, invented this was never
24 paid, they say, well, where do we pay? How much is it going to

1 cost us? We've come up with a number of two dollars per user per
2 month as an ongoing payment. That number works out to something
3 like 300 billion dollars a year for ongoing licenses. And then,
4 we started looking further and said, okay let's also give every
5 user of this technology a license for everything they're doing.
6 So, all of a sudden, everyone on the planet that's stolen our
7 technology, whether they knew it or not, then becomes legal,
8 including the thieves

9 **GABRIEL:** Is that like certifying them?

10 **MCKIBBEN:** It's a license. When you buy a piece of software,
11 you get a license with it, and that gives you a legal copy of
12 the license. None of that's been licensed [Leader's invention]
13 because the original thieves put out this meme, this propaganda,
14 that it [Leader's invention] was all open source. That was a
15 total fabrication.

16 It was never open source. When IBM first put it out through
17 The Eclipse Foundation, they actually took the header code off
18 of our code and actually put their copyright notice in it. I
19 mean, it's just unbelievably scandalous

20 **GABRIEL:** Your 17 years of legal battles with this cabal...
21 we like to list them, because it's the same group of criminals
22 in Washington, D.C. right now. You're talking about John
23 Podesta, Robert Mueller, Rod Rosenstein, Hillary Clinton, Bill
24 Clinton, James Chandler, Stephen Crocker, Michael Kappas ...

1 **MCKIBBEN:** David Kappos.

2 **GABRIEL:** David Kappos, Larry Summers, I forgot him last
3 time. How can I forget Larry Summers? These people have been
4 doing this for so long, since the early 90s, and unfortunately,
5 Michael and his company have been struggling with them for 17
6 years, not really knowing how powerful they were. These people
7 have come to light now ...

8 **MCKIBBEN:** We didn't have any of those names on our radar
9 screen. We just knew the courts were misbehaving. The courts
10 weren't following the law. We had the one person's name, James
11 Chandler

12 **GABRIEL:** Right, who seemed to be the kingpin and the
13 linchpin of the entire thing.

14 **MCKIBBEN:** Right?

15 **MCKIBBEN:** Right. Yes, we thought, well, on paper he
16 [Chandler] was the expert in the country on trade secrets,
17 intellectual property, economic espionage, inventions, patents.

18 **GABRIEL:** He was on the National Security Council. He wrote
19 the laws. . . so he could break them.

20 **MCKIBBEN:** He wrote the Federal Trade Secrets Act, and
21 Economic Espionage Act of 1996.

22 **GABRIEL:** You sat with this man again and again, and he
23 basically stole your patent.

1 **MCKIBBEN:** In the Miller Act notice there's a picture of him
2 [Chandler] attending one of our product design meetings in early
3 2000. There he was learning about all of our technology, and how
4 we were going to approach scalability in the Internet.
5 Essentially, that is proof of the collaboration that occurred.
6 They took all that information, and while he was working with us
7 to file patents, they are taking the code [our social networking
8 invention] and distributed it to the whole planet.

9 So by the time we found out that this is what had happened,
10 the whole market had been established. I mean, if you look back
11 at the history of social networking, it really exploded in 2004,
12 after a conference that IBM Eclipse sponsored between on
13 February 2-5, 2004 in San Francisco called EclipseCon2004. That
14 was when the cabal pushed our code out to the whole market.

15 **GABRIEL:** Americans for Innovation has put together more
16 evidence than I've ever seen on any particular case. So for 17
17 years you've been working with your shareholders, with lawyers,
18 with patent lawyers, just fighting this battle against the same
19 group of people that, again and again, rear their ugly heads and
20 show themselves as insider traders who have become filthy rich
21 over, in fact, stealing patents like yours. But, yours [Leader's
22 invention] was one that became probably the largest impact in
23 our modern digital age.

1 **GABRIEL:** So, I love the idea of The Miller Act. It's a Win-
2 Win-Win scenario. I love the idea that if this could take place,
3 we could actually see, perhaps, the crumbling of this entire
4 edifice of the fake Silicon Valley.

5 So, the question that people have is, is there anything
6 else they can do? Do you need money to support legal concerns?
7 Or, I don't know, what is it that other people can do besides
8 get the word out—which has been amazing, by the way, with the
9 videos that we did together.

10 **MCKIBBEN:** They've been very helpful, thank you.

11 **GABRIEL:** They've spread far and wide. A lot of people have
12 been discussing this. But, is there anything else that people
13 can do for Leader Technologies. Could they approach your company
14 if they wish to support you?

15 **MCKIBBEN:** Let me focus my answer on the big picture need.
16 The big picture need is for everyone in the country who believes
17 that the rule of law should apply to the use of social
18 networking, all over the planet, should ask President Trump to
19 consider writing the check to Leader Technologies, to pay us for
20 the last 17 years. And, to license our technology going forward.

21 The President has the authority to fix this. So, the other
22 issue is how do you in Republic ... I think this is the other
23 aspect of [the theft of] our technology. It was used, basically,
24 to hide the misconduct of the powerful through social media,

1 through all these memes, all of the psychological warfare, all
2 of the propaganda that has been pushed out.

3 I think the way we fix that [is by re-implementing] an idea
4 the Founders had for a truly for Free Press. The Free Press, in
5 theory, is supposed to hold the powerful accountable. But, as we
6 have seen, our mainstream media has been bought by these people.
7 So, they're nothing more than propaganda machines. What we need
8 to do is re-establish [a truly Free Press].

9 What we're willing to do is say, Mr. President, [when] you
10 get us paid, we're willing to start, is to use that cash to help
11 develop a truly Free Press through the alternative media—the
12 alternative media is just exploding right now, but it lacks
13 resources. So, what can happen in this one [Miller Act notice]
14 check that you write, we can then see hundreds of billions of
15 dollars a year in investment and cash going out to these
16 companies that helps develop a truly Free Press that is not
17 beholden to all of these power brokers that have taken over our
18 economy.

19 **GABRIEL:** So, your shareholders could be made right.

20 **MCKIBBEN:** Yes.

21 **GABRIEL:** You could rectify the situation [regarding getting
22 social users legal with a blanket license].

23 **MCKIBBEN:** Yes.

24 **GABRIEL:** Everyone could actually make a ton of money.

1 **MCKIBBEN:** Yes.

2 **GABRIEL:** The criminals who have, in fact, stole this from
3 you could be held accountable. The Patent Office could be re-
4 established and the national emergency that Trump has declared
5 would actually be the platform upon which he could do this. And,
6 he could, in fact, just as you say, sign the check.

7 So, we have supported you from our angle in trying to get
8 the word out. And, we're doing everything we can to do exactly
9 what you asked to get the word straight up the line to the
10 President, to the people in Washington who have the power to act
11 and pay Leader Technologies what was stolen from them. So
12 Michael, thank you for being here again.

13 **MCKIBBEN:** Thank you for having me.

14 **GABRIEL:** Always a pleasure, thank you.

15 [Closing Music]
