

Recall your high school geometry and then take off the *damned* mask

The hysteria surrounding wearing face diapers has become laughable if it were not so dangerous to your health.

Here is some basic “science” (just high school geometry folks).

The average diameter of a Coronavirus particle is **0.129 micrometers (μm)**.¹

The average width and height of a cloth pore is **10 micrometers (μm) (A_c)²**

The average number of face mask cloth pores covering your mouth used in this example is **300 pores**.³

Lined up side by side, the number of virus particles able to pass through a cloth pore is approx. $10 \div 0.129 = 77.52$ particles horizontally and 77.52 vertically. We will round to **78 particles** (width and height).

The average cloth pore opening compared to a Coronavirus particle. Fig. 1.

Each cloth pore of a face mask is big enough to allow **6,084 particles per pore** to pass in and out.

Spread the truth.

Therefore, 6084 particles x 300 pores over your mouth = **474,522 particles** are allowed in and out when you breath, **unobstructed by your face mask.**

Conclusion:

Face masks aka face diapers are practically useless in protecting you and others from Coronavirus particles floating in the air.

Face diapers are a tool of tyrannical submission, not a tool of health.

Throw off the tyrants before they fully enslave you.

Your liberty is on the line.

This geometry shows you that you have been breathing virus particles the entire time of this pandemic face masking hoax. God made our bodies wonderfully to be able to handle normal immunities. **Your body has been protecting you the entire time (that you thought it was the mask).**

Your fellow human beings are not your enemy.

Medical tyrants are.

Any errors or omissions are inadvertent.
