

Comparison of Flu, Coronavirus, Pneumonia Mortality to increased vaccination rates (CDC statistics)

Compiled May 5, 2020

The **Coronavirus** number is *unadjusted* for the widely-reported over assignment of deaths to COVID-19 as the cause of death in persons with multiple complications.

Conclusion: The increases in mortality appear to have a direct accelerating correlation to the increased rates of vaccination.

Since the prevailing assumption that vaccines should *reduce* flu mortality, the statistics appear to show that vaccines disproportionately *increase* flu mortality, not *decrease* it, as intended.

Let's stop injecting unknown foreign substances into our bloodstreams because some "expert" says its good, but where those experts have a political agenda as well as investments in the vaccine companies that will benefit. **Let's wake up and stop being so gullible.** These so-called experts who fail to disclose their massive *conflicts of interest* is enough proof that they only have their self interest in mind, and not the welfare of *We the People* and our families.
